The place of the bad with the Judas-smile;
Down! are the tyrant, the bigot and slave!
Up! are the loving, the free and the brave!

ANOTHER CHINESE WONDER.—The Spanish Government have recently imported into Havana some 500 expatriated Chinese, to work as negroes. Among them is a physician, who judges of disease solely by the pulse. Such is said to be the practice of the faculty in the "central, flowery land,"—they feeling the pulse in the temporal artery, in the wrist and ankle.—The Governor of Cuba gave him a license to practice, and he has been doing an immense business. Every one pays $2 who even enters his house, and he takes some days nearly $200.

MARRIED.

At Black Rock, on the 28th ult., by the Rev S. Sturges, Mr. WILLIAM G. JOHNSON, of Cleveland, Ohio, and Miss LUCY ANN STURGES, of Allegany Co.

On the 30th ult., by Selah Barnard, Esq., Mr. HIRAM BRITTON, of Chicago, Ill., and Miss ELIZA SMITH, of Montezuma, N. Y.

By the same, Mr. JOHN HANSON, and Miss NANCY BOYD, both of this city.

On the 2d instant, by Rev. Alpha Wright, Mr. JOHN McGREGOR, and Miss JANETTE WILKISON.

DIED.

On the 1st inst., WILLIAM HENDERSON, recently of Genesee county, aged 73 years.

In New York, on the 20th ult., Mr. THOS. H. MILLS, brother of Judge Mills, of Newstead, aged 58 years.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n8

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every endeavor will be given to render the true spirit with as profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 168 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

For the Western Literary Messenger.

Invocation.

FROM THE RUNICK.

The beldame on the waves below
Flung the dark contents of her chalice,
Dimming the brightness of their snow,
With scowl denoting demon-malice,
And bosom cold to mortal pain—
Then, making circles with her wand,
Sang in a low, mysterious strain
The power of bard to paint beyond.

I.

Ministers of vengeance leave
Gloomy grot and sunless cave!
Ere the dewy reign of Eve
Death must triumph on the wave:—
Habited in robes of wrath,
Let your follower be Grief!
Guide his vessel on the path
Leading to this fatal reef;
Word, with insult fraught, of me
He hath spoken daringly,
And a leader claims the skill
Of her troop to work him ill—
He must drown!

II.

Spirits, who beneath the deep
Darkly build the wrecking rock!
Wake the dreaming storm from sleep,
And the doors of safety lock!
Fleetly, on their palfreys white,
Swept the Fatal Sisters by
His old castle yesternight,
Shrieking out—"thy *doom is nigh*"!
Genii of the clouds! array
Arching sky in black to day;
For the tongue of leader dread
To her ghastly troop hath said
He must drown!

W. H. C. HOSMER.

From Peterson's Ladies' Magazine.

The Old Deacon.

BY MRS. ANN S. STEPHENS.

"She loved not wisely, but too well."

It was a balmy pleasant Sabbath morning; so green and tranquil was our valley home, that the very air seemed more holy than on other days. The dew was floating in a veil of soft mist from the meadows on School Hill, where the sunshine came warmly, while the wild flowers in the valley lay in shadow, still heavy with the night rain.—The trees which feathered the hill sides, were vividly green, and Castle Rocy towered—a magnificent picture—its base washed by the water, and darkened by unbroken shadow, while a soft fleecy cloud, woven and impregnated with silvery light, floated among its topmost cliffs. The two villages lay upon their opposite hills, with the deep river gliding between, like miniature cities, deserted by the feet of men; not a sound arose to disturb the sweet music of nature, for it was the hour of morning prayer, and there was scarcely a hearth-stone which, at that time, was not made a domestic altar. At last a deep bell-tone came sweeping over the valley from the Episcopal steeple, and was answered by a cheerful peal from the belfry of our new academy. The reverberations were still sounding, mellowed by the distant rocks, when the hitherto silent village seemed suddenly teeming with life. The dwelling-houses were flung open, and the inhabitants came forth in smiling family groups, prepared for worship. Gradually they divided into separate parties. The Presbyterians walked slowly toward their huge old meeting-house, and the more gaily-dressed Episcopalians, sought their more fashionable house of worship. Old people were out—grandfathers and grandmothers, with the blossom of the grave on their aged temples. Children with their rosy cheeks and sunny eyes, rendered more rosy and more bright with pride of their white frocks, pretty straw bonnets, and pink wreaths. It was pleasant to see the little men and women striving in vain to subdue their bounding steps, and school their sparkling faces to a solemnity befitting the occasion. There might be seen a newly-married pair walking bashfully apart, not daring to venture on the unprecedented boldness of linking arms in public, yet feeling very awkward, and almost envying another couple who led a roguish little girl between them. She—a mischievous little thing—all the time exerting her baby strength to wring that chubby hand from her mother's grasp—pouting her cherry lips when either of her scandalized parents checked her bounding step or too noisy prattle, and, at last, subdued only by intense admiration of her red morocco shoes, as they flashed in and out like a brace of wood lilies beneath her spotted muslin dress.

At length our excellent minister appeared at the southern entrance, and walked up the aisle, followed by his grey-headed old deacon. The minister paused at the foot of the pulpit stairs, and with a look of deep and respectful reverence, held the door of the "Deacon's Seat." while the old man passed in. That little attention went to the deacon's heart; he raised his heavy eyes to the pastor with a meek and heart-touching expression of gratitude, that softened many who looked upon it, even to tears. The minister turned away and went up the stairs, not in his usual sedate manner, but hurriedly, and with unsteady footsteps. When he arrived in the pulpit, those who sat in the gallery saw him fall upon his knees, bury his face in his hands, and pray earnestly, and, it might be, weep, for when he arose, his eyes were dim and flushed.

Directly after the entrance of the minister and deacon, came two females, one a tall, spare woman, with thin features, very pale, and bespeaking continued but meekly-endured suffering.—There was a beautiful and Quaker-like simplicity in the book muslin kerchief folded over the bosom of her black silk dress, with the corners drawn under the ribbon strings in front, and pinned smoothly to the dress behind. Her grey hair was parted neatly under the black straw bonnet, and those who knew her, remarked that it had gained much of its silver since she had last entered that door. In her arms the matron bore a rosy infant, robed in a long white frock, and an embroidered cap. A faint color broke into her

sallow cheek, for though she did not look up, it seemed to her as if every eye in that assembly was turned upon her burthen. They were all her neighbors, many of them kind and truthful friends, who had knelt at the same communion-table with her for years. Yet she could not meet their eyes, nor force that tinge of shame from her pure cheek, but moved humbly forward, weighed to the dust with a sense of humiliation and suffering. A slight, fair creature walked by her side, partly shrinking behind her all the way, pale and drooping like a crushed lily. It was the deacon's daughter, and the babe was hers; but she was unmarried. A black dress and plain white vandyke supplanted the muslin that in the days of her innocence, had harmonized so sweetly with her pure complexion. The close straw bonnet was the same, but its trimming of pale blue was displaced by a white satin riband, while the rich and abundant brown curls that had formerly drooped over her neck were gathered up, and parted plainly over her forehead. One look she cast upon the congregation, then her eyes fell, the long lashes drooped to her burning cheek, and with a downcast brow she followed her mother to a seat, but not that occupied by the old deacon. There was a slight bustle when she entered, and many eyes were bent on her, a few from curiosity, more from an impulse of commiseration. She sat motionless in a corner of the pew, her head drooping forward, and her eyes fixed on the small hands that lay clasped in her lap. After the little party was settled, a stillness crept over the house; you might have heard a pin drop, or the rustle of a silk dress, to the extremity of that large room. All at once there arose a noise at the door opposite the pulpit; it was but a footstep ringing on the threshold stone and yet the people turned their heads and looked startled, as if something uncommon was about to happen. It was only a handsome, bold looking young man, who walked up the aisle with a haughty step, and entered a pew on the opposite side from that occupied by the mother and daughter, and somewhat nearer the pulpit. A battery of glances was levelled on him from the galleries, but he looked carelessly up, and even smiled when a young girl by whom he seated himself, drew back with a look of indignation to the furthest corner of the pew. The old deacon looked up as those bold footsteps broke the stillness; his thin cheek and lips became deathly white, he grasped the railing convulsively, half rose, and then fell forward with his face on his hands, and remained motionless as before. Well might the wronged old man yield, for a moment, to the infirmities of human nature, even in the house of God. The bold man who thus audaciously intruded into his presence, had crept like a serpent to his hearthstone—had made his honest name a bye-word, and his daughter, the child of his old age, a creature for men to bandy jests about. But for him, that girl, now shrinking from the gaze of her own friends, would have remained the pride of his home, a ewe lamb in the Church of God. Through his wiles she had fallen from the high place of her religious trust, and now, in the fullness of her penitence, she had come forward to confess her fault, and receive forgiveness of the Church it had disgraced.

The old deacon had lost his children one by one, until this gentle girl alone was left to him; he had folded a love for her, his latest born, in his innermost heart, until all unconsciously she had become to it an idol. The old man thought it was to punish him that God had permitted her to sink into temptation; he said so, beseechingly, to the elders of the church, when, at her request, he called them together, and made known her disgrace. He tried to take some of the blame upon himself; and that he had, perhaps, been less indulgent than he should have been, and so her affections had been more easily won from her home and duty—that he feared he had been a proud man—spiritually proud, but now he was more humble, and if his Heavenly Father had allowed these things in order to chasten him, the end has been obtained; he was a stricken old man, but could say, "the will of God be done." Therefore he besought his brethren not to cast her forth to her disgrace, but to accept her confession of error and repentance; to be merciful, and receive her back to the church. He went on to say how humbly she had crept to his feet, and prayed him to forgive her; how his wife had spent night after night in prayer for her fallen child, and so he left her in their hands, only entreating that they would deal mercifully by her, and he would bless them for it.

Willingly would the sympathizing elders have received the stray lamb again, without further humiliation to the broken hearted old man; but it could not be. The ungodly were willing to visit the sins of individuals on a whole community. The purity of their church must be preserved—the penance exacted.

From the time of that church-meeting, the poor father bent himself earnestly to the strengthening of his child's good purposes. He made no complaint, and strove to appear—nay, to be—resigned and cheerful; he still continued to perform the offices of deacon, though the erect gait and somewhat dignified consciousness of worth that formerly distinguished him, had utterly disappeared. On each succeeding Sabbath his brethren observed some new prostration of strength. Day by day his cheek grew thin—his voice hollow, and his step more and more feeble. It was a piteous sight—a man who had been remarkable for bearing his years so bravely, moving through the aisles of that old meeting-house with downcast eyes, and shoulders stooping as beneath a burthen. At length the mildew of grief began to wither up the memory of the good man. When the first indications of this appeared, the hearts of his brethren yearned toward the poor deacon with a united feeling of deep commiseration. The day of Julia's humiliation had been appointed, and the Sabbath which preceded it, was a sacramental one. The old deacon was getting every decrepit, and his friends would have persuaded him from performing the duties of the day. He shook his head, remarked that they were very kind, but he was not ill, so they let him bear about the silver cup filled with consecrated wine, as he had done for twenty years before, though many an eye filled with tears as it marked the continued trembling of that hand, which more than once caused the cup to shake, and the wine to run down its sides to the floor. There was an absent smile upon his face when he came to his daughter's seat. On finding it empty, he stood bewildered, and looked helplessly round upon the congregation, as if he would have inquired why she was not there. Suddenly he seemed to recollect; a mortal paleness overspread his face. The wine-cup dropped from his hand, and he was led away crying like a child.

Many of his brethren visited the afflicted man during the next week. They always found him in his orchard, wandering about under the heavy boughs and picking up the withered green apples which the worms had eaten away from their unripe stems. These he diligently hoarded away near a large, sweet briar-bush which grew in a corner of the rail fence. On the next Sabbath he appeared in the meeting-house, accompanied by the minister as we have described, to be out-

raged in the very house of God by the presence of the man who had desolated his home. It is little wonder, that even their, his just wrath was, for a moment, kindled. The service began, and that erring girl listened to it as one in a dream. Her heart seemed in a painful sleep; but when the minister closed his Bible, and sat down, the stillnes made her start. A keen sense of her position came over her. She cast a frightened look on the pulpit, and then sank back pale and nervous, her trembling hand wandering in search of her mother's. The old lady looked on her with fond grief, whispered soothing words, and tenderly pressed the little hand that so imploringly besought her pity. Sull the poor girl trembled, and shrank in her seat as if she would have crept away from every human eye.

The minister arose, his face looked calm, but the paper which contained the young girls confession, shook violently in his hand as he unrolled it. Julia knew that it was her duty to arise. She put forth her hand. grasped the carved work of the seat, and stood upright until the reading was finished, staring all the time wildly in the pastor's face, as if she wondered what it could all he about. She sat down again, pressed a hand over her eyes, and seemed asking God to give her more strength.

The minister descended from the pulpit, for there was yet to be another ceremony; a baptism of the infant. That gentle, erring girl, was to go up alone with the child of her shame, that it might be dedicated to God before the congregation. She arose with touching calmness, took the babe from her mother's arms, and stepped into the aisle. She wavered at first, and a keen sense of shame dyed her face, neck and very hands with a painful flush of crimson, but as she passed the yew where young Lee was sitting, and expression of proud anguish came to her face, her eyes filled with tears, and she walked steadily forward to the communion-table. in front of her father's seat. There was not a tearless eye in that whole congregation. Aged, stern men. bowed their heads to conceal the sympathy betrayed there. Young girls—carless, light hearted creatures, who, never dreaming of the frailty of their own natures, had reviled the fallen girl, now wept and sobbed to see her thus publicly humbled.—Young Lee became powerfully agitated, his breast heaved, his face flushed hotly, then turned very pale, and at last he started up, flung open the pew door, and hurried up the aisle with a disordered and unequal step.

"What name?" inquired the paster, bending toward the young mother, as he took the child from her arms.

Before she had time to speak, Lee stood by her side, and answered in a loud steady voice, "That of his father, James Lee!"

The trembling of that poor girl's frame was visible through the whole house, her hand dropped on the tabie, and she leaned heavily on it for support, but did not look up. The minister dipped his hand in the antique China bowl, laid it upon the babe's forehead, and, in a clear vice, pronounced the name. A faint cry broke from the child as the cold drops fell on his face. The sound seemed to arouse all the hitherto unknown and mysterious feelings of paternity slumbering in the young father's heart. His eye kindled, his cheek glowed, and impulsively he extened his arms and received the infant. His broad chest heaved beneath its tiny form, and his eyes seemed fascinated by the deep blue orbs which the little creature raised smilingly and full of wonder to his face. Lee bore his son down the aisle, laid him gently in his astonished grandmother's lap, and returned to the pulpit again. Julia had moved a little, and overcome with agitation, leaned heavily against the railing of the pulpit-stairs. Lee bent his head, and whispered a few earnest words, and held forth his hand. She stood, for a moment, like one bewildered, gave a doubtful, troubled look into his eyes, and laid her hand in his. He drew her gently to the table, and in a firm, respectful voice requested the minister to commence the marriage service.

The pastor looked puzzled and irresolute. The whole proceeding was so unexpected and strange that even he lost all presence of mind. "A publishment is necessary to our laws," he said, at length, casting a look on the deacon, but the old man remained motionless, with his hands clasped over the railing, and his face bowed upon them. Thinking him too much agitated to speak, and uncertain of his duty, the divine lifted his voice and demanded if any one present had ought to say against a marriage between the two persons standing before him.

Every face in that church was turned on the deacon, but he remained silent and motionless, so the challenge was unanswered, and the minister felt compelled to proceed with the ceremony, for he remembered what was, at first, forgotten, that the pair had been published according to law, months before, when Lee had, without given reason, refused to fulfil his contract.

The brief but impressive ceremony was soon over, and with an expression of more true happiness than had ever been witnessed on his fine features before, Lee conducted his wife to her mother, and placed himself respectfully by her side. The poor bride was scarcely seated. when she buried her face in her handkerchief, and burst into a passion of tears, which seemed as if it never would be checked. The congregation went out. The young people gathered about the doors, talking over the late strange scene, while a few members lingered behind, to speak with the deacon's wife before they left the church. Lee and his companions stood in the pew, looking anxiously toward the old man. There was something unnatural in his motionless position, which sent a thrill through the matron's heart, and chained her to the floor, as if she had suddenly turned to marble. The minister came down the pulpit stairs, and advancing to the old man, laid his hand kindly upon the withered fingers clasped over the railing; he turned very pale, for the hand which he touched was cold and stiffened in death. The old man was feeble with grief, and when young Lee appeared before him, his heart had broken amid the rush of its strong feelings.

Tax on Beards.—The Emperor of Russia, after having lent a hundred millions to the Bank of England, fifty millions to France, fifteen millions to Prussia, and other large sums to the large bankers of Europe, is replenishing his treasury by a war upon the beards of the Jews. A recent imperial ukase has been transmitted to the rabbi of all the synagogues in his dominions, commanding an immediate removal of the beards of his Jewish subjects—non-conformity to the order entailing a certain heavy penalty. As the Emperor's Minister of Finance very well understood, the Jew loves his beard better than the small end of his purse. The fiscal registrators, with their box of taxes and the regimental barbers with their soap and razors, make the rounds together, and no Israelite can hope to escape a choice between them. The excitement among the Jews, at this new tyranny is said to be very unusual and dangerous.

The Holy Land.

BY HARRIET MARTINEAU.

VI.—THE JORDAN AND DEAD SEA.

This day, (April 6th,) we were to visit the Jordan and the Dead Sea. In the early morning, about 4 o'clock, I ascended a steep mound near our encampment, and saw a view as different from that of the preceding day as a change of light could make it. The sun had not risen; but there was a hint of its approach in a gush of pale light behind the Moab mountains. The strip of woodland in the middle of the plain looked black in contrast with the brightening yellow precipices of Quarantania on the west. Southwards, the Dead Sea stretched into the land, grey and clear. Below me, our tents and horses, and the moving figures of the Arabs, enlivened the shadowy banks of the stream.

We were off soon after six, and were to reach the banks of the Jordan in about 2½ hours. Our way lay through the same sort of forest land as we had encamped in. It was very wild; and almost the only tokens of habitation that we met with, were about Rihhah—by some supposed to be the exact site of the ancient Jericho. This is now as miserable a village as any in Palestine; and its inhabitants are as low in character as in wealth. No stranger thinks of going near it who is not well armed and guarded. Yet there is no need to resort to any means but honest and very moderate industry, to obtain a comfortable subsistence here—if only honesty were encouraged, and industry protected by a good social state. The fine fig trees that are scattered around, and the abundant promise of the few crops that are sown, show that the soil and climate are not to blame. At this place there is a square tower, conspicuous from afar above the trees, which some suppose to be the sole remnant of the great city: but it can hardly be ancient enough to have belonged to old Jericho.

On a hillock in the midst of the brushwood we saw a few birds of such a size that one of the party, in a moment of forgetfulness, cried out—"Ostriches!" There are no ostriches in this country; but these cranes looked very like them, while on their feet. One by one they rose, stretching out their long legs behind them—certainly the largest birds I ever saw fly—or probably shall ever see.

Though we had been told, and had read, that the river could not be seen till the traveler reached its very banks, we could not help looking for it. Three broad terraces have to be traversed; and then it is sunk in a deep bed, where it rushes hidden among the woodland. Its depth of water varies much at different seasons: though less now than formerly. The Scriptures speak so much of the overflow of Jordan, and of the lion coming up at the swelling of Jordan, that it is supposed that formerly the river was subject to inundations, which may have formed the three terraces above mentioned, and caused the extraordinary fertility of the plain in old times: and that the wild beasts which then harbored in the brakes, came up to terrify the dwellers in the fields. However this may have been, it is not so now. The channel is no doubt deepened: and the river now in the fullest season, only brims over its banks into the brakes, so as to stand among the canes, and never reaches the terraces.

Though we were all on the lookout, and though we reached the river at the spot which is cleared for the approach of the Easter pilgrims, we could not see the water till we could almost touch it.—The first notice to me of where it was, was from some of the party dismounting upon the Pilgrim's beach. When I came up—O! how beautiful it was!—how much more beautiful than all pictures and all descriptions had led me to expect! The only drawback was that the stream was turbid; not only whitish from a sulphureous admixture, but muddy. But it swept nobly along, with a strong and rapid current, and many eddies, gushing through the thick woodland, and flowing in among the tall reeds, now smiting the white rocks of the opposite shore, and now winding away out of sight behind the populars and acacias and tall reeds which crown its banks. It is not a broad river; but it is full of majesty from its force and loveliness. The vigorous, up-springing character of the wood along its margin struck me much; and we saw it now in its vivid spring green.

The pilgrims rush into the sacred rived in such numbers, and with so little precaution as to the strength of the current, that no year passes without some loss of life; and usually several perish. This year only one was drowned. Whatever superstition there might have been among our company, it was not of this wild sort; and we bathed in safety. The ladies went north, the gentlemen south. I made a way through the thicket with difficulty, till I found a little cove which the current did not enter, and over which hung a sycamore, whose lower branches were washed by the ripple which the current sent in as it passed. On these branches the bather might stand or sit without touching the mud, which lay soft and deep below. The limestone precipice and wooded promontory opposite made the river particularly beautiful here, and sorry I was to leave it at last.

It is useless to attempt to make out where the baptism of Jesus took place, or where his disciples and John administered the rite. And on the spot one has no pressing wish to know.—The whole of the river is so sacred and so sweet that it is enough to have saluted it in any part of its course.

One thing more we did: we remembered friends far away, and carried away some water for them, having provided tin cases for the purpose. The Queen's ceildren are baptised in Jordan water; and I brought away a case full for the baptism of the child of a friend who lives farther away from the Jordan than the Queen does.—This business done we were summoned to horse, and rode away southwards to the Dead Sea.

The belt of woodland soon turned away eastwards, and we found ourselves exposed to extreme heat, on a desolate plain crusted with salt and cracked with drought. There had been a closeness and murkiness in the air, all the morning, which was very oppressive; and now it was, at our usual slow pace, almost intolerable. I put my horse to a fast canter, and crossed the plain as quick as possible, finding this pace a relief to my horse as well as myself. The drift on the beach of the sea looked dreary enough; ridges of broken canes and willow twigs washed up, and lying among the salt and the little unwholesome swamps on the shore; but the water looked bright and clear and so tempting that our horses put their noses down repeatedly, always running away in disgust. I tasted the water, about two drops, and I almost thought I should never get the taste out of my mouth again. And this is the water that poor Costigan's coffee was made of!

Costigan was a young Irishman, whose mind was possessed with the idea of exploring the Dead Sea, and giving the world the benefit of his discoveries. It would have been a useful service; and he had zeal and devotedness enough for it, but he wanted either knowledge or prudence; and he lost his life in the adventure, without hav-

ing left us any additional information whatever. He had had a small boat carried overland by camels; and in this he set forth (in an open boat in the month of July !,) with only one attendant, a Maltese servant. They reached the southern end of the lake—not without hardship and difficulty; but the fatal struggle was in getting back again. The wind did not favor them, and once blew such a squall that they had to lighten the boat, when the servant stupidly threw overboard the only cask of fresh water that they had.—They were now compelled to row for their lives, to reach the Jordan before they perished with thirst; but the sun scorched them from a cloudless sky, and the air was like a furnace. When Costigan could row no longer, his servant made some coffee from the water of the lake, and then they lay down in the boat to die. But the man once more roused himself, and by many efforts brought the boat to the head of the lake. They lay helpless for a whole day on the burning shore, unable to do more than throw the salt water over each other from time to time. The next morning the servant crawled away, in hopes of reaching Rihhab, which he did with extreme difficulty. He sent Costigan's horse down to the shore, with a supply of water. He was alive, and was carried to Jerusalem in the coolness of the night. He was taken care of the Latin convent there; but he died in two days. Not a note relating to his enterprise was ever found; and during his illness he never spoke on the subject. Any knowledge that he might have gained has thus perished with him; and no reliable information could be obtained from his servant. Costigan's grave is in the American burying ground; and there I saw the stone which tells his melancholy story. He died in 1835.

There appears to be no satisfactory evidence as to whether any fish are to be found in the Dead Sea. Our guides said that some small black fish have been seen there, but others deny this. A dead fish has been found on the shore near the spot where the Jordan enters the lake; but this might have been cast up by the overflow of the river. It is said that small birds do not fly over this lake, on account of the deleterious nature of its atmosphere. About small birds I cannot speak; but I saw two or three vultures winging their way down it obliquely. The curious lights which hung over the surface struck me as showing an unusual state of the atmosphere—the purple murky light resting on one part, and the line of silvery refraction in another. Though the sky was clear after the morning clouds had passed away, the sunshine appeared dim; and the heat was very oppressive.

The gentlemen of the party who stayed behind to bathe declared, on rejoining us at lunch time, that they had found the common report of the buoyancy of the water of this sea not at all exaggerated, and that it was indeed an easy matter to float in it, and very difficult to sink. They also found their hair and skin powdered with salt when dry. But they could not admit the greasiness or stickiness which is said to adhere to the skin after bathing in the Dead Sea. They were very positive about this: and they certainly did observe the fact very carefully. Yet I have seen, since my return, a clergyman who bathed there, and who declared to me that his skin was so sticky for some days after, that he could not get rid of it, even from his hands. And the trustworthy Dr. Robinson, a late traveller there, says —"After coming out, I perceived nothing of the salt crust upon the body, of which so many speak. There was a slight pricking sensation, especially where the skin had been chafed, and a sort of greasy feeling, as of oil, upon the skin, which lasted for several hours." The contrast of these testimonies, and the diversity which exists among the analysis of the waters which have been made by chemists, seem to show that the quality of the waters of the Dead Sea varies. And it appears reasonable that it should; for it must make a great difference whether fresh waters have been pouring into the basin of the lake, after the winter rains, or a great evaporation has been going on under the summer's sun. In following the margin of the sea, we had to cross a creek, where my skirt was splashed. These splashes turned presently to thin crusts of salt; and the moisture and stickiness were as great a week afterwards as at the moment.

We wound among salt marshes and brakes, in and out on the desolate shores of this sea:—this sea which is not the less dead and dreary for being as clear and blue as a fresh mountain tarn. As we ascended the ranges of hills which lay between us and the convent where we were to rest, the Jordan valley opened northwards and the Dead Sea southwards, till the extent traversed by the eye was really vast. How beautiful must it have been once, when the Jordan valley, whose verdure was now shrunk into a black line amongst the sands, was like an interminable garden; and when the cities of the plain stood bright and busy where the Dead Sea now lay blank and grey! As I took my last look back, from a great elevation, I thought that so mournful a landscape, for one having real beauty, I had never seen.

TUSCARORA INDIANS.—A remnant of this ancient but warlike Tribe still lingers about our village. Their council fires have gone out, and the war-whoop that mingled with the roar of waters, and struck such terror and dismay into the hearts of their enemies, has passed away, and the few who are hovering about the graves of their fathers, will soon cross the big waters into the spirit-land of the just. The women are generally sober, industrious, and very ingenious in making bead work, which they sell to visitors with great profit.—*Niagara Falls Iris.*

The Husband to his Absent Wife.

The sun is setting in the azure west
Mid clustering clouds of violet and gold,
And soft winds whisper mid the sweet wild rose
That twines its fragrant boughs above our door;
At such an hour as this thou absent one,
My spirit wings its tireless flight to thee
O'er azure mountains and the far blue wave;
And I for one brief moment half forget
My loneliness.

I'm sitting as of yore,
Upon our threshold at this twilight hour;
Watching the fading crimson in the west,
Phebe; how oft together have we gazed,
Upon this panorama! now, *alone*
I mark its lessening light and deepening shade,
And listen to the murmur of the winds,
Musing on thee, thou ever cherished one.
"Home is not home without thee," e'en the flowers
Thy absence seem to mourn; they droop and fade
Around our threshold; sadly do they miss
Thy fostering hand.

Oh! hasten thy return,
Thou knowest not how slow, how wearily,
The leaden hours move by, when thou art gone.
If I were in the flower-embosomed vales,
Where ceaseless summer with her life and song,
Makes all things glad and beautiful and bright;
Were you not there, my spirit would repine,
As one alone, shut out from hope and joy.

GENESEE VALLEY. C. B. C.

Com. Stockton at Washington.—The Washington correspondent of the Charleston [S. C.] Evening News, gives the following, as a scene in the ante-room, during one of the "clearings" of the Fremont Court Martial, at Washington, on the first day of Stockton's arrival there. It is somewhat graphic.

The court-room was cleared repeatedly for deliberaton, and the auditors retired to the ante-room. Here there was an entertainment of interest, and from memory, I will endeavor to describe it.

Com. Stockton turning to Col Benton, and to others, said: "People have symathized with me in my misfortunes in coming over from California; but, gentlemen, I have never had so much sport in my life. I shot forty buffaloes on the way. Great fun!"

"Is it true," enquired one of the group, "that an Indian can put an arrow clear through a buffalo?"

"It is," responded the Commodore, "and I'll tell you what an Indian did to me."

A gentleman who was writing at a table put down his pen to listen; a little knot of officers in the corner ceased their conversation, and every one with open mouth, fixed himself in a comfortable position to listen to the narrative.

Com. Stockton is a dashing speaker, has a good voice, and gestures to suit, and he commenced:—

"I had always been a friend to the Indians; I had defended them and spoke in their favor from the stump, (for I have done a little in that way,) and when we encamped on the plains, I gave orders not to shoot an Indian if it could be avoided. Let the poor devils steal a dozen horses, if they please, but not a hair of their heads must be injured. Well, the weather was extremely cold. I put on three pairs of stockings, three pairs of drawers, two pairs of pantaloons, and,—(don't laugh, gentlemen, by —— it's true) three or four shirts, and thick over-coats. I lay down to sleep, and covered myself with six blankets. Notwithstanding, I was still cold."

"You were not in a condition to run," remarked Lieut. Col. Fremont with a smile.

"But," resumed the Commodore, "this gentleman asked whether an Indian could put an arrow through a buffalo. Gentlemen, through all the blankets, pantaloons, and drawers, an arrow penetrated, and passing under my haunches, wounded me! (Don't laugh, it's true.) On the point of the arrow head was poison; but fortunately, the edge of it struck me, and then before I escaped with my life. Gentlemen, from that moment my sympathy with the Indians departed."

Some farther remarks were made about "manifest destiny," and the Commodore delivered a short speech on "civil and religious freedom," which he would guaranty to South, as well as to all of North America especially, and to the world in particular. It was rich.

He branched off, in a desultory manner, on his own conduct in California. He had to seize the crown there with his own hand, he said, and place it on his own head, for the Californians ran, and wouldn't stop to transfer it. He was a viceroy. He had, as a naval commander, no authority over the land forces; but when Lieut. Col. Fremont placed himself under him, he made Fremont obey orders. There was no backing out. A man after entering into a fight, can't stop short and say, "I wont obey you." He must go on. As to what he did, he would not alter a sentence, modify a paragraph, or undo a single act. He acted reluctantly in California, and was not actuated by ambition. He had two prayers; one was, that he might do nothing to injure what little reputation he had, and the other that God would keep him safely, and not suffer him to be placed in a condition where the d——d savages would cut his throat.

"I will tell all about my conduct; I will tell everything, if I have an opportunity. I want the truth to come out," he added.

"That's the American people," responded Col. Benton; "that's the American people, sir; they will have the truth, sir."

At this point the little orderly appeared at the door, and in a rich Irish accent said: "Gentlemen, the court's again in session."

Marriage after Burial.—Two Parisian Merchants, strongly united in friendship, had each one child of different sexes, who early contracted a strong inclination for each other, which was cherished by the parents, and they were flattered with the expectations of being joined together for life. Unfortunately, at the time they thought themselves on the point of completing this long wished-for union, a man, far advanced in years and possessed of a large fortune, cast his eyes on the young lady, and made honorable proposals; her parents could not resist the temptation of a son-in-law in such affluent circumstances, and forced her to comply. As soon as the knot was tied, she strictly enjoined her former lover never to see her, and patiently submitted to her fate; but the anxiety of her mind prayed upon her body, which threw her into a lingering disorder that apparently carried her off, and she was consigned to her grave. As soon as the melancholy event reached the lover, his affliction was doubled, being deprived of all hopes of her widowhood; but recollecting that in her youth she had been for some time in a lethargy, his hopes revived and hurried him to the place of her burial where a good bribe procured the sexton's permission to dig her up, which he performed and removed her to a place of safety, where by proper methods he revived the almost extinguished spark of life. Great was her surprise at finding the state she had been in; and probably as great was her pleasure at the means by which she had been recalled from the grave. As soon as she was sufficiently recovered, the lover laid his claim; and his reason, supported by a powerful inclination on her side, were too strong for her to resist; but as France was no longer a place of safety for them, they agreed to remove to England, where they continued ten years, when a strong inclination of revisiting their native country seized them, which they thought they might safely gratify, and accordingly performed their voyage. The lady was so unfortunate as to be known by her old husband, whom she met in a public walk, and all her endeavors to disguise herself were uneffectual. He laid his claim to her before a court of justice, and the lover defended his right, alleging that the husband by burying her had forfeited his title, and that he had acquired a just one by freeing her from the grave and delivering her from the jaws of death. These reasons, whatever weight they might have had in a court where love presided, seemed to have little effect on the grave sages of the law; and the lady; with her lover, not thinking it safe to wait the determination of the court, prudently retired out of the kingdom.

An American China Manufactory.—We learn that a gentleman named Ridgway, from Staffordshire, England, has established a manufactory of China and Queensware on the Big Sandy River, in Virginia, within a mile and a half of the Ohio.—*Phil. Inq.*

Funeral and Last Moments of Dr. Hopkins.

Correspondence of the N. Y. Evangelist.

Having recently returned from Buffalo, where I went to attend the funeral of Dr. Hopkins, I thought that it might be interesting to many of your readers to know some of the particulars.—On the 22d ult., at 10 o'clock in the forenoon, after having written a letter and sealed it, he was struck with apoplexy, and in defiance of all that skill and sympathy could do, lingered speechless until 10 o'clock on Saturday morning, and then *fell asleep*. The case was one of unusual severity, and from the first entirely hopeless. He had been complaining for several days previous, but none of his symptoms were regarded as serious, nor did any of them clearly indicate the fatal result. But although our brother remained speechless, yet from Monday evening to Friday morning he was comparatively conscious, and by significant signs, gave cheering evidence to Rev. Mr. Rich and others that Christ was with him, and that although walking through the valley of the shadow of death in circumstances so appalling, yet that he feared no evil. On Wednesday afternoon he took a most affecting leave of all the relatives who were permitted to wait on him during his last moments. He beckoned his sister to his bedside, put around her neck the arm which had not been paralyzed, drew her gently down and kissed her. He did the same to his brother, and then to his mother. It was regarded by them, and no doubt intended by their dying friend, as a last farewell. The death of such a man and in such circumstances, produced, of course, a great sensation. The whole city seemed to be moved. It was regarded as a public calamity, and there was every expression of grief and sympathy on the occasion which the children of men can command. The funeral, although on a week day, and in the business season of the year, was attended by a great concourse of people; but a part of those who wished to be present could not find a place in the house. The church was hung in mourning; the choirs sang pieces prepared expressly for the occasion; eight clergymen acted as pall-bearers, and carried their brother to the grave; and all the ceremonies were conducted with that propriety and good taste for which Buffalo is greatly celebrated.

Dr. Hopkins was born at Hartford, Conn., the 25th day of July, 1805, and consequently at the time of his death was only in the 43d year of his age. He graduated at Yale College in 1826, and at that early age gave decided indications of the peculiar power by which he was distinguished as a preacher. He pursued his theological studies with Rev. Dr. Wisner, of Ithaca, and was licensed to preach the gospel in 1828, in the 23d year of his age. His first pastoral charge was in Pawtucket, Rhode Island, where he took a church at its first formation, consisting of only some twelve members, and left it after three years of untiring labor, a large and flourishing congregation. From Pawtucket he went to Utica, to take charge of the Bleecker-st Church; and in September, 1835, removed to Buffalo, and commenced his labors as pastor of the First Presbyterian Church. He continued with this people until the time of his death, a devoted pastor and successful preacher. During the twelve years of his ministry more than 500 individuals were gathered into the church; and a people who, when he came among them, gave hardly a thousand dollars a year to benevolent objects, now contribute but little short of six thousand. It may be proper also to state that during the time two bands have gone off to organize new churches, and that the congregation still continues to be the largest of our order in Western New York.

Our departed brother possessed a mind of a high order, characterized by great sprightliness and elasticity. His conceptions were purely original, lively and brilliant, and when he laid out his strength on a subject, and it was a congenial theme, he was singularly eloquent. The manner, if anything, exceeded the matter. There were some who took exceptions to his delivery as being too violent; and yet but few living preachers deliver a discourse with so much popular power. His whole soul was in the work, and there were an earnestness and energy and occasional bursts of passion which fixed every eye and ear. He was a very fine reader, but excelled most of all in his public prayers. So much earnestness and pathos and appropriateness are seldom found together in the same performance, and there was an unpretending simplicity and humility which brought the most important service of the sanctuary as near perfection as mortal man may come. The deceased secured a strong hold of the affections of his people in his social intercourse, and won still more upon them in the day of affliction. His considerate counsel, his soothing accent, his well-chosen words, and sympathizing tears, will never be forgotten. Our brother possessed one qualification of a bishop in an eminent degree—*he was a lover of hospitality*. His house and heart were always open, and no one who came under his roof ever felt that he was constrained to eat the bitter bread of a begrudged hospitality.—It is a sufficient indication of his genuine goodness that all who had been inmates of his family for any length of time, invariably clung to him with ardent affection. Alas! how many such there are to weep at the tidings of his death!

A year ago last Sabbath we were assembled together in the First Presbyterian church, to attend the funeral of Mrs. Hopkins. She died, as you are aware, at sea, on her return from Europe.—So distressing were some of the circumstances, that the whole community were in sackcloth, and if tears and grief are the best tribute for the dead, no burial could be more highly honored than hers. In that distressing day, who thought that before the year had scarcely rolled around, the husband would be laid in the place of the wife, and the people doubly bereaved be called together again to deplore the more dreadful stroke which had laid their pastor low? Truly clouds and darkness are round about Jehovah. *How unsearchable are his judgments, and his ways past finding out!*

A short time since the family of Dr. Hopkins consisted of his mother, himself and wife, his own sister, and his wife's sister—now the two sisters, and the wife and husband are sleeping side by side in the grave. Of that lovely family circle the aged mother alone remains, now in her 80th year, her strength scarcely diminished, a most venerable and interesting old lady, and wonderfully supported in all her afflictions by Him who has said, "I will never leave thee nor forsake thee." May he be the portion of each one whose eye may rest on this brief tribute to the memory of a departed and lamented friend. J. B. S.

Rochester, Dec., 1847.

Another Dwarf.—The Union of the 13th says: We have had the honor of a visit, this evening, from Major General Hancock, a dwarf from North Caolina. He is two inches higher than his celebrated *confrere* Tom Thumb, but weighs two pounds less. He is twenty-three years old—about ten years older than General Thumb—well formed, agreeable in manners, and smart and prompt in his answers.—He dances the Polka and other fashionable dances.

For the Western Literary Messenger.

Elegiac Stanzas.

Suggested by the Death of the Rev. Asa T. Hopkins, D. D.

Through Faith, bright evangel, points upward to glory,
And whispers "The meed of the righteous is rest;"
Though Hope, her sweet sister, repeats the glad story,
And pictures, through fancy, the joys of the blest;
Yet darkness will reign when the good and the gifted,
The watchmen of Zion, are summoned away;
The wrecks of high promise are fearfully drifted,
And Grief sends her cries out in wildest dismay.

Lo! Truth o'er the grave of the fallen is bending,
A mourner whom angels, her holy compeers,
While her wail with the dirge for dead Autum is blending,
Might hasten with gladness to solace with tears.
Since her client has gone whence there is no returning,
It is meet she lament that his labors are o'er,
For the lips that so late were with eloquense burning,
May startle the spirits of error no more.

But though hushed is the voice which such rapture imparted
In the temple of God, to the lowly and just,—
That voice which could comfort the sorrowful-hearted
When called to deposit a loved one in dust;—
Should the truths it has sounded so oft with such meetness,
Their freedom and strength to our spirits here lend,
We may hear it again in more angelic sweetness,
And join it in anthems that never shall end.

DECEMBER 1ST. J. CLEMENT.

For the Western Literary Messenger.

"That Steeple."

BY "THE MAN ABOUT TOWN."

It was a startling occurrence, the erection of that steeple. Deacon Fidget's wife had never before heard of such a thing. She wondered what the world was coming to. She had read her Bible pretty thoroughly, yes, six times through from beginning to end, not even skipping the hard names in Chronicles and she was certain nothing was said about steeples. It warn't scriptural, it was Babylonish. "For her part, (and her part appeared to be the whole part and a little more, for her good husband sat with his elbows resting upon his knees, his chin socketra thoughtfully in in the palms of his hands, his eyes fastened motionless on a most uninteresting head of a nail, and his whole countenance elongated into an expression of despairing submission)—for her part, she was content with a meeting house without a steeple. She did'nt want any pepper-boxes of Satan sticking upon her house—that she did'nt. If the other folks were a mind to put up a steeple, they might; but she was'nt going to worship the Philistian's idol—not she!"

That Steeple! It causes more excitement in Gossiptown than would have been caused if the man in the moon had hung himself on the left limb with a red pocket handkerchief. It was a standing sin; an abomination in high places; in great truth, a vexation of spirit to Mrs. Deacon Fidget. "She did'nt envy them their steeple—no, indeed; but she was grieved over the vanity of the thing; and then they must go and stick up a gilt rooster, a swinging about all day long. She wondered what would come next. She had heard, indeed, that the other folks had put up doors at the end of their seats, and that some had brought in blue cushions to sit on, and a big bass fiddle was talked of; but she could'nt believe they'd got such wicked heresies among them."

Well, things went on this way for six weeks, when it was whispered around that the other congregation was about having a bell swung in their new steeple. "A Bell," said Mrs. Deacon Fidget. Had the man in the moon, after having hung himself with the aforesaid red pocket handkerchief for a comfortable length of time, made his appearance in Gossiptown, trundling the ring of Saturn with the tail of a comet, the commotion could not have been greater. "A bell," repeated the astonished Mrs. Deacon Fidget, in treble voice, sliding up to A sharp octave, and raising her hands into the same elevated region. Here let it be chronicled, as an interesting phenomenon in the worthy dame's life, she actually let half a dozen minutes slip by without saying a word;—a thing so unprecedented and mysterious, that the good Deacon actually looked up and ventured to enquire if anything ailed her. It would be impossible to convey any adequate idea of the blaze of moral indignation that crowded out of Mrs. Fidget's eyes—we say *crowded out*, to express the obstructed prolificacy of that interesting optical process. But her mouth was the great centre of action. There was actually a convergency of face about that mouth, as if the separate features were crowding around to hear what was about to be said. But, if they entertained any such expectation as that, they were disappointed, for the old lady said nothing all that day *save* a half whispered "Bael and Dagon in the house of the Lord!"

One fine morning, two weeks after this, the village was startled and made vocal with the merry peal of a silver toned bell. It started off at first quite irregularly and excentrically, as if it was not used to such business. By and by, it stopped, as if quite out of breath; and then, as if hearing its musical echoes floating in quivering, silvery sounds through the woods, and over the hill and down the vale, it began again in extatic gyrations, throwing off such a multitude of sounds that one could almost imagine they struck each other flying through the air, and threw off new and fainter sounds. But what said that dear old lady, Mrs. Deacon Fidget? We have made use of two comparisons; permit us to indulge in another. Had the nasal titillation, at that moment rioting about in all sorts of summer lightning in the old ladies' nose, snapped her head off in the explosion and jerked it out of the window, she could not have been more astonished. At the first tap of the bell, she rose straight up to her full height; at the second, awful reproof was distinctly discoverable beneath the glasses of her steel-bound specs, and by the time the bell began to ring so extatically, you will, of course, have anticipated

that the glasses were in a state of fusion. An inflexible regard for truth constrains us to state, however, that they were not; though, probably, any glasses less used to the old ladies' moods would have shared that melancholy fate. Mrs. Fidget went straight over to Mrs. Gossip's, and they two went to Mrs. Straitlace's, at the closing of whose door we lose sight of further facts, and enter the region of conjecture and speculation. Passing by an hour afterwards, I heard a voice, in no very faint tones, speaking in this wise: "For her part, she did not envy the other people their steeple and bell. Mrs. Gossip knew that very practice that she stuck up for, and there was no scripture in steeples and bells. She would not have well, and so did Mrs. Straitlace, it was scriptural such an abomination stuck up on her meeting house. She hoped to be in her grave first."

A year passed away, during which time, I was absent in the west. On my return to Gossiptown, to my astonishment I saw, on approaching, another great spire pointing to Heaven from the cluster of white houses, and heard another bell ring forth silvery tones on the morning air. "What can this mean?" said I. I passed on quietly to the worthy Deacon Fidget's. Mrs. F. was lecturing her her husband as usual. "The steeple was as high and as good as the other one; and, indeed, the filagre work and the balls on the corners made it look much more handsome. She always had been in favor of such a steeple; and now they had got it the other congregation had'nt anything to boast of, and then what a nice sweet bell they had! It had a much more handsome tone than the other folks', and it was a loud bell, too. And what a beautiful silver-scaled fish they had on top, and they could see which way the wind blew as well as the other folks. She had always thought that meeting houses ought to have steeples and bells, though she had never expressed her mind on that subject, as Mr. Fidget knew!"

O! Mrs. Deacon Fidget!!

Synopsis of the Report of the Secretary of War.

It appears by this document, which is of great length, that the whole military force at present employed under this government, numbers—

Of regulars,	21,509
Of Volunteers,	22,027
Total,	43,336

With General Scott—

At Tampico, now en route. and on the line from Vera Cruz to headquarters	32,156
With General Taylor,	6,729
In Santa Fe, on the Oregon and Santa Fe routes, and in the Indian territory,	3,634
In California and on route thither,	1,019
	43,336

The actual strength, it appears, is much less than this amount, but the number not in active service cannot be precisely ascertained.

The Secretary advises that the present organization be completed by enlistments. An enlistment of 7381 is necessary to complete the regular organization; and to complete that of the volunteer force, an enlistment of 12,500, to serve during the war. There appears to be now in service, a numerical force of 23 regiments, 7 battalions, and 33 companies, not organized into regiments or battalions.

The most important action recommended, is the immediate organization of ten additional regiments of regulars, to serve during the war; and he also asks authority to accept in case of exigency, the services of a volunteer force of not less than 20,000.

The Secretary states that he has no means of ascertaining the amount of revenue that can be collected in Mexico.

The total amount already collected in Mexican ports amounts to	$530,810 46
Of this sum, there has been handed over to the the Commissary Department,	438,722,33
Remaining,	$92,088 13

His further recommendations are as follows:

Payment of expenses of States, for organizing, transporting, and subsisting volunteers. (He specifies the claim of Texas to such compensation.)

The formation of a retired list.

An appropriation for repair, &c., of the public defences along the seaboard and northern line.

An increase in the engineer force.

The appointment of six additional hospital surgeons.

An appropriation for the payment of additional clerks employed by the department, to furnish discharged soldiers with scrip and certificates of location.

A pension for the widows and children of those dying by disease while in active service, (no such provision no exists by law.)

Such a modification of the pension law as to place the widows and children of officers and soldiers of the regular army on the same footing with those of volunteers, with regard to pension.

The Secretary reports on the present condition of the Indian tribes, and their relation towards the United States. The following list of papers accompany the report:

Report of the Adjutant General.

Reports of the various battles since Buena Vista, inclusive.

Orders and instructions regulating contributions in Mexican ports.

Reports of Commissary General, Paymaster General, Chief Engineer, Chief of Topographical Engineers, Chief of Ordnance, Commissioner of Pensions, Commissioner of Indian Affairs, and second and third Auditors.

IMPROVEMENT ON THE RAILROADS BETWEEN ALBANY AND BUFFALO.—We noticed the fact a few days ago that the Utica and Schenectady Road would very soon have fifty miles of T rail laid down. The public in general do not seem to be aware of the exertions making by the several companies from Buffalo to Albany, to put their roads in the best possible condition. A large number of workmen are kept in constant employment, and the progress made is limited only by the supply of T rail which can be procured at the factories. That made use of by the Auburn and Rochester Company, weighs 70 lbs. to the yard, and is said to be the heaviest in the United States. Nothing can exceed the safety, rapidity and pleasure of traveling upon a road constructed of such material. Snake heads, and the other dangers of the strap or bar rails, will be known no more. The disagreeeable noise, and still more unpleasant shaking of the cars, which render reading and conversation almost impracticable, will be completely remedied. And what is a great consideration with a go-ahead community like ours, the trains will be able to average twenty-five miles an hour.

Foreign Items.

An announcement reached London on Monday that a formidable conspiracy had been discovered in Paris, which had the effect of seriously depressing the English funds for a short time.—The committee of the stock exchange had commenced an investigation into the circumstances connected with the report, but it could only be traced to Folkstone, from which it was received by the electric telegraph.

Hostilities have at length commenced in Switzerland, at the fortified city of Friberg. Some skirmishing had taken place, in which the troops of the Sonderbund were worsted.

Dr. Felix Mendelsohn Bartholdy, the eminent composer of "Elijah," died suddenly at Leipsic, on the 4th ult., in the 39th year of his age.

The Cholera has entirely disappeared from Moscow, but it appears to be spreading beyond that city in the direction of St. Petersburgh.—There have been a few cases at Waldai and at Novogorod, a city not more than forty leagues from the capital.

The state of Ireland is truly frightful. A system of agrarian resistance is every where manifested; landlords daily falling before the vengeance of the people.

The French mail steamer Union was to leave Havre on the 24th ult., her departure having been delayed in consequence of the injuries which her machinery suffered upon the last voyage from New York.

The Sarah Sands will resume her place upon the line on the 22d January.

The British and North American steamers will continue to run fornightly during the winter, until the new vessels shall be ready, when the spring will commence with a weekly mail; the new arrangement will take effect on the 1st of January, on which day the Cambria will sail from Liverpool for New York.

The packet ship Stephen Whitney, was totally lost at 10 o'clock, P. M., of the 10th ult., on her voyage from New York to Liverpool, under circumstances the most perfectly appalling, that the imagination can possibly conceive. Mistaking the light upon Rock Island, near Cape Clear, on the south coast of Ireland, for the Old Head of Kinsale, she continued her course, intending to make Cork Harbor, but in less than a quarter of an hour, with a suddenness which defied all human effort to avert her fate, she came broadside on a rock called the West Calf, four miles inside the Cape, and in less than ten minutes after striking, she dashed to atoms, overwhelming no less than ninety two of her helpless crew and passengers. Eighteen only, of one hundred and ten, succeeded in clambering up the face of the rock which forms a wretched island, containing three fishermens's huts.

Parliament was opened by commission at 2 o'clock on the 18th, when the House of Commons proceeded to the choice of Speaker. Mr. Shaw Lefevre, the late Speaker, was re-elected by a unanimous vote, and the House adjourned to the next day. On the 19th it was expected that the election of Speaker would be confirmed by royal commission, and that the members of the House would be sworn in. The following day it was supposed would be occupied by business of form, and the regular business of the session would not begin until the next week, when the royal speech would be delivered, business of the session would begin.

The Archbishop of York died at the palace near York, November 5, after an illness of two days, in the 91st year of his age. He enjoyed the high dignity of his station, and performed its duties for a period of 40 years, having been previously Bishop of Carlisle for 16 years.

The Times announces that the vacancy in the See of York is to be filled by Dr. Musgrave, the Bishop of Hereford, and that he is to be replaced in his present See by Dr. Hampden, Regius Professor at Oxford. The Times is not satisfied with either of these appointments, especially with the latter.

In France two more domestic tragedies have been enacted on the great theatre of human life. The diseased state of social feeling in the highest ranks of society has furnished two more lamentable victims of insanity and suicide. Count Bresson, the chief promoter of the unfortunate Montpensier marriages, has put a period to his ill-fated existence, by violent means, at Naples. This fatal act has been produced by an overwrought mind not finding "ample room and verge enough" for the scope of its ambition in the subordinate station of ambassador to an Italian State. Being disappointed in obtaining the London embassy, where activity might have stifled "the still small voice" of conscience, Count Bresson, expatriated to Naples, could no longer bear the misery of his own thoughts, and so rushed to self-destruction. Count Mortier, ambassador from the Government of France to the Court of Turin, has also been stricken with insanity. In a paroxysm of the most frantic lunacy, this unhappy man nearly sacrificed the lives of his two children, but fortunately the poor innocents were rescued from his violence. These events, happening so close upon other similar examples of murder, suicide, and frightful corruption amongst the circles immediately surrounding the French throne, cannot but leave a most painful impression upon public opinion in every civilized country in the world. A frightful fatality seems to haunt the progeny of the chief actors in the great social revolutions of which, during our time, France has been the scene.

The Piedmontese Gazette of Nov. 8, contains an important piece of intelligence. The three Italian Princes, who have entered upon a system of reform; that is the Pope, the King of Sardinia and the Grand Duke of Tuscany, have just laid the foundation of a customs' union. The treaty has been signed at Turin, and is given in the Journal des Debats. The three Princes declare that they are animated with a desire to contribute by their union to everything which can promote the dignity and prosperity of Italy.

Plain Talk.—Mrs. Elizabeth Peters, of Boone county, Indiana, notices her absconding husband in the following plain terms:—

"Left my bed and board last fall, thereby rendering my expenses lighter, my legal husband, John Peters, without cause or provocation. All the old maids and young girls, widows of all ages and conditions are hereby forewarned against herboring or trusting him on my account, as I am determined not to be accountable for his debts, or more especially for his misconduct, because he is a loafer, a drunkard, a gambler, a thief, a liar, and a Locofoco."

Cure for Ill-Temper.—A sensible woman of the Doctor's acquaintance (the mother of a young family) entered so far into his views upon this subject, that she taught her children from their earliest childhood to consider ill-humor as a disorder which was cured by physic. Accordingly she had always small doses ready, and the little patients, whenever it was thought needful, took rhubarb *for the crossness*. No punishment was required. Peevishness or ill-temper and rhubarb were associated in their minds always as cause and effect.—*The Doctor.*

Editorial Department.

J. CLEMENT, EDITOR.

The President's Message.

This important national document was received in this city on Thursday night of last week, a few hours after our paper had gone to press. It is very lengthy, and is mainly devoted to the subject of the Mexican War—its origin, its progress, etc., etc. The President deems it "important that Congress should at an early period of their session, confer the authority to raise an additional regular force to serve during the war with Mexico, and to be discharged on the conclusion and ratification of peace." He further recommends "that authority be given by law to call for and accept the services of an additional number of volunteers, to be exercised at such time and to such an extent as the exigencies of the service may require."

The President suggests the loaning of seventeen millions of dollars for the year ending the 30th of next June, should a duty on tea and coffee be imposed, and the public lands graduated, otherwise eighteen and a half millions: also twenty millions and a half for the next fiscal year, ending June 30, 1849, provided the war continues thus long and tea and coffee are not taxed, there is no graduation of the public lands, nor any military contributions on land in Mexico.

A new ministry to Rome is recommended to be established, on account, we suppose, of the position which Pope Pius lately occupies.

Speaking of the Tariff of 1846 the President says that "while the interests of agriculture, of commerce and navigation have been enlarged and invigorated, it is highly gratifying to observe that our manufactures are also in a prosperous condition."

Numerous other topics of interest and importance are dwelt upon, all of which we have not room to point out this week, but some of which may be referred to in another number. We conclude with an extract touching the importance of establishing a territorial government over our possessions in Oregon:

"The attention of Congress was invited, at their last and preceding session, to the importance of establishing a territorial government over our possessions in Oregon; and it is to be regretted that there was no legislation on the subject. Our citizens who inhabit that distant region of country are still left without the protection of our laws, or any regularly organized government.—Before the question of limits and boundaries of the territory of Oregon was definitely settled, from the necessity of their condition, the inhabitants had established a temporary government of their own. Besides the want of legal authority for continuing such a government, it is wholly inadequate to protect them in their rights of persons and property, or to secure to them the enjoyment of the privileges of other citizens, to which they are entitled under the constitution of the United States. They should have the right of suffrage, be represented in a territorial legislature, and by a delegate in Congress; and possess all the rights and privileges which citizens of other portions of the territories of the United States have heretofore enjoyed, or may now enjoy."

Conversation.—The following excellent remarks on thei nfluence of conversation, are taken from a discourse delivered before the graduating class of the New-Hampton (N. H.) Theological Institution, at the last Anniversary, August 15th., by Professor Eli B. Smith, principal of the same. The subject of the discourse is, *Ministers, Examples to Believers*, very appropriate for the occasion on which it was delivered; and the production itself is characterized by conciseness, strength, and cogency of argument:

"To give to a nation their popular songs, has been said to be a more important work than to give to them their laws. So, to control the conversation of a community, is to do that which will determine their character, as intelligent or ignorant, as refined or rude, as virtuous or vicious, as religious or infidel. To become acquainted with the daily intercourse whice the members of a family, or neighborhood, or church, have with each other, is to have the means of gauging correctly their domestic, social, moral, and religious habits. We can have no better clue to the feelings of their hearts, and no better index to the influences which they are exerting.

In every place there are those upon whom are devolved immense responsibilities, in this respect. They give tone and character to the conversation of their respective circles of influence. They purify, or they poison, the atmosphere around them. They send out the blood which circulates in the veins and arteries of the social body; hot, and feverish, and deadly, or pure, and nourishing, and healthy. Their hearts are the centrd of circulation. As they are, so, to a greater or less extent, are all around them."

Burning of the Propeller Phoenix.—How many hearts has this awful catastrophe made desolate! and how many, on the other side of the Atlantic, are yet to become so, when the doleful intelligence reaches the friends of the poor Hollanders who perished! Mournful, O mournful are the thoughts of that conflagration! and the following lines, by an eye witness of the terrific scene, though not written by an experienced hand, exhibit natural feeling, and will touch a tender chord in the sympathetic heart:

How wild, how painful were the shrieks,
How piteous were the cries,
When from the doomed Propeller's deck
We saw the flames arise!

Some breathed a silent prayer to Heaven;
Some gazed in mute despair;
While others dared blaspheme their God,
And, raving, tore their hair!

I heard my sister shriek for aid;
In vain I tried to save!
She gave one short and gurgling moan,
Then sank beneath the wave!

I saw my mother's corpe float by,
Her gray hair in the breeze,
And then I prayed for death to come
My bursting heart to ease!

I saw no more—my blood ran cold—
All consciousness was gone!
Friends found me on a barren shore,
A stranger and alone!

YANKEE VISITORS TO CANADA.—We have lately read an able and beautiful Address on the subject of manufactures delivered before the Mechanic's Institute of Hamilton, C. W., by the Hon. R. B. SULLIVAN of Toronto. In it is the following humorous sketch of Yankee Visitors:

"The American visits his Canadian neighbors on a tour of pleasure, or, perhaps, to sell his clocks, or his rakes, or his tomb stones,—for, strange to say, so infatuated are our people with foreign luxuries, that they cannot be buried without the assurance of a ghostly mile stone of dirty white, imported all the way from the State of Maine, standing over their graves, looking like a bad imitation of a badly painted two inch board: —Well, he comes into Canada, and he is perfectly astonished to find such natural capabilities, "privileges," as he very significantly calls them. "Why," he asks, "is there not a paper mill *here?*" —"and a woolen factory *there?*"—"and a cotton factory there?"—"and a trip hammer on *that* stream?"—"and a pail factory at *that* fall?—and a town on *this* location?"—"and *this?*—and *this?*—and *this?*" He brings his hemp from Ohio to sell, under the firm belief that it will not grow to the north of the line; and he finds it overtopping his head in the lanes, and behind the barns; a weed which the farmers—"cant keep from growing!" All our strange inactivity, he falsely attributes to the mystic influence of the Kingly Government; he tells his Canadian acquaintances of the wonderful inventions of Republican ingenuity; with much ingenious exaggeration, adds two or three stories to the brick houses moved on rollers in New York; describes the wonderful self-acting pin making machine of Boston, which they have to keep chained, lest it should bury the town, and fill up the harbor with pins; and ends by telling his hearers, what a fine country Canada *will be*, when the Mexican war is over, and when his countrymen can find time to take it!"

THE DEMOCRATIC REVIEW for this month confirms what we said of the work in our last notice, that it is improving. The papers in this issue are, with scarcely an exception, of a very interesting character, and will please the admirers of good literary composition. The essay on "The Poetry of Coleridge," is written by some one who thoroughly understands the "Sybilline leaves" of this poet's genius and character; and it will draw attention to a vein of poetry which has been underrated and too much overlooked. The article on "Washington Irving," though somewhat florid in style and evidently by a young writer, is a well merited panegyric on him whom a British critic calls "the best living writer of English prose."—We are glad to learn that Irving is preparing a life of Mohammed. This number of the Review is embellished with a likeness of Selah B. Strong, justice of the supreme Court of this State. The twenty-second volume will commence in January. John W. Moore, New-York, publisher.

THE UNION MAGAZINE for January has already been received, and surpasses itself and every ther monthly of the same price It is embellished with three splendid engravings aside from the plate of fashions; and contains original communications by Bryant, Willis, Benjamin, Mrs. Child, Mrs. Sigourney, Mrs. Osgood, Mrs. Embury, Mrs. Ellet, Mrs. Kirkland, Miss Gould, etc., etc. The Union is unequalled in typography; and the Editress, Mrs. Kirkland has no superior among the female prose writers of America. Isreal Post, New-York, publisher.

THE KNICKERBOCKER for November contains the following crumb in the editor's table, which reminds us of a Methodist minister whom we lately heard preach at a village in Northern Pennsylvania:

"That was a brief but forcible sketch of an affected young clergyman which the New Hampshire judge gave in a line or two of his diary:—'Went to church this morning; heard Mr.—— preach himself above an hour, *much to his own satisfaction.*'"

LIBERTY; a poem, delivered before the Literary Societies of the University of Vermont, Aug. 3. 1847. By J. N. HOPKINS, Jr., A. M. New York: D. Appleton and Co.

This Poem contains lines of all lengths, from two monosylabic to six iambuses, an irregularity which we do not fancy. It gives a puerility to some parts, which does not seem in keeping with the dignity of the subject. Nevertheless the poem contains many good passages, as true as they are poetical. There is point in the following lines on party spirit:—

"Party now reigns supreme, though some may hint;
'The Constitution still exists'—in print!
King Caucus lords it o'er rank and file,
Driven to the ballot-box like cattle, while
True men are called, by every hireling tool,
Traitors—to those who have no right to rule."

STEERAGE PASSENGERS TO ETERNITY.—Our readers have not forgotten the cutting lines by SAXE on the interference of Fashion in matters of religion, where she teaches

"How sinners, long in Folly's mazes whirled,
With pomp and splendor may 'renounce the world;'
How 'with all saints hereafter to appear,'
Yet quite escape the vulgar portion here."

This truth is confirmed by a late movement of the congregation worshiping in one of the most gorgeous church in Gotham. It seems they are about to construct a separate and cheaper place of worship for the poor. This, the New World thinks, "is making steerage passengers of the poor on the voyage to eternity."

THE NEW-ORLEANS DELTA is the most valuable *news*paper on our exchange list. Its correspondents from "the army of occupation," are numerous and able, and every department of the paper exhibits taste and talent.

THE AMERICAN REVIEW.—The contents of this monthly for December are as follows:—"Mr. Clay's Resolutions;" "Our Finny Tribes," by Charles Lanman; "Arnazorium Wanderings;" "Macbeth;" "A Ballad;" "The Thousand and One Nights;" "Covetousness;" "The Violin," by G. W. Peck; "Improvement in the Art of Lithography;" "Letter on the Iroquois;" "Foreign Immigration;" Critical Notices," etc. The friends of this able monthly will be pleased to learn that notwithstanding the death of its projector, proprietor and editor, Mr. Colton, it will continue to be issued. T. S. Cutting, agent for this city.

ELLEN HERBERT, OR FAMILY CHANGES; No. 6 of Harpers "Fireside Library." This invaluable series cannot be too highly commended or too widely circulated. It is beautifully printed, aptly illustrated, and combines in an eminent degree mental and moral culture. It is designed to supply Sabbath schools and the domestic circle with entertainment and instruction in the form of pleasant little stories; and no parent who can possibly afford the expense, should fail to supply his family with these interesting little volumes. Ellen Herbert is more elegant in style and not less pointedly religious than any of the preceding numbers.

Will the publishers send us No. 5, "The Schoolmistress," which was never recieved.

TO CORRESPONDENTS.—We assure the author of 'The Present Age,' that we cherish no hard feelings towards any living being; but as he sent us said article as *original*, and now (since it has been declined) acknowledges that it appeared two years ago in the Boston Post, how are we to know that the two poems on hand are original?

The pretty poem sent us from West Bloomfield with "Given by his Mother at Parting," has been mislaid. We must trouble the author for another copy.

YOUNG MEN'S ASSOCIATION.—The lecture before this society on Monday evening, although the weather was very unpropitious, was unusually well attended; the lecture room being crowded to its utmost capacity—and "SCOTTISH SONG," the subject Mr. HOSMER chose for consideration, was discussed with that enthusiasm and ability which one might expect from the talented lecturer. The lecture next Monday evening will be delivered by Dr. DEWEY.

PICTORIAL HISTORY OF ENGLAND; Harper and Brothers. Number thirty-three. 25 cents.

This magnificent work is three-fourths completed. Number 33 brings the history down to about the middle of the seventeenth century, and concludes with an index to the third volume.—The embellishments in late numbers are numerous and splendid, as usual.

AMERICAN PHRENOLOGICAL JOURNAL.—This reputable monthly has reached the end of its ninth volume. It is edited by O. S. FOWLER, Esq., and published by FOWLERS and WELLS, New-York, at one dollar a year. Now is the time to subscribe.

THE A. D. PATCHIN came in from Chicago on the 9th instant, the last upper lake boat of the season. Capt. Whitaker is usually the first out and the last in. By the way, the Patchin is to have an new and more powerful engine put into her this winter, also an upper deck put on. She will come out in the Spring prepared to run with the fastest.

IMPROVEMENTS AT THE FALLS.—The Niagara *Iris* has a congratulatory description of these. It appears that the "Falls Hotel," kept by Mr. FANNING, is receiving large additions to its size. The Exchange Hotel is converted into shops for mercantile purposes, and the proprietor, Mr. HULETT, is erecting a large building adjoining for various branches of trade. The editor prophecies, with the tone of a man who knows what he is doing, that the Hotel commenced by Mr. RATHBUN will be built up. The Cataract Hotel has been much enlarged, and is one of the best houses in the United States. A screw factory, others for machinery and cabinet ware, are, or soon will be, in operation, upon a large scale.

The railroad track to Buffalo is undergoing thorough repairs. One hundred thousand persons have traveled over this road during the past year, without an accident. It is said that fifty thousand persons visited the Falls during the past season. Lastly, we learn that the *Iris* itself is prosperous, and increasing its subscribers—of which good fortune it is well worthy.

☞ Gen. TAYLOR, before leaving Monterey, gave a collation at his camp to all his officers.—There was a large number present from the various commands, and the affair is said to have passed off very pleasantly. A correspondent of the *Picayune* says:

Lieutenant Colonel Fay, of the 10th regiment, and a number of his officers who had come up with a train from below, were just in time to join the festivities.—Among the guests was the Spanish Consul and a wealthy Mexican citizen of Monterey, Dr. Lleni. A number of sentiments were drank, and among the first the following one, proposed by Dr. Lleni: "Honor to Gen. Zachary Taylor among his countrymen, Peace to all the world, Friendship on the Continent, and Justice to Mexico." Gen. Wool, after expressing his regret at the contemplated departure of Gen. Taylor, and his diffidence at assuming a command so responsible as that about to be devolved upon him, gave "The health of Gen. Taylor, the hero of Palo Alto, Resaca de la Palma, Monterey, and Buena Vista." Dr. Lleni and his nephew also gave toasts to Gen. Wool; and, in short, to use a common set phrase, "nothing transpired to mar the harmony of the occasion."

The citizens of Canada feel much inconvenience from our new Post Office arrangement, and are petitioning to the P. M. General, to rescind the late order. The reply is that the whole matter is in the hands of Mr. Bancroft and the British Ministry; and must await their sanction.—*Niagara Democrat.*

Arrival of the Britannia.

LIVERPOOL, Nov. 19.

Western Canal Flour at 29a30; Richmond and Alexandria 28a28s 6d; Philadelphia and Baltimore 28a28s 5d; New Orleans and Ohio 26a 27s; United States and Canadian flour from 21s to 23.

India corn, per bbl, 15s 6d to 16s 3d.

Wheat, United States and Canadian white and mixed, per 70 lbs. 7s. 6d. to 9s. Red 6s. to 8s. although this market has shown no positive tendency to advance, it has been characterized by sustained firmness and increasing demand.

Indian Corn particularly has been extraordinarily active and is steady at present quotations, while the best white is retailing at 40 shillings.—Indian meal for Irish supply is also very brisk.

In London, the market is by no means so active as in Liverpool, and throughout the Provinces.

On Wednesday the attendance at Mark Lane was very small, and the transactions exceedingly limited. Quotations, however, have not receded.

Beef—Prime mess pr. tierce, new, 84s to 90s. Ordinary, 70s to 80s. Old not quoted. Mess pr. bbl. 200 lbs. 40s to 48s. Ordinary, 36s to 42s. Prime, 30s to 34s. Extra Indian mess, &c. 336 lbs. 95s to 100s.

Pork, Prime Mess, new per bbl. 200 lbs. 55s to 64s; Old, 40s to 45s; Mess, 62s to 68s. Prime, 40s. to 45s.

Bacon dried smoked, per cwt. 30s to 40s; Long middles in salt, 32s to 56s; Short, 32s to 56s. Shoulders, 20s to 30s; Hams smoked or dried in Canvass duty paid, per cwt. 30 to 50s: in Casks not smoked duty free, 25s to 35s.

Tongues—ox, in pickle, duty paid, per dozen, 12s to 18s.

Figs, per cwt, 20 to 30s.

Butter—United States not quoted; Irish in fair demand, 91s at the top price. Canadian 58s to 70s.

Cheese—Fine, duty paid, per cwt, 46 to 50s. Middling 42a to 45s. Ordinary 35a40s.

Lard—Duty free, fine leaf, in kegs, per cwt, 55 to 58s. Do, in barrels, 52 to 56s. Ordinary to middling, 48 to 50. Inferior and grease, 29 to 32s.

Truman & Cook, of London, have failed, an eminent brokerage house, whose liabilities amo't to 350,000 pounds.

The Bank of England still demands a high rate of 8 per cent discount, but many of the private establishments of the country have discounted bills at 7 and even 6 1-2 per cent.

Money market—yesterday a better feeling prevailed, and no new failures were reported. Consols closed at 83 7-8 for money.

LOSS OF THE PACKETSHIP STEPHEN WHITNEY.—This unfortunate vessel was totally lost at 10 o'clock P. M., of the 10th Nov. last, on her passage to Liverpool, on the coast of Ireland. Off Ireland, 92 of the crew and passengers were drowned.

WOOD—GREEN AND DRY.—Water forms no inconsiderable part of the weight of all vegetable substances. Nearly one-half of the weight of a growing oak tree, according to Count Rumford, consists of sap. Ordinary dry wood contains about one-quarter of its weight in water. It is estimated by Rumford, that an average cord of green wood contains more than *two hogsheads* of water; and the waste of heat in evaporating this quantity of water, would raise thirteen and a half hogsheads of water to a boiling point. The buyer of wood may learn from these facts the advantage of dry wood over green, as an article of fuel; and the seller, who has the wood to draw, may learn how to economise labor, by drying his wood, and thus disposing of about one-quarter part of the weight of a cord of wood in water, which he would otherwise be compelled to draw to market.

The following table will show the weight of a cord of different kinds of dry wood, and the comparative amount of charcoal, or real combustible matter, found in each, taking 100 as the standard:

A cord of Hickory,	lbs. 4469	Carbon, lbs.	100
" Maple,	2663	"	54
" White Birch,	2389	"	48
" " Beech,	3336	"	65
" " Ash,	3430	"	77
" Pitch Pine,	1904	"	43
" White Pine,	1963	"	42
" Lombardy Poplar,	1774	"	40
" White Oak,	3831	"	81
" Yellow Oak,	2919	"	66
" Red Oak,	3854	"	84

NEW YORK, Dec. 11—3 P. M.

Farther accounts from Africa state that the British Man of War *Warwick*, had captured a Slaver on her way to St. Helena, with 500 slaves.

The Liberia Herald states that the brig got off 500 staves from Gallenes, when two British vessels gave chase and the brig was run ashore.

PHILADELPHIA, Dec. 10.

The freight train broke down near Pottstown this afternoon, killing two men, HENRY GALLAGHER, tender, from Philadelphia, and OWEN M. EVANS, formerly conductor on the road. The conductors were more or less injured. Several cars were more or less broken.

Advices from New Orleans state that the public reception of Gen. TAYLOR had been postponed to the 3rd, and was organizing as the mail left. It is said to have surpassed any public display ever witnessed in New Orleans.

The General was mounted on one of his favorite war horses and the entire population appeared to be mustered with banners and badges.

Col. Wynkoop who had been appointed Civil Governor of Jalapa, commenced issuing proclamations and civil orders.

He encouraged the merchants to resume business and open their stores; pledging to them, and the inhabitants generally, protection in the full pursuit of their ordinary occupations.

He has prohibited the sale of ardent spirits, under heavy penalties, and the property of the Mexican authorities is made responsible in case of the commission of crimes. Mexican authorities, civil and judicial, are restored to the full exercise of their functions, and all disputes among Mexicans are to be settled by them.

DEPTH OF THE OCEAN.—At the annual meeting the association of the Am. Geologists in Boston, Commander WILKES, U. S. N., made a communication upon the subject of the depth and saltness of the ocean. The maximum depth has never been attained. Capt. Ross sounded 4600 fathoms, about 37,000 ft., and got no bottom.—There are great difficulties attending deep sea soundings. Experiment shows that the great valleys of our ocean run at right angles to the ranges near our coast. The basins of the Southern hemisphere dip and rise alternately from the equator towards the pole, causing very unequal depths of water.

NEW YORK, Dec. 13—3½ P. M.

St. Michael's Church, Kensington, has obtained an award of $27,000 against the County of Philadelphia for damages sustained during the *Native* riot in 1844.

Further accounts from Tobago inform us, that during the terrible hurricane which swept over that beautiful island 61 large country residences, 59 plantations and sugar works; and 632 dwelling houses and other edifices, of which some were religious ones, Churches, Chapels, &c., were completely demolished.

Up to the latest dates, 30 human beings had been ascertained as having perished during the storm and it is believed that when full accounts from remote parts of the island are received, this number of victims will be greatly increased.

The Jamaica papers say that the distress occasioned among the people is so great, that a memorial has been addressed to the Home Government for aid.

NEW YORK, Dec. 14, 3½ P. M.

Accounts are received from New Orleans to the 5th inst.

British Royal mail steamer arrived at N. O. on the 5th inst. from South America, which port she left on the 2d ult. She is the first of the monthly line of steamers between South America and N. Orleans. She left on the 6th for Vera Cruz.

The Steam Ship *McKim* has arrived at New Orleans via. Tampico but her advices are no later from the former post, she left Tampico as late as the 25th ult. yet byought no news from Mixico.

Gen. TAYLOR was detained at New Orleans until Sunday morning when he left in the steam-*Missouri*, *en route* to his plantation at Baton Rouge. He would pass a few days in quiet with his family at his country seat in Mississippi, so that if needed, he can return immediately.

A telegraph despatch dated Cincinnati, 13th, says there has been another great freshet in the Ohio, which was within 9 feet of the highest point reached during the great flood in 1832.

This flood has extended to many parts of the West, doing great damage. The lower part of Cincinnati is submerged.

Just below Little Falls, there are some ten miles, more or less, of T rail, and happening recently to pass over it, we had the curiosity to observe the rate of moving. *It was forty miles an hour.* And yet there was far less danger of accident than there would have been upon the flat rail at a speed of 15 miles.—*Rock. Am.*

SATISFACTION FROM EDITORS.—When a certain newspaper first started, many gentlemen felt offended with the freedom of its remarks. A gallant colonel, taking amiss some innocent freedom of the editor, determined to curb his wit by a smart application of the horsewhip. Well, the colonel, full of martial fury, walked himself off to the office, burning with revenge, grasping in his right hand a riding-master's whip. Intimating his wish to see the editor, he was politely shown into a room, and informed that the editor would wait on him instantly. Like a chafed lion, he walked up and down the room during the interval, flourishing his weapon of vengeance; when the door opened, and in marched an individual of the Brobdignag species, clad in a thick white fuzzy great coat, his chin buried in a red cotton handkerchief, with a broad oil skin hat upon his head, and a most suspicious looking oak stick under his arm.

"What might you want with *me*, sir," asked this engaging looking individual.

"I wished to see the editor."

"*I* am the editor, sir, at your sarvis," said the Brobdignag, taking from its rest the stick of about the thickness and size of a clothes prop.

"Indeed!" ejaculated the colonel, edging away towards the door; "oh, another time."

"Whenever you please, sir;" and the parties separated.

AN AMERICAN SAILOR.—A letter published in the Harrisburgh Argus, written by Lieut. James Elder, says: "When the transport ship Empire struck near Fowl Key. but one man was lost, who, Lieut. E. says, he was steering the ship when she struck, and attempted to save her by putting the helm hard down: but when nearly hard down the rudder struck the rocks, which carried him over and under the wheel several times, the handles of the wheel tearing his thigh every evolution, the flesh was literally torn off from the knee to the hip. Lieut. E. asked him why he did not let go. He said 'four hundred lives are more valuable than one.'

"This brave sailor's name should be known and remembered—he is beyond the reach of this world's recompense, for he did not survive his injuries.'

ASSERTION VS. FACTS.—De Bow's Review asserts that negro slaves are longer lived and more prolific than the whites. We oppose to this bold assertion the fact, as repeatedly developed by the census, that the fecundity and life of the negro slaves are scarcely in proportion of one to five with the free white race.—*National Whig.*

A COUNTERFEITER STRUCK BY LIGHTNING.—A man by the name of M. Lee came to Petersburgh, Va., and exchanged thirty-six hundred dollars in five dollar counterfeits on the Danebury Bank of North Carolina, after which he left in the Northern cars today. A description of him was communicated by telegraph, and information has just been given of his arrest and commitment in Washington. All the money but ten dollars has been recovered.—*Philadelphia, Dec.* 9.

A NEW MOVE IN VIRGINIA.—A number of prominent men in Western Virginia, headed by Rev. H. RUFFNER, D.D. a Presbyterian minister, have resolved to emancipate their slaves, and make an effort to abolish slavery west of the Blue Ridge in that State.

☞ A Gold Mine is said to have been discovered in Canada, at a distance of forty miles from Quebec.

FIFTY YEARS AGO.

BY WILLIAM G. GALLAGHER.

A Song of the Early Times out West,
And our green old forest home.
Whose pleasant memories freshly yet
Across the bosom come!
A song for the free and gladsome life
In those early days we led,
With a teeming soil beneath our feet
And a smiling heaven o'erhead!
Oh, the waves of life glanced merrily,
And had a joyous flow,
In the days when we were Pioneers,
Fifty years ago!

We shunn'd not labor when 'twas due,—
We wrought with right good will;
And for the homes we won for them,
Our children bless us still.
We lived not hermit lives, but oft
In social converse met;
And fires of love were kindled then,
That burn on warmly yet.
Oh, pleasantly the streams o'life
Pursued its constant flow,
In the days when we were Pioneers,
Fifty years ago.

We felt that we were fellow men,—
We felt we were a band,
Sustained here in the wilderness,
By heaven's upholding hand.
And when the solemn Sabbath came,
We gathered in the wood,
And lifted up our hearts in prayer
To God, the only good.
Our temples then were earth and sky,—
None others did we know,
In the days when we were Pioneers,
Fifty years ago.

Our forest life was rough and rude,
And dangers closed us round;
But here amid the green old trees,
We freedom sought and found.
Oft through our dwellings wintry blasts
Would rush with shriek and moan;
We cared not though they were but frail,
We felt they were our own!
Oh, free and manly lives we led,
Mid verdure or mid snow,
In the days when we were Pioneers,
Fifty years ago.

But now our course of life is short,—
And as from day to day
We're walking on with halting step,
And fainting by the way,
Another land more bright than this
To our dim sight appears;
And on our way to it we'll soon
Again be Pioneers;
Yet, while we linger, we may all
A backward glance still throw
To the days when we were Pioneers,
Fifty years ago.

MARRIED.

On the 7th instant, at Trinity Church, by the Rev. E. Ingersoll, Mr. JOSHUA L. PARISH, and Miss LYDIA G., daughter of Charles G. Irish, Esq., all of this city.

On the 9th inst., by Rev. Geo. W. Hosmer, Mr. A. T MILLER, and Miss BETSEY M. PALMER.

On the 1st intant, by Rev. Dr. Tucker, Mr. GEORGE BLACKMAN, and Miss HARRIET A. McKENZEY.

On the 5th, by the same, Mr. SAMUEL MADGETT, and Miss ELIZABETH PILGRIM.

On the 6th, by the same, Capt. WILLIAM MORE, and Miss ADALINE WOODWARD.

DIED.

On the 8th inst., AUGUSTA LORINDA, only child of Chauncey C. and Alta L. Wells, aged 3 months and 2 days.

On the 11th inst., Mrs. AMELIA GOODALL, wife of Wm. N. Goodall, of this city, and daughter of the late Rev. Wm. Bishop, of Bradford, England, aged 41 years.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n3

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main-Street, Buffalo

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but as Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theorr is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 186 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

WESTERN
LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, JANUARY 1, 1848. NUMBER XXII.

For the Western Literary Messenger.

The Evening Hour.

BY P. SMITH.

I.

The pensive Eve has lit once more
Her stars above:
This silent time, this shadowy hour,
I own I love;
For oh there's that about the Eve,
Which soothes my heart;
A spell which bids my sorrows leave,
My cares depart.

II.

Then wayward Fancy spreads her wings
And soars on high;
And places on etherial things,
Her eagle eye:
And Hope, the syren, cherished long,
In light appears,
And chaunts the soul the triumph-song,
Of future years.

III.

Then Memory's retrospective glance
Reviews the past;
Recalls the dreams of youth's romance,
T'oo fair to last;
Brings back the happy days of old,
Life's flowery June,
When, dearest, first my love I told,
Beneath the moon.

IV.

Yes, Fancy, Hope, and Memory,
T'ogether join,
To make the twilight hour to me,
Almost divine:
They yield a charm to dark-browed Eve,
Which soothes my heart;
A spell which bids my sorrows leave—
My cares depart.

ROCHESTER, Dec. 15th, 1847.

From the Jersey City Telegraph.

Washington in Love.

In 1756—twenty years before the brilliant era which shines like a rich gem in the pages of the world's history,—a gentleman named Beverly Robinson occupied a dwelling (situate in New York) which, at that time, was considered a model of elegance and comfort, although, according to the prevailing tastes of the present day, it was nothing of the kind. It was standing, very little altered from its original condition, six years ago, on this side of the Hudson River, within two or three miles of West Point. Mr. Robinson enjoyed all the luxuries known to the colony, and some, beside, which the other colonists did not know—for instance, a rich and massive silver tea urn, said, by the gentleman's descendants, to be the first article of the kind, and for a long time the only one, used in this country. In this dwelling, so much admired, the space between the floors and ceiling was exceedingly low, and in many of the rooms (set off, about the fire-places, by polished tiles,) the rafters were massive and uncovered, and all things else in the structure were exceedingly primitive. In this house were born or reared a brood of the most prominent and inveterate foes to the Patriots of the American Revolution, and the object of that struggle, that history mentions. Two generations of the Robinson family bore arms and held office in the armies of the English King, and fought determinedly against our sires and grandsires.

Well—in this house, which will already have attached itself to the interest of the reader—the only victory that was ever gained over George Washington, was achieved.

In 1756, Colonel George Washington, of Virginia, a large, stalwart, well-proportioned gentleman of the most finished deportment and careful exterior; a handsome, imposing, ceremonious and grave personage—visited his firm and much esteemed friend, Beverly Robinson, and announced his intention of remaining his guest for many weeks. A grinning negro attendant, called Zeph, was ordered to bring in his master's portmanteau, additional fuel was cast into the broad and cheerful fireplace, an extra bottle of prime old Madeira was placed upon the table, whose griffin feet seemed almost to expand to twice their original size at the prospect of an increase of social hilarity, and Col. Washington was duly installed as a choice claimant of old-fashioned and unrestrained hospitality.*

Seated with Mr. and Mrs. Robinson, overwhelmed with attention, and in possession of every comfort, the visitor evinced unquiet and dissatisfaction. Every sound of an opening or closing door aroused him from apathy, into which he relapsed when it was ascertained that no one was about to enter the apartment. His uneasiness was so apparent that his host at last endeavored to rally him, but without effect. Mrs. Robinson finally came to the rescue, and addressed the Colonel in direct terms.

"Pray, friend Washington, may we be made acquainted with the cause of your dulness?—There is some reason for it, and that reason lies with us. Tell it."

In vain the Colonel argued that nothing had occurred to vex him—that he was not in want of any further inducement to present or future happiness; his entertainers would not regard his words, but continued their pertinacious endeavors to solve his mystery. At length, wearied by importunity, Washington—then twenty years before his greatness, leaned over the table, played with his glass, attempted to look unconcerned, and whispered to Mr. Robinson the single word—"Mary."

"Yes?" responded Mr. R. interrogatively, as if unable to comprehend Washington's meaning.

"Is she well? Does she still abide with you?"

"She does," replied the lady of the mansion.

Washington again became apathetic and contemplative, while several significant glances passed between the gentleman and his wife. Some five minutes were spent in perfect silence, which was only interrupted by the exit of Mrs. R. from the apartment. She speedily returned, accompa-

nied by a beautiful young lady, whom Washington, with a countenance beaming joyfully, arose to greet with becoming respect.

The young lady was Mary Philipse, sister of Mrs. Robinson, and daughter of the owner of the Philipse estate.

It was perhaps singular; but the time of her appearance and the period of the return of Washington's cordiality, was identical. Strange as it was, too, midnight found this young lady and the Virginia colonel alone, and in deep conversation. The conjugal twain who had kept them company in the early part of the evening had retired to their bedchamber. More remarkable than all, daylight found this couple still together. The candles had burned down to the sockets of the sticks, and the fireplace, instead of exhibiting a cheerful blaze, harbored only a gigantic heap of ashes and a few dying embers. What could have prolonged that interview? Not mutual love; for the parties preserved a ceremonious distance, and the young lady evinced a hauteur that could be matched only by her companion in after years. And yet the truth must be told. There was love on one side; the colonel, smitten by the graces and rare accomplishments of a lady as beautiful as nature's rarest works, was endeavoring to win her heart, in exchange for his own. He made his confession just as the cold grey of the dawn of morning broke up the dark clouds in the east. He confessed, in cautious and measured terms, it is true, the extent of his passion, and avowed what it was his earnest hope would be the result: that was the gain of her hand. The lady hesitated. Was it the modesty of the maiden who dares not trust her lips with the confession of affection it is her heart's desire to make? No! She respected, although she did not love her interlocutor, and she felt diffident in making known to him the true state of her feelings. At last candor triumphed over delicacy, and she informed Washington, in set terms, that she loved another! She refused him! The greatest of modern men was vanquished, and by a woman! He was speechless and powerless.

Trembling, with compressed lips and a countenance ashy pale, he crept from the place just as the old negress of the household entered to make preparations for the breakfast. He sought his room, threw himself upon his couch, dressed as he was, and lapsed into a troubled sleep. The only VICTORY ever won at his expense penetrated him to the soul. He was unhappy—supremely wretched! The future conqueror of thousands of brave men suffered because he had been rejected by a female. This was his first, but not his last wooing.

Years rolled on upon the mighty tide of time. George Washington was the Commander-in-chief of the American forces opposed to the royal government. The friend of his early manhood, Beverly Robinson, was the Colonel of the Loyal American regiment raised in this state, and his son was the Lieutenant Colonel. The house we have spoken of was in possession of the 'rebels,' and was occupied by Arnold, the traitor. It was afterwards the temporary residence of Washington. At the same time, the husband of Miss Mary Phillipse, Roger Morris, was a prominent tory, and a member of the council of the colony. Few of the parties were occupied by any reflections of an amorous nature. Time, in its progress, had worked mutations which had severed the closest ties, both of friendship and consanguinity. Those who were most intimate previous to the commencement of the war, were now studied strangers, with drawn swords at each other's breasts. Even sons and fathers were estranged and arrayed in opposite ranks—even the child of that illustrious statesman, Dr. Franklin, was a bitter and uncompromising tory. It must not be supposed that the loyalist friends of the Colonel, George Washington, shared any better fate, so far as the acquaintanceship of the Father of his Country was concerned, than others. His old Hudson River friends he had not seen for years. The husband of Mary Phillipse was personally unknown to him—Beverly Robinson, grown grey and careworn, would scarcely have been recognized.

Andre was taken and condemned to death, and while under General Woodhull's charge, was visited by Mr. Robinson in the capacity of a species of a commissioner which protected his person.—What was the surprise of Washington, a few days before the time of the execution, to receive a letter from his old friend and entertainer, referring to past events, and claiming, on a score of reminiscence, a secret or private interview. The claim was acknowledged, and, late at night, Mr. Robinson, accompanied by a figure closely muffled in a cloak, was admitted to the General's apartment. For a moment these two men—their positions so widely different—gazed at each other in silence.—Recollections of days gone by—of happy days uncorroded by cankering care—prevailed, and they abruptly embraced. Washington was the first to recover his self-possession. Suddenly disengaging himself, he stood erect and clothed in that unequalled dignity which was his attribute, and said—

"Now, sir, your business."

"Is," replied Robinson, in a choking voice, "to plead for Andre."

"You have already been advised of my final determination," replied Washington, sternly.

"Will nothing avail?" asked Robinson, in smothered accents.

"Nothing! Were he my own son, he should pay the penalty due to his offence. I know all that you will say; you will speak of his virtues—his sisters—his rank, and of extenuating circumstances; perhaps endeavor to convince me of his innocence."

Robinson struggled with his emotions a few seconds, but, unable to repress his feelings, he spoke but a single word, with such a thrilling accent that he started at the sound of his own voice. That word was *George!*

"*General* Washington, *Colonel* Robinson," responded the great patriot, laying great stress on each military title.

"Enough," said the other. "I have one more argument—if that fails me, I have done. Behold my friend!"

"Your friend! Who is he? What is his name!"

One other single word was spoken as the heavy cloak in which the mysterious friend was clothed, fell to the floor and exposed the mature figure of Mrs. Morris, and that word, uttered with a start by Washington, was *Mary!* The suspense was painful, but brief.

"Sir," said Washington, instantly recovering, "this trifling is beneath your station and my dignity. I regret that you must go back to Sir Henry Clinton with the intelligence that your best intercession has failed. See that these persons are conducted beyond the lines in safety," continued he, throwing open the door of the apartment and addressing one of his aids.

Abashed and mortified, Mr. Robinson and his sister-in-law took their leave. The woman had gained a conquest once, but her second assault was aimed at a breast invulnerable.

---

* The owners of this estate—which was vast—having opposed the Americans, they became victims to the confiscation act, and a great portion of the property was confiscated. The reversionary interest was not affected, however, and in 1809, John Jacob Astor bought it for $100,000. For this Mr. Astor received from the State, 19 years after, the small sum of $500,000.

A Ball-Room Sketch.

BY A LADY UNDER FIFTY.

I am standing at the entrance of a ball-room—a looker on, where all beside are actors. I am wrapt in my shawl, alone and unnoticed, like a solitary beetle among a host of fire flies, dancing, flashing, sparkling before me. All the youth, grace, beauty, and animation of our town are brought together:—the student from his book, the clerk from his desk, and the mechanic from his shop—each with his fair partner, her form clothed in its most becoming dress, and her face in its most becoming smile. Lights, single and in constellations, are shedding their radiance from above, and eyes brighter still are shedding their radiance around. Music is sending animation to the feet, and voices to the hearts of the dullest.—What a brilliant scene! It looks as the world did, when I stood on its threshold thirty years ago, and saw it as one moving whole. Will mingling in it dispel the bewildering enchantment now as then? It is strange that the sight of happiness should make us sad—happiness we neither envy nor wish to share.

Happy faces? So they seemed when I first looked at them; but now that I have seated myself in this snug corner and scrutinized them single, methinks jarring passions show themselves on those bright countenances, like spots on the sun's disc. There is yonder gent from the city, whispering in the ear of our village coquette the worn out compliments he has somewhere picked up while she is smiling acquiescence, and at the same time stealing side-glances at her slighted partner to mark the effect. *His*, at least, is not a happy face. Why does not this petty artifice teach him to feel contempt instead of mortification? Again she smiles:—but having exhausted his scanty fund of talk, the dandy turns from her to another—and *her* face is clouded. And whom has he addressed? The parson's pretty but rather plump daughter; and really, the girl does look bewitchingly as she replies to his address. But a self complacent glance from his own compressed waist to hers, compressed in vain, and a murmured "too much *embonpoint*"—has left another shadowed brow. There, in a recess, sits my own sweet Clara—my favored of all favorites, because she has beauty without vanity, learning without pedantry, wit without malevolence, and refinement without affectation—looking as lonely as Boone on the banks of the Kentucky.

> "In such a wilderness of mirth
> The only thinking one,"

The dandy approaches her; but a look of unmingled contempt sends the pliant thing of cloth and velvet to the lower end of the hall, frowning and disconcerted. Clara's eye is fixed on the dancers again. It follows one of the gayest among them. That one whispers something to his blushing partner—and as Clara quickly turns away her head, there is a moisture on her cheek that ill accords with merriment. She has anticipated much:—she has dressed to please the eye of one only; that eye seeks her not—and what is the admiring gaze of the whole crowd to her? Tears in a ball room! Ah, the keenness of disappointment, before the heart is hardened! How slight the stroke, yet how deep the wound. Live a few years, and she will have learned to smile as she thinks of its trifling importance: but she will also have learned to smile while her heart is breaking, It needs no sybil eye to read her destiny. That anxious glance spoke her deep-rooted affection—that tear, her bitter disappointment. The impulse that bid her cheek hide her emotion, while she gaily joined the dance with another, betokened a proud spirit that has already taught her the first lesson in the art of disguise.

Dancing is an innocent amusement in itself; but who will say that it is not injurious in its effects, as generally managed, and with its usual accompaniments? It is like—but there beside the door stands a better illustration than I could possibly give. It is George Edwards. Not many years ago the Old Colony boasted not a more promising young man. At the age of twenty-one, he became possessed of an estate worth ten thousand dollars—a fortune amply sufficient in New England to lead a young man to wealth and respectability, or to want and ruin, as he chooses. The first time I saw him after this era, he was in this very hall; and I wondered not, as I looked on his fine manly figure, and open, engaging countenance, that many a maiden's heart beat visibly at his approach. He saw himself admired—and his vanity was awakened: yes, vanity—for, trust me, hearts swell as often from this cause beneath a coat of broadcloth as beneath a muslin kerchief. Who does not aspire to be an object of attention? There is not a more universal ambition. It is the secret cause of half the revolutions, reformations, and party divisions in the world. Ambition troubles the waters: if benefits result, it is by means of those who improve the hour to heal the diseases of society. Surrounded by flatterers, George Edwards must needs do as others did. He could not be niggardly—and he was not. He became more liberal in money matters—and also in principles and conduct. He soon learned that there were other innocent amusements, so called—such as laying down painted bits of pasteboard according to certain rules. A game of cards, to while away an evening now and then, was more agreeable than his own thoughts, disordered by a previous night of amusement. To do as others did, he must partake of such beverages as were offered to him at his places of resort. He discovered, after a while, that drinking somewhat freely invigorated his spirits, gave his cheek a healthy glow, and added a new charm to his freedom of manner. He finally acquired the reputation of being one of the finest, care-for-nobody fellows in existence. But why trace a progress that almost every eye has watched! There stands Edwards now, his countenance bloated and discolored—his coat torn half in two, the effect of a recent wrangle in a bar-room—wretchedness in his heart—profanity on his lips. His estate is stripped to pieces by executions; his mother is in her grave, without a stone to mark where she lies; he has a heart-broken wife and coarse clad children supported by the public funds; and he is a day-laborer—still haunting places of amusement from habit, a waiter where he was once a leader. Does he think of all this?—he had once a heart to feel, and a mind to reflect. No! vice has made him as low in soul as he is in society. He is gone; and I am glad to be relieved from so painful a subject of reflection.

How have my thoughts wandered! The dancers are gone, or going; the musicians are nodding as they scrape; the decorations of the walls decorate the floor. The lights are fast dropping into darkness; every thing looks tired, dusty and heated. Let me be gone.

What a contrast, to come out into the clear morning air! Lights are glimmering here and there from the windows of the retiring dancers. They are casting aside their solded dresses and ornaments, which seem to defy the pettish attempts of their drowsy fingers to unloose them; while they think upon the events of the night—the night of anticipated pleasure, which, whether enjoyed or not, is over. Would that I knew how

many, as, weary and exhausted, they fling themselves on their couches, can say with truth that it has been a night of happiness.—*Young American's Magazine.*

From the Buffalo Commercial Advertiser.

The Child and her Father. Santa Claus and a Secret that is not a Secret.

More than a year ago, a father led his little daughter along the outskirts of some woods. It was the glorious season of summer, and in pleasant guise he amused her by teaching many a lesson which she could only have learned imperfectly from books or within the narrow walls of the school-house. Along the way where their feet trod, grew many simple and beautiful flowers, which she eagerly gathered; and as she handed them to her father, and asked him to carry them for her, he showed her what wonderful regularity there was in the leaves and petals of each, and that many flowers, seemingly insignificant, produced useful seeds or delicious fruits. They watched the ant and the bee gathering their various stores, and he told her that not in vain lived the destructive grasshopper with its chirping music of happiness and praise, and the gay butterfly that flaunted heedlessly along or idly stopped to display its gorgeous colors upon the handsomest leaf or flower that it could find; for though their existence was improvident and brief, it was full of pleasure to them, and they did not know how soon it would end. As he told her how they helped to people solitude and make desolate places cheerful, he bade her notice a small bird that was carrying a grasshopper as food for its young. He carefully watched to see where the bird went, and drawing gently aside the leafy branches of a bush he showed the child how the young birds were fed; and in how secret and safe a place the mother had built her nest. The child was wonderfully pleased to see how firmly it hung upon the twigs, and interwoven with the feathers and dried grass she found a small piece of ribbon which she had flung away as useless many months ago. The terror of the parent-bird did not escape her notice; and the father knew that in the wild place which seemed to him as a sanctuary, he had taught his child the desired lesson, for she exclaimed, "Father, I did not know before, that here, away from the houses, and where scarcely any one ever comes, there were so many beautiful things, and so many happy little creatures that lived among and enjoyed them all."

She had learned that nothing is made in vain, and, though imperfectly understood, the truth that sufficient means of happiness are provided for all creatures, had dawned upon her mind.—She saw that she had pleased her father, though she knew not the reason—and her own heart felt the ennobling influence of the great truth she had unconsciously uttered. Their hands grasped each other more closely as they entered deeper into the forest. He showed her how even the mosses and lichens, that seemed to blight the trees, fed in due season the wild deer; and as they gazed upon the lofty and overhanging forest-boughs, he called to her remembrance the arches of the large church she had seen in the far-off city; and said that whatever else man may have discovered, he yet, when he would build a temple, can find no style more appropriate than was suggested to the heathen, who sublimely thought that as the Deity was not to be confined within the buildings of man, they would worship him in the open air and beneath the forest. But nobler yet is the Christian's faith, which knows that His presence fills a space far greater than the canopy of the sky, that He is in the meanest hut, and that He speaks in the heart of each true worshipper, and prompts every good deed of the smallest child.

When the father and his child came out of the forest a very different view was before them.—They stood on some high land, and as she saw that the broad and life-creating sunshine seemed to beam upon every thing, he told her that though it might be seen that here and there small places were shaded, it was because some plants grew best there, that the cattle might find a cool retreat, or for some other wise and perhaps unknown purpose. They sat down by the side of a deep gully, and he told her how a spring on the hill, helped by many rain drops, had by flowing constantly worn away by little and by little that passage through the solid rocks, now so deep that tall trees grew entirely within it, and she could scarcely see the weak stream at the bottom.

A small kind of beautiful fern grew plentifully around them. No plant in the American woods is more beautiful, or has been less noticed in books. It is supported by a single stem, and is like a miniature representation of a tree that grows only in tropical climates. Often had the child gathered these feathery plants, and having thrown them into the air, watched, how, as if instinct with bird-like life, they would descend gracefully, slowly, and erectly, the stem striking the ground first, as if it tried to resume a place among its flourishing companions. She had often carried them home, but no plant so much resembles all unlawful pleasure, for it withers as soon as it is gathered. So like the air is the color of its slight stem, that in the shade, where it is chiefly found, its leaves seem to float unsupported—like the Indian juggler in the child's picture book. The father looked at his happy child and the place seemed to him like a fairy scene. He wondered less that ignorance had peopled the world with unreal spirits of beauty and goodness than that any man could be deemed wise who passes by such places without seeing and hearing the spirit that dwells in them.

That must have been a natural idea, for, as if she read his thoughts, the little child sprang up, and with more gesticulation and accuracy than even her father thought was possible, she told him the story of Cinderella, with all its wonders. It is a silly tale if literally understood. The child liked it because it showed the defeat of pride and how the humble had attained greatness. In ear-

lier days the father too had often read with a thrill of pleasure about a fairy land—

> In some romantic tale,
> Where dwarfs, if good, are sure to thrive,
> And wicked giants fail.

As he grew older he placed that hope among his childish errors, but, yet more experienced, he had seen that if the good man is not happy it is because he supposes that money or land are wealth, and seeks for worldly distinction instead of the enjoyments of an approving conscience. So he had returned to the belief of his childhood.

But to the child, fairies were real beings. She asked if there were fairies now; said that Santa Claus was a fairy, and begged her father to catch one for her to keep. "Then father," said she, pressing her hand upon his brow, "I can have all I wish for, and I'll take good care of you. The grey hairs on your head shall be dark again, and you and I will live and grow old together. Mine should be a busy little fairy, for I know I could always find some good thing for him to do." But the child herself was as a fairy to her father, and with her smiles and prattle so taught his heart, that he loved for her sake all that is beautiful and true, as if he were yet a boy.

Months came and went. Almost every living thing had left the woods and fields, and on Christmas eve, after the child was at rest, the father sat by his fireside, sleeping, if that state could be called sleep when visions more distinct and spiritual than those of his waking moments were present with him. If he saw some unreal things, there was at least as much truth and reality in them as in the opinions which nearly all the world believes to be true and takes for its guidance.

Before him stood or seemed to stand Santa Claus. Whether he came down the chimney or through the keyhole we do not know. It is just as easy for a spirit like him to come in one way as the other. But there he was, large and good natured as life. We won't stop to tell you how he was dressed, except to say, that without entirely disregarding the fashions of the time when he lived upon earth, he was dressed chiefly with regard to comfort and the season of the year, and that his clothes were not so tight as to prevent his eating a Christmas dinner without inconvenience—and that is saying a great deal. He looked like a jolly, plump, good-natured Dutchman, neither narrow-faced, nor narrow-chested, nor narrow-souled. Indeed those sharp nosed people who think that an intellectual face must be something like the blade of a razor, keen in the front, "long, lank, and lean," and chiefly consists of two smooth sides, might not quite have liked that honest phiz. Indeed some men might have hated it for its good-nature, and despised it for its frankness. The man who talked so wisely with his child now felt as if he was in the presence of a superior being, but could not help wondering what, when Santa Claus lived on earth, had been his business, and whether he kept a variety store. If he had, it was plain enough that he always bought his goods for cash, and never anxious and fretted to keep up his credit, appeared at the receipt of custom to get a note discounted. But these are merely human speculations, and are unworthy of their subject.

Santa Claus glanced merrily round the room—which was full of sleeping children, and at once proceeded to perform the duties of the night. Now it is very well for those who have goods to sell to have Santa Claus painted as if he carried a pannier on his back. People are so stupid that very likely they would not believe it could be Santa Claus unless he carried such a load. But no one supposes that such a basket could hold half the presents he bestows. The truth is whatever he wishes to give comes into his hand as soon as the wish is formed—and as he knows enough to choose the easiest way of managing his own peculiar business, the probability is that the popular notion of the clumsy pannier is a vulgar error, entirely unfounded in fact.

No printer ever handled the magic types more nimbly, no conjurer ever produced unexpected articles in more rapid succession than he, reading the wishes of the children as they lay asleep before him, gave them almost in every case the very things they had wished for and dreamed about for a month previously.

By some means or other a dark-looking child with crisp, curly hair appeared among the rest. Santa Clause was going to give it a whip and a military cap, but he started back astonished, and these bad play-things disappeared. The man secretly wondered why his saintship did not see the color of the child before he read its wishes, but the fact is that spirits commune most readily with mind and thought—and that the shape of the body, the color of the skin, or the curve of the hair, are always the very last things that they look at. It was curious to watch the changes of the various objects in Santa Claus' hand, as he continued to look upon that child. First there was a newspaper, then pen and ink, then a musket, a sword, and one after another in less time than we are in writing about it, other objects assumed a shape and vanished. But at last appeared two or three spelling-books with pictures, and the man, who continued to watch, says that he saw plainly another Book, the name of which we will not mention, though it is familiar to us, and is the best of all gifts for the season.

When Santa Claus had attended to the wishes of all the good children, he looked upon the man who sat at the fire-side and who, seeing so many pleasant things given away, began to think he ought have some share in them. Santa Claus saw this in a minute, for the man's thoughts were all reflected in his ghostly eye, just as plainly as the image a of child is reflected in the eye of its father.

"You have a pleasant life," thought the man as Santa Claus looked at him.

"Yes," said his saintship, in very tolerable English. "I do a great deal of good. Children are always glad of my visits and I take care to

give only such gifts as their parents approve of. I have a very happy life. I wander all over the world inventing pleasant things to give away at Christmas."

"You must have seen a great deal of the world. But why," thought the man selfishly, "don't you give something to grown-up people also?"

"Because my power is very limited, and men think themselves too wise to value any such presents as I could give them, and yet a child's thought can often untie the Gordian knot of men's errors and sophistry. I like children best. They are more easily pleased."

"But with your earnest wishes to do good you must be annoyed to find your power is so limited."

"That," said the spirit, "is the source of much human excellence, but it is also the besetting folly, the great curse of man. He is always anxious for more, and is miserable because he cannot possess every thing. If he had every thing he would be more miserable than he is now. We spirits know better. Each has his appointed office to fulfil, and even the greatest of us has limits beyond which he cannot pass."

"You have seen a great deal of the world," thought the man, "and have picked up much information. Have you not some little scrap to spare, something to tell me that I could take out a patent for, and so grow rich."

"At your old tricks again—poor man. My predecessor who gave the woodman an iron axe instead of one of gold, knew man well. I can't tell you anything that you don't know already. Man is not unhappy so much from ignorance merely, as because he does not act upon the knowledge he possesses. But I may remind you of something that you know already. Bring me some candles."

All at once the man found himself holding as many candles as he could lift, and Santa Claus bringing out a small lamp, told him to light the candles and put them in the windows of the house. He lit them all from the flame of that small lamp, and the man could not help noticing, though it is a very common occurrence, that tho' the candles illuminated the whole house in the most splendid manner, the little lamp by which they had all been lighted, shone on just as before, as if it had done nothing strange, and was ready to light as many more.

After all, there was something peculiar in the light, for it shone into every corner of the house and many things which the man had always thought were dull, useless and contemptible, seemed bright and pleasant, and as they were all in their proper places he saw that they were all very useful. He had often thought that he lived in too small a house and that many things about it were extremely inconvenient, but as he happened to look into a mirror he saw that he alone had been to blame—that his discontent was his own fault, and that even each of his bad passions would have borne good fruit if it had been properly grafted and tended.

They both went to the front of the house, and the man was astonished at the clearness with which he saw everything. There were more people before the house than he had ever seen in all the rest of his life, and each man seemed to have a candle that he wanted to light. But they were fighting and quarrelling as to what the true light was. Many of them insisted that there was only one way to the light, and stood speechifying at the different entrances to the house; and each tried to prevent men from going up the entrances which another man liked. Thus very few more could light their candles though there was light and room enough for them all. In this struggle for happiness many men were thrown down and trampled in the mud, and the wick of their candles was so wet that it hissed and spluttered when the flame was applied to it, and could scarcely be lighted at all. There were a great many false lights, some of which it was difficult to know from the true ones. A very yellow looking fellow, dressed in filthy rags, professed to have the true light, and he had a great many followers. Indeed, every one had a notion of his own upon this subject, and most people seemed to hate those who differed from themselves.

The man looked at a crowd that seemed long ago to have gone past the place where the light was. He could see them by the blue light of the large torches they carried. They had gone beyond the line whence return was possible. They had fought and quarrelled. Some held up the standard of the Crescent, and he saw with sorrow that the sign of the Cross was above others of them. But alas! no light from Heaven shed a lustre upon the divine emblem which they profaned. He looked again and saw that they did not hold the Cross, but an idol of their own making. They had insisted that every man should think as they thought, and, kindling torches at their false light, they set fire to piles of faggots and burned many good men who were willing to suffer for the sake of the truth.—Nearly all ever the world he saw that some such contention was going on, and had existed almost ever since the world began. "How," said the man, in despair, as he heard the noise of spiteful controversialists, and the mingled moans and war-sound of contending armies—"how is it possible that I shall know what is the true light and teach my child the way to happiness."—He feared that he was betrayed by some of the false lights that have led so many to destruction, and he found that Santa Claus had changed, as living beings can change only in dreams, or when their minds are kindled by the true light, which tries to shine upon every one, and which would shine the more brightly and warmly if it lit every man in the whole world.

"It is not," said he, "for me to say of what elements or tints this light is composed, nor do I

suppose that, rightly understood, it can ever be wholly extinguished, or can exist only in one form or shape. But this, so far as my knowledge extends, is always its characteristic, that those who are illuminated by it seek with the greatest possible zeal and gentleness to make others partakers of their own happiness, and find that the more widely it is spread the greater is the portion that remains for themselves to enjoy. We have not been dealt with, as by a grudging Creator, who designed that the means of happiness should belong only to a few, and that they should grasp so large a share that life loses its pleasure for them. Away with the thought that man can only be happy in proportion as he takes from others. Alike true in political economy, mental philosophy and religion, is the great fact that abundant means of happiness are provided for us all—that the highest and most divine pleasures are not such as a few only can enjoy. This is a great truth, that includes all others."

When the man awoke, he remembered his dream, and told it in the morning to his happy little daughter, who was sure to listen with much interest to everything that her kind father told her, for they were always the most intimate of friends, and even when she had done wrong she was not afraid to tell him of it, for he taught her gently how to avoid future error, and was slow to blame harshly. And now, though he can see her no more, she often comes to him in his dreams as a little angel, thanks him for the lessons he taught, says that she is not in her grave, puts good tho'ts into his mind, and tells him that they shall one day meet again.

Christmas.

How cold, how gloomy it is. The window panes are covered with ice; the morning twilight extends its hand to the evening twilight, and the dark night entombs the day. In Northland however, the midday has a few bright moments; the sun sheds still a few feeble beams, then he quickly disappears and it becomes dark. Farther up in the country, people know nothing more of day—the night endures for months.

They say in the north, that "Nature sleeps," but this sleep resembles death; like death, it is cold and ghastly, and would obscure the heart of man, did not another light descend at the same time, if it did not open to the heart a warm bosom and animate it with its life. In Sweden they know this very well, and while everything sleeps and dies in nature, all is set in motion in all hearts and homes for the celebration of a festival.—You know it well, you sons of the house, you who bite your nails in order to puzzle out "what in all the world" you shall choose for Christmas presents. Thou knowest it well, thou fair child, who hast no other anxiety than lest the Christmas should lose its way and pass by the door. You know it well, you fathers and mothers with empty purses and full hearts, ye aunts and cousins of the great and immortal race of needlewomen and workers in wool—ye welcome and unwelcome uncles and male cousins, ye know it well, this time of mysterious countenances and treacherous laughter! In the houses of the rich, fat roasts are prepared and dried fish; sausages pour forth their fat, and tarts puff themselves up; nor is there any hut so poor as not to have at this time a sucking pig squealing in it, which must endeavor, for the greater part to grow fat with its own good humor.

It is quite otherwise with the elements at this season. The cold reigns despotically; it holds all life fettered in nature; restrains the heaving of the sea's bosom; destroys every sprouting grass blade; forbids the birds to sing and the gnats to sport; and only its minister, the powerful north wind, rolls freely forth into gray space, and takes heed that everything keeps itself immovable and silent. The snow birds only—those optimists of the air remain merry, and appear by their twittering to announce better times. At length comes the darkest moments of the year, the midnight hour of nature,; and suddenly light streams forth from all habitations, and emulates the stars of heaven. The church opens its bosom full of brightness and thanksgiving, and the children shout full of gladness, "It is Christmas! it is Christmas!" Earth sends her hallelujah on high!

And wherefore this light, this joy, this thanksgiving? "A child is born!". A Child! In the hour of night, in a lowly manger. He has been born; and angels have also sung: "Peace on earth!" This is the festival which shall be celebrated—and well may ye, you dear children, sound forth your cries of joy! Welcome, even though unconsciously, the hour in which this friend, this brother, who was born to you; who shall guide you through life, who shall lighten the hour of death to you, and who one day shall verify the dreams of your childhood; who shall stand beside you in necessity and care, and shal help to answer the great questions of life.

Rejoice, ye happy children, whom He blessed! Rejoice and follow after Him! He is come to lead you and all of us to God!

These are inexhaustible, love inspiring, wonderful, entrancing thoughts in which man is never weary of plunging. The sick soul bathes in them as in a Bethesda, and is made whole; and in them the healthy find an everlasting life's refreshment. Of this kind are the thoughts of that child—His poverty, His lowliness, His glory!

It is a beautiful and wise ordination, that the life of the church unfolds itself most richly at that moment in which nature lies dead. For this receive thanks, Thou all-good Father!

A Wild Animal Suckled by a Woman.—We noticed the fact at the time, that while Raymond & Waring's Menagerie was at this place some six weeks since on exhibition, a Bengal tigress, belonging to it, gave birth to a cub, the male parent of which was a lion. While in New York the other day, we were informed by a gentleman connected with the Menagerie, that the little cross-breed is alive and growing finely—a woman in the city, who had lost her child, having taken it to raise at her breast! We are told that Romulus and Remus, the founders of Rome, were suckled in infancy by a wolf; but we never heard before of a woman adopting a young ferocious animal, and suckling it as her own child! The step-mother to the half-lion and half tiger, keeps her charge in a bureau drawer; and in the morning when her husband gets out of bed, he takes the little sharp-clawed fellow out, and places it in the bed with his wife to suckle! When hungry, the little fellow makes a terrible racket, and seems half crazy to get at the breast from whence it draws its sustenance! Though it shows every sign of attachment and fondness for its foster-dam, we should advise *her* to wean it as soon as possible. This curious cross-breed is a male, its head and foreparts being the complete lion, the mane already beginning to show itself; while its body is striped, and bears full resemblance to the tiger.—*Eastern State Journal.*

For the Western Literary Messenger.

To ——.

Hast thou ever dreamed I loved thee,
In thy fancies, day or night?—
If thou hast, how did it move thee?
With proud scorn or dear delight?
Did it waken thy disdain
Or a dream of love again?

Oh! I love thee! says my heart,
In a whisper, sweet and low—
And thou hast become a part
Of my being—till I know
That my life has come to be
But one dream of love and thee.

Love and thee!—the earth and sky,
All of beauty they possess,
All I see of pure and high,
Tell me but thy loveliness
I but love them when they bear—
Beauty such as thou dost wear.

Yes, I love thee, but I dare not
Breathe a thought of this to thee,
You for my true homage care not.—
What I feel is nought to thee,
Still *I love*, and thought of bliss—
None can hinder me from this.

Rural Department.

Reflections for the Farmer.—There never was a class of people more blessed or more prosperous than the farmers of the United States now are. Their crops are abundant and readily command cash at good prices; while every necessary of life which they wish to purchase, especially manufactured articles, was never so good and so cheap. Then the facilities of transportation and locomotion have been greatly increased and improved, and this is another source of positive benefit to the farmers. With these physical benefits, those of an intellectual and moral kind have kept rapid pace. Books have been cheapened and multiplied incalculably. Schools, especially those of a higher order, have increased—and churches and faithful ministers abound. Do you think of these things as you ought? and are you striving to take advantage of them to improve your moral, intellectual, and physical condition to a greater extent? Those who act wisely will make the most of these great blessings every hour; for they cannot always expect them to be so abundant, and besides, to *improve* them *now* is the *surest* way to *continue* them.

One certain means of effecting improvement among the farmers is what we have heretofore often recommended—the formation of clubs in each neighborhood for weekly eveving meetings in the winter. It is not necessary in these to confine yourselves entirely to agricultural discussions but such things as have a collateral bearing on agriculture may occasionally be profitably introduced; such as the geology, the botany, and the arboriculture of the country; nor should we consider the moral means of improvement of the heart and mind entirely out of place in these evening discussions. But our homily must end.

We have finished another year of our periodical being. Let us be thankful to the Great Author of all things for its many benefits, and look forward with renewed hopes and exertions for a continuation of his favors.

Building Coal-Fires.—As anthracite is now used it makes a fire that is unpleasant, expensive, irregular in temperature, and productive of great dust and disagreeable and unhealthy gases, which are wafted about to the great inconvenience and annoyance of the inmates of every house in which it is used. If properly and judiciously used, the anthracite fire is of uniform temperature, free from deleterious gases and annoying dust and ashes, and with a saving of from twenty to thirty per cent., as may be seen by the experiment.—Anthracite should be carefully broken into uniform pieces of the size of a nut, and in building the fire in the morning as little charcoal or other kindlers used as will assist in starting the ignition with a blower. When the whole is well ignited, cover it with the cinders obtained by riddling or sifting the extinguished contents of yesterday's grate, including those of the size of a pea, or even smaller. When this, too, has become partially ignited, the whole should be covered from an inch to an inch and a half, or even two inches thick, with a paste or mortar made by mixing the ashes sifted from the cinders with water to the consistence of mortar for plastering. The fire should be left in this situation undisturbed until almost bed-time, or until the room begins to get cool. The crust should then be broken into pieces of the size of an egg, levelled, well wet with water, beat or patted down into an even cover, and left until the next morning. Thus the poking of the fire is dispensed with altogether, and the only moving of the ashes is the *removiag* them from the fire-place or grate into the hods to be carried out of doors, to be sifted preparatory to making the fire. Fires built in this manner are of even temperature, free from dust and disagreeable and deleterious gases, and at a saving of from twenty to thirty per cent., in the expense of coal.—*National Intelligencer.*

How to Increase the Productiveness of Trees and Plants.—In his valuable treatise on the culture of the apple and pear, Mr. Knight has the following remarks, p, 83:

"In the garden culture of the apple, where trees are retained as dwarfs or espaliers, the more vigorously growing kinds are often rendered unproductive by the excessive though necessary use of the pruning knife. I have always succeeded in making trees of this kind fruitful by digging them up and replacing them with fresh mould in the same situation. The two great luxuriance of growth is checked, and a disposition to bear is brought on."

Some years since, we saw it stated in one of our agricultural exchanges, that if beans, a few inches high, were transplanted, they would not perhaps attain the *height*, but yet flower and ripen sooner than if not. We made the experiment three seasons in succession, and found the assertion fully verified by the result. The celebrated Dr. Darwin, author of the "Zoonomia," "Botanic Garden," &c. &c., says:—"It is probably that confining the roots of cucumbers and melons in small garden posts would stop the too luxuriant growth of the vines, and make them more fruitful, if care was taken to supply them with water more frequently, and with sufficient nutriment, by mixing with the water some of the carbonic black fluid which has drained from a manure heap."

Population of Milwaukee.—The census of our city, under the law of the last legislature, is almost completed. It shows an astonishing increase. The aggregate population will not vary much from 13,500. In the 1st of June, 1846, only 18 months ago, it was but 9,640; and in '40, only seven years ago, Milwaukee had but as many *hundreds* as she can now count THOUSANDS.—*Sentinel.*

For the Western Literary Messenger.

Tears.

Pleasant is the joy of grief. It is like the shower of Spring when it softens the branch of the oak, and the young leaf tears its green head.—OSSIAN.

Gentle, refreshing is the influence of that sorrow which calls forth from its "thrice hallowed cell" the treasured tear. Not when all the mind's powers are weighed down with the utmost of misery, not when guilt has blackened over the last page of the heart-book, when the world scorns or the trusted betray do we weep; but is it not when hope, glorious day-beam-hope, breaks the spirit-clouds above us, or association "sweeping the chords of memory's harp," returns in thrilling melody the joys of the past—is it not then that emotions, refined and beautiful, too beautiful for words, find expression in the eloquent tear! Yet, there are tears which have their fountain in real and bitter sorrow; still in such sorrow some relieving feature must be found: it is not the helpless and braine-crushing wretchedness of him who stands dumb and tearless beside the grave which is closing over his *all* of happiness and peace. Let the sufferer but weep and the surcharged bosom will bear on; let him but weep and the burning selfishness of grief which preyed on all the soul's sweet life, is changed to that tranquil pensiveness which is dearer to the wounded spirit than to the votaries of gay pleasure, are their moments of highest enjoyment.

Yes, precious and beautiful are tears: beautiful the pearly drop which, at the call of sympathy, glitters on the silken eyelash, and beautiful is that "shining moisture," which, adding soft lustre to the beamy glance of youth, shows a heart overflowing with pure and exquisite delight. But it is to the dejected, despairing child of misfortune, begirt with "cares that tear the bosom which they soil" that the emotions which produce tears, are precious as to the parched earth kind summer showers, bearing away the deforming dust from the spirit's beauty and reviving the fair but drooping flowers of high and holy feeling.

THE RECLUSE.

AN ELEPHANT AT LARGE.—The Philadelphia Ledger furnishes the following notice of a difficulty with the elephant at the Zoological Institute:

The affair occurred while the keeper was cleaning and preparing the animal for the afternoon exhibition, in the recess, in which he is kept, when the chain, with which he is usually fastened to a stake in the ground, being loose, he walked toward the ring.

The keeper called him, and as he did not stop when spoken to, used his goad, and so irritated the animal that he turned and made two passes at the unfortunate man, tossing him for some distance. He fell in front of a cage, containing a hyena and wolf, and this, as well as a stove in front of it, were overturned by the enraged animal, while making a third pass.

The cage fell upon Kelly, fracturing both of his legs, the right one being so severely crushed that amputation was subsequently found to be necessary.

After this the elephant returned toward the ring, but was driven back to his recess by the powerful dogs belonging to the establishment; but this increased the rage of the animal, and he vented it in breaking up the cage before mentioned as having been overturned, and the animals it contained were set at liberty.

He then re-entered the ring, where he caused some damage to the railing. By dropping a noosed rope into the ring, from the dome of the building, his forefeet became entangled in it, and crippled, the keepers succeeded in driving him into the small gangway, near the western door on Walnut street, where his power for mischief was prevented, by fastening his tusks by a chain to his fore feet, and the effectual use of the harpoon accomplished his submission.

The celebrated Herr Driesbach then took the matter in hand, and at his command, the animal proceeded to the ring and gave proof of his good humor being restored by the most implicit obedience to all his acquirements.

The fear that the enraged animal would demolish the cage of the lion or tigers, had previously induced the proprietors to have the means at hand for his destruction, in case that their efforts to overpower him should not succeed.

A cannon was therefore procured, charged with cannister, and stationed in front of the building, on Walnut street, to be ready for any emergency, but fortunately his submission rendered such a recourse unnecessary, and this valuable animal took his customary part in the performances last evening.

The affair fortunately occurred at a time when a very few persons were in the building. Had it been delayed but a short time, it would have occasioned a dreadful scene of alarm, as a large number of children belonging to a Sunday school were about entering the building at the moment of the occurrence.

The elephant it appears was the well known Columbus. If our recollection deceives not, this is not the first evidence that he has given that he is a refractory and dangerous animal.

MARRIAGE. — Wherever woman plights her troth, under the sky of Heaven, at the domestic hearth, or in consecrated aisles, the ground is holy, the spirit of the hour is sacramental. That it is thus felt, even by the most trivial, may be observed at every wedding ceremony. Though the mirth may be fast and furious before or after the irrevocable formula is spoken, yet at that point of time, there is a shadow on the most laughing lip, a moisture on the firmest eye. Wedlock, indissoluble, except by act of God—a sacrament whose solemnity reaches to eternity—will always hold its ranks, in life as well as literature, as the most impressive fact of human experience. He is a slight observer, who sneers at its prominence in dramatic writing, whether of the stage or the closet, the play or the novel. It must always be so. If Government, with all its usurpations and aggressions, has appropriated history, let the less ambitious portions of our literature be sacred to the affections—to the FAMILY, based in conjugal and Parental love as that institution is, and less to the STATE, which hitherto in the world's annals, has been little else than the sad exponent of human ambition.—*Cincin. Signal.*

EDUCATION.—The multitude think that to educate a child is to crowd into his mind a given amount of knowledge; to load the memory with words. No wonder then they think everybody fit to teach. The true end of education is to unfold and direct aright our whole nature. Its office is to call forth powers of thought, affection,

will, and outward actions, power to observe, to reason, to judge, to contrive—power to adopt good courses, and to pursue them, to govern ourselves and to influence others, to gain and spread happiness. The intellect was created, not to receive passively a few words, dates and facts, but to be active for the acquisition of truth. Education should inspire a profound love of truth, and teach the process of investigation. A sound logic, by which we mean the science and art which instructs us in the true laws of reasoning and evidence, is an essential part of a good education.—*Channing.*

Life in the Mexican Capital.

We have received a file of the new Anglo Saxon newspaper, the "*North American*," published in the city of Mexico. It is a large and handsome sheet, and its mechanical execution is in a style that would do no discredit to any city in the United States. It is conducted with much spirit and ability by Wm. C. Tobey, whose effusions under the *nomme de plume* of "John of York," in the daily papers of New York, Philadelphia and Boston, have rendered him somewhat widely and favorably known.

As the best means of giving an idea of what life is in the Aztec Capital under the American dominion, we have made somewhat copious extracts from the North American, which will be found below :—

Assassinations.—A citizen told us the other day, that some of the lowest orders of the population are flattering themselves with the idea that they can decimate our army by assassinations.—To say nothing of the villainy of such a mode of warfare, we can assure all who entertain such an idea, that it is preposterous in the extreme. During the first three or four days after our army entered the town, some half dozen assassinations occurred, but of late we have heard of none. Our men are generally on the look out for such favors, and are as handy with the bowie-knife as most people, and extremely cunning in the use of the revolver. We should suppose that all citizens who desire peace and good order would frown down any attempt, come from what quarter it may, to incite the mob to such an infamous proceeding. Any serious demonstration of that nature will be prejudicial to others than the mere actors. While it could result in little or no injury to the American army, the citizens generally would be the sufferers. We apprehend however, that all sober men, whether soldiers or followers of the army, have little to fear. Those who invite personal injury by their excesses, deserve little sympathy.

One of the benefits arising from the occupation of the city by the American army, may be witnessed at the Custom House where hundreds of indigent females are employed at higher wages than they have ever before received for like labor, in making clothing for the troops. Many of these, we are told, are relatives of officers and soldiers in the Mexican army, the absence or death of whom has left them destitute. It is a source of gratification that, while our officers could not avert the calamities which have befallen these people, they are doing every thing in their power to alleviate their afflictions.

Robbery of the Diligencia.—At a quarter past five on the morning of the 4th ult., the diligencia about starting for Queretaro was attacked in front of the Panteon de Sta Paula by six men, who after having robbed the passengers, five or six in number, cooly walked off. These robberies appear to us most ridiculous. There has occurred a case in Mexico, where fourteen passengers, most of them military men, coming together in two diligences, have been forced to deliver up their loose change to *two determined* bandits.

Gal-laxy.—The fair ones of this far-famed city have subscribed six dollars for American Stars "for one month."

> "Fairest of Stars, first in the train of night
> If thou belongs't not to the dawn."

Reub thinks that "blarney-stones" are a good deal cheaper since the earthquakes.

The Turf.—We understand that arrangements are in progress for a "meeting" within the coming week, at which a celebrated Spanish caballa and an American horse are to contend for a respectable purse. Great sport is anticipated.

Mendicants.—In no city we have visited have we ever seen as many mendicants as in this, the capital of the Mexican republic—and more objects so absolutely dependent upon public charity. Almost every beggar we have seen was blind or maimed and unable to earn a livelihood. It is a matter of surprise to us Northmen, that in a city where every man, woman and child is a devoted Christian, some means has not ere this been taken to provide a place of refuge for these stricken people. One of the holiest and most beautiful precepts of our Saviour is charity, and they who dispense it are registered among the most faithful of his servants. A mite taken from the fund daily squandered in sensual enjoyment, would lighten many a heavy heart and soothe the sorrows of hundreds who daily suffer more than the pangs of death—the gnawings of unsatisfied hunger.

The Cross of St. George.—It must be a source of pride to every English resident of Mexico that, while citizens of this country are almost daily robbed on the road, the English courier passes unmolested from Mexico to Vera Cruz and *vice versa*. While the robbers would relieve the Priest of his cross they never lay hands upon "The meteor flag of England."

Pretty Incident.—At the National Theatre, a few evenings since, the Orchestra, after having played Hail Columbia, struck up the Marseilles Hymn. As if struck by an electric shock, the American officers in the house rose and gave three cheers. The Hymn of Liberty, no matter what its origin, will ever find a response in American hearts.

The Toad.—That poor, despised and harmless reptile, is admirable in its proportions, and has an eye of such transcendent beauty, that when I find one I place it on my hand to view it more minutely. Its skin, too, so completely adapted to the subterranean places into which it goes for shelter, is well worty the attention of the philosopher. As this little animal is innocuous, I feel sorry when I see it trampled under foot by inconsiderate people, who have learned from their grandmothers that it is full of venom.—*Essays on Natural History, by Charles Waterton, Esq.*

☞ At St. Louis on the 15th, *Harrington*, of Rockwell & Co.'s Circus, shot Hiram Franklin, the well-known Equestrian of the same Troupe, and wounded him slightly. *Harrington* afterwards committed suicide, by shooting himself twice in the head.

Editorial Department.

J. CLEMENT, EDITOR.

Demise of a Revolutionary Soldier.

Died in Collins, Erie Co., on the 20th ult., Mr. JOHN STANCLIFT, at the age of 93 years.

Mr. S. was born in the town of Chatham, Conn., Sept 26th, 1754. At the age of six years, he removed with his father's family to East Hartford, where he lived till he was sixteen, when he removed to Torringford. Here he remained till the commencement of the Revolutionary War. Soon after the battle of Lexington, while yet a minor, fired with patriotic zeal, he enlisted in the continental army. He joined the regiment under Col. Henman, and immediately went to Crown Point, and thence to Canada. He was in the memorable siege of St. John, which lasted from the 8th of October to the 2d of November, and which consisted of an almost incessant cannonading, and was attended with much suffering on the part of the American army, from rain, cold and hunger. Having served out his time of enlistment, he went home.

In 1776, hearing of the fall of Gen. Montgomery, with whom he had previously formed an intimate and endearing acquaintance, he enlisted again for one year, in the regiment of Col. Russel, and immediately started for Canada. On the route, the regiment met the main army at Three Rivers on their retreat under Gen. Arnold. The reader will recollect that when they had retreated as far as Chambly, that the small pox broke out in their midst and made most fearful ravages; and till they arrived at Ticonderoga, via., Crown Point, constant and painful mortality prevailed. "At Ticonderoga" writes the deceased in some private notes to which we have access, "my cousin died, and myself and two others buried him. My messmates all died, and my time being out, I went home alone."

In 1777 he enlisted once more, joining the regiment of Col. Bradley. This body forthwith marched through New Jersey into Pennsylvania, where they joined Washington. Mr. S. was in the engagement at Germantown, which occurred on the 4th of October, (1777) and narrowly escaped by flight. "Here" writes the deceased, "was a dreadful scene! our whole brigade facing the enemy within eight rods, we stood and fired into their solid columns till they had closed on three sides of us, when Major Platt, at the top of his voice, said—'*every man make his escape.*'—The only chance for escape was over a fence on the left. One man went over by my side, and fell and said he was a dead man. I saw the hole in his back as he fell!! It was in a cornfield, and the stalks seemed to fly as if the balls were as thick as hail! I thought there was no hope, and walked a step or two—then ran, and the Lord delivered me."

Mr. S. went to Valley Forge, when his term of enlistment expiring, he took a final leave of the tented field. Soon after this he was married; and here we might add that he lived with his wife, in a peaceful and happy union, for sixty-one years. In his thirty-third year he experienced religion, which enhanced his comforts and solaced his griefs for sixty years, and rendered the setting of his sun, after its journey of almost a century, serene and glorious. He was a member of the Congregationalist church.

In 1789 he moved to New Hartford, Oneida Co., in this State. He afterwards went to Canada, where he remained till 1816, when he removed to Collins. Here he lived till his death, an affectionate husband and parent; an exemplary christian; a respected citizen and neighbor, and "an honest man." Peaceful be the sleep of the brave and good.

THE KNICKERBOCKER for December is well spiced as usual, Messrs. Saxe, Hosmer, Parkman, Chilton, Palmer and others having done what they could to enhance its interest. The following poem is seasonable:

A WELCOME TO WINTER.

Blast of the North! that exiled long hath roamed,
Where Winter chained by flowing streamlets lies,
Where the fair sun with ceaseless light has domed,
Through half his yearly course, the starless skies;
Stern Winter's march the trumpet-voice doth sound,
His prison-house thou hast at length unbarred;
No more the sun, bright sentry! in his round
Unquenched by night, the strong domain doth guard.

Then welcome, Winter, from the dreary clime
Where verdant landscape never greets the eye,
But iceberg-monuments arise sublime,
To mark the grave where buried Nature lies;
The autumn leaflets, as in sore amaze,
Curl, shrinking from thy touch, and drop in fear;
When in the lake-spread mirror thou wouldst gaze,
Thy chilling breath hath dimmed its surface clear.

Yet thou art welcome, with thy elfin train,
That shrieking gambol o'er the storm-swept heath;
Whose hands have pictured on the frosted pane
The dream-born fancies caught from sleepers' breath;
Welcome to us!—thy iron reign doth bring
The joys that cluster round the social hearth:
Where the glad voice of Innocence doth ring,
And guileless youth rejoices in his mirth,
And home is made the paradise of earth.

LITERARY PREMIUMS.—We call particular attention of our subscribers to the inducements offered in the shape of Literary Premiums to any one who will make exertions to extend our list. There are now many *towns* which receive a number of papers sufficient to obtain the largest prize offered. All that is necessary, is for some one to just make the effort and procure the subscriptions, forward us the money, and we will send the Books carefully packed to any place on the line of any regular Express, free of charge. See last page.

A DEMON IN PETTICOATS.—It is stated in an English paper that a jealous wife recently tied her husband in bed while he slept, and then poured

boiling water over him. When arraigned for trial, which resulted in transportation for life, she boldly confessed the crime.

☞ We learn from the *Conneaut Reporter* that the Academy in Kingsvills, Ashtabula county, was destroyed by fire early on Monday morning last. How the fire originated is not known, but is supposed to be the work of an incendiary.—Most of the apparatus connected with the school, a very flourishing one, was destroyed, and the loss will be severely felt by Mr. GRAVES, the Principal. Many of the books belonging to students were also lost.

From Mexico—Arrest of Worth and Pillow.

The New Orleans papers received this afternoon gives some more details of the Mexican war, but nothing later.

A Vera Cruz correspondent of the Delta gives the following account of the arrest of Generals Worth and Pillow.

Two letters emanating from the American Camp, published in the United States, have been read by Gen. Scott. In an order published to the army he prematurely decided who wrote them, and impeached the honor, patriotism and services of the two Generals, who were eulogised in those two letters.

One of those Generals, (Pillow) denies in a card published in Mexico, the authorship of the letter attributed to him. The other General (Worth) prefers charges against Scott, and Scott arrests him for contempt. Gen. Pillow was arrested because he appealed from an opinion of Scott, requesting the latter to transmit the appeal to the Secretary of War. Scott refused in a hasty manner, whereupon the former remarked, "I will do it, sir!" "Then I arrest you, sir!" was Scott's reply. So matters stand at last dates. The army is excited, and if we may judge from what we hear at this distance, more than a moiety of it sympathises with the Generals sought to be disgraced.

The *Arco Iris* says a detachment of American soldiers quartered at Medelin, started for a ball in the village about 11 o'clock at night. The ball party took alarm, and one of them discharged a pistol at the advancing Americans who returned the fire, killing seven and wounding nine, one of whom was a woman.

The Indians have made an excursion into the state of San Luis Potosi and approached very near the capital.

Accounts from Yucatan to the 18th of Nov. state that a battle had been fought between Col. Lyelina's revolutionary forces, 1,800 strong, in which the latter gained a complete triumph.—Lyelina made the attack on the city of Valladolid, and the action lasted three hours. He lost four pieces of artillery and had 70 men killed, among whom were three officers.

The Indians, 5,000 strong, commanded by a chief named Pratt, had attacked Tijosuco. The inhabitants stood out for 24 hours, when they were obliged to retreat for want of ammunition to continue the combat, leaving the town, of about 6000 inhabitants, entirely in the hands of the Indians.

Since this success, their numbers are said to have increased to 15,000 troops.

Gov. Mendez, from Yucatan, was marching with a force to try to suppress the insurrection of the Indians. The greatest alarm prevailed among the Spanish portion of the whole country.

We give below very copious details of the recent great flood on the Ohio and some of its tributaries. The extent of the damage, no one as yet has pretended to estimate, but it must be very great. An event so memorable, and so abounding with interesting incidents, should be compressed into the space of an ordinary paper paragraph:

The Great Flood at the West.

From the Cincinnati Gazette, of December 14.

THE FLOOD.—At 5 o'clock last evening the Ohio was 45 feet 6 inches above low water mark. Steamboats were butting Water street at the junction with Main, fastening their anchors in front near Sycamore, and between Sycamore and Broadway, lying on a line with the South walls of Cassilly's Row.

The damage is already large, and much more is threatened. The immense quantities of lumber lying along the river from Race street west, are in great danger of going off en mass. The owners of some of it were removing it to higher ground; others had hemmed their's in by flat boats, which were well fastened to the shore; and still a third class were loading into open flats that which was already afloat.

So far as we have heard of but few personal accidents. A horseman got into deep water yesterday morning near the lower Millcreek bridge. He saved himself, but his horse was drowned.—While we were in the neighborhood of the crossing of Carr and Sixth streets, a child some three years old stepped out of a house into the backwater, but was instantly caught up.

The mean rise of the river, throughout yesterday, was three inches per hour. If the same rate continued throughout last night, the southwestern portion of the city will this morning present a sad spectacle.

A boat down from Pittsburgh yesterday morning reported the water pouring wildly out of the Alleghany and Monongahela. Another in from Wheeling last evening reported the river extremely high there, and still rising fast. A letter from the Kanawha, received yesterday, says that there was at the time of writing an immense freshet in that river.

From the same of the 15th.

THE FLOOD.—The Ohio continued to rise yesterday throughout the day, and at 5 o'clock last night the waters had reached within about 4 feet of the great flood of 1832. It is now up to the curb stone in front of Hosea & Frazer's store, at the south-west corner of Main and Front: on Sycamore street, it flows back about half way to Columbia; at the foot of Broadway, the water reaches across the street; and in all the stores at the westerly part of Cassilly's Row the water stands about a foot deep.

The damage on the bottom lands of the Ohio must be great, thousands of acres of corn, (left standing through the winter) are under water; immense quantities of wood floated off; and probably three-fourths of the water mills situated on the creeks near the river are destroyed.

Mr. Pomeroy lost five boats, with about 20,000 bushels of coal, which broke loose from his landing on Monday night. A man, formerly in his employment, (Isaac Tittle) who was trying to secure them, had his leg broken, by being entangled with a cable. The boat immediately broke off with Mr. T. only on board. His brother hearing of the misfortune, took a skiff and pursued and overtook the boat, just below the city. Mr. T. was taken out, and crawled up the banks to a house on the Kentucky shore, where he finished

the night. Mr. Pomeroy had him brought home yesterday, and every attention paid to his wants.

Several shanties have floated off, and at about 1 o'clock yesterday two houses and a bridge passed the city.

The gas works were overflowed, and the National theatre closed last night till further notice. The lectures and concerts advertised at halls lighted with gas, were also postponed.

The rise has been sufficiently gradual to allow of the removal, generally, of produce and merchandise from stores as far up as Columbia street, without great loss.

The Mayor and other public spirited citizens were busily engaged through the day in providing shelter and food for the poor families driven from their homes near the river. The city council also had a special meeting in the afternoon, to take proper steps to meet the exigencies of the occasion.

Four places have been designated, at either of which persons who have been driven from their dwellings by the high water can call and have their present wants either as to food or shelter promptly supplied.

It cannot be necessary to urge upon any one the duty of contributing such aid as may be in his power freely and promptly. The extent of the calamity must be known to all. Hundreds of families have been driven from their homes by the desolating flood, in weather of almost unexampled inclemency. Women and children—the sick and the infirm—helpless infancy and equally helpless old age—are suddenly bereft of homes, in some cases stripped of clothing, and in nearly all deprived of food.

From the same of the 17th.

The disastrous rise in the Ohio still continues. At 5 o'clock last night the waters were rising very slowly, less than an inch an hour.

The Courts adjourned yesterday, so as to put the court house at the disposal of the committees of relief. It will afford temporary shelter to a large number. The greatest promptitude has been evinced by the Mayor, the marshal, and other city officers, the sons of temperance, and numerous benevolent associations and individuals, including ladies, who have spent all their time for the last three days in affording shelter to the houseless poor, and supplying them bountifully with cooked provisions and clothing.

The Mary Pell brought up nearly three hundred persons yesterday, from Lawrenceburgh, who have been forced from their homes by the flood. The whole of New Richmond is under water, and the inhabitants forced on the hills back of the town, where they are camped out, and crowded into the few farmers' houses there.

The snow has continued to fall, with slight intermissions, since Sunday night. If this has been very general, and it should be succeeded by a warm rain, the consequence may be appalling.

From the same of the 18th.

The Ohio was still rising at 5 o'clock last night, very slowly, apparently less than half an inch an hour. It had then attained a point within ten inches of the great flood of 1832.

It is worthy of record, among the incidents of the flood, that yesterday a flat boat load of hogs was discharged in Main street, in front of T. & C. Neave's store, near Pearl, and another flat boat was laden with flour, furniture and merchandise, from Kentucky river, and shipped from the same *landing*. Three canal boats were also *cordelled* up Columbia street against a strong current, into the White Water canal basin, to the Miami canal, where they will be run in future.

Flood above, below, and in the Interior.

Boats from above, Wednesday and Thursday, give most gloomy accounts of the submerged towns along the Ohio—Marietta, Neville, Moscow, New Richmond, &c. Such of the people as were able to get away readily had fled to the hills in the rear of the town, and taken shelter with the farmers. The rest were in the second stories of their houses, awaiting their chances. From below, between this city and Louisville, similar accounts are brought up. Louisville itself was on Thursday morning approximating Cincinnati in its condition,

Intelligence enough was received by yesterday's mails to render it quite certain that all the tributaries of the Ohio, at least above the Falls, have been swollen by the late rains to a height unexamplied since the year 1832. The subsiding of the waters will bring as deplorable accounts of the destruction of property, and we fear the loss of life. It will be a melancholy duty, but we shall keep our readers well advised of all matters that reach us.

As might have been expected, from the manner in which the water poured out of the Licking a few days ago, there has been destruction of property along this stream. The Maysville Eagle details some of it. The flooring of the elegant and substantial bridge at the Blue Licks had been swept off, and the bridge itself was saved only by the timely giving way of the northern embankment, by which a new channel was made for the rushing waters.

At the toll gate on the North Fork, the water rose so rapidly as to compel the keeper to fly with his family to a little house on a hill side; and the overflow became so great, that on Thursday last the pike for a hundred yards was impassable except by swimming. On the same creek, the Eagle says, both above and below Lewisburg, the damage was very heavy. The report was current that Phillip's mill and dam had both been washed away, and that Taylor's dam was entirely gone.

Thousands of pannels of fencing and much corn in shocks had been destroyed or washed off. A tobacco house, that was thought to be entirely out of reach of the highest water in the creek, was covered to the roof, and a heavy crop of tobacco ruined. The water at some points was ten and at others five feet higher than ever known before.

The turnpike from Maysville to Germantown was rendered impassable by the falling of heavy banks of earth from the hills above, and the washing of ploughed land, as well as the hill sides, had been extremely destructive. Deep gullies were made in slightly rolling ground, and in some cases large portions of wheat fields were washed away.

The Kentucky river underwent a similar rise, but its higher banks will prevent equal destruction of property. A correspondent of the Atlas, writing from Frankfort on Friday, describes the rains of Thursday afternoon and night as torrents, and the river as rushing by with terrific impetuosity. The Kentucky on Friday morning was literally covered with cord wood, fence rails, lumber, barrels, saw logs, and other drift, which it had received from its swollen tributaries and borne from its own shores. Great damage was reported to the mills on Benson creek and Elkhorn.

From the Louisville Journal of Dec. 14.

The Flood.—The river is higher now than it has been since the memorable flood of '32. Every house on Water st., from Fourth to Tenth, was in water last evening, and in some of them it was high enough to float a steamboat. Strader's wharf is entirely covered with water, and at the rate the river was rising last night, an inch and a half per hour, boats will be able to enter some of

the streets to-day. The damage done by this freshet here, as well as elsewhere, is incalculable. The weather became very cold yesterday morning, and it snowed yesterday and last night. This will check the rise in some degree, but it is believed that it will nevertheless rise about six feet more here. By the stages we learn that the Kentucky river was rising fast at Frankfort yesterday morning, and Salt river was swelling rapidly.

From the Journal of the 15th—Evening.

THE FLOOD.—The river yesterday and last night was rising at the rate of about two inches per hour. Last evening it was within 10 or 12 feet of being as high as in '32. It is up in the cross streets from 25 to 50 yards, and the strip of land between Beargrass and the river, as far up as Clay street, is all under water. The bridge at the foot of Preston street has been swept off, and lodged in the flats between the creek and the city. The bridge at the foot of Clay street is broken in two. In some of the buildings below Sixth street the water is in the second story.

Grainger's foundry is several feet in water and it is up to Curry's. Steamboats find great difficulty in landing. The Cincinnati mail boat arrived yesterday morning about 1 o'clock. It is impossible to estimate the loss sustained by this flood. Every one who lives on the river, whether merchant, farmer, or mechanic, must suffer severely. The interruption to business, and the damage to property and merchandize by water alone, not mentioning what was totally destroyed, must cause an immense loss.

THE FRESHET.—The water are abating fast.—The Muskingum has been extraordinarily high. At 20 minutes before two in the morning of Thursday, the alarm-bell was sounded. We found that the new embankment had given away in several places, and that the flood was fast pouring in. The few families that remained at once removed, and by daylight from 3 to 15 feet water covered that district of the town. It was a grand but fearful sight to watch the first inward flow on the snow-covered earth and the dark surface of water, creeping along, at no snail's pace, the evident futility of all human effort to check its progress. Many a happy family had been driven from its fireside ease and comfort. No lives were endangered. Between this and Marietta there has been no communication for nearly ten days. The *Cambridge Times* says the Willis Creek was higher than was ever known before, and the damage must be immense. On the Scioto, much injury to property has resulted from the waters.—The Ohio has been within a few inches of the rise of 1832. The locomotive could not get within 10 miles of Columbus.—*Zanesville (Ohio) Courier.*

DOG MUTTON.—The *Journal of Commerce*, world-renowned for its canicidal propensities, seems ambitious of an equally wide-spread carnivorous reputation. It is not enough for that print that poor Tray be killed—it wants him to be eaten as well. In Saturday's paper the editors relate the following:

A paper of Rouen, France, states that the police of the city were informed that a certain man in a poor part of the city had a butchery in his house. The policeman who went to investigate the matter had some difficulty in finding the room, but at length discovered an apartment where a big dog, dressed and split open, lay upon the bench, and a half a dozen others in the same plight were hanging about the room by their hind legs, and in an adjoining closet some fine cutlets were broiling on the coals. The dog butcher assured the policeman that this was his substitute for butcher's meat, and that the whole was for his own eating. The business of the policeman extended only to the *sales* of meat, and so he went away, not thinking himself obliged to disbelieve what the man had said. Certainly this plan is preferable to merely killing dogs to be rid of them, and in a city so full of big, fat dogs, and nice, tender puppies as ours, may cheer the hungry despondent.

Arrival of the Hibernia.

BOSTON, Dec. 25—4 P. M.

The Hibernia arrived this morning from Liverpool, whence she sailed on the 4th inst.

CORN, &c.—Best Western Canal Flour 28s to 29s per bbl.; Richmond and Alexandria 26s to 28s; New Orleans and Ohio 26s to 27s; Canada 27s to 29s; United States and Canada sour 21s to 23s.

WHEAT—United States and Canada white, mixed, per 70 lbs., 7s 6d to 8s 4d; red 6s to 7s 6d. Indian Corn, per quarter, 32s to 36s. Corn Meal, 15s to 16s 6d per bbl. Oat Meal, per 260 lbs., 25s to 27s. Oats, per 45 lbs., 2s 6d to 3s—per 60 lbs., 3s to 4s. Rye, per 90 pounds, 3s to 4s. Since the departure of last steamer, the Corn Market has been greatly depressed, by a slackened demand in the interior, which, with other causes, has considerably deadened its activity. Flour has fully receded from 6d to 1s per bbl. White Indian Corn and Corn Meal have been equally depressed. The latter is in very sluggish demand for Ireland.

In the London market yesterday, although the arrivals of English wheat for market have been exceedingly light, the business transacted was scarcely noticeable save for some selected parcels which brought average prices. In this market for cotton a slight improvement had taken place towards the last of last week, but was quickly arrested by advices received per Caledonia as to the flourishing condition of the growing crops and of the deterioration of prices in the American ports. The market has now declined ¼d per lb. with a languid trade.

Bacon, (duty free,) dried and smoked, old, per cwt., 30s to 40s. Long middles, free from bone, in salt, 30s to 50s.

Hams, smoked or dried, in canvass, duty paid, 20s to 50s. In casks, salted, 25s to 35s.

Tongues, in pickle, duty paid, per dozen, 10s to 16s.

Pig, per cwt., 15s to 25s.

BUTTER—United States not quoted; Canadian 70s to 85s, duty paid.

CHEESE—Fine, duty paid, 46s to 50s per cwt.; middling, 42s to 47s; ordinary 30s to 40s per cwt.

LARD—Fine leaf, in kegs, per cwt., 50s to 54s; do in bbls., 49s to 52s; ordinary to middling 46s to 54s; do in bbls., 49 to 52s; ordinary to middling 46s to 48s; inferior and grease, 29s to 33.

BEEF—Prime Mess per tierce, of 304 lbs, new, 84 to 90s; ordinary, 70s to 80. Old not quoted. Mess per bbl. of 200 lbs., 40s to 48s; ordiuary 36 to 42s; Prime 30 to 46s. Extra India, family, &c., per tierce of 336 lbs., 95 to 100s.

PORK—Prime Mess per 200 lbs. 56 to 62s; ordinary 30 to 40s. Mess 60 to 65s; Prime 38 to 42s.

HOPS—In bond, per cwt., 40 to 50s. Linseed Cake, (duty free,) per ton, £8 10s to £10 10s.

ASHES—United States Pots 28s 6d to 29s; Pearls 30 to 31s. Montreal Pots 28s 6d to 29; Pearls 32 to 34s. State of funds since our last advices has been tolerably steady, with a direct upward tendency yesterday, the quotation for money closed at 85½, and for time at ½. Exchange bills have risen to 5s premium, and bank stock to 188½.

The British Parliament for several days has been engaged with the subject of trade and the financial condition of the country. It is expected that measures of a salutary character will be introduced. The state of Ireland is truly frightful. The land reeks with assassination from one end to the other.

Government has proposed a coercion bill of a very mild and moderate character. In Switzerland the civil war has been virtually terminated by the surrender of Luzerne to the troops of the Federalists. The Sunderbund is dissolved. The affairs of Italy are in a fair way to adjustment. The Pope has opened the new Council of State at the Vatican, and his speech elicited unmixed approbation.

The Royal Bank of Liverpool has resumed business under favorable circumstances. The Asiatic Cholera is stated to have advanced to the Prussian frontier. A French paper, La Presse, stated that the United States Government had purchased the Island of Lyra from Greece, and will at once pay off the mortgage due. The Washington steamer arrived in Southampton on the 3d instant.

Parliament assembled on the 18th ult. Mr. SHAW LEFEVRE was re-elected Speaker. Respecting Ireland, the *Times* says:

We regret to state that crimes and outrages continue undiminished in Ireland. The state of Tipperary, Clare, Westmeath, King's County, Roscommon and Limerick, is most deplorable.—The offences perpetrated in these six counties bring a sad stain upon the history of Ireland, and render it absolutely necessary, for the preservation of the peace of the remaining parts of the country, that a rigor beyond the present laws should be exercised by the Government, for the protection of life and property.

The details which daily reach us from ill-fated Ireland are almost all written in the same unvarying fatal characters of blood. The pressure of want amongst the people, serious as it undoubtedly is, appears secondary in intensity to the insane desire of destroying human life. The lives of the best benefactors of the people seem more peculiarly devoted to sacrifice.

A deputation of thirty-two Irish members, headed by Mr. H. Grattan, waited upon Lord John Russell, on the 25th ult., on the subject of Irish affairs. The deputation submitted 357 resolutions on Irish affairs to his lordship, and alluded with satisfaction to the fact of the Government having already adopted four of the recommendations suggested, viz: An improvement of the law between landlord and tenant; the establishment of food depots; increased facilities for the transfer of incumbered estates; and the disposition to afford the people an opportunity of reclaiming waste lands in preference to the emigration scheme. The deputation, however, chiefly insisted upon its being the first duty of the Government to provide food for the starving people. Lord John Russell intimated that the Government had already made arrangements for the establishment of food depots.

Of commercial affairs the *Times* speaks in very encouraging terms as follows:

It is gratifying to be able to announce that a marked improvement has taken place during the past fortnight in the aspect of commercial affairs. The value of public securities has advanced, and there has been less stringency in the money market generally. The resolution of the Bank of England to reduce the rate of interest to 6 per cent., which was promulgated on the 2d instant, will tend still farther to restore confidence, and enable holders of produce to sell their various commodities on more favorable terms.

At present, however, the markets for foreign and colonial produce are depressed; and this fact, coupled with the failures which occur at intervals in all parts of the country, throws a gloom over our prospects, which the amelioration of the money market does not effectually remove. In the manufacturing districts there is somewhat greater activity, with more hands employed, whilst on the other hand large bodies of men are being discharged from the various railway works which have been suspended.

MELANCHOLY ACCIDENT!—The bridge over the Genesee River near the residence of Hon. P. Church, gave way last Sunday forenoon while a sleigh was crossing. The sleigh and horses, and the passengers, four in number, were precipitated some twenty feet into the stream below. The persons in the sleigh were of Mr. Burrill's family, Philipsburg, whose names were Miss Burrill, Miss King, Miss Sneath and —— an Irishman, the driver. Miss King and Miss Sneath were drowned. The team was also lost. Miss King's body was soon recovered, but up to this present writing (Tuesday morning) Miss Sneath's body has not been recovered.

The bridge we are told was known to be unsafe. The timbers were so much decayed, that it appears unaccountable that it had not fallen before.—*Angelica Advocate.*

THE SAME HEAVEN CAN RECEIVE THEM ALL.—Chillingworth was asked by a learned Jesuit, how Protestants, rejecting the Pope's infallibility and relying on the Scriptures alone, could hope to be saved, when each sect gave the Scriptures a different meaning, adding, "The same heaven cannot contain them all." To this Chillingworth answered, "It is sufficient for any man's salvation that he believes the Scripture! that he *endeavor* to believe it in its true sense, as far as concerns his duty, and that he conform his life to it, either by obedience or repentance; he that does so may be sure that he cannot err fundamentally; and they that do so cannot differ in fundamentals; so that notwithstanding their differences and your presumption, 'the same heaven can receive them all.'"

The Grave of the Year.

Be composed, every toll and each turbulent motion,
That encircles the heart with life's treacherous snares,
And the hour that invites to the calm of devotion,
Undisturbed by regrets, unincumbered by cares.
How cheerless the late beaming face of creation!
Weary time seems to pause in his rapid career,
And fatigued with the work of his own desolation,
Looks behind, with a smile, on the Grave of the year;

Hark! the wind whistles rudely—the shadows are closing,
Which enwrap his broad path in a mantle of night,
While pleasure's gay sons are in quiet reposing,
Undisturbed by the wrecks that have numbered his flight.
In yon temple where fashion's bright tapers are lighted,
Her votaries, in crowds, decked with garlands, appear—
Aye—as yet their warm hopes, by no spectre affrighted—
Assemble to dance round the Grave of the Year!

O! I hate the false cup that the idlers have tasted,
When I think on the ills of life's comfortless day;
How the flowers of my childhood their odors have wasted,
And the friends of my youth have been stolen away;
I think not how fruitless the warmest endeavor
To recall the kind moments, neglected when near,
When the hours that oblivion has cancelled forever
Are interred by her hand in the Grave of the Year!

Since the last solemn reign of this day of reflection,
What throngs have relinquished life's perishing breath!
How many have shed their last tear of dejection,
Had closed the dim eye in the darkness of death!
How many have sudden their pilgrimage ended
Beneath the lone pall that envelopes the bier—
Or to death's lonely valley have gently descended,
And made their cold beds with the Grave of the Year!

'T is the year that so late its new beauty disclosing
Rose bright on the happy, the careless and gay,
Who now on their pillow of dust are reposing,
While the sod presses damp on their bosoms of clay!
Then think not of bliss, when its smile is expiring,
Disappointment still drowns it in misery's tear;
Reflect and be wise, for the day is retiring,
And to-morrow will dawn on the Grave of the Year!

Yet awhile, and no seasons around us shall flourish,
But silence for each her dark mansions prepare,
Where beauty no longer her roses shall nourish,
Or the lily o'erspread the wan cheek of despair;
But the eye shall with lustre unfading be brightened,
When it wakens to bliss in yon orient sphere,
By the sunbeams of splendor immortal enlightened,
Which no more shall go down on the Grave of the Year!

SPLENDID LITERARY PREMIUMS
WORTH CONTENDING FOR.

WESTERN LITERARY MESSENGER
VOLUME TENTH.

GREAT INDUCEMENTS TO AGENTS!!

On the 5th of February, 1848, we shall commence the Tenth Volume of the Western Literary Messenger. It will appear in an entirely new dress and with an increased list of able contributors; and the publishers are determined to make it second in value to no family news and literary paper in the country. They will aim to render it alike the delight of the fireside, an ornament to the centre table and an honor to Western Literature.

Desirous of enlarging its circulation in all parts of the United States and Canada, and willing to give ample encouragement to agents, we herein offer the following flattering inducements to any person who will interest himself in increasing our list of subscribers:

Any one who will send us the names of eight subscribers, to be sent to one Post Office, and ten dollars, we will give a copy of Frost's Pictorial Wonders of the World, a splendid work in one volume; or Simpson's Overland Journey round the World, in one volume, tastily bound in scarlet cloth.

Any one who will send us twelve subscribers to one Post Office address, accompanied with $15, we will give Headley's Napoleon and his Marshals in two volumes, 12mo., with plates; or Headley's Washington and his Generals, in two volumes, do., or Miss Bremer's Novels, or D'Aubigne's History of the Reformation, in one large octavo volume, bound in muslin and illustrated.

Any one who will send us sixteen subscribers addressed to either one or two Post Offices, accompanied with $20, we will give Lardner's Lectures, two volumes, with plates and illustrations, or Griswold's new and magnificent work, the Prose Writers of America, or D'Israeli's Works, or Marryatt's Novels complete.

Any one who will send us thirty-two subscribers, to be sent to not more than three Post Offices, accompanied with $40, we will give M'Cullough's Geographical Dictionary, in two very large octavo volumes, bound in sheep; or Ure's Dictionary of Arts, Manufactures and Mines, in one magnificent volume, and also the supplement to the same; or Dickens' Novels complete, in three volumes.

Any one who will send us sixty-four subscribers, to not more than four Post Office addresses, accompanied with $80, we will give Sir Walter Scott's complete works in ten octavo volumes bound in cloth; or a splendid quarto Bible, worth at least $16.

Any one who will send us one hundred subscribers, to not more than five Post office addresses, accompanied with $125, we will give the Waverly Novels, a splendid edition in 27 vols., of Harper's magnificent illuminated Bible, worth at least $25.

Persons making out either of the above lists between the first and fifteenth of January, may promise new subscribers four numbers of the present (ninth) volume, GRATIS.

Persons sending over sixteen subscribers can have till the middle of April to make out their list, allowing each subscriber will take the back numbers of the volume.

Competitors for any of the above splendid literary Premiums, would do well to at once set about procuring names, which should be sent in to us at once.

☞ The terms of subscription, to mail subscribers, remain as usual at $1,50 per annum, payable in advance.

JEWETT, THOMAS & CO.

BUFFALO, Dec, 22, 1847.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n2

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main Street, Buffalo.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 168 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.
PUBLISHERS,
COMMERCIAL ADVERTISER BUILDINGS
MAIN STREET, BUFFALO.

TERMS.—To mail subscribers, $1,50 per annum in advance, four copies for $5,00, ten copies for $10,00. To city subscribers who receive their papers from the carrier, $2,00. Mail subscribers will also be charged $2,00 if payment is not made in advance.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

*** All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

WESTERN
LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, JANUARY 8, 1848. NUMBER XXIII.

For the Western Literary Messenger.

The Miners of Lore.*

BY J. CLEMENT.

Priests of Science, Truth diviners,
Youth may not such gifts implore:
We are miners, humble miners,
Delving at the veins of Lore.

Mightiest minds of ages olden
Here have long and tireless wrought,
Casting jewels, bright and golden,
In thy furnace, burning Thought.

Here too, men of modern ages,
Who would wield the wand of power,
Statemen, heroes, bards and sages,
Seek their spirit-gilding dower.

Wealth like this—oft meanly rated,
Yields of joy a bounteous store,
And the mind that here is freighted,
Holds its treasures evermore.

We will then be thorough miners
Working away shaft of Truth:
Souls that here are pearl enshriners,
Heaven will clothe in endless youth

* Sung at the late Anniversary of the Wilson (Niagara Co.) Collegiate Institute.

A Legend of West Point.

A lovelier day, in June, 1790, never dawned upon the blue Hudson than that on which a company of soldiers, lounging upon the decks of the trim sloop "Jane," floated slowly over the bosom of Tappan Zee. At that period, a voyage up the Hudson was a work of time—and so thought the officer in command as he trod the deck with an impatient step, and at intervals leaned over the taffrail, gazing at the blue outline which marked the still distant Highlands towards which the vessel was slowly tending.

"You look like anything but a happy Benedict Fred," remarked a young man in a civilian's dress, who, leaning against a water butt with his feet over the bulwarks, had been watching the ripples just spreading from the side, and amusing himself in aiming chips at the white crests as they sparkled and turned into their liquid beds.

"Happy!" rejoined the other, "happy! and how could one be happy, with a burning impatience, such as I feel, at the heart? Do you suppose I find pleasure in realizing the distance that still separates me from my home; and to be bound down to this sluggish thing of wood and hemp, when I want to cleave the space and bear me swiftly to my dear watching wife. Think of it, Harry! Three years absence; twelve months without a line or message;—and now within a few paltry miles, condemned to watch the bubbles on the water for hour after hour, as they float by like so many snails;" and, hurriedly breaking from his companion, he resumed his rapid pace over the deck.

"Wings would never suit him in such a mood," muttered the other,—"nothing but the lightning for him, and then he'd never feel how hot it was."

Evening came creeping over the water with a stealthy foot, chasing the last sunbeams as they fled hastily up the Eastern hills,—until no light remained but that of the moon, which threw upon the waters trembling blades of silver, and painted upon the surface black distorted images of the bold heights which towered almost above the vessel already entering within the range of the Highlands.

The two friends leaned over the side in silence, as the sloop dipped into the dark mountain shadows, like a hare seeking a covert, and anon, as if assured of safety, shot out into the pure moonlight, joyfully clapping her white wings as the breezes freshened.

"What a glorious night!" said Harry; "just such an one as that after your wedding, Fred, when you must needs take a moonlight sail to Washington's valley, and display your power of mental abstraction by bringing up under the rocks on Constitution Island. With what looks of amazement we emptied ourselves upon the romantic strand you had promised, which proved to be a slippery rock about four feet high and fifty yards from shore. If those old cliffs never echoed the voice of man before, they had their fill of it then, when the tide rose and Granger made the important discovery that the bottom plank was out. Do you recollect the old skipper that took us off? How he edged away when he saw your Lucy's white dress, and thought her a spirit luring him to destruction, (the suspicious old wretch;) but his taste for money soon quieted his scruples, when St. John at a venture pitched half a dollar into his crazy craft, and asked him if it felt hot. How the heavy shadow of the island enshrouded us that night, while all beyond was bathed in light, even to the white cascade that sparkled in the cove at the valley, and the glancing of the sentry's musket before the 'Yellow Barracks' on the plain."

"Did you ever have a presentment, Harry?" interrupted the other,—"the thought of some evil, impending and imminent? Did a cloud ever come over your brightest hour, like that little film which is just gliding over the moon:—and when that cloud came, did it poison the very air you drew in, mingling like an infernal vapor with the sweetest draught, and sickening your very soul, and all with no visible cause; but so immovably fixed in your mind that no resolution, no determination could shake off the apprehension which tingled in every nerve, and drove its burning iron into your inmost heart? I felt it on that night, Harry,—and for months since, when quartered in the Indian country on the banks of the Ohio, I have watched the water in just such a moonlight as that, until I saw the slimy rock, and the disabled boat, and Lucy with a face as white as the rose that bound her hair, trembling more for me than herself, and pressing to her side the arm I passed round her, as if to say 'even death shall not separate us.' I thought her already an angel, and I a gross creature of earth; and, Harry, I feel it now; I cannot drive it from my mind. Her face rises on every wave, gazing tenderly into mine, with the wreath over her brown hair, and such a sweet, sad smile playing about her lips. It almost maddens me. Even the ripples are

breathing her whispers to my ear;—and look! that foam breaking from the bow is but the waving of her long white dress." And he grasped his friend's arm convulsively.

"It is but a freak of the imagination, Fred," said the other, soothingly; but as he spoke the sloop passed into the murky shadow of a huge mountain, surging slowly along within a stone's throw of the black cliffs, which echoed back the plash of the waves beneath the bow, and sent down a hoarse murmur from the pines that crowned their summits, awakening in the breast an overpowering sense of gloom and desolation. Both speakers felt sensibly the force of the contrast, and in silence retired to the cabin.

Nor was Lucy Gray less anxious for her husband's return; "her officer," as she had often proudly called him, after aiding him in the morning to adjust his sword belt, and yielding her lips to his farewell kiss. Often had she watched him as he walked down the little path from the cottage, and when he turned and with extended hand made her playfully a military salute, she smiled and kissed her fair white palm with mock formality, and retired to her domestic cares with a cheerful heart, for she thought of the meeting which must follow the lapse of a few short hours.

It was now the third day since she had looked for his coming, after an absence, as we have said, of three years, the weariest day of all, for even now deferred hope was making the heart sick, and the aching sense of apprehension weighed down her soul. She looked in vain during the day, and, as twilight advanced, she would sit listening to the prattling of her child, but with an ear awake to the sudden gush of the breeze, or the creaking of the gate, or the fall of a branch upon the pathway; for it might be *his* step —and the next moment his loving arm would be around her,—his noble heart would be pressed to hers, and the tones so musical with affection breathing in her ear.

It was too much: she hastily consigned the child of their love to her little cot for the night, breathed a prayer over her, and eager with hope, nay, a certainty, that but a few hours must elapse before she should be clasped in his arms, hurried down to the steps at the summit of the precipice but a short distance from the cottage, where for hours she stood watching the white sails gleaming in the moonlight, until they had passed the angle of the river above, and she felt assured the precious burthen was not theirs.

It was near morning when Captain Gray leaped into the skiff by the vessel's side, and with fierce impatience ordered the crew to pull directly for the shore. "There's no landing there, sir," ventured one of the crew, "we must turn to the point above."

"Straight for the shore," he replied. "I have scaled that rock a hundred times," he remarked to his friend.

"That may be, but night is no time to venture such a risk," rejoined the other.

"This night has no darkness for me," he replied, and was silent.

The shore was soon reached, and, at a place that baffled pursuit, he rushed into the thickets which lined the base of the hill.

To have followed would have been worse than useless—and Harry returned to the vessel to effect a landing more leisurely in the morning.

At an early hour he called at the cottage, but it was empty, and the alarm had already spread among the neighbors. A search had been instituted, and Frederick Gray was discovered at the base of the precipice with the shattered body of his wife resting in his arms.

How long she had remained above, none can tell; and whether wearied with watching she had sunk in sleep upon the giddy ledge, or by a misstep lost her foot-hold, and plunged down the fearful height, it is in vain to conjecture. A broken twig lay upon the brink, the mark of a clenched hand was left upon the green turf, and a shred of muslin fluttered upon a point of rock far below.

That, ere life fled, she had recognized the agonizing embrace of her husband, there is reason to suppose, for one hand was clasped upon his sleeve, and a smile still rested upon her pale cold lips; but the mystery of that night's fearful communion was never revealed, for his mind was crushed, and he was an idiot.

My Legend of the Steps is finished. It is but a simple story, and to a casual reader may possess but little interest; yet many a tear did I shed over its relation in my childhood, and even now it remains indissolubly linked with the saddest memories of my early years.—*Journal of Commerce.*

Biography of Jacob Hays.

BY THE LATE WILLIAM COX.

He is a man, take him for all in all
We shall not look upon his like again.—*Shaks.*

Ladies and gentlemen, allow me to introduce to your acquaintance, Baron *Nabem*, a person who has a very *taking* way with him.—*Tom and Jerry.*

Perhaps there is no species of composition so generally interesting and truly delightful as minute and indiscriminate biography, and it is pleasant to perceive how this taste is gradually increasing.—The time is apparently not far distant when every man will be found busy writing the life of his neighbor, and expect to have his own written in return, interspersed with original anecdotes, extracts from epistolary correspondence, the exact hours at which he was in the habit of going to bed at night and getting up in the morning, and other miscellaneous and useful information carefully selected and judiciously arranged. Indeed, it is whispered that the editors of this paper intend to take Longworth's Directory for the groundwork, and give the private history of all the city alphabetically, without "fear or favor—love or affection." In Europe there exists an absolute biographical mania, and they are manufacturing lives of poets, painters, play-actors, peers, pugilists, pick-pockets, horse-jockeys, and their horses, together with a great many people that are scarcely known to have existed at all. And the fashion now is not only to shadow forth the grand and striking outlines of a great man's character, and hold to view those qualities which elevated him above his species, but to go into the minutiæ of his private life, and note down all the trivial expressions and every day occurrences in which, of course, he merely spoke and acted like an ordinary man. This not only affords employment for the exercise of the small curiosity and meddling propensities of his officious biographer, but is also highly gratifying to the general reader, inasmuch as it elevates him mightily in his own opinion to see it put on record that great men ate, drank, slept, walked, and sometimes talked just as he does. In giving the biography of the high constable of this city, I shall by all means avoid descending to undignified particulars; though I deem it important to state, before proceeding farther, that there is not the slightest foundation for the report afloat that Mr. Hays has left off eating buckwheat cakes in the morning, in consequence of their lying too heavily on his stomach.

Where the subject of the present memoir was born, can be of but little consequence; who were his father and mother, of still less; and how he was bred and educated, of none at all. I shall there-

fore pass over this division of his existence in eloquent silence, and come at once to the period when he attained the acme of constabulatory power and dignity by being created high constable of this city and its suburbs: and it may be remarked, in passing, that the honorable the corporation during their long and unsatisfactory career, never made an appointment more creditable to themselves, more beneficial to the city, more honorable to the country at large more imposing in the eye of foreign nations, more disagreeable to all rogues, nor more gratifying to honest men, than that of the gentleman whom we are biographizing, to the high office he now holds. His acuteness and vigilance have become proverbial; and there is not a misdeed committed by any member of this community, but he is speedily admonished that he will "have old Hays (as he is affectionately and familiarly termed) after him." Indeed, it is supposed by many that he is gifted with supernatural attributes, and can see things that are hid from mortal ken; or how, it is contended, is it possible that he should, as he does,

"Bring forth the secret'st man of blood?"

That he can discover "undivulged crime"—that when a store has been robbed, he, without stop or hesitation, can march directly to the house where the goods are concealed, and say, "these are they"—or, when a pocket has been picked, that from a crowd of unsavory miscreants he can, with unerring judgment, lay his hand on one and exclaim, "you're wanted!"—or how is it that he is gifted with that strange principle of ubiquity that makes him "here, and there, and everywhere" at the same moment? No matter how, so long as the public reap the benefit, and well may that public apostrophise him in the words of the poet:

"Long may he live! our city's pride!
Where lives the rogue, but flies before him!
With trusty crabstick by his side,
And staff of office waving o'er him."

But it is principally as a literary man that we could speak of Mr. Hays. True, his poetry is "unwritten," as is also his prose; and he has invariably expressed a decided contempt for philosophy, music, rhetoric, the *belles lettres*, and in fact all species of composition excepting bailiff's warrants and bills of indictment—but what of that? The constitution of his mind is, even unknown to himself, decidedly poetical. And here I may be allowed to avail myself of another peculiarity of modern biography, namely, that of describing a man by what he is not. Mr. Hays has not the graphic power or antiquarian lore of Sir Walter Scott—nor the glittering imagery or voluptuous tenderness of Moore—nor the delicacy and polish of Rogers—nor the spirit of Campbell—nor the sentimentalism of Miss Landon—nor the depth and purity of thought and intimate acquaintance with nature of Bryant—nor the brilliant style and playful humor of Halleck—no, he is more in the petit larceny power of Crabbe, with a slight touch of Bryonic power and gloom. He is familiarly acquainted with all those interesting scenes of vice and poverty so fondly dwelt upon by the reverend chronicler of little villany, and if ever he can be prevailed upon to publish, there will doubtless be found a remarkable similarity in their works. His height is about five feet seven inches, but who makes his clothes we have as yet been unable to ascertain. His countenance is strongly marked, and forcibly brings to mind the lines of Byron, when describing his Corsair:

There was a laughing devil in his sneer
That raised emotions both of hate and fear;
And where his glance of "apprehension" fell,
Hope withering fled, and mercy sighed, farewell!

Yet with all his great qualities, it is to be doubted whether he is much to be envied. His situation certainly has its disadvantages. Pure and blameless as his life is, his society is not courted—no man boasts of his friendship, and few indeed like even to own him for an intimate acquaintance.—Wherever he goes his slightest action is watched and criticised; and if he happen carelessly to lay his hand upon a gentleman's shoulder and whisper something in his ear, even that man, as if there were contamination in its touch, is seldom or never seen afterwards in decent society. Such things cannot fail to prey upon his feelings. But when did ever greatness exist without some penalty attached to it?

The first time that ever Hays was pointed out to me, was one summer afternoon, when acting in his official capacity in the city hall. The room was crowded in every part, and as he entered with a luckless wretch in his gripe, a low suppressed murmur ran through the hall, as if some superior being had alighted in the midst of them. He placed the prisoner at the bar—a poor coatless individual, with scarcely any edging and no roof to his hat—to stand his trial for bigamy, and then, in a loud authoritative tone called out for "silence," and there was silence. Again he spoke—"hats off there!" and the multitude became uncovered; after which he took his handkerchief out of his lefthand coat pocket, wiped his face, put it back again, looked sternly around, and then sat down. The scene was awful and impressive; but the odor was disagreeable in consequence of the heat acting upon a large quantity of animal matter congregated together. My olafactory organs were always lamentably acute: I was obliged to retire and from that time to this, I have seen nothing, though I have heard much of the subject of this brief and imperfect, but, I trust, honest and impartial memoir.

Health and happiness be with thee, thou prince of constables—thou guardian of innocence—thou terror of evil doers and little boys! May thy years be many and thy sorrows few—may thy life be like a long and cloudless summer's day, and may thy salary be increased! And when at last the summons comes from which there is no escaping—when the warrant arrives upon which no bail can be put in—when thou thyself, that hast "wanted" so many, art in turn "wanted and must go,"

"Mayst thou fall
Into the grave as softly as the leaves
Of the sweet roses on an autum eve,
Beneath the small sighs of the western wind,
Drop to the earth."

Boarding Houses.

A young unmarried man, at the beginning of his business career, and to economize, goes to a boarding-house to reside. A young couple who have not perhaps the means of hiring and furnishing a house, or who are ignorant of the housekeeping art, go to a boarding-house till their means accumulate and they can be more independent. Sometimes two devoted souls, who have married in haste, come to a boarding-house, trusting to Providence, having neither prudence nor furniture. They think it delightful to be always near each other in one room, and expect to live by the signs of the almanac, which tells them as they believe, 'About this time look out for a sprinkling of real happiness.' They who have been unsuccessful in their affairs give up their house and board, to be still within view of the world, and to save money. Old persons, especially men of small fortunes, who are unwilling to burden themselves with domestic cares, go to a boarding-house where they can live comfortably,

hear what is passing in the world, and talk to each other of times past, when they were rich. When all these people, different in habits, disposition and manners, are found assembled in one house, (at meal times, all in one room,) you may well say, 'Here is an epitome of the world!' You see strange faces; see strange ways of doing things; hear strange speeches; see a little grace, and attempts at grace that utterly fail; now and then a sensible person, yet more often the greatest of all bores, one who thinks himself sensible; a young lady who minces, and who never eats more than a small piece of the breast of a chicken; and an elderly lady who has seen much affliction, which she deals out in small portions to every one, yet who is blessed with a good appetite, takes a pretty large quantity of gravy, and is unwilling to soil her napkin. Men, gross feeders, who send up twice for soup, and who mix in the same plate fish, flesh and vegetables, with all sort of condiments, the mass surmounted with apple-sauce to give a more *piquant gout;* all these at work at the same time, with an earnestness that leads you to suppose this is the first meal they ever saw, or the last they ever expect to swallow.

These houses are kept for the most part by persons (generally females,) in reduced circumstances, who adopt this method of obtaining a livelihood; most commonly by widows, who are left penniless, perhaps with a family beside, who have never before been dependent, and do still remember they have seen easier days. They are generally ignorant of the way such establishments should be conducted; above all, are very reluctant at coming down to the requirements of their new calling. These are called 'perfect ladies,' and generally speaking, they keep the poorest houses. They bear in mind what they call "days of former prosperity;' although if the truth were told, they may have been forced to struggle hard to keep up appearances, and had an ill-natured husband; yet they seldom fail of giving a hint to the boarders, singly and collectively that once they set the fashion, and were on a level with Mr. John Smith, of Washington Square, or Mr. Fuzzle, of Union Place. They sit at the head of the table, as mistress of their own house, as if the boarders were their guests, and take their place in the drawing-room, as the lady hostess, whose duty it is to entertain the company. The male boarders are in the house only at meal-times, or when they come home to sleep; the females keep in their own rooms when not out on visits, or what is very usual, call at each other's apartments to tell the news and compare notes. The work of destruction commences. The mistress of the house, her high charges, the miserable fare she gives for so much money paid, her intolerable meanness in denying sugar, butter and cakes to the children when they ask for them; all these are descanted upon till she of the house is entirely used up. One would be apt to suppose she was about to lose all her boarders, were it not well known among the complainants that they intend to remain, because they cannot do better by going elsewhere. It is not easy to reconcile people, each of whom wants to receive much and give little.

The mistress of the house being despatched, the fair inmates begin to tear each other to pieces, after the most approved manner. 'Did you ever see any one eat so much as Mrs. Allgrinder does? She ought to pay more than any of the other boarders. And then, that sanctified Miss Puckermouth, who wastes so much time in making shirts for the cannibals of the Fejee Islands, who devour missionaries and go naked!' 'Lor, Mrs. Callender? I am glad your come; it's quite neighborly, this call! Do you know, I have been wanting to tell you something; and as I know how discreet you are, and never let out, I must just say that Mrs. M'Faddle, who lodges in the next room, receives too much company. They are too gay, these M'Faddles who pretend they see their friends only to discuss the Reverend Rueben Twaddle's discourses, before they are cut up into tracts to be distributed by the 'Moral Reform Society.' It is more probable they come together to talk over their own experiences; and you and I know what these must be, if they would tell all!'

Woman have so few moments of relaxation from the insipid routine of domestic life, that to obtain a little variety, and create excitement, they fall upon the characters of their neighbors. They cannot, if they were disposed, read while household duties are to be performed; but they can talk, even while the children squall; and what topic is more easy to find than that of making known the faults of a friend, that they may be corrected by the public, or the secret vices of others, that they may be shunned? Detraction, so called, may perform the duty of a monitor, and a little pleasant scandal may be a means of reclaiming many from the path of error. Then the motive is so pure!

In these houses flirtation is practised in various ways, and with various success. When conducted skilfully between single persons it is not reproved, but rather looked upon as a mark of cleverness, which affords amusement to the boarders who look on. Intrigues with married women are got up occasionally, but they are practised with little art and on a narrow scale, for want of the sound judgment and great experience which such matters require. As the world grows older every day, bringing forth neophytes who are arid of knowledge, it is not to be doubted that in a great city like this, full of enterprising inhabitants and boarding-houses too, such affairs will become as prevalent as they are in Europe, and be conducted with like skill, without incurring more blame. It must be confessed that the boarding-house system is well adapted to foster rising talent of this sort, and it is to be presumed that the next generation will not be slow in turning to account the scanty legacy bequeathed by their parents.

Where there are women in the house who have with them marriageable daughters, flirtation on the part of the girls, and intrigue on the part of the mothers, are both managed pretty openly; for here is a laudable purpose to be attained. The boarders seeing these praisworthy intentions, are generally kind enough to lend their aid by giving counsel to the mamma, and drawing the victim to submit becomingly to his fate. Many matches are made in this way; sometimes from love, and often because the man is beset, and cannot help himself. There are instances where the whole of the courting has been done by the mother, and succeeded, although the parties most interested showed, and really felt, little affection for each other. Some thoughtful, worldly-minded young men, when their bills have run up beyond their means to discharge, straightway fall in love with the landlady's daughter; by which course pay-day is put off indefinitely, to their great relief. There are also sly, shrewd persons, who marry the landlady herself; by which wise measure they not only have their accounts cancelled, but are comfortably provided for during the rest of their lives.

The mountains of Segar in Arabia, produce frankincence; and those of Safra, the balm of Mecca, from the amyris opo balsamum, which in the early ages sold for its weight in gold. It is still considered a valuable medicine.

The Fate of Grand Pre.

From the Boston Daily Advertiser.

Mr. Longfellow's beautiful poem, Evangeline, has given a celebrity to the unfortunate village of Grand Pre, the shores of the Gaspereau, and the French Acadians, which, in ninety years past, all their sufferings have not secured. Presuming that there are many readers of Evangeline, who learn from it, for the first time, of the deplorable act of English tyranny which desolated the Acadian villages, we collect a few notes on their history which will interest those who have read the poem. It will be seen how exactly and how closely Mr. Longfellow has followed the fate of these unhappy men.

The province of Acadia or Nova Scotia, being so far from Canada as to be quite beyond military assistance from that province, had fallen into the hands of the English repeatedly, before it was finally ceded to them, by the French King, in the treaty of 1713. The French government, says the Abbe Raynal, never knew the value of this possession,—although they should have found an interest in it from the fact, that it was the first region in America colonized by Frenchmen. The first permanent European settlement, made North of Mexico, was made at Port Royal, now Annapolis, by the French in 1604.

When by the treaty of 1713 the sovereignty of the colony was transferred to England, the English seem to have cared as little for their new acquisition. They stationed a small garrison at Port Royal, giving its present name to that place. But no emigration of consequence followed,—not five English families entering the colony for more than forty years.

The French colonists, who were transferred by this treaty to new masters,—were only induced to take the oaths of allegiance to the English crown, with this express qualification,—that they should not be called upon to bear arms in defence of the Province. This qualification was suggested by their unwillingness to fight against the French, or the Indians, with whom they had contracted alliances. General Phillips, who was charged with administering the oaths, assented to this qualification. It is said that the King, in England, objected to it when informed of it. The oaths, however, were never taken, or, for many years, proposed, in any new form. These French colonists were always known, in the subsequent struggles, as "the Neutral French."

What is remarkable in the matter is that no farther steps were taken to secure their neutrality. No magistrates were ever appointed over them, no rents or taxes exacted from them. They were in the happiest of all possible positions,—the position of a people forgotten by an arbitrary government.

The fascinating *Arcadian* description which the poem gives of their lives and customs, is wholly borne out by the Abbe Raynal's more prosaic account of them:

"Their manners," says he, "were of course extremely simple. There never was a cause either civil or criminal, of importance enough to be carried before the court of judicature established at Annapolis. Whatever little differences arose, from time to time, among them, were amicably adjusted by their elders. All their public acts were drawn by their pastors, who had likewise the keeping of their wills, for which and their religious services the inhabitants paid a twenty-seventh part of their harvest.

"These were always plentiful enough to afford more means than there were objects for generosity. Real misery was utterly unknown, and benevolence prevented the demands of poverty. Every misfortune was relieved, as it were, before it could be felt, without ostentation on the one hand, and without meanness on the other. It was, in short, a society of brethren, every individual of which was equally ready to give and to receive what he thought the common right of mankind."

This statement, it is said by good judges, is not overdrawn. The same authority states the number of these colonists in 1749, as 18,000. Our own historian, Minot, calls them 7,000, only, writing from General Winslow's MSS. He also says their character was mild, frugal, industrious and pious.

The war of the Succession, ended in that quarter by the capture, by the English and Provincial forces, of the French Fort Beau Sejour, an encroachment on this territory. It was then charged against these people that they had furnished the French and Indians with intelligence, quarters, provisions and assistance, and that three hundred of them were found in arms at Beau Sejour. To such as had not thus been found in arms, it is said the offer had been made by the English, that they might keep their land if they would take the oath of allegiance without any qualification. If this offer were really made, does not really appear. If it were, it was rejected.

In the capitulation of Beau Sejour the English had consented that the "inhabitants should be left in the same situation as they were in when the army arrived, and not to be punished for what they had done afterwards." Notwithstanding this stipulation, however, after the surrender the Lieutenant Governor of Novia Scotia, with his Council and the British Admirals, agreed summarily, that, as, if they drove the inhabitants away from their country, on the charges named above, they would go to recruit the French armies in Canada, it would be better at once "to disperse them among the British colonies, where they could not unite in any offensive measures."

This conclusion was carefully concealed from the Acadians until they had gathered in their harvest, which the conquerors needed. Colonel Winslow, of the Provincial force, was charged with the principal duty of executing a service which punished a whole community for the offences charged on individuals. He seems to have entered on it with no little reluctance.

The secret was perfectly kept, and a cunning proclamation issued, bidding the inhabitants assemble in their different villages "to hear the King's orders."

"At Grand Pre," says Minot, "where Colonel Winslow had the immediate command, four hundred and eighteen of their best men assembled. These being shut into the church (for that had become an arsenal) he placed himself with his officers in the centre, and addressed them thus:

"Gentlemen, I have received from his Excellency Gov. Lawrence, the King's commission which I have in my hand; and by his orders you are convened together to manifest to you, his Majesty's final resolution to the French inhabitants of this his Province of Nova Scotia; who for almost half a century have had more indulgence granted them than any of his subjects in any part of his dominions; what use you have made of it you yourselves best know.

The part of duty I am now upon, though necessary, is very disagreeable to my natural make and temper, as I know it must be grievous to you, who are of the same species.

But it is not my business to animadvert, but to obey such orders as I receive, and therefore, without hesitation, shall deliver you his Majesty's orders and instructions—namely:—"That your lands and tenements, cattle of all kinds and live stock of all sorts, are forfeited to the Crown; with all other your effects, saving your money and household goods, and you yourselves to be removed from this his Province.'

Thus it is peremptorily his Majesty's orders, that the whole French inhabitants of these Districts be removed; and I am, through his Majesty's goodness, directed to allow you liberty to carry off your money and household goods, as many as you can without discommoding the vessels you go in. I shall do everything in my power that all those goods be secured to you, and that you are not molested in carrying them off; also that whole families shall go in the same vessel; and make this remove, which I am sensible must give you a great deal of trouble, as easy as his Majesty's service will admit; and hope

that in whatever part of the world you may fall, you may be faithful subjects, a peaceable and happy people.

I must also inform you that it is his Majesty's pleasure that you remain in security under the inspection and direction of the troops that I have the honor to command."

With this most quaint address, Col. Winslow declared them the King's prisoners. And they were detained in the church for several days. It appears from Mr. Haliburton's book on Nova Scotia, in which he avails himself largely of the writers whom we have copied, that at their earnest entreaty they were permitted ten at a time to return to visit their families and homes.

Minot closes the narrative thus:—

The whole number of persons collected at Grand Pre finally amounted to 423 men and 337 women, heads of families, and their sons and daughters, to 527 of the former, and 576 of the latter, making in the whole 1,923 souls. Their stock was upwards of 5,000 horned cattle, 493 horses, and 12,887 sheep and swine.

As some of these wretched inhabitants escaped to the woods, all possible measures were adopted to force them back to captivity. The country was laid waste to prevent their subsistence. In the district of Minas alone, there were destroyed 255 houses, 276 barns, 155 out-houses, 11 mills and 1 church, and the friends of those who refused to come in, were threatened as the victims of their obstinacy. In short, so operative were the terrors that surrounded them, that of twenty-four young men who deserted from a transport, twenty-two were glad to return of themselves, the others being shot by sentinels, and one of their friends who was supposed to have been accessory to their escape, having been carried on shore, to behold the destruction of his house and effects, which were burned in his presence, as a punishment for his temerity, and perfidious aid to his comrades. Being embarked by force with the musketry, they were dispersed, according to the original plan, among the several British Colonies. One thousand arrived in Massachusetts Bay and became a public expense, owing in a great degree to an unchangeable antipathy to their situation, which prompted them to reject the usual beneficiary but humiliating establishment of paupers for their children.

The moment of embarkation is thus described by Mr. Haliburton:

The preparations having been all completed, the 10th of September was fixed upon as the day of departure.—The prisoners were drawn up six deep, and the young men, one hundred and sixty-one in number, were ordered to go first on board of the vessels. This they instantly and peremptorily refused to do, declaring that they would not leave their their parents; but expressed a willingness to comply with the order, provided they were permitted to embark with their families. Their request was immediately rejected, and the troops were ordered to fix bayonets and advance towards the prisoners, a motion which had the effect of producing obedience on the young men, who forthwith commenced their march. The road from the chapel to the shore, just one mile in length, was crowded with women and children, who, on their knees, greeted them as they passed with their tears and their blessings; while the prisoners advanced with slow and reluctant steps, weeping, praying, and singing hymns. This detatchment was followed by the seniors, who passed through the same scene of sorrow and distress. In this manner was the whole male population of the district of Minas put on board of five transports, stationed in the river Gaspereau, each vessel being guarded by six non-commissioned officers and eighty privates. As soon as the other vessels arrived, their wives and children followed, and the whole were transported from Nova Scotia.

Hutchinson, in speaking of the distresses of these people, says: "In several instances, the husbands who happened to be at a distance from home, were put on board vessels bound to one of the English colonies, and their wives and children on board other vessels, bound to other colonies remote from the first. One of the most sensible of them describing his case, said, "It was the hardest which had happened since our Savior was upon earth."

* * * * * * *

In another section of the Colony, says Mr. Sabine, two hundred and fifty-three houses were set on fire at one time, and their owners beheld the awful calamity from the neighboring woods in unspeakable agony. When, at length, an attempt was made to burn their church, they suddenly emerged from the forest, slew and maimed about fifty of their men, and quickly returned to "God's first temples."

The course of American history afterwards brought a striking retribution upon the family of one at least of the principal actors in this affair.

Whatever were the offences of *some* of the Acadians it is undenialy true that, as a people, they were involved in hopeless and utter misery, in consequence of their unalterable attachment to their religion, and their devoted loyalty to their sovereign; and was the head of the most ancient and loyal family of New England the proper instrument to punish them for faithfulness to conscience and duty? Twenty years after, as will be seen by the accompanying notices, nearly every person of Winslow's lineage became sufferers in turn, and for similar reasons; and the fact, that *they*, by the force of events, were transplanted to the very soil from which the Acadians were expelled, and that men of their blood and name are now as rarely to be met with in the country in which for a century and a half they were prominent actors, as are those of French origin in the former Acadia of France, affords another instance, and the last to be recorded in this volume of the vicissitudes of human life and the changes of condition effected by civil war.

The Rene Leblanc of the poem is not an imaginary person. He was a notary public, as represented, and had formerly testified his allegiance to the English Crown by his own sufferings.—The Indians had carried him into captivity on that account, and detained him a prisoner four years. At the time of the events described, he was a vigorous old man, with twenty children and one hundred and fifty grand-children. Despite of Winslow's promise, he was sent with his wife and his two youngest children only to New York:—the others having been sent elsewhere. With them he travelled to Philadelphia in the search of others of his family, and succeeded in joining three of them in that town. But here he was exhausted, and died heart-broken and in despair.

The whole of his history is very well worth the attention of our own government at a moment when it is annexing subjects of a foreign allegiance and disposition.

The Bridge at the Falls of Niagara.

From the New York Courier and Enquirer.

I have been intensely interested to-day in listening to a description, from a well-informed and competent source, of the great bridge over the gorge that separates the dominions of the Queen from those of the President. If anything could be wanting in the attraction of the country about Niagara to turn thither the tour of the multitudes in the pleasure season, this bridge will supply it. Its thousands of tons of weight of the strongest iron-cord that the ingenuity of the iron-master can desire, find a safe support in wrought-iron anchors, built in the solid rock one hundred feet below the surface, so that before it could yield, the very rock-bound earth would forsake its tenacity. A large wooden framework is to be placed so that no undulating motion can be experienced. In full sight of the cataract, the surge of angry waters far beneath, the sullen storm-beaten rocks all around, the quick locomotive will put forth all its quickness to rush beyond the peril of its journey. This glorious work is already begun, the money for its cost paid in and available, the excavations commenced, and the contractor is to pass on horseback by the middle of next June. Its firmness is to be such that, with all the burden of a powerful locomotive and a long attendant train of cars, it is not to vibrate one inch in the centre. The railway is to occupy the centre, two carriage ways on either side, and two footways.

What a magnificent spectacle this road in full use will present! A road of this kind over the Menai Straits in Wales is famous for the daring

display of its construction. That over the Niagara will soon be world-famed. It will be an iron link of civilization between the ruling Powers of the world, and will never be severed.

One of the first thoughts that presents itself in reference to the construction is as to how the wires are to be thrown across. The steamboat now used below the Falls is to take over two cables, to which strands of iron are fixed. These are to be drawn over till two ropes of iron are drawn over, on which a temporary pathway it to be placed; and when I inquired where workmen *could* be found that had nerve enough to work effectually under such circumstances, the answer, so characteristic of American strength of action, was, "Oh, there are always plenty of Yankees who have both the courage to work there and the ingenuity to work well."

The great railway in Canada which is to connect with this mighty work presents some admirable features. Its grade is over twenty feet, and a very large proportion of the distance is on a straight line. On one line, perfectly straight, ninety miles are laid out. All the highways of the country are to pass either over or under the road, by such depression or elevation as to be entirely removed, so that there will be neither obstacle ner hindrance to a flight which will put more life into the provincial dominion of her Britannic Majesty than it has yet seen. "That same" province of Canada West has yet to see great days. England expends millions on sections of her great dominion far less worthy of her notice and fostering care.

"The last link" is completed when this great bridge of the cataract shall have been completed. From Boston and from New York an unbroken line is presented, and the day is soon coming when some correspondent of ours will delineate the incidents of a thirty hours' journey from the metropolis to Detroit. Such are the movements and the progresses in support of which all may unite, and which mark our busy day.

Gutta Percha.—This is the name of a new substance or gum, which is said to be destined to eclipse India rubber for all the purposes for which that article is now used. The gum is from a peculiar tree which grows on the Island of Borneo and throughout the peninsula of Malacca. It differs from the Caoutchouc gum, inasmuch as it immediately becomes hard after exudation, and by exposure to the air. Its utilitarian application is endless. It is purified by being boiled in hot water, when it becomes soft and plastic; below the temperature of fifty degrees it is nearly as hard as wood; it is extremely tough but becomes plastic when it is cut into thin stripe; at a temperature below boiling water it becomes as soft and yielding as melted wax, or putty, and may be moulded into any form or stretched out thinner than the finest paper. When it cools it becomes hard and tough again and retains its plastic shape without the slightest change by contraction or warping.

The preparation is said to be already know in England, where it has been employed in bookbinding, for which purpose it has been preferred to leather. Ornaments as elegant as those of *papier mache* are made of it, and is is said to have been made use of also for mouldings and cornices. Acids and chemical agencies have no effect upon it, whilst its tenacity in resisting weight is so wonderful, that a thin slip will sustain a weight of fifty pounds A leaf of this remarkable Gutta Percha no thicker than bank note paper is as impervious to water as glass; for umbrellas, overcoats, roofs of houses, bottoms of ships, coverings of boxes, and in all cases where protection from wet is desired, its use will be invaluable. It can be formed into gas-pipes and water-pipes of any size, and any degree of strength that may be required: and used for such purpose will never decompose or wear out: and being ductile and elastic it may be applied in a thousand shapes, and for thousands of purposes where iron or lead cannot now be used.

For floor cloths, it is said that it will supersede the use of all other materials, as it can be made of extreme thinness, perfectly impervious to air or water, and of greater durability than any other flexible material known. In its hard state it can with difficulty be cut with a knife or a saw, but when it is soft, it can be moulded into the most delicate forms by the hand of a child.

Suicide.—Self-murder by steel, lead, hemp or poison, is of rare occurrence, and we are now going to speak of it. But people murder themselves fractionally; they do not more than half live, which amounts to half murder. We do not mean that they do not eat, sleep and clothe themselves enough—these are not living, only the means of living. A person may apply all the means in the best and most abundant style—doing, in fact, nothing else—and not live at all.—He is a sort of walking self-murderer.—He may do so and be all the time most anxious to reach old age—he may die a thousand deaths in fearing one.

What a glorious thing life, in its fulness, is!—The man who truly lives has great and various plans—as great as his faculties—reaching definitely into the future, on all of which the minutes as they come find him at work—joyfully, fearlessly, at work. One part of all his plans is never to be disappointed. Another part is to enjoy everything in the universe as it floats by him.—Call on him, he is glad to see you. Fool not to be. How heartily he shakes your hand. If there is nothing very amiable in you he makes something so by his smile and hearty cheer. If that case is hopeless, and he must hate, he does it with his whole heart. He fights you with a cordiality that convinces you that he can love and his love is worth having. O! the cold, dull, discouraged, dead men, that walk our streets and mope into their counting-rooms. They suspect everything, confide nothing. One wonders that they do not snuff out the little flickering of life that remains. To change the figure,—what an enormous waste of manure for so small a crop of life.

The great field of man is labor. And yet on this field he dies mostly a perpetual death, thro' the foolish notion that it is not his happiness but his misery. He makes a captive, a victim, an outcast, a slave of himself all the while, though he should be a perfect king.

Even life's angels, the bright browed young men, and the fair, glossy-locked maidens, but half live through care and worry for the future—for profession, settlement, business, husbands,—neglecting their own work and not trying to do God's. There is not a young man or woman in the opening bud of life who might not, by the joyous and free expanse of our glorious nature, the frank untramelled flowing of our natural kindness, make a heaven all around.—*Anon.*

A Legislature Dispersed by the Small Pox.—On the 17th inst., both branches of the Indiana Legislature, owing to a general excitement which grew out of several cases of small pox, adjourned over to the first Monday in February. Mr. Andrew Kennedy, [formerly a member of Congress,] is dangerously ill of the genuine small pox.

For the Western Literary Messenger

I'm Kneeling by thy Side, Mother.

BY MARIANNA MENDEZ.

I'm kneeling by thy side, Mother!
And Father, thou art here!
Yet ye murmur forth no welcome-word
My lonely heart to cheer!
I breathe thy cherished name, Mother,
With low and quivering lip—
But, as the mournful echo dies,
I turn away and weep!

For thou *didst* love me *once*, Mother!
And on thy gentle breast,
Each little grief my young heart knew,
Was sweetly lulled to rest!
But oh! that fearful day, Mother!
That dark and woful day!
When, shrouded for an early tomb,
Thy form before us lay!

I felt that thou wert dead, Mother!
Thy cheek was white and cold—
And thy heart's warm beatings never more
Might stir thy vestment's fold!
The long lash drooping soft and low,
Thine eye's dark radiance hid;
And thy pale hands folded peacefully
Beneath the coffin's lid!

Death's seal was on thy lip, Mother.
But the sweet smile lingering there,
Came, as an Angel beckoned thee
The Crown of life to wear!
Now the grave-sod lieth green, Mother,
Above thy tranquil brow!
For long and weary years have passed
Since first they laid thee low!

Yet thou art near me still, Mother!
Thy wing is hovering o'er,
When, with the dreams of other years,
That smile comes back once more!
I cannot see thy face, Mother!
But from yon jasper walls,
Like seraph tones from golden lyres,
Tha starry music falls!

The sun is sinking low, Mother—
A deep hush broodeth 'round!
And my throbbing heart grows strangely still,
Beside thy hallowed mound!
I trace, once more, the sculptured stone
With calm and tearless eye—
For in the hour of parting strife
Thine was the victory!

And I would not call thy wing, Mother,
From that bright home above,
Save but around my path to throw
Thy shielding watch of love!
Tho' warm and grateful ties, Mother,
Around my fond heart twine,—
Yet *thy* lost love hath place within
The spirit's inner shrine!

Farewell! once more, farewell, Mother?
How many a change hath been
Since last I knelt beside thy grave,
And, ere I come again—
Each rainbow hue that tints my path
May darkly fade away,
And the weary spirit long for rest
Beside thy peaceful clay!

Oh! look with those meek eyes, Mother,
On thy lone orphan band—
Our paths have sundered far, since first
We missed thy gentle hand!
Yet, 'mid the daily walks of life—
And on the treacherous deep—
Still o'er thy scattered household group,
Thine holy vigils keep!

Yea! clasp us 'neath thy wing, mother,
Whene'er our feet would slide—
And to the shadow of the "Rock,"
Our failing footsteps guide!
And when at last Life's journey ends
Beside the silent tomb,—
Be ours, thy calm triumphant faith,
Thine, our eternal Home!

NEWARK, July 31, 1847.

For the Western Literary Messenger

"Learn to Say No."

We have somewhere read of a wise and good mother who, in her dying hour, besought her son to learn to say No. Such timely advice can not be too often reiterated. "Words" so "fitly spoken" should be preserved and handed down from one generation to another, for they are 'apples of gold," and may prove a blessing to the end of time.

To say No is a difficulty with multitudes.—This is owing to a want of decision. They neglect its cultivation and become weathercocks. Their purposes are shifted oftener and with more suddenness than the wind. They may, as they suppose, have made up their minds to go a certain way, when you ask them to go another, and there seems to be no hesitancy in complying with the invitation. To-day they may conclude to pursue a specified calling, but to-morrow an opportunity presents itself to engage in some other, and they do it. A person of this character will sometimes fairly learn a good trade; then forsake it for, it may be, "the oyster business;" by and by accept a clerkship on a steamboat; anon study phrenology a month, and then examine heads for a living the balance of the year; ere long peddle Connecticut clocks till he gets "run down," and finally "wind up" by becoming a corn-doctor!

Seriously, without fixedness and firmness of purpose, in other words, the ability to pronounce the emphatic No, one is in constant and imminent peril. Indeed, a deficiency in this respect, is the open gate to each crooked lane in life.—It leaves the way clear for sin's *first* step. A case to illustrate this point is fresh in mind.

Some of our readers have heard of HIRAM COREY, who was convicted of manslaughter in the second degree in Cattaraugus county, eight or nine years ago, and sentenced to Auburn State Prison for the term of seven years. We lately met him in that county and learned that he attributes his long catalogue of crimes, whose hideousness seems to have increased, step by step, in a regular gradation, to a failure in saying No when he was first invited to partake of the intoxicating glass. Had he resolutely refused to touch it, he could never have become a drunkard; would have avoided rioting, gambling and the darker crimes of which he was at last guilty; and, finally, he would, as he feels assured, have escaped

the shame and misery of a felon's doom in his seven long years of dreary confinement. A sober, respected, industrious man, and a christian, his language to youth (recorded in a little printed narrative of his life now lying before us) is, "Avoid the company of the intemperate and the the profane, for if you cultivate a taste for such society, your earthly enjoyments are not only endangered, but will begin to terminate, and future years will reveal your shame and sorrow."

Young reader, remember this advice of the contrite and liberated convict; learn to say No when invited or urged to indulge in *any* sinful habit, or in any foolish practice which may *lead* to crime; early choose some honorable occupation; stick to it and increase its honor; live an honest, industrious *man*, and die a lamented *christian*.

EDITOR.

The Execution at Jalapa.

It has been already stated that two Mexican officers had been tried and executed at Jalapa for a violation of their parole of honor. The circumstances are thus detailed by a correspondent of the N. O. *Picayune:*

JALAPA, Nov. 24, 1847.

I sent off an unfinished letter to you last night, and when interrupted by the information that a courier was on the point of starting, I was going on to speak of the intense feeling manifested by the most influential people in town in favor of Lieut. Alcalde, who, with Adjutant Garcia, is to be shot today, at noon, for a violation of their parole of honor. So deeply were my feelings wrought upon by the scenes of last evening—the crowds of supplicating women—the solemn but animated countenances of Mexican generals, priests, and dignified citizens, as they plead for the lives of those who had so basely forfeited them, that I dreamed of nothing else last night but executions, priests and crying women.

The degrading confession, on the part of the most respectable Mexican citizens, that it is considered no disgrace, no crime, for a Mexican officer to violate his parole of honor while an enlarged prisoner of war, or even for him to join a band of cut throats while yet a prisoner, and lie in wait to kill those to whom he owes his life and freedom—to whom, in fact, his life belongs, is enough to excuse us from putting any faith in future in the promise of Mexican officers. It is time, too, to give these individuals a few salutary lessons in the school of honor, and to cause them to hold inviolate the almost only barrier against wars of extermination, viz: the soldier's parole.

The two criminals spent the whole of last night in the church with priests, a strong guard being placed over them. The coffins have already been conveyed to the place of execution, and in less than an hour the two wretched men will die, as they hardly deserve to die, a soldier's death, and they will appear before a higher judge, who will decide whether it be wrong to take the life of a professional soldier for a violation of the most sacred and humanizing feature of civilized warfare. Yesterday the citizens of Jalapa witnessed an act of American justice; today they will see another.

Half-past 12 *o'clock.*—The execution is over. The prisoners marched blindfolded to the plaza, a priest attended them. They were in full uniform, and behaved with as much firmness as could be expected of men under such circumstances.—Each was supported by a friend at either arm, and were led to the side of the plaza and seated upon their coffins, near the wall of the barracks. They continued their devotions aloud, after embracing a few friends, until the word "fire!" when both fell back dead, scarcely moving a muscle. The troops under Gen. Patterson were all paraded again, and not only looked very well, but behaved as they did yesterday, with propriety.

The bodies of the executed officers were given over to their friends, and soon conveyed away in neat coffins. Thousands of Mexicans flocked towards the scene, but were prudently kept out of the plaza. The excitement which prevailed yesterday among the inhabitants seems in a measure to have subsided today,—but whether it yielded to a sense of justice or to awe, remains to be seen.

JALAPA, Mexico, Nov. 24, 1847.

It is now dark, and since I concluded my last communication and handed it in to be forwarded, such singular and outrageous scenes have passed before me that I must again write, though in the midst of preparations for a long march.—This morning the alcade of Jalapa called on Governor Hughes and asked him if the bodies of the condemned Mexicans could be given up to their friends after the execution. "Yes" "Will you allow the condemned to walk to the place of execution?" "Yes, if they and their friends desire it." "Will you direct that they may not march in the midst of soldiers, but a space be allowed for them and their friends?" "They will be strictly guarded to the place of execution, and every precaution taken to prevent confusion by an attempt to escape. Although they have forfeited every right to such considerations, still they are condemned to die, and every reasonable indulgence shall be allowed, and all proper delicacy shall be observed towards them." "May the usual funeral ceremonies be performed?" (It had not been intimated to Gov. Hughes that subscriptions had been made to get up a grand pageantry.) "Certainly, yes, but no ostentatious display will be allowed. Should anything of the kind be attempted I shall put it down and hold you responsible for it. The immediate relatives and friends can bury the unfortunate men according to usage, but nothing farther. Do you think one hundred persons would be as many as would congregate on the occasion?" "Oh! yes; not so large a number will desire to attend."

A short time after this interview the alcade went to Gen. Patterson's quarters, and, through an officer of the staff, asked if the General had any objections to the deceased being buried with the usual religious ceremonies. The officer, after consulting with the General, replied that no objection would be made. Judge, then, of the surprise of the General and the Governor when they heard the sounds of martial music passing their quarters, and on looking out saw a procession of some 2,500 people, a military band of twenty-five musicians, the military caps of the degraded scoundrels carried along side of the gaudy coffins, a formidable array of priests, silver candlesticks, &c. &c. and two hundred of the first citizens of the place, scrupulously dressed in the finest broadcloth, in tasty and complete mourning suits, following the remains of the very men whom our officers had condemned for the basest of crimes—men who, in Europe, in any civilized or decent community, would have been denied every thing but "the benefit of the clergy!"—Gen. Landero was in the procession. Never were the most sacred and tender feelings of humanity more grossly outraged, never was impudence or insult more strongly marked; never did the inhabitants of a conquered town deserve se-

verer chastisement. The alcade, it seems, after visiting headquarters, went and told Gov. Hughes that he had seen Gen. Patterson and communicated to him all that the Governor had said to him, and that the Gen. had given his free consent for the remains of the criminals to be buried with any ceremonies their friends might see fit to observe!

It would seem that our enemies are bent upon their own destruction. No kindness is extended to them that they do not abuse, no courtesy shown them they do not mock at; no faith placed in them after they are fairly conquered that they do not take disgraceful advantage of.

THOUGHTS ON THE TOWN.—It is a contemplative task, at the present time, to walk through any one of our more populous streets and observe the kaleidoscope, color-changing, many-shaded crowds that one meets thronging the side walks. The elegant lady, attired in all the magnificence of the current fashion; the poor, plainly clad widow, with the imprint of want and of sorrow on her countenance. The rich speculator, whose "operations" range at hundreds of thousands; the poor, disappointed northern clerk, the bubble of whose hope of getting a high salaried situation has burst, leaving him a moneyless stranger in the city. The fashionable fop, all gold, glitter, and diamonds, but wanting the immediate jewel of the mind, a vigorous and educated understanding; the honest, independent artisan, whose fortune is his labor, whose health is his contentment of mind. The patron of the turf, ready to go his "pile" on some nag; the "sporting gentleman," who never puts forth his last card till death calls on him to show his hand. The self-sufficient martinet, with silver-laced coat and downy mustache, on his way to the war; the sturdy officer, whose sword has carved his fame, returning from it. But of all whom one sees in our streets, none call forth such emotions of pity as the poor, sickly, or disabled soldiers who, though not in great numbers, may be every day seen hobbling along on their return from Mexico, anxious to reach their homes, but unable to proceed with any celerity. It is a sad sight to look at the poor fellows, wan and wearied as they appear, and it is a bitter reflection that their share of the glory, to which they so signally contributed, is a wrecked constitution, a maimed member, and a blank among the names reported for promotion to the war office. And this is honor! this is glory! Well has the poet said:

"What is honor but a name?
A charm that lulls to sleep;
A shade that follows wealth and fame,
And leaves the wretch to weep."

—*New Orleans Delta.*

ARTIFICIAL STONE.—A process has been patented by which artificial stone of every quality may be produced, from artificial granite to statuary marble. This invention is, from its cheapness, a great advantage for all the purposes of architectural decoration, and from its plastic nature before it becomes hard, of great service to sculptors in taking casts of statues, busts, &c., and even of figures of the size of life. The cost is in all cases where carving is required in stone, in which this composition is substituted, less by nine-tenths. The invention is founded on the chemical analysis of the natural varieties of stone, and the manufacture is capable of such modifications as are requisite to produce all the varieties. The artificial stone produced is less absorbent than natural stone, and is superior in compactness of texture, and will resist frost, damp, and the chemical acids. It is made of flints and silicious grit, sand, &c., rendered fluid by heat, and poured into moulds as required, till cool and hardened. Its strength and solidity enables it to resist more blows than real stone. The specimens of the invention are exceedingly curious; they consist of many varieties, some being plain pieces of coping stone, stones for varigated pavement for halls and rooms, stone ornaments, such as mouldings for friezes, finials, and some more elaborate, having flowers and devices apparently cut with the chisel. There are also some grindstones, and hones used by agricultural laborers for sharpening sythes and tools. The invention is also applicable to the lining of cisterns and water pipes, its vitreous qualities insuring cleanliness. Its extreme cheapness is also a matter of consideration to those who require ornamental additions to houses.—*London Times.*

REMEDY FOR THE POTATO ROT.—In 1846, one of the editors of this paper planted potatoes on land manured with morocco tanner's manure, which contains a good deal of lime. The crop was healthy and good, while other fields in the vicinity were diseased. In considering what it was, in the tanner's manure, that protected the potatoes from disease, he came to the conclusion that it was principally the lime. Accordingly in the Spring of 1847, after his potatoes were up and ready for the first hoeing, he put about a pint of shell lime (slacked) on each hill, having, previous to planting, ploughed in a moderate dressing of stable manure. The result was, 200 bushels of the finest potatoes to the acre.—mealy and sound, on land naturally poor and sandy. They continue sound and good. We were about to state these facts for the benefit of others, when we met with the following in the American Agriculturist for Jan. 1848 (just issued.)

"Here is a remedy against the rot, which so far as we have heard, has proved infallible.—We have published it twice already in the Agriculturist, but not one farmer out of a thousand seems to have yet heard of it; for the special benefit, therefore, of the nine hundred ninety and nine, we intend to insert the remedy two or three times more. It is simply this:—

"When the seed is dropped, sprinkle about a pint of slacked lime over it in each hill, and then cover it.

"There is this value about the lime, if it does not prevent the rot in the potato, it will be worth its cost and the labor of application in fertilizing the land."

The mode of applying the lime, or rather the time of doing it, recommended by the Agriculturist, is different from ours, and may possibly be the best, though we are not sure of it. We would prefer that the lime should not come in immediate contact with either seed or vines.—*Jour. of Com.*

[A friend says he has tried this, and found it wholly inefficient in preventing the rot.]

Mr. Orestes Augurtus Brownson has been delivering at the Bangor Lyceum the lecture which he gave in New York last winter, on "The Revolutionary Spirit of the Age." The Bangor Whig says:

The lecture was a remarkable effort to reverse History, and dethrone common sense. All wisdom, including literature, divinity, law, government; all freedom and respect to human rights were with the ancients, and the ages had backslidden. There was more learning in the 13th century, albeit the art of printing had not been discovered, than there is now. "The stream cannot rise above the fountain, therefore no man can be more than man." What man was, man is, and always must be, except as he runs down and grows less. All the oak was in the acorn, therefore the oak can be no more than the acorn!"

J. CLEMENT, EDITOR.

Longfellow's Evangeline.

Of this new poem by the Harvard Professor, all manner of pretty things have been said.—It has been praised by the periodicals, high and low; by nine hundred and ninety-nine newspapers; by men of taste at all literary depots, and by the small beer literati around the town pump. It has been praised warmly, superlatively, by every body, in every place.

Well, it is *worth* praising, *somewhat*. It has beauties; they are many and striking. The subject itself, (the expulsion of the French settlers of Acadie from the basin of Minos, "one of the most sadly romantic passages," as Whittier says, "in the history of the colonies of the north") is highly poetical, and Longfellow has powers capable of rendering it into attractive verse. But we regret that he chose the hexameter measure. It seems foreign to our language. The admirers of Ossian may read it *con amore*, for, as has been shown, it is similar in style to that poem. The following extract will prove this:

"Swiftly they hurried away to the forge of BASIL the blacksmith. There at the door they stood with wondering eyes to behold him take in his leathern lap the hoof of the horse as a play thing, nailing the shoe in its place: while near him the tire of the cart-wheel lay like a fiery snake, coiled round in a circle of cinders. Oft on autumnal eves, when without in the gathering darkness bursting with light seemed the smithy, through every cranny and crevice, warm by the forge within they watched the laboring bellows, and as its panting ceased, and the sparks expired in the ashes merrily laughed, and said they were nuns going into the chapel. Oft on sledges in winter, as swift as the swoop of the eagle, down the hill-side bounding, they glided away o'er the meadow. Oft in the barns they climed to the populous nests on the rafters, seeking with eager eyes that wondrous stone, which the swallow brings from the shore of the sea to restore the sight of its fledglings; lucky was he who found that stone in the nest of the swallow!"

Much as Evangeline has been praised, we sincerly hope no other American poet will fall into hexameters. They are a dangerous exotic, and we should dread to see them springing up in the good old Saxon soil. Even Longfellow is not always tasty in their introduction. Witness the following lines:

"Patiently stood the cows, meanwhile, and yielded their udders
Into the milkmaid's hand, whilst loud and in regular cadence,
Into the sounding pail, the foaming streamlets descended."

If this is not an unsuccessful attempt to extract honey from a crab-apple, why, then there is no such thing as a cross and kicking heifer. And strong in this faith, we dismiss Evangeline.

CITY ITEMS.—New Year passed off in a general thaw. Warm showers of rain broke up the frozen mud; and a deluge of social cheer broke up the "fallow ground" of frosty selfishness and ice-ribbed petulance. Every thing transacted on this occasion, was well enough, except the midnight salute of fire-arms under which the Old Year was buried.

The usual lecture before the Young Men's Association on Monday evening, was given by G. W. CLINTON in the Cottage Baptist Church. The house was filled to overflowing; a common thing and a good indication. The subject of *Human Progress* was handled in a masterly manner. Mr. C. went into a lengthy definition of Civilization; scoffed at the idea of its being antagonistic to Religion; showed the difference between ancient and modern civilizations; maintained that the latter was not only progressive but imperishable; and concluded with an enumeration of some of the indications of human progress.

Two boys were drowned on Friday the 31st ult. while playing on the ice in the Hamburgh street canal, near Washington street. One of them, aged about fourteen, was a son of Mr. CORNELIUS MCMILLAN; the other, nine years old, was a son of Mr. G. W. RHODES. Their bodies were found next day near the Main street Bridge.

STEPHEN LAMPHIER, a man in the employment of A. W. JOHNSON & Co., fell from the third story of their storehouse on Friday the 31st ult., and was severely though not dangerously bruised. One leg was so much fractured that it was immediately amputated, under the influence of ether, by Drs. SPRAGUE and WINNE. He had no pain during the operation.

TRAINING HOGS.—We were much amused a few days since, in witnessing the operations of a lad in one of our bye streets who had an elderly porker in tow, and was drilling him for equestrian feats. The animal was too fat and lazy to run; and the young trooper manaed, by pinching its tail, to make it squeal, and thus getting its mouth open, he threw a strong cord into it: then, with a hand hold of either end, and himself fairly mounted on the animal's back, he made out, by drumming with his legs on its fat sides, to get up a gentle trot, and had, withal, a pleasant ride.

It appears, by the following account, that a man in "Varmount" has got the start of our young Buffalonian, in training these (like mankind) naturally obstinate animals. A farmer of St. Albans, says an exchange, "recently made a grand entree into that place, mounted on a small car drawn by four large hogs. He entered the town at a brisk trot, amidst the acclamations of hundreds, who were soon drawn together to witness this uncommon spectacle. After making the tour of the market place three or four times, he went into the woolpack yard, had his swinish cattle unharnessed and taken into a stable together, where they were regaled with a trough full of beans and wash. They remained about two hours, while he dispatched his business as usual at the market,

when they were put to and driven home again, multitudes cheering him. This man, it is said, has only had these animals under training six months. A gentleman on the spot offered him $240 for the concern as it stood, but it was indignantly refused."

When our friend SAXE gets out a third thousand of his famous poem "Progress," let him, if not a Mussulman, do justice to his swineship.

OUR PREMIUMS.—The movement of "M. W." is a good one; and he will find any one of the books offered, appropriate for a District Library. By the way, how easy a thing it will be for our friends all over the country to get some of these books for such libraries. There is scarcely a school district where twelve persons could not be found who would send us $1,25 each for the Messenger one year, and by that means get a book worth three dollars for the public library. Let some person in each district make the *first* movement, and ordinarily the plan will succeed.—Where twelve names cannot be obtained, let eight be sent, by which means a book (say Simpson's Overland Journey round the World) worth two dollars, will be given. Our friends who make returns immediately shall have the balance of the present volume of the Messenger, gratis. The next volume, both in its mechanical execution and the value of the literary matter, shall not be surpassed in the country.

CHURCH DISPLAY.—In this age when it is customary to expend so much pride *on* churches as to leave but little religion to be exhibited *in* them, it strikes us that the following remarks by a Boston divine are very appropriate. They are found in the columns of the Transcript:

"Nothing can be more foreign to the character of a Christian temple, than a pompous display, whether in architecture, music or preaching.—Nothing can be more inconsistent with its rights and real uses, than a wasteful or prodigal extravagance. Nothing can be more contradictory to the gospel—for the proclaiming and diffusion of which it professes to be built—than a degree of costliness which involves a parish in burdensome and oppressive liabilities, and encumbers them with a church debt."

THE COLUMBIAN MAGAZINE for this month comes to us improved in its exterior appearance; richly embellished, containing three engravings aside from the usual plate of fashions; and filled with an excellent variety of original and well-written articles. JOHN INMAN and ROBERT A. WEST, remain as editors: John S. Taylor, New-York, publisher.

AGRICULTURAL PAPERS.—We receive regularly, The Cultivator, monthly, of Albany; the Genesee Farmer, monthly, of Rochester; and the Boston Cultivator, weekly; all excellent publications.

TO CORRESPONDENTS.—We must decline a long story called "*The Ball.*" The first part needs abridging and the last re writing. It does not end naturally.

"*The Broken Hearted to her Sister,*" contains but little poetry. We wonder the lady should put her name to it. Declined.

"*The Teachings of Nature*" and "*The Ohio River,*" by different writers, are laid aside.

The author of "*A Nocturnal Sketch*" has not succeeded as well as in her first attempt, which was very successful. She can do better.

We must defer "*Le Clerc's*" matter for the present, our time is so much taken up. The pieces heretofore laid aside were deficient in literary merit. Their *tone* was well enough.

EDINBURGH PHRENOLOGICAL JOURNAL AND MAGAZINE OF MORAL AND INTELLECTUAL SCIENCE.—This truly splendid quarterly for January, edited by GEORGE COMBE and ROBERT COX, and republished by Fowlers and Wells, lies on our table. No periodical that comes under our observation, is better printed, and most of the matter would be acceptable to the thoughtful and be found highly instructive. Price two dollars a year, or fifty cents for single numbers. Hawks is agent.

THE HOME JOURNAL commenced a new volume with the new year. It contains the first chapter of a new romance called, Passages in the Life of a Refugee of the Revolution; or, Cruises of an old Sailor. Logged from the Recollections of a Landsman.

THE JOHN DONKEY, a new monthly published in Philadelphia, lies before us. For a frontispiece it has the editor (as we conclude) with the head of an ass on his shoulders.

THOMPSON'S BANK NOTE REPORTER for January may be had at the Literary Depot in the Post Office.

THE TEACHERS' ASSOCIATION of Erie county closes a session of two days, to day. We shall have something to say of it next week.

A NEW CAVE.—The editor of the Wisconsin Argus, accompanied by several friends, recently entered upon an exploration of a newly discovered Cave in Dane county, near Madison. They wandered through its labyrinths for several hours, but found no signs of its termination. It is probably of great extent, and is marked by many of the peculiarities of the great cave of Kentucky.—It will constitute the story of some venturesome explorer hereafter.

NEW YORK AND ERIE RAILROAD.—This road is now open to Port Jervis on the Delaware river. The cars ran to that place last Friday. This extension is thirteen miles, making the whole distance from New York *ninety-eight* miles.

☞ A City Scene.—It is a true saying that "one half of the world know not how the other half lives." Yesterday, says the New York *Sun*, about noon, as we were walking on Division street, we noticed apparently a middle aged woman, harrying along as if a great deal depended on her reaching her destination as quickly as possible. She was not alone, however, for a little girl some nine years old came running along after her, the tears rolling down her cheeks, and her little feet upon the pavement already blistered from walking. The woman had something like a square upon her head covered with a white cloth, which the wind turned aside as she was crossing the street and we saw the end of a small coffin. We followed her home, an old wooden rookery which stood alone in the rear of an alley and looked as if it had been abandoned by all neighbors.—We then learned the story of her sorrow. Her little daughter, twin sister of the girl before mentioned, had died the day previous, and being too poor to defray the expenses of the burial she had been obliged to apply to the city authorities for assistance. Her child was laid out on a deal table, and there seemed to be a sweet smile still lingering upon its lips. There was sorrow at the mother's heart, but, as the tear-drops started in her eyes, little Mary, for such was her name, clasped her tiny hands together, and said, "Do not cry mother, sister's happy!" How simple, touching and beautiful was that sentence from the lips of that little girl, and yet how many young hearts like hers are reared in poverty and suffering, when wealth, aye wealth is thrown away upon those who do not deserve it.

☞ The loss of property by the late great flood in the Ohio valley is estimated at ten millions of dollars. This is undoubtedly an exaggerated estimate, but if the loss is one quarter the sum named, it is a great calamity.

We have seen no estimate of the loss of life, but a large number of persons must have perished.

☞ The wires of the Western Telegraph (O'Reilly's) are now strung along the ports from Detroit to this city. The office will be on Exchange street, nearly opposite the Mansion House, and the company will commence operating next week.

☞ Paris possesses five public Libraries, to which *admission is absolutely free*, independently of those of the Institute, the University, and the two Chambers, to all of which persons satisfactorily recommended may obtain admission.—These five libraries contain an aggregate of one million three hundred thousand volumes.

☞ Directors of the Buffalo and Williamsville Mac Adam Road Company.—These gentlemen were yesterday duly elected: Wm. T. Miller, Ira A. Blossom, Horace Clark, Ij. Seymour, jr., Samuel F. Pratt, Wm. Hodge, jr., and Benjamin Hershey. Inspectors of the next election—E. G. Spaulding, John Ganson and John R. Lee. Afterwards a meeting of the Directors was held and Wm. T. Miller was elected President, John R. Lee, Secretary and Treasurer, and H. Streeter, Superintendent.

New York, Jan. 3—7 P. M.

Mr. Clay arrived at Washington this morning.

The brig Abbothula of Portland, has been totally wrecked on the coast of Virginia.

Southern mail arrived at Richmond today. No news.

The interest on the Maryland State debt due on Saturday last was promptly paid.

Women and Children.—At Manchester, England, has long existed an institution similar to the Young Men's Association of this city. Manchester is about the size of New York, and the population of it and the region within 30 miles is greater than that of London and the adjacent region to the same extent. The Athenæum, the name by which this institution is known, is one of the many popular associations of which Manchester may justly be proud, and in which she excels any other town in Great Britain. At a recent "soiree" given by its members, at which Alison the historian presided, and made the opening address, about 1,800 people were present, half of whom were ladies. Several members of Parliament and some literary gentlemen, whose attainments rank among the highest of our age, were present. Among these was Ralph Waldo Emerson, of Massachusetts, was exceedingly well received.

George Cruikshank, the great caricaturist, closed with a very happy speech—in which he sad that if he had ever produced anything worthy of praise, it was because he had always worked for the women and children:

"You may smile—(renewed laughter)—but it is true. I have always considered, when I was about to produce anything, that if I could amuse or instruct the female mind, and the minds of children, I was sure to have the minds of the men. (Cheers.) And I will make one observation with reference to a late production which I have brought forth—(hear, hear)—that I was induced to do so in order to save some of the poor females from the brutality which they have been suffering, under the effects of intoxication on the part of the men. (Hear, hear, and cheers.) I thank you, ladies and gentlemen, for the compliment which you have paid me. I may have produced something worthy of your consideration; but recollect, there may be talent to produce, but there must be talent to appreciate. You have that talent." (Loud cheers and laughter.)

An Honorable Death.—The Secretary and General Agent of the Commissioners of Emigration—Robert Taylor—died from disease—ship fever—contracted in the unwearied and fearless discharge of the duties of his office. The *Courier & Enquirer* pays the following just tribute to his memory. Though he died in his own bed, he died a glorious death, if duty can be honorable and to brave danger can be glorious:

Mr. Taylor, together with one of the commissioners, not less indefatigable and fearless than himself in the fulfilment of his trust—but whom we do not name, out of respect for feelings which shrink from any fuller public notice of the disinterested beneficence to which they are ever prompting their owner—visited Ward's Island last week, and went through all the buildings—hospitals included—in which the sick and destitute emigrants are sheltered and cared for. They wished to see for themselves, as was their habit, that the honored purposes of the land, of which the execution is confided to them, were carried out in the spirit in which they are conceived.

On returning from this visit, Mr. Taylor complained of feeling unwell—of headache, and general uneasiness. The fatal fever was even then in his system. He went to his bed, and only left it for the coffin!

When the soldier falls proudly in battle—a nation mourns his fate, cherishes his name, and adopts his children. He, too, has fallen a soldier of humanity, a brave man struggling not on the bloody and brilliant fields of war—but in the obscure lazar-houses of pestilence—against unseen and irresistible foes—for no temporal reward—for no personal promotion—for no human ap-

plause—but in the discharge of duty—in love for man, and in obedience to God! And God will mark such a career with such a close, even though they should pass it unheeded by.

But men will not suffer it thus to pass unheeded. The moral hero will not be permitted to die obscurely and be forgotten. A grateful city—grateful associates who know, because they have shared, his perils—grateful benevolent societies, in the name of the foreign races for whose well-being this precious life was given—humane and reflecting men of all tongues and kindred, will unite in paying fitting tribute to the pure name, the services, with memory of Robert Taylor—and will take care that the family made destitute by his death, shall not be without such consolation and support, as the gratitude—nay justice of his fellow-citizens may afford.

The loss of such a man as Robert Taylor—so fitted by previous pursuits—by character, and temperament for the office he filled so well—can hardly be appreciated, and difficult—most difficult will it be for the Commissioners to replace him. We shall not soon look upon his like again.

Ireland.

The condition of Ireland is most horrible.—Threatened starvation is but a small evil compared with the demoralization that seems to be almost complete in several of the most important counties, and is rapidly spreading. To give the details with which the British journals abound, would fill many columns of our paper; but they more than confirm the statements contained in the following, which we copy from the London correspondence of the *National Intelligencer*.—Indeed, the language of the various speakers, whose remarks are quoted, seems remarkably subdued in view of the actual facts:

The debate on the address upon the Queen's speech brought forward the entire subject of Ireland. Mr. Roche said "it had been observed that there was something in the Celtic blood which was prone to crime and disorder. But when the Irish came to England or went to America, did they shoot or assassinate? What was the reason that in every country in the world the Irishman was quiet and industrious except in Ireland? Why, because in those countries he was treated with justice?" Mr. Roche said there was "no occasion for a coercion bill: all that could be done by an arms bill, would be to disarm all respectable persons, and place them at the mercy of every vagabond. By a coercion bill disaffection would be created among well-disposed people." Sir G. Grey said "the poor laws' bill was working well in a great majority of the unions in Ireland; there were one hundred and thirty unions, and he believed that in only twenty-two of them aid would be required in addition to the rates, to meet the exigencies of the people." Mr. John O'Connell drew a frightful picture of the condition of the people. Hundreds were dying of famine, and the prospects of the coming winter were more dreadful than those of the last had proved. He was against arming the Ministers with any extra powers. Mr. H. Grattan said that 115,929 persons had died for want of food in Ireland during the late famine. That in 145 parishes, containing 1,600,000 persons, there was not a single resident landlord. The only disturbed counties were Tipperary, Clare, part of King's county, Roscommon, and Limerick. Why did not such men as Lord Palmerston, Lord Fitzwilliam, and Lord Lansdowne reside in Ireland? Sir B. Hall alluded to the speech of Archdeacon Laffan, in which the people of England were stigmatised as "Saxon scoundrels, who, if men enough, would, when suffering the same privations as the Irish, stand on one side, and shoot every man who had a decent coat on his back." There were four members of Parliament present when the speech was made, one of them Mr. J. O'Connell, and not one of them had thought fit to make a reproving observation. On Sunday morning a man was denounced by a priest from the altar; in the evening he was shot! Maj. Mahon was in like manner denounced on Sunday; he was shot on Monday.

According to the return of the Poor Laws' Commissioners, the rateable rental of Ireland amounted to thirteen millions; Sir B. Hall believed it amounted to twenty, and until that was fully taxed, he would not consent to any further subsidies from England. He was for giving additional powers to the Lord Lieutenant. He believed the Roman Catholic Priests might do a great deal to prevent crime, if they were so inclined. Mr. Maurice O'Connell said "as to the grant of eight or ten millions made last year from England, he could assure the House that not more than *one-fifth* of it had reached the people, and even of that a large amount had been absorbed in paying the army of fifteen thousand officials."

Sir W. Somerville (Secretary for Ireland) said that he regretted he could not state that the picture which had been drawn of crime and distress in Ireland had been exaggerated; but, as regarded crime, it was in some degree satisfactory that it was quite local, being confined to five counties. The spirit of crime now arises, not from distress, but from a resistance to the payment of rent; crimes were now committed principally by bodies of armed men. Where crime was the most rife the distress was not the greatest. During the last week in last July no less than 2,569,956 persons were receiving gratuitous relief. The harvest had been very abundant this year, but the potato crop was only *one-fourth* the annual value. Emigration, which was popular last year, was now quite the reverse, owing to the unfavorable accounts received from Canada and the United States. Three-fourths of Ireland would be able to maintain itself, with the aid of the poor laws; for the remaining one-fourth additional assistance would be necessary and would be rendered.

Lord Stanley (in the House of Lords) said "he believed that the landed proprietors had exerted themselves to the utmost in Ireland. There are districts in Ireland in which the entire fee simple of the property would not suffice to maintain the poor; there are districts in which the landlords are penniless, in consequence of armed combinations to resist the payment of rent. My own property in Ireland is situated in a district which, comparatively speaking, is but little distressed.—I have as good a tenantry as any in the south of Ireland; my rents are generally punctually paid; yet I have been subjected to such expenses that I have not received a shilling rent for the last half year. I say, advisedly, that the state of Ireland at present is worse than a state of civil war. The best landlords, those who have sacrificed all the comforts of civilized life—and they must be sacrificed in some parts of Ireland—in order to discharge their duties to their tenants and dependants, are, at this moment, absolutely besieged in their own houses, held prisoners within their own gardens, with the knowledge that throughout the country *their names are on the black list, and that they are marked out for assassination.* One by one they are cut off by the assassin. However much the Roman Catholic clergy of Ireland may, as a body, be desirous of repressing offences, they *do not*, as a body, *lend themselves to the support of the laws.* There have been recent instances of denunciations of individual landlords which could hardly fail of stimulating to acts of violence; and I believe I am justified in saying that in one instance the denunciation was followed within two

days by the assassination of the man, respecting whom the *priest had asked from the altar 'whether he deserved to live?'*"

Lord Stanley strongly pressed upon Ministers the duty of asking from Parliament whatever powers they might judge necessary for the putting down the reign of terror in Ireland; assuring them that they would receive from him and his friends "no flinching, hesitating, or ambiguous support." Lord Brougham said "Ireland stood at that hour in a position of shameful and hateful eminence. It was the neighbor of the most civilized nations of the earth, and yet there was no country, including the most barbarous and savage, in which life was not more secure." He alluded to the "denunciations of persons from the altar by the pastors of the people." He was desirous that "the law should be made stringent enough to reach these offenders." The Earl of Roden said, "in Limerick, Tipperary, and Roscommon, it was notorious that gentlemen were placed on the list of victims to be murdered at such periods as to the murderers might be convenient. In Ireland joy was openly expressed when a murder was committed; the country was illuminated; bonfires, blazing from hill to hill, showed the rejoicing of the people; and yet he who had fallen was probably no tyrant, but a humane and liberal minded landlord. The Government, then, must be in earnest. Lord Clarendon was one of the best possible Lord Lieutenants of Ireland, and peculiarly fitted for that position." Earl Fitzwilliam said "it appeared to him that there would be this winter at least two millions of people in Ireland requiring relief. It was said that the potato crop would only feed 1,400,000; what was to supply the remaining 5,600,000 of the people? The *distress* of the people needed looking at as much as their *crime*. The state of things would be quite as bad, if not worse, this year than it was the last." I have extracted thus largely from this debate, because more correct ideas may probably be formed, from the opinions of men of all parties, respecting Ireland, than by any other means. The real state of that country is an object of the highest interest on your side of the water, not only as relates to the general cause of humanity, but more immediately so, from so large a portion of your naturalized population having a peculiar interest therein, as their native land.

Sir George Grey brought forward his proposed measure relative to Ireland, and the tone and provisions of it disarmed even John O'Connell and many others from whom opposition was expected. It was supported by Sir Robert Peel and Mr. D'Israeli, as the representatives of their particular sections, and met with a very feeble and evidently a factious opposition from Fergus O'Connor and a few others. Sir G. Grey made the following alarming statement of the progress of outrage:

	1846.	1847.
Murders	68	96
Attempts on life	55	126
Robberies of arms	207	530
Firing into dwellings	51	116

NEW YORK, Jan. 3— 3 P. M.

Accounts from New Orleans are from the 26th.

A Jalapa correspondent of the Picayune of the 16th speaks of rumors of peace, which he totally discredits.

The guerillas on every part of this line are now most effectually cut up; wherever they exists, it is only in small bodies. Occasionally, however, they succeed in making a capture from a merchant train. One which arrived here from Mexico was, I understand, partially cut off, and twelve or fourteen mules of a Mexican train, which was in the rear of Gen. Butler's Company, falling some distance behind, were also taken.

Congressional.

MONDAY, Jan. 3.

The Vice President laid before the Senate the report of the Secretary of War relative to the occupation of Fort Armstrong. A large number of petitions were presented.

Mr. Hunter presented for consideration a resolution calling on the President for Mr. Wise's correspondence in relation to the Slave trade.—Adopted.

Mr. Benton offerod a resolution directing the printing of the history of Doniphan's expedition to Chihuahua.

Mr. Johnson, of Louisiana, introduced a joint resolution for the appointment of a commissioner to examine the claims of American citizens against Mexico.

The bill to provide clothing for volunteers in the army was passed.

On motion, the Senate laid aside the morning business to take up the ten regiment bill.

Mr. Cass ably advocated the passage of the bill, and pointed out its advantages, declaring his intention not to bring political topics into the discussion.

The Governor's Message.

The Message of the Governor, being its own best exponent, needs but a brief commentary. It is a frank, clear, and forcible exposition of the views and sentiments of the Executive in reference to questions affecting the interests and prosperity of the State.

After a very satisfactory view of the Finances of the State, the Governor enters upon the consideration of questions of Internal Improvement, and as connected with that question, the construction of Lake Harbors and the Improvements of Navigable Rivers.

The subject of Common Schools, Academies, Colleges and the State Normal School, are commended to the fostering care of the Legislature.

The subject of a general law in relation to Manufacturing Associations is ably discussed in connection with its bearings upon the Agricultural interests.

The Manor controversy is also discussed at length, and in a calm but independent spirit.

In reference to the Mexican War, though holding opinions in unison with those entertained by all Whigs, as to its causes, objects and conduct, the Governor deems it to be his own duty, and the duty of the Legislature, to rely, for an honorable Peace, upon its vigorous prosecution.

We copy the above from the *Albany Evening Journal*, because it presents briefly and well the principal topics that are the subjects of this annual Executive communication The Message is eminently practical in its character, confined to matters strictly and Constitutionally within the scope of such communications; and although it cannot be hoped that all will concur in the opinions and recommendations of the Governor, the views he has expressed in regard to the subjects of great public concernment treated of, will, we think, command the hearty approval of the great mass of the sober, reflecting, well-informed portion of the people.

"I feel dependent, for a vigorous and hopeful spirit, on now and then a kind word, the loud laugh of a child, or the silent greeting of a flower."—*Dr. Charles Follen.*

Watches only one eighth of an inch thick are now manufactured at Geneva, the hands being placed on a dial aside from the movement, instead of being in front.

TELEGRAPH TO THE PACIFIC.—The St. Louis papers are talking of extending the magnetic telegraph from that place to the Pacific. The distance is 2000 miles, which at $150 a mile would make the total cost $300,000. The project of connecting the Atlantic and Pacific by means of a railroad, is likely to be anticipated by the telegraph.

☞ The Albany *Knickerbocker* hits off the following:

One boy in a shop is as good as a man. Two boys, however, are worse than the devil. If there be only one youth in the rooms he is the most sedate customer in the party. Introduce another, however, and grand and lofty tumbling and somersets over the stove, will be the order of the day from sunrise till dark.

VALUABLE WIFE.—A blacksmith named Osborne, offered himself as bail, at the N. Y. Court of Sessions, for a prisoner whose trial was put off to the next term. "Are you surely worth $500 above all your debts?" inquired the recorder.—"Why sir, I hold my wife to be worth $500 at least, without counting property." "The Court is satisfied; take his bail," replied the recorder.

LOVE.—Love has been likened to many things; but there grows a flower in Spain the very type of burning and ardent love. The aloe, with its towering yet graceful stem, its feathered tresses, grand yet elegant, surrounded and carefully guarded by its strong and prickly leaves, grows in secret; these are the affections, the passions, and the energies of the heart, developing day by day, until forth bursts the flower in all its bloom and majesty. Then hour by hour the leaves decay, pride, affection and ambition, wither, droop and die; and behold it stands and can never bloom again.—*The Wayside Cross.*

The capital invested in the cotton manufacture, in England, was stated at a recent meeting in Liverpool to amount to $350,000,000, and the export of cotton goods had exceeded $125,000,000 per annum.

DIED.

In Colden, Dec. 27th, 1847, CAROLINE SWEET, aged 18 years.

SPLENDID LITERARY PREMIUMS
WORTH CONTENDING FOR.

WESTERN
LITERARY MESSENGER
VOLUME TENTH.

GREAT INDUCEMENTS TO AGENTS!!

On the 5th of February, 1848, we shall commence the Tenth Volume of the Western Literary Messenger. It will appear in an entirely new dress and with an increased list of able contributors; and the publishers are determined to make it second in value to no family news and literary paper in the country. They will aim to render it alike the delight of the fireside, an ornament to the centre table and an honor to Western Literature.

Desirous of enlarging its circulation in all parts of the United States and Canada, and willing to give ample encouragement to agents, we herein offer the following flattering inducements to any person who will interest himself in increasing our list of subscribers:

Any one who will send us the names of eight subscribers, to be sent to one Post Office, and ten dollars, we will give a copy of Frost's Pictorial Wonders of the World, a splendid work in one volume; or Simpson's Overland Journey round the World, in one volume, tastily bound in scarlet cloth.

Any one who will send us twelve subscribers to one Post Office address, accompanied with $15, we will give Headley's Napoleon and his Marshals in two volumes, 12mo., with plates; or Headley's Washington and his Generals, in two volumes, do., or Miss Bremer's Novels, or D'Aubigne's History of the Reformation, in one large octave volume, bound in muslin and illustrated,

Any one who will send us sixteen subscribers addressed to either one or two Post Offices, accompanied with $20, we will give Lardner's Lectures, two volumes, with plates and illustrations, or Griswold's new and magnificent work, the Prose Writers of America, or D'Israeli's Works, or Marryatt's Novels complete.

Any one who will send us thirty-two subscribers, to be sent to not more than three Post Offices, accompanied with $40, we will give M'Culloagh's Geographical Dictionary, in two very large octave volumes, bound in sheep, or Ure's Dictionary of Arts, Manufactures and Mines, in one magnificent volume, and also the supplement to the same; or Dickens' Novels complete, in three volumes.

Any one who will send us sixty-four subscribers, to not more than four Post Office addresses, accompanied with $80, we will give Sir Walter Scott's complete works in ten octavo volumes bound in cloth; or a splendid quarto Bible, worth at least $16,

Any one who will send us one hundred subscribers, to not more than five Post office addresses, accompanied with $125, we will give the Waverly Novels, a splendid edition in 27 vols., of Harper's magnificent illuminated Bible, worth at least $25.

Persons making out either of the above lists between the first and fifteenth of January, may promise new subscribers four numbers of the present (ninth) volume, GRATIS.

Persons sending over sixteen subscribers can have till the middle of April to make out their list, allowing each subscriber will take the back numbers of the volume.

Competitors for any of the above splendid literary Premiums, would do well to at once set about procuring names, which should be sent in to us at once.

☞ The terms of subscription, to mail subscribers, remain as usual at $1,50 per annum, payable in advance.

JEWETT, THOMAS & CO.

BUFFALO, Dec, 22, 1847.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 164 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n2

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON.
n7 No. 164 Main Street, Buffalo.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 138 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.
PUBLISHERS,
COMMERCIAL ADVERTISER BUILDINGS
MAIN STREET, BUFFALO.

TERMS.—To mail subscribers, $1,50 per annum in advance, four copies for $5,00, ten copies for $10,00. To city subscribers who receive their papers from the carrier, $2,00. Mail subscribers will also be charged $2,00 if payment is not made in advance.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

*** All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

WESTERN
LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, JANUARY 15, 1848. NUMBER XXIV.

For the Western Literary Messenger.

The Prisoner's Waking Thoughts.

The wintry morn once more
Its dreary, chilling and portentous glare
Through the barred casement dim does pour
Where lurks despair.

Too soon thou takest thy flight
Oblivious sleep, this wasted life's best boon,
And thou, oh kindly-shadowing night,
Far, far too soon.

Though ever sad dreams lie
The pillowed brow beside, and lurid gleams
Flit o'er hushed sleep's serenest sky,
They still are dreams.

But morning brings worse dole
Of sickening thoughts with its ungentle beam
Which tell in anguish on my soul
They are no dream.

Without, the ceaseless blast
Sweeps whirling on, and from each desolate bough
The last frail withered leaves are cast
Unpitied now.

Fixed is drear winter's reign:
Each pale, untimely flower from the cold skies
Shrinks low to the unsheltering plain
No more to rise.

Bright visions cherished long,
Youth's holy hope and aspiration high,
Beneath dark storms of hate and wrong
Ye too must die.

THE RECLUSE.

December 1,

From the Saturday Rambler.

The Minister's Meeting.

BY ANN E. PORTER.

The amusements of the Puritan descendants, like those of the Jewish nation, are often of a religious cast. The anniversaries of their religious societies are welcomed, not merely as favorable seasons to transact business and collect intelligence, but as yearly jubilees, where friends meet and mingle kind greeting; and schoolmates and old acquaintances are thus often unexpectedly brought together, and a sort of "*ola podrida*" dish, well spiced, is served up, composed of old reminiscences and new events.

We Yankees imagine we possess a faculty of knowing *most* every thing, and can do things a *little* better than our neighbors, but if there is any deficiency, it is that we have not yet learned to *play;* at least the art or amusing ourselves gracefully we do not learn from the French so readily as we imitate their infidelity and their fashions. *Hard work* has been the order of the day from the time when those brave, hardy men landed on the barren rock, and toiled for a bare subsistence during that dreary winter. And now, unless there is some labor, ay! and some *profit* too, in our sports, we, worthy descendants of those good men, care little for them. But with all our economy of time and means, we spend much of both in religious gatherings. Every State and county and association has its yearly and quarterly meetings, when the ministers and their deacons, often their wives and children, assemble in some town or village and spend a few days in religious exercises and social communion. In our rude and pastoral little State there is a simplicity and primitiveness in these meetings that is very pleasant. The ministers, poor themselves generally, come in their own conveyances, wagons and horses that would not command the highest price in Broadway or Washington Street, but nevertheless are perfectly safe and fitted for the rough service of our hills. They come thick and fast the day previous to the meeting, and the weary traveller, whether man or beast finds a cordial welcome in almost any family. He could scarcely miss finding all things ready did he knock by chance at the first house that pleased his fancy. The good housewives have been busy for a week providing their choice dishes, and making ready the prophet's chamber.

Few can be found but feel it a privilege to open their hearts and doors on such occasions. We are a poor people—our flocks and herds are our inheritance, and the rich manufacturers of the Bay State, and the wealthy of the cities, take good care to keep our wool and butter at so low a price that we are never burdened with an excess of riches. But nevertheless hospitality, cordiality, and openheartedness, abound in our hamlets.

But if I begin an eulogy upon Vermonters, I shall forget that I was going to tell a story. It is about one of these very meetings held not long since in our village. There was quite a consultation one Sunday after meeting upon the subject. The minister had given notice that the State Convention of ministers would be held here the ensuing week, and now the good ladies were telling how many they thought they could accommodate. All seemed much interested excepting Deacon Stebbins' wife. She wore a new Amazon bonnet and balzarine dress that day, and Mr. Dana, the store-keeper, had sold her all the fawn colored moreen that he had, a few days before. Whether it was to show these fine things, or because she had brought the fashion from Boston, they could not tell. (She went with her husband a few weeks before, when he took down a span of horses to sell, and she certainly had been a different woman since.) Heretofore, on all such meetings, the deacon's great white house had been open from garret window to cellar door, and the ample dining room had witnessed many a sincere *return of thanks* from the good men who had shared the rich cheer provided there. But now Mrs. Stebbins gave her bonnet a toss, and sailed away in her eight breadths of moreen like a ship of war preparing for a broadside. But alas, the enemy was none of her own sex, who could have poured a volley of hard words as return fire, but her own husband, the deacon, as helpless and inoffensive as the Mexicans before the conquering arm of Scott. The poor man was not endowed with the gift of tongue, and so, being rather slow of speech, he always sought a retreat as brave generals have done before, under the cover of a thick fog.

On his return from meeting, after taking supper, he ensconsed himself in a big arm chair, and

was deeply interested in Scott's notes and practical observations when Mrs. Stebbins entered, and after gazing with a sort of malicious look at her husband's comfortable, cozy appearance, she began: "Well. I say now, Mr. Stebbins, once for all, that if they are going to have any more of them meetings here, I for one shan't take a single minister."

The Deacon was so astonished that he forgot to put his finger on the place when he stopped reading, and looked up with a perplexed gaze, as if he thought his wife demented. She observed it and went on.

"I mean just what I say, I am tired of slaving myself for such company. It took me a whole day to clear the parlor after them the last time, the new carpet was most spoiled with tobacco and mud, and one of the new chairs broken because they chose the top of it for a footstool. If we could have some such ministers as I saw in the city, why it would be worth while, but as to having any more of our country parsons, why I've set my foot down about the matter, and you need'nt urge me at all."

Never was the poor deacon more perplexed.—As an officer of the church and one of the committee of arrangements, he felt that he could hardly make up his mind to turn a minister from his door, but then he knew from sad experience that "when a woman will she will, and when she wont she wont." It was sometime before he could *make ready* to speak, and when he did, he said just what should for a few minutes have been left unsaid.

"I am sorry, Hannah, you feel so, for I have just engaged to take a minister, and he is rather a rough looking one too. He came to the tavern last night, and our minister did not ask him to preach, for he thought from his looks the people would prefer to be excused, but as he was going to stay through the week, he wished we would invite him here, so I stepped over to Parker's and asked him, but he preferred to wait till the close of the evening meeting, but will be here to spend the night."

How quickly the ship of war tacked and came along side the weaker craft, with every gun pointed; it was a novel sight, for the deacon had only Scott's Bible, and he would not dare use that as a hostile weapon, so he sat as if quietly awaiting annihilation.

"Pretty business, Mr. Stebbins! as if a poor woman could be called upon at any minute to slave and drudge for travelling preachers. I've said it, and I shan't alter my mind, so you may find some other place for the country parson,"

Deacon Stebbins was truly a good man and a meek man; he neither thought nor said, as many others in like situation would have done, "I am master in my own house," but he did involuntarily think of "Him who washed his disciples' feet," and he felt grieved at the pride and vanity of his wife. But the Bible lay before him, and he would not be angry—so for the sake of peace he replied:

"Well, Uncle Jo. Small told me to-day that he thought he could accommodate a minister if any could be found willing to come to his little brown house, and share is humble fare. This man looks rough and plain, and I have no doubt would be glad to save his tavern fees, even at Uncle Jo.'s table, I will take him there."

O, the blessed power of a soft word! It falls like summer rain upon the parched and dusty earth. Poor Mrs. Stebbins felt rebuked and silenced by her husband's quiet reply, and moreover the thought that her poor neighbor, the recipient often of her bounty, should be more hospitable than herself, made her ashamed of the course she had taken. But her woman's pride prevented her retracting, so she merely said,

"That will be a good plan, and I have no doubt he will enjoy himself there finely, and Uncle Joe and his wife will both feel highly honored at entertaining a minister." And then to herself she said, "I'll send them over a nice chicken to-morrow."

The deacon felt rather sad, for there was something in the plain old minister that took his fancy, and he thought he might have had some pleasant talks talks with him after his day's work was done.

Now Deacon Stebbins was "*strong on the doctrines*," the good, old, stern, uncompromising doctrines of Hopkins and Edwards, and he often found, he said, that these tough, blunt old country ministers were the very ones that held fast hold of the faith of their fathers, and could explain the doctrines the best to his satisfaction. But as Uncle Jo. lived near, and indeed rented his little patch of land from him, he inwardly resolved to call frequently during the week.

When he invited the stranger to change his quarters, the minister remarked very humbly that if he could find some little quiet place where he could remain during the meetings he should be very thankful, but he was not entitled to any such privilege, as he was not a member of the body about to be convened.

There is a moral magnetism between kindred hearts, and the deacon's warmed more and more towards the old man, and he longed to open his best front chamber for his reception. But the "powers that be" had forbidden, and he quietly submitted. He felt better when he saw how pleased the guest was with the neat little attic room at Uncle Jo.'s.

The bed was clean and neatly made, with a white counterpane upon it, while the white fringed curtains and calico covered easy chair gave it quite an air of comfort. On the little round table lay a large Bible and Watts' hymn book.

"Here," said the minister, as he laid his hand upon the books, "I shall be very happy, if I do not incommode my good friends."

"O no," said Aunt Ruth, who with her black gown and clean cap stood at the door, "you know what the Bible says about entertaining strangers."

The minister smiled and replied, "one thing is certain, my good woman, in the outset; you have entertained no angel, but a travel-worn pilgrim, whose good will and prayers are at your service."

Deacon Stebbins felt badly that he must be deprived of the pleasure of entertaining any clergyman during this meeting, but something whispered to him that it would be best to let his wife have her own way this time. A wayward woman is sometimes soonest brought to reason by this course.

In the course of the week the resident minister, Mr. Turner, asked the deacon how many he should send to his house. The good man, somewhat disturbed, replied none, and gave the true reasons. Mr. Turner was more amused than vexed. "Indeed," said he, "there is a defect among many of our country ministers—they are sometimes deficient in the 'minor morals of good manners,' but as a whole the ministers of Vermont will bear comparison with those of most any other State. But," added he, "this tobacco chewing, and snuff taking and smoking, and chair riding among clergyman ought to be denounced. We never think of St. John as guilty of such indecorum. But perhaps we can suit your wife, after all! if any very dainty, high-bred ministers happen to make their appearance among us, we may venture to send them I suppose, especially if they come from Boston."

The deacon nodded assent, and they separated, but the minister had gone but a step or two before he turned back and inquired for the minister of the tavern. "His name I do not remember, and indeed I do not know, as I heard it indistinctly when he mentioned it to me."

"Well, really," said the deacon, "I do not myself know his name, but he is at Uncle Jo.'s and appears very happy there."

"All right," said Mr. Turner, and he again went his way.

Poor Mrs. Stebbins! She had punished herself for the peccadilloes of others. A noble housekeeper, she delighted in the domestic bustle of preparation for company. Now all her neighbors were busily employed dressing meat, making puddings and pies, and getting their houses in order. Hers, alas! was all as it should be, and Monday afternoon, after her washing had been duly arranged upon the drying lines in the large green clothes-yard, and chambers and kitchen received their washing-day ablutions, she seated herself in the front sitting-room, and looked out into the village street. All was bustle and animation, but no ladies were to be seen, she would have no calls this week; but the butcher with anxious brow, was bargaining with the farmers, the grocer was dusting his shelves, and making room for fresh arrivals, while the six horse baggage wagon, the steamer of our village, had just arrived, and was discharging its cargo at the store of Chase, Brown & Co. All seemed to have business but herself, and she, strange to say, could find no work handy but her knitting, that dullest of all handicraft to a disturbed mind. And when she saw how meekly her husband bore with her decision, she became more and more angry with herself and all around her. She knew how much he had anticipated the meeting, and the society of the ministers. To him "'twould be a little heaven begun below." She really would have found some fault with him, if he had but given her time, but he wished to get ahead with his work to have more time to attend the meetings. Poor woman! she had no resort but Aunt Ruth's, and she started with her sun-bonnet to cross the garden for the purpose of making her a call; but then she thought of the poor old country minister she had turned from the door, and she went back to the gray-yarn sock.

The next morning the deacon was abroad with his scythe an hour earlier than usual, (and he was called an early riser,) but while wielding the bright weapon, as yet untouched by the sunbeams, and humming Old Hundred, he heard a light step, and a pleasant voice near. "Have you another scythe, Deacon?" said the minister from Uncle Jo.'s. "I would like to try a hand with you this morning,"

The deacon looked surprised and pleased. He was a good farmer himself, and not afraid to "try hands" with any farmer in the town, and it must be confessed he was a little proud to show the good man his skill. Another scythe was soon produced, and to work they went. But what was the astonishment of the deacon at the end of half an hour when he stopped to take breath, to see the skill with which the minister handled his weapon, and the wide swaths he made. He confessed himself at the end of two hours fairly beaten, and wiping the perspiration from their brows, they sat down under a tree to rest Now, thought the deacon, with a slight twinkle of roguery in his mild, gray eye, I'll find a poser for him; perhaps he's better on grass than doctrines. (The deacon, it must be remembered, thought a good deal of his own theological knowledge.) "I'll try him on the eighth chapter of Romans; that will test his skill."

The minister, meanwhile, was surveying the landscape, and seemed to be drinking in its beauties, as one who had an eye and soul for the rich scenery so bountifully lavished upon this Switzerland of the new world. But deacon Stebbins was not inclined that way; so he very bluntly but kindly begged the minister to give him his views upon the aforesaid chapter. The minister smiled, and taking a Testament from his pocket, he turned to the place and commenced reading. The deacon tried to look over and read with him, but though he took off his spectacles and wiped them, it was all in vain, he could not read, and he gave up in despair, thinking his eyesight was failing fast. But he soon forgot everything as the old gentleman went on, verse after verse, in simple lucid manner, making the rough places plain. "Why," as the deacon afterwards expressed it, "it beat the mowing all hollow, and Scott's notes into the bargain." So engaged were they both that it was not until the hired boy came to say that Mrs. Stebbins had waited breakfast an hour, that they became aware of the lapse of time.

Deacon Stebbins went home with a happy heart; and it was not until he entered his door that he thought of the lecture he might receive from his not very patient spouse, for keeping the table waiting. But, strange to say, the clouds had cleared in that quarter, and she was radiant with smiles. It seems that Mr. Turner had called and stated that two gentlemen from Boston were in the village the evening before, and left word that they should return and attend the meeting; he hoped Mrs. Stebbins would be so kind as to invite them to her house. All was now animation in the house, and not even Friar Lucks' hoarded cheer was half so temptiag as the contents of Mrs. Stebbins' pantry when evening came. Pies, whose flashy tops concealed the rich berries, or whose crispy borders twined lovingly around the luscious squash, or the more delicate custard; loaves of cakes, were nestled in close companionship, the tiny currant and the swollen plumb, and then the white, delicious bread, so porous and so sweet, to say nothing of the golden butter, sage cheese, and pots of sweetmeats waiting in silent corners for the hour of their promotion. So elated was the Deacon's wife, that in the height of her good humor she sent word to Mr. Turner that she could accommodate at least six more, if the meeting should be large.

Wednesday noon brought the two city visiters, and their first appearance fully satisfied the expectations of Mrs. Stebbins. Their coats were of the finest broadcloth, and the latest cut: the white handkerchief of one was neatly crossed and confined by a bona fide diamond pin, while over the glossy vest of the other, a gold chain of beautiful workmanship hung gracefully, as if proud of the massive gold repeater it guarded. The deacon was a little puzzled, bnt seeing the good humor of his wife he made no remarks, but thought he enjoyed the society of Uncle Jo,'s minister the best. Meantime the meetings were progressing, and were a fine specimen of the simplicity and freedom so characteristic of Vermont gatherings, whether political or religious.

But we will take a little liberty with our Bostonians, and listen at the key-hole after they have retired for the night, and are enjoying the comforts of Mrs, Stebbins' parlor chamber.

"Zounds! this is comfort. Hal!" said the elder of the two, and as handsome a fellow as ever sported a cane on Washington Street. The other was dressed in a gaily flowered dressing gown, and embroidered slippers, and seated by an open window, with a Principe in hand or rather mouth.

"Comfortable, truly," he replied, "especially when one's allowance is as limited as mine has

been lately; but somehow or other I feel a little blue to-night. To-morrow I must hold forth, according to promise; I hope in all conscience we shan't be recognized and reported at college,—the old president would be down on us like Jupiter with all his thunderbolts."

"Never fear," replied his friend, "no one strays up in these wild regions but some wool buyer, or geologist, and thank our stars Prof. H. is busy studying out some antediluvian bird tracks just now. Besides, what harm is there in your acting as agent of the Peace Society, even without a certificate. It is time that ministers, followers, as they call themselves, of the Prince of Peace, should be up and awake, denouncing this cursed Mexican war; and if they won't do it, we college scamps will show them their duty."

"True enough, but little good I fear 'twould do if they knew we were now suspended from college for gambling and wine drinking."

"Ha! ha! friend Hal," and a merry laugh rang out from the other, as he knocked the ashes from his cigar. "The next sermon I preach, which will be in the next pretty village we stop at, will be from the text. 'And Satan came among them.'"

The next day evening the village church was filled to overflowing, as it was reported that a gentleman from Massachusetts would speak on the subject of Peace; (most of our people are anti-war.) Mrs. Stebbins was in her glory as she sailed up the broad aisle with the young speaker, who waited upon her into the pew, as I have sometimes seen a fine vessel towed into port at the mouth of the Merrimack, by smaller craft.

The young man spoke well, the audience were delighted; but just as he was in the midst of one of his rhetorical flourishes, he stopped short, and seemed like a singing bird charmed by some snake. His eyes were fixed upon the corner pew, way down near the door. It was Uncle Jo.'s, and there sat the country minister; but such a pair of keen black eyes as were fixed upon the speaker are seldom seen. No wonder the poor fellow stopped; they were enough to annihilate him. Nobody but the deacon had noticed those eyes, for they often slept beneath a pair of dark shaggy eye-brows. The speaker could not proceed, and gave it up. The audience dispersed, wondering what it meant.

That evening the country minister at Uncle Jo.'s had an interview with Mrs. Stebbins' young ministers, and they suddenly disappeared from the meeting, leaving half the good cheer provided by their liberal hostess untouched.

The last day the people were delighted with a discourse from the learned President H., of —— College. He had been from youth a laborious student, spent some years of study in Germany, and travelled through Europe, Palestine and Egypt; but he said when he left our little village that he never spent a happier week than that spent in Aunt Ruth's quiet little attic; and he enjoyed his interview in the hay field with our good deacon so well, that he promised to spend a week with him the next year. Mrs. Stebbins says she is ashamed of her city notions, and for the future she shall think more of the deacon's judgment than her own. There is a report that the peace lecturer has joined the Massachusetts regiment now in Mexico, but it is not certainly known. At any rate they were heard to say they would never take Vermont for a college police again.

A Slave Prison.—A correspondent of the Lowell Courier writes from Charleston, S. C., as follows:

"Since I have been here I have visited what is called the work-house, but more properly speaking, slave prison; here are deposited for safe-keeping those that are brought to market for sale; also those that have run away and are brought here to be punished—some are put to breaking stone, others on the treadmill. When I was in, there were three men and one woman on the wheel, and a driver standing by with a whip in his hand; this wheel is attached to mill stones, and in this way they grind their hominy. In a room in the building is the whipping apparatus. While I was examining this, there was a boy brought in by his master to be whipped. It appears to be the custom here, when slaves are to be punished, to bring them to this place, for which they pay one dollar. The boy was stripped naked, his feet fastened to the floor, his hands placed in a rope overhead, and then drawn straight by means of blocks, then a cap drawn over his head and face. The boy, I should think, was not over 13 years of age. He was whipped very hard—*the skin flying at every blow.* After he was let down and had gone out, I asked his master what he had been doing. He said he had run away the day before and gone to the races. I thought it rather severe, considering how popular races are here. I was told that quite a number had been brought there that day to be punished for the same offence."

Franklin—The Home of his Boyhood.—The racy description which follows, of the house which was the home of Benjamin Franklin's boyhood, will be read with universal interest, not only in this country, but throughout the civilized world. It is copied from the Boston correspondent of the National Standard:

"There are a few places yet left in Boston, of universal interest. Do you see that house on the corner of Hanover and Union streets, with a gilt ball protruding from its corner diagonally into the street? It has no architectural pretensions to arrest a passer-by. It is a plain brick house of three stories, with small windows close together, and exceeding small panes of glass in them, the walls of a dingy yellow. Yet it is a house swarming with associations interesting to well nurtured minds throughout the civilized world. Read the name upon the ball, and you will get an inkling of my meaning—"Josias Franklin, 1698." Yes, that is the very roof under which Benjamin Franklin grew up. He was not born there; but his father removed there when he was but six months old, so that all his recollections of home must have been connected with those walls. The side of the house on Union street remains as it was in the days of Franklin's boyhood; but that on Hanover street has been shamefully mal-treated. Nearly the whole front has been cut out to make room for two monstrously disproportioned show-windows. And this house, so full, as I have just said, of associations, is fuller yet of bonnets! Yes, by the head of the prophet, of *bonnets!* It is a bonnet warehouse, and from the inordinate windows aforesaid, bonnets of all hues and shape ogle you with side long glances, or else stare you openly out of countenance, while mountain piles of bandboxes tower to the ceiling of the upper story, eloquent, like Faith, of things unseen. Heaven forbid that I should say anything in derogation of *bonnets*, any more than of the fair heads that wear them; but I would that they had another repository.

It was my good fortune to go over the house before it had undergone this metamorphosis. It was occupied, in part at least, some eight or ten years ago, by a colored man of the name of Stewart, a dealer in old clothes, who thought of buying the premises, and wanted my advice about it. I gladly availed myself of the opportunity to view them. The interior of the house was then, I should judge, in the same condition that it was

when the worthy old soap-boiler and that sturdy rebel, (in youth as in age,) his world-famous son lived there. They were the very rooms in which the child Franklin played, the very stairs up and down which he romped, the very window seats on which he stood to look out into the street.—The shop on the street was unquestionably the place where he used to cut wicks for the candles, and fill the moulds, and wait upon the customers. I pleased myself with imagining which room it was in which his father sat, patriarch like, at his table, surrounded by his thirteen children, all of whom "grew up to years of maturity and were married." And you may be sure I did not fail to take a peep into the cellar, where poor Richard in his infantile economy of time, proposed to his father that he should say grace over the whole barrel of beef they were putting down in the lump, instead of over each piece in detail, as it came to the table! A proposition which inclined the good brother of the Old South Church to fear that his youngest hope was given over to a reprobate mind, and was but little better than one of the wicked.

And I would have given a trifle to know which of the chambers it was that was Franklin's own, where he educated himself, as it were, by stealth. Where he used to read "Bunyan's Works, in separate little volumes," and "Barton's Historical Collections"—"small chapman's books, and cheap, forty volumes in all"—and Plutarch's Lives, not to mention a book of De Foe's, called "*An Essay on Projects*," and Dr. Mather's called '*An Essay to do Good*;" and where, too, his lamp (or more probably his candle's end) was "oft seen at midnight hour," as he sat up the greatest part of the night devouring the contents of the books which his friend, the bookseller's apprentice, used to lend him over night, out of the shop, to be returned the next morning. How the rogue must have enjoyed them. Seldom have literary pleasures been relished with such gusto as by that hungry boy.

It will not be many years before this monument of the most celebrated man that Boston—not to say America—ever produced, will be demolished, and the place that now knows it will know it no more, unless something be done to save it. It will be a burning shame and a lasting disgrace to Boston, with all its wealth and pretensions to liberality, and its affectation of reverence for its great men, to suffer the most historical of its houses to be destroyed, when the rise of real estate in that neighborhood shall seal its doom. It is a shame that it has been left so long to take the chances of business. It should have been bought years ago, and placed in the hands of the Historical Society, or some other permanent body, in trust, to be preserved forever in its original condition. It is not too late to restore it to something like its first estate, and save it from utter destruction. If it be not done, it will be a source of shame and sorrow when it is too late.

The house in which Franklin was born has been destroyed within this century. That house stood in Milk street, a little below the Old South Church, on the other side of the way, and the spot is marked by a "furniture warehouse" five stories high, which forms a fitting pendant to the bonnet warehouse on Hanover street. The printing office of James Franklin, where Franklin served his apprenticeship, where he used to put his anonymous communications under the door, where he used to study when the rest were gone to dinner, and where he used sometimes to get a flogging from his brother, was in Queen, (now Court) street, nearly opposite the court-house, on the corner of Franklin avenue; which, if I am not mistaken, derives its name from this curious circumstance.

A Gentle Hint.—I was amused the last morning watch that I kept. We were stowing the hammocks in the deck nettings, when one of the boys came with his hammock on his shoulder, and as he passed, the first lieutenant perceived that he had a quid of tobacco in his cheek.

"What have you got there my good lad—a gum-bile? your cheek is much swelled."

"No, sir," replied the boy, "there's nothing at all the matter.'

"O, there must be; it is a bad tooth, then?—open your mouth and let me see."

Very reluctantly the boy opened his mouth, and discovered a large roll of tobacco.

"I see, I see," said the first lieutenant, "your mouth wants overhauling and your teeth cleaning. I wish we had a dentist on board, but as we have not, I will operate as well as I can. Send the armorer up here with his tongs."

When the armorer made his appearance, the boy was made to open his mouth, while the chew of tobacco was extracted with this rough instrument.

"There now," said the lieutenant, "I am sure that you must feel better already; you never could have any appetite. Now, captain of the after-guard, bring a piece of old canvas and some sand here, and clean his teeth nicely."

The captain of the after-guard came forward, and putting the boy's head between his knees, scrubbed his teeth well with the sand and canvas for two or three minutes.

"There, that will do," said the first lieutenant. "Now, my little fellow, your mouth is nice and clean, and you'll enjoy your breakfast. It was impossible for you to have eaten anything with your mouth in such a nasty state. When it's dirty again, come to me, and I'll be your dentist."

Anecdote of Stephen Girard.—The following capital anecdote, illustrative of the late Stephen Girard, of Philadelphia, is from the New Bedford *Mercury*:

Mr. G. had a favorite clerk, one who every way pleased him, and who at the age of 21 years, expected Mr. G. to say something to him of his future prospects, and perhaps lend him a helping hand in starting himself in the world. But Mr. G. said nothing, carefully avoiding the subject of his escape from minority. At length after the lapse of some weeks, the clerk mustered courage enough to address Mr. G. upon the subject.

"I suppose, sir," said the clerk, "I am free, and I thought I would say something to you as to my future course. What do you think I had better do?"

"Yes, yes, I know you are," said Mr. G. "and my advice to you is, that you go and learn a cooper's trade."

This announcement well nigh threw the clerk off the track; but recovering his equilibrium, he said, if Mr. G. was in earnest, he would do so.

"I am in earnest"—and the clerk rather hesitatingly sought one of the best coopers, and agreed with him upon the terms of apprenticeship, and went at in good earnest; and in course of time made as good a barrel as any one. He went and told Mr. G. he had graduated with all the honors of the craft, and was ready to set up in business; at which the old man seemed gratified, and told him to make three of the best barrels he could.—The young cooper selected the best materials, and soon put into shape and finished three of the best barrels, and wheeled them up to the old man's counting room. Mr. G. said the barrels were first rate, and demanded the price.

"One dollar," said the clerk, "is as low as I can live by."

"Cheap enough," said his employer, "make out your bill and present it."

And now comes the cream of the whole. Mr. G. drew a check for twenty thousand dollars, and handed to the clerk, closing with these words:

"There take that and invest it in the best possible way, and if you are unfortunate and lose it, you have a good trade to fall back upon, which will afford you a good living at all times."

How Mr. Jones got on Fire:—Or an Argument in favor of Cold Water Principles.

On Thursday night last, Mr. Jones, a gentleman with a red chubby face, and a vest of the same hue, was brought before the Recorder for having created a disturbance in the streets. The deponents stated that the accused had rushed out of his domicil and shouted "fire!" The echo of the cry was instantly taken up by some small boys, and in a few moments the whole neighborhood was in agony as to the cause or whereabouts of the conflagration. No house was seen to be on fire, no roof dropped burning cinders to the ground, and no engines were seen in the vicinity. It was a most mysterious circumstance, but yesterday it was solved. On examination it seemed that Mr. Jones resolved to relieve himself of all sublunary cares for a few hours at least. He accordingly proceeded to get very drunk, and arrived at his domicil a few hours after sun set, in the most beautiful state. He saw the 'bright brass knocker on his door, but he imagined it was making faces at him. He raised his hand to smash the countenance of the optical intruder, but he missed it and struck the side of the house. His wife, who was a meek, pious woman, let him into the house, and with a gait something like that of a rheumatic crab, Mr. Jones walked to his bed room. Here his meek spouse dismissed her liege lord from her thoughts with a sigh, and unlike Desdemona in the period of her virginity, Mrs. Jones wished "that heaven had *never* made her *such* a man." Mr. Jones took the candle in his haad, and after intimating to his wife that he was determined to go on a voyage of discovery in the back yard, he essayed to fulfil his intentions. In going out of the door a gust of air blew the flame of the candle into Jones' nostrils, and he went away on his voyage with a prophetic thought that something was about to happen. Jones, and a valiant man he was, searched his yard, but found neither thieves, murderers, nor any other thing that could lead him to suppose that his premises were going to be attacked. Jones leaned against the gait of his yard, and quietly surveyed the green grass plat beyond. In one corner her saw a cistern, bound strongly aroond with iron hoops, and he laughed to himself, to think, that now-a-days there would be no particular call on the Water Works. Then again there was an humble wood horse and a saw, a pile of wood and an axe in another corner. Jones feeling happy in the possession of this much of the world's goods, in ecstacy spanked his thigh with his hand, and resolved to do—what? To make over his estate to the poor—to leave a legacy to some charitable institution, or after his death to bequeath his body to the medical faculty? No, none of these ideas took possession of his mind, but his thoughts were wholly absorbed in the idea of a broiled mackeral and a pickle,

Jones smacked his lips, and knowing that his wife was in delicate health, he resolved to cook his mackerel himself. Accordingly he proceeded to the kitchen, took the mackerel out of soak, and placed it on the fire. Forgetting that he had bought some paints and oils to renovate the outside of his house, Jones sat down on a tin can of turpentine, and commenced basting his fish with butter, and occasionally throwing on it a pinch of pepper. The mackerel sputtered and trembled on the gridiron, and Jones was in ecstacies. One side of the fish was done, and just as he was about to turn it, the top of the can of turpentine gave way and Jones' coat tail became saturated with the inflammable liquid. In turning round to see what was the matter, the fire caught the tail end of his coat, and almost instantly he was in a "blaze of glory." The flames darted up his back, and wreathed themselves like crimson serpents about his legs and arms. Jones didn't wait for a fire engine, but he rushed out of the front door into the street, and cried out at the top of his voice, 'I'm afire! I'm afire!"

A watchman in the vicinity ran up to the unfortunate individual, and inquired what was was matter. Seeing Jones kicking and splurging about in the muddy street, something like a newly caught sea turtle when it is turned on its back, the watchman took hold of him, Jones being exasperated, and in his flurry taking the watchman for an assailant or highway robber, hit him quite a severe blow in the mouth. This conduct the watchman resented by giving Mr. Jones a tap on the head with his club, and "*solus volus*," as Gen. Taylor is reported to have said, carried him to the watch-house. Yesterday morning the wife of Jones had a conversation with the Recorder, and the good natured magistrate ordered the unfortunate Jones to be discharged, He went out of the court room minus his coat tail and a portion of his trousers, and mentally resolved never to attempt to fry a mackerel, when he was a "little how come you so." "An o'er true tale."

☞ The whole of the present number of ordained missionaries in the world, is estimated at about 1200; and of male and female assistant missionaries, at about 2400, making a total of 3600.

The Bible has been printed in 138 languages and dialects, and all but 30 of these translations are new, and were made chiefly by missionaries since the institution of the British and Foreign Bible Society in 1804. The number of copies of the Bible and Testament which have been issued by the Bible Societies, is about *thirty millions*.

Fair Wind.

BY J. T. FIELDS.

O who can tell, that never sailed
Among the glassy seas,
How fresh and welcome breaks the morn
That ushers in a breeze!
Fair wind! Fair wind! alow, aloft,
All hands delight to cry—
As leaping through the parted waves
The good ship makes reply.

While fore and aft, all staunch and tight,
She spreads her canvas wide,
The captain walks his throne, the deck,
With more than monarch's pride.
For well he knows the sea-bird's wings,
So swift and sure to-day,
Will waft him many a league to-night
In triumph on his way.

Then welcome, to the rushing blast,
That stirs the waters now—
Ye white plumed heralds of the deep
Make music round her prow!
Good sea room in the roaring gale—
Let stormy trumpets blow—
But chain ten thousand fathoms down
The sluggish calm below!

Parisian Pickings-Up.

FROM PUBLIC AND PRIVATE SOURCES.

From the Boston Atlas.

The trial of Thibert the chief of the *Romanitchels*, a band of depredators which has hitherto defied the most active researches of the police, has created the greatest interest among those lovers of romance who frequent in such crowds the representations of the Porte St. Martin and the Ambigu Comique, and who read with such intense delight the stirring revelations of Eugene Sue. The arrest of the chief has brought to light the extraordinary history of the band which he commanded—a history which throws us back immediately to the *Truands* of the middle ages. These *Romanitchels* are regarded as the aristocracy of thievery. They are proud and independent, and would scorn to associate in habits of friendship with those who share with them both in the crime and the booty. They seldom visit large cities, but carry on their depredations in the provinces upon an extensive scale and with a master-hand. They are the sole remnants of that ancient gipsy race, self-styled Bohemians, which so suddenly burst into France during the reign of Charles VI. Unlike their brethren of the rest of Europe, they live not in community—being bound by no tie whatever, not even by that of paternity, which is by every other race accepted even when all besides have been rejected. Each individual of this outcast race lives for himself, and himself alone; and as he never knew a father's care, so do his offspring become the property of the tribe at large, falling to the share of those with whom the mother may choose to associate, thus forestalling by this unnatural government the system of Fourier in its worst and weakest points. Thibert, the chief of this gipsy band, is said to realize the very *beau ideal* of a hero of romance, bearing all the characteristic wildness of his race in his bronzed features and eagle eye—in the proud defiance of his gesture—and in his scorn of falsehood when interrogated by his judges. What renders his history more extraordinary is the complete solitude in which he seems to have lived, and, save when actually engaged in his unlawful traffic, the order and regularity of his habits and the respectability of his bearing. He was possessed of several country houses in the environs of Paris, which served as *depots* for the stolen goods; his most favored retreat being a lovely villa on the banks of the river at Villenuve St. George's. Here in the summer's evenings would he love to sit by moonlight and play upon an ancient kind of instrument, said to bear some resemblance to the antique rebec, the melancholy airs which have been familiar to his race for so many hundred years. Little did the traveller, when tempted by the beauty of the spot and the sweetness of the harmony, pausing on his way to listen, imagine that the peaceful retreat at which he stood to gaze, and the rich melody to which he listened with such delight, were both created by the taste and feeling of a midnight thief and blood-stained murderer! How do these contradictions startle one in the contemplation of human nature. Listen to the opening examination of Thibert, and say where the wrong lies, and where the scorn and contumely ought by right to fall.—"How old are you?" "As far as I can judge, I must be about forty-five." "What is your profession?" "That of a thief." "What was your father?" "A thief likewise, and died upon the scaffold!" "And your mother?". "A thief also, and died in the prison of Grenoble." "And when you were thus left alone, why sought you not to learn another trade?" "Because I was repulsed from door to door—because no institution is open, *either to those who sin or whose fathers have sinned before them!*"

Rachel is indisposed, (so are Queen Victoria and the Queen of Spain,) the witty Dejazet is in the provinces, and Madame Rose-Cheri as attractive as ever. Frederic Lemaitre is expected to open his winter's campaign at the Porte St. Martin, with a new character of immense power and great originality. The history of the piece is interesting. The manager of the theatre had found in his letter-box, amongst the usual number of manuscripts on vellum paper, tied with pink ribbon, and small copy-books written in blue ink, a coarse and dirty packet of greasy paper, written in a trembling hand, with ink evidently much diluted, and a pen which must have been worn to the stump. It was a drama entitled *Charles the Bold*. The manager flung the scented effusions bound with rose and blue back again into his refuse drawer, and fell to reading, with the greatest curiosity, the dirty, unsavory production just mentioned. His astonishment—his delight—were so great, that he left not his desk until the whole had been devoured.

The work was unaccompanied by card or letter—but at the end of the drama was the name of the author with his sad address—"*Hopital St. Antoine*, Nov. 14th." The honest manager immediately set forth in quest of the newly discovered genius—and upon a pauper's bed, in sickness and misery, discovered him. His first care was to have him removed to more congenial quarters, where, aided by care and attention, and, above all, by the best medicine, hope and courage, he is in a fair way of recovery—and the drama will come out as soon as Lemaitre returns.

The English are not so numerous in Paris as they were formerly. One of their belles, Miss Louisa Mackinnon, has been married at the Embassy, with great pomp, to Lord Cochrane. Another wedding, which attracted much attention, was that of Monsieur Hilaire Etienne Octave Bouille, Marquis de Boissy du Coudrais, Peer of France and Chevalier of the Legion of Honor, to Madame Theresa Francoise Olympia Gaspera Gamba, daughter of Count Gamba, and widow of Count Guiccioli. The Marquis is a wealthy, eccentric old widower, connected with the first families in France. His bride is a most bewitching, golden-haired creature:

"Being somewhat large, and languishing, and lazy,
Yet of a beauty that would drive you crazy;"

the original of Dudu, in Don Juan, which is a capital portrait of her, even now. She is fifty, and celebrated as having long held its noble author captive. She moves in the best French society, where she has generally been escorted during late years by H. L. Bulwer, now English minister at Madrid.

Important Invention.—Mr. Elijah Galloway has patented what has hitherto been esteemed much more as a philosopher's stone of steam power than a practical invention. It is said to be so wondrously portable as not to weigh more than two or three hundred weight, and not to occupy more than half the space of an ordinary hat-box. A steam-pipe from the boiler brings the steam into this little receptacle: an eccentric crank is turned by the rotary motion within it; and here is all the machinery said to be necessary to propel the largest engines, whether mining, marine, or locomotive. The Admiralty are said to have ordered an estimate for supplying the *Minx* with a fifty-horse power one. They could not do better, we think, than name such a little whirling machine the Minx itself, and provide it with the all-sufficient accommodation of a bandbox.—*The Builder*

From Graham's Magazine.

The Land of Dreams.

BY WILLIAM C. BRYANT.

A mighty realm is the Land of Dreams,
With steps that hang in the twilight sky,
And weltering oceans and trailing streams
That gleam where the dusky valleys lie.

But over its shadowy border flow
Sweet rays from the world of endless morn,
And the nearer mountains catch the glow,
And flowers in the nearer fields are born.

The souls of the happy dead repair,
From their bowers of light, to that bordering land,
And walk in the fainter glory there,
With the souls of the living, hand in hand.

One calm sweet smile in that shadowy sphere,
From eyes that open on earth no more—
One warning word from a voice once dear—
How they rise in the memory o'er and o'er!

Far off from those hills that shine with day,
And fields that bloom in the heavenly gales,
The Land of Dreams goes stretching away
To dimmer mountains and darker vales.

There lie the chambers of guilty delight,
There walk the spectres of guilty fear,
The soft low voices that float through the night
Are whispering sin in the helpless ear.

Dear maid, in thy girlhood's opening flower,
Scarce weaned from the love of childish play!
The tears on whose cheeks are but the shower
That freshens the early blooms of May!

Thine eyes are closed, and over thy brow
Pass thoughtful shadows and joyous gleams,
And I know, by the moving lips, that now
Thy spirit strays in the Land of Dreams.

Light-hearted maiden, oh, heed thy feet!
Oh keep where that beam of Paradise falls;
And only wander where thou may'st meet
The blessed ones from its shining walls.

So shalt thou come from the Land of Dreams,
With love and peace, to this world of strife;
And the light that over that border streams
Shall lie on the path of thy daily life.

LITERATURE AND LABOR.—We had much pleasure in reading part of a lecture recently delivered by JOSEPH R. CHANDLER, of Philadelphia, before the Literary Society of Washington College, on the "Duties of Educated Men." He enforced the value and importance of thorough attainments in the various branches of learning, and defined the chief duties of all men who have been so fortunate as to receive the advantages of a high education, (as the phrase is commonly understood.) We are continually in danger of forgetting that education means no more than the developement of our powers, and of applying the words to some one of the many forms in which man is educated. The mere man of books may be really ignorant, as may the mere lawyer or man of business. The mind of the truly intelligent man is not cramped up or contracted into any narrow form. But using the term education in its application to classical learning and its kindred attainments, this lecture enjoins its possessors, in the midst of the tendencies to a predominating worldliness, to cherish in themselves a diffuse around them the love of science and arts, and a reverence for law and order, and to dignify labor, and by bringing their attainments to bear upon the pursuits of their fellow men, to improve their condition and to lift into consideration the employment of all. We make one extract from the passages devoted to this branch of the subject:

"Say you to the son of toil that labor is the condition of life—it is only the manner of its performance which constitutes the difference with the good. Be you prompt to apply to practical use the acquisition which these halls ensure.—Scorn the belittling idea, and show to others that you scorn it, that the mere possession of classical knowledge is, in itself, an occasion of boast—a ground for special distinction. If the scholar does not apply his knowledge to some objects of individual advantage, and, by that means, to general good, he is a coxcomb, and justifies the estimate in which the ignorant have affected to hold the learned. Learning is but a means, an implement, either of profitable use, or elevated enjoyment; in the former application it is the instrument of the laboring man; in the latter, it may become, and you should strive to produce that end, the boon of all. Singly possessed, learning inflates and injures; diffused through all ranks, it elevates pursuits, modifies ambition, chastens passions, equalizes enjoyment and purifies morals. Your duty, as scholars and philanthropists—as patriots and Christians, must then be manifest.—Labor--labor—and that labor which conquers all, will improve all."

EFFECTS OF EXCESSIVE COLD.—The long continuance of great cold influences the physical and moral character. It has an effect on the sensibility of the body. The inhabitants of northern and southern countries differ in this respect materially. It is said that near the poles there are people so little endowed with sensibility that they feel no pain from the deepest wounds. Vancouver states that some of them thrust nails and pieces of glass into the soles of their feet, without feeling uneasiness, while in warm climates such a proceeding would be attended with dangerous results. The ability to endure cold is very various in different people. Capt. Ross speaks of this fact, and says he was able to predict after observation, who would suffer from cold that others would despise. The Russian and Norwegian are indifferent to ordinary degrees of cold. Yet if we recollect rightly, it was the regiment of Italian soldiers who, though coming, from a warm climate, endured the severity of the French campaign in Russia, with the least suffering and loss. Every one is familiar with the fact that cold disposes strongly to sleep. Intelligent travellers, knowing well the danger of giving way to this inclination have yet found it impossible to resist, and have been overpowered by sleep in the midst of exertions to keep awake. Cold sometimes acts with such rapidity, when very intense, as to destroy life almost instantaneously. The use of intoxicating drinks exposes the system more immediately to the action of cold. The protective powers are lessened. "At a *fete* given under Potemkin's administration, at St. Petersburgh, by a farmer general of distilled spirits, fifteen to eighteen hundred persons, who committed too great excesses in spirituous drink, perished miserably from cold in the squares and streets of that capital." It is said that the majority of those who perished in consequence of

cold, during the Russian [illegible] were under the influence of [illegible]

Montesquieu believed that [illegible] the seat of despotism, and the cold [illegible] liberty, while the inhabitants of [illegible] gions claim liberty as the natural [illegible] elevated position. Thompson maintains that crimes are almost always committed in cold weather, and to support this notion, people have absurdly instanced those that have happened in winter, as though an equal number might not be found that were committed in summer.—*Utica Gazette.*

THE SCOTT AND WORTH DIFFICULTY.—The origin of this difficulty is yet a subject of conjecture. The N. Y. *True Sun* on the authority of a gentleman who was lately in the city of Mexico says the arrest was in consequence of the disobedience of orders by Gen. WORTH or by WORTH and PILLOW conjointly, during the late battles before the city of Mexico. WORTH was ordered to operate upon a certain point at night, and to surprise the Mexican garrison and take the enemy prisoners. This, however, he did not, He waited until the next morning. By this time Mexicans, apprised of the design of the American commander prepared for a stout resistance. The conflict ensued and the brigade led be General WORTH lost eight hundred men!

This story is somewhat confirmed by the fact that in WORTH's report of his operations, he says he abandoned the attack in obedience to "*reiterated* orders."

The Washington correspondent of the N. Y. *Evening Post* assigns Gen. SCOTT's general order reprobating letter writing, and alluding to certain officers as "vain, conceited and envious heroes," as the origin of the quarrel. On the appearance of this order, according to the *Post's* correspondent, Gen. WORTH addressed a note to Gen. SCOTT inquiring whether he must consider himself obnoxious to the reproof in the order. To this Gen. SCOTT did not give a direct reply, and Gen. WORTH repeated the request. The sequel we copy in the writer's own words:

To this second note Gen. Scott declined giving a more specific answer, and informed his correspondent that he could not hold himself responsible for the references it might please the officers to draw from his phraseology.

Gen. Worth thereupon drew up a statement of the entire correspondence between the commander-in-chief and himself, and addressed it to the Secretary of War, with remarks of his own as to the injustice with which he had been treated, and assuring the Secretary that but for his regard to the public service, he should file charges against Gen. Scott. This statement directed as an appeal to the Secretary of War, he sent unsealed to Gen. Scott, requesting him to transmit it to Washington — Gen. Scott refused to forward it, at the request of Gen. Worth, but forthwith put Gen. W. under arrest; and reported him to the War Department for insolence to his superior officer, &c., and to sustain the charges, transmits the statement drawn up by Gen. Worth.

This is the gist of the controversy, as I have it from good authority. I cannot undertake, of course, to give the exact language of documents that I have never seen. No doubt the papers will be called for by Congress, and then the truth will out. It is surmised that the government may recall Scott.

☞ An official statement signed by Daniel Graham, Register of the U. S. Treasury, shows that the expenditures of the Government for the first quarter of the present fiscal year were *eighteen and a half millions*, or at the rate of *seventy-four* millions *per annum*.

[illegible] the qualities of action and being, no less [illegible] of sentiment or form. Virtue indeed [illegible] as the poetry of conduct—the very [illegible] reative faculty; for it is as much [illegible] e beautiful as the cunning stat- [illegible] uing."

[illegible] *of the creative faculty!*— [illegible] ruth thoroughly, and they [illegible] *ously* the mental facul-

[illegible] Properly speak- [illegible] udes goodness; [illegible] true. "But," [illegible] d [wisdom] [illegible] of accep- [illegible]. It has [illegible] ead, but [illegible] action, [illegible], the [illegible] be

[illegible] the qualities of action and being, no less [illegible] of sentiment or form. Virtue indeed [illegible] as the poetry of conduct—the very [illegible] reative faculty; for it is as much [illegible] e beautiful as the cunning stat- [illegible] uing."

A note affirms that [illegible] 252 lbs. of bread by [illegible] vevence—24 lbs more [illegible]

The following are [illegible] the pamphlet of the [illegible] bread," etc:

"Bread made from flour not [illegible] with an extra quantity of bran, is the best form in which faribaceous and excrementol matter [illegible] usually taken; not only in diabetes [illegible] the other varieties of dyspepsia [illegible] obstinate constipation. This is [illegible] cacy of which has been long known and [illegible] yet, strange to say, the generality of mankind choose to consult their own taste rather than their reason; and officiously separating what Nature has beautifully combined, entail upon themselves much discomfort and misery."—Dr. Prout, on *Diseases of the Stomach*, &c., p. 300.

In corroboration of the value of brown bread, Professor Johnston, of the University of Durham, England has subjected the meal and flour of wheat to chemical analysis, according to which, the flour of wheat contains, at the lowest estimate, 22 per cent. less of the staminal principles of nutrition than the entire meal, (flour unbolted) and, if to this is added the smallest allowance for the matters destroyed by fermentation, we shall be under the mark in saying that fermented flour bread contains 25 per cent. less of the nutricious ingredients than fermented meal bread. This loss in quality, together with the loss in quantity, furnishes data for a correct estimate of the retative value of the two as articles of diet. Hence it appears, *for every 75 loaves of fermented bread we might possess 100 of unfermented meal bread; and in every three of these at least as much nourishment as is contained in four of the other.*

GIVING AND RECEIVING ADVICE.—In giving advice, we must consult the gentlest manner and softest reasons of address; our advice must not fall, like a violent storm, bearing down, and making that to droop which it was meant to cherish and refresh; it must descend as the dew upon the tender herb, or like melting flakes of snow; the softer it falls, the longer it dwells upon, and the deeper it sinks into the mind. If there are few who have the humility to receive advice as they ought, it is often because there are few who have the discretion to convey it in a proper manner, and to qualify the harshness and bitterness of reproof, against which nature is very apt to revolt, by a mixture of sweetening, and agreeable ingredients. —*Anon.*

PREMIUM FOR A TRACT.—Some friends of the Sabbath have offered $100 for the best approved tract of 4, 8 or 12 pages, showing the pernicious influence of Sabbath recreations on health and morals, and meeting the popular reasons urged for them. The manuscripts may be adressed (post paid) until the first of May next, to William A. Hallock, 150 Nassau st. New York, or to Wilfred Hall, Esq., 144½ Chestnut st., Philadelphia.

How the Quaker Outwitted the Robber.

WRITTEN BY SAMUEL LOVER.

A traveller wended the wilds among,
With a purse of gold and a silver tongue;
His hat it was broad, and all drab were his clothes,
For he hated high colors—except on his nose;
And he met with a lady as the story goes.

The damsel she cast him a merry blink,
And the traveller was nothing loth, I think;
Her merry black eye beamed her bonnet beneath,
And the quaker he grinned, for he'd very good teeth,
And he asked, 'art thou going to ride on the heath?'

'I hope you'll protect me, kind sir,' said the maid,
'As to ride this heath over I'm sadly afraid;
For robbers, they say, here in numbers abound,
And I would'nt for any thing I should be found,
For—between you and me—I have five hundred pound.

'If that is thine own, dear,' the quaker said,
'I ne'er saw a maiden I sooner would wed;
And I have another five hundred just now,
In the padding that's under my saddle bow,
And I'll settle it all upon thee, I vow!'

The maiden she smiled, and the rein she drew,
'Your offer I'll take—though I'll not take you!'
A pistol she held at the quaker's head—
'Now give me your gold—or I'll give you my lead,
'Tis under the saddle, I think you said.'

The damsel she ripped up the saddle bow,
And the quaker was never a quaker till now;
And he saw by the fair one he wished for a bride
His purse borne away with a swaggering stride,
And the eye that looked tender now only defied.

'The spirit doth move me, friend Broadbrim,' quoth she,
'To take all this filthy temptation from thee,
For mammon deceives—and beauty is fleeting;
Accept from thy MAILEN a right loving greeting,
For much doth she profit by this quaker's meeting.'

'And hark! jolly quaker, so rosy and sly,
Have righteousness more than a lass in your eye;
Don't go again peeping girls' bonnets beneath,
Remember the one that you met on the heath,
Her name's Jimmy Barlow—I tell to your teeth!'

'Friend James,' quoth the quaker, 'pray listen to me,
For thou canst confer a great favor, d'ye see;
The gold thou hast taken is not mine, my friend,
But my master's—and truly on thee I depend
To make it appear I my trust did defend.'

'So fire a few shots through my clothes here and there,
To make it appear 'twas a desp'rate affair.'
So Jim he popped first through the skirts of his coat,
And then through his collar—quite close to his throat;
'Now once through my broad-brim,' quoth Ephraim, 'I vote.'

'I have but a brace,' said bold Jim, and they're spent,
And I won't load again for a make-believe rent.'
'Then,' said Ephraim, producing his pistols, 'just give
My five hundred pounds back—or as sure as you live,
I'll make of your body a riddle or sieve.'

Jim Barlow was diddled—and though he was game,
He saw Ephraim's pistol so deadly in aim,
That he gave up the gold, and he took to his scrapers,
And when the whole story got into the papers,
They said that the thieves were no match for the quakers

A CURIOSITY.—A few days since, Geo. Wells and Captain Fowler, of Wellsville, Ohio, accidently discovered somethiug having the appearance of ivory or bone, projecting from the surface of the bank of the river, near that place. After much labor they succeeded in getting the newly discovered object dug up, which on examination, proved to be the "tusk of an animal."—It measures eight feet and a half in a length, and in circumference, twenty-two and a half inches, and would probably weigh near two hundred pounds. It has become soft, and is of about the same consistency as chalk, yet it has every appearance of ivory— this is, indeed, something for the curious.—*Cleveland Her.*

MARRIAGE.—Wherever woman plights her troth, under the sky of Heaven, at the domestic hearth, or in consecrated aisles, the ground is holy, the spirit of the hour is sacramental. That it is thus felt, even by the most trivial, may be observed at every wedding ceremony. Though the mirth may be fast and furious before or after the irrevocable formula is spoken, yet at that point of time, there is a shadow on the most laughing lip, a moisture on the firmest eye. Wedlock, indissoluble, except by act of God—a sacrament whose solemnity reaches to eternity—will always hold its ranks, in life as well as literature, as the most impressive fact of human experience. He is a slight observer, who sneers at its prominence in dramatic writing, whether of the stage or the closet, the play or the novel. It must always be so. If Government, with all its usurpations and aggressions, has appropriated history, let the less ambitious portions of our literature be sacred to the affections—to the FAMILY, based in conjugal and Parental love as that institution is, and less to the STATE, which hitherto in the world's annals, has been little else than the sad exponent of human ambition.—*Cincin. Signal.*

CONSUMPTION.—DICKENS, gives the following description of this sad disease, which is constantly carrying sorrow and desolation into thousands of families:

There is a dread disease, which so prepares its victims, as it were for death; which so refines it of its grosser aspect, and throws around familiar looks, unearthly indications of the coming change—a dread disease, in which the struggle between the soul and body is so gradual, quiet and solemn, and the result so sure, that day by day, and grain by grain, the mortal part wastes and withers away, so that the spirit grows light and sanguine with its lightening load, and feeling immortality at hand, deems it but a new term of mortal life—a disease in which death and life are strangely blended, that death takes the glow and hue of life, and life the gaunt and grisly form of death—a disease which medicine never cured, wealth warded off, or poverty could boast exemption from—which sometimes moves in giant strides, and sometimes at a tardy, sluggish pace, but slow or quick, is ever sure and certain.

BUNKER HILL IN ITALIAN HISTORY.—Padre Capobianco, who was on board the Sicilian frigate Urania, at New York, some two years ago, has published account of what he saw in this country, from which we extract the following:

Boston is a fortified by nature and by art. It rises upon three most pleasant hills, one of which is Bunker Hill, upon the summit of which towers the famous monument named Bunker Hill, erected to commemorate the victory gained by the Americans over the English, in 1776. It was commenced by the Engineer O'Donnell Webiter, in 1827, under the Presidency of the celebrated La Fayette, and finished in 1843.

Lest our readers should doubt the accuracy of our translation, we give here the original: "*Esso fu cominciato dall' Ingegniere O'Donnell Webiter nel* 1827, *sotto la presidenza del celebre Lafayette e terminato nel* 1843."—*North American.*

☞ The Mobile Register says the loss by the flood of the Tombigbee will amount to one million dollars.

Editorial Department.

J. CLEMENT, EDITOR.

Culture of Imagination in the Young.

It was amusing to witness the late operations of a couple of neighbor's children, a boy and girl of the age of five years. Apparently losing all thought of the other occupants of the room where they were, they imagined themselves married and blessed with a numerous family of pretty and precious children, for each of which they had a distinct and very poetical name. The parents, taking it for granted that the small pox is prevalent in their neighborhood, call in an imaginary doctor, and have their little ones vaccinated. But the operation fails of success in bringing on the kind pox. The more terrible disease seizes the dear creatures; they sicken;—die; and the stricken parents, clad in mourning, follow them, one by one, to their wintery bed, and with sorrowing hearts, return to their desolate home! Thus closed the scene.

This trifling incident was a beautiful exhibition of the early developement of the imagination; and it was fraught with a moral. The faculty to the operation of which the scene owed its conception, had been cultivated in these children; hence its strength at so unripe an age. And as there are conflicting views in regard to the importance of this faculty, we will subjoin to the above incident a passing word on the subject.

There *are* individuals who regard the imagination of but little consequence, and ever sneer at the idea of its culture. This results, we are bold to say, from ignorance of the extent of its agency in ministering to the higher gratifications and purer pleasures of life. The truth is, without its existence the world would be devoid of charms. The Beautiful in nature would be like "hid treasures," undiscovered and useless; and Art would have no visiters, for she would possess nothing to admire. Sculpture, Painting, Music and Poetry, would not be heard of; and the immortal creations of Phidias, Raphael, Mozart, Homer and kindred sons of fame, would be like the philosopher's stone or the fountain of eternal youth. All, *all* that pleases the eye without, and the long scrolls of the unwritten poetry of daily life within, would remain a blank throughout all the dull and monotonous journey of life.

> "*Thy* light *alone*, like mist o'er mountains driven,
> Or music by the night-wind sent
> Through strings of some still instrument,
> Or moonlight on a midnight stream,
> Gives grace and truth to life's unquiet dream."

But in its relation to the moral and social character of man, this power of the mind, presents its *noblest* features. "As the principle that takes cognizance of beauty," says a late writer in one of our periodicals, it (speaking of imagination) properly embraces all that pleases us in human conduct, and lies at the very foundation of morals. It regards the qualities of action and being, no less than those of sentiment or form. Virtue indeed may be defined as the poetry of conduct—the very offspring of the creative faculty; for it is as much an expression of the beautiful as the cunning statue, or the magic painting."

Virtue the offspring of the creative faculty!—Let parents ponder this truth thoroughly, and they will aim to evolve *harmoniously* the mental faculties of their children.

WISDOM AND KNOWLEDGE.—"Properly speaking," says some one, "wisdom includes goodness; for *the good alone are wise.*" Very true. "But," continues the same writer, "the word [wisdom] has been used in the popular looseness of acceptation, as synonymous with knowledge. It has been well said that knowledge is of the head, but wisdom of the heart. The one is the abstraction, the other the application: the one the *science*, the other the *art.*" Such being the case, let us be sure we are educated in *both.*

THE DEMOCRATIC REVIEW for this month contains an engraved likeness of CHARLES H. HASWELL, engineer-in-chief of the United States Navy, and ninety-six pages of literary, political, and financial matter. It is a very cheap work at three dollars a year. This number commences the twenty-second volume. J. W. MOOR, publisher, New York.

THE TEACHERS' ASSOCIATION of this county, which met in this city last week, made choice of the following officers for the ensuing year: W. D. HUNTLEY, President; E. D. KINGSLEY, 1st Vice President; B. F. CHILCOTT, 2d Vice President; D. G. JANES, Recording Secretary; V. M. RICE, Corresponding Secretary. An address was delivered by H. GATES, Esq. on Friday, and another by the Rev. C. P SHELDON, on Saturday.

CITY OF SYRACUSE.—At an election to decide upon the adoption of the new city charter, held on the 1st, 1,849 votes were cast. The friends of the charter had a majority of 346. The result was the occasion of much rejoicing in Syracuse and Salina, which will henceforth be united. The first election under the new charter will be held on the first Tuesday of March next.

☞ HEARING THE TELEGRAPH.—That the electrical fluid is audible as it passes along the wires is quite a common though mistaken notion with many country people who live near the line of the Telegraph. "Did you ever see the news going?" said we to a boy the other day. "No, but they was telegraphing yesterday, for I heerd them," was the reply. The sound produced by the vibrations of the wires has given rise to this idea.

CANADIAN ELECTIONS.—The returns which have reached us in the Montreal papers, show the election of 5 Liberals and 2 Tories in Lower Canada, and 2 Liberals and 12 Tories in Upper Canada, and 2 doubtful.

☞ THE LAST POTATO.—This important root is becoming more and more scarce. The experiments mentioned by the best publications of the country as most successful result in failure, and present appearances indicate that unless the disease should disappear in the same mysterious way in which it began, the root will become extinct. It will be seen that our apprehensions with regard to the crops in Europe were well founded. A Liverpool letter to the New York *Courier*, under date of November 19th, says:—"I regret to say, that the potato rot has appeared with greater virulence than ever, within the last week or two, some kinds which have never before been affected, having been now attacked. In fact the general opinion among our best agriculturists, is that 'the root is leaving us altogether!' The accounts from Ireland are most frightful, and starvation will be much worse this year than last."

The London correspondent of the National Intelligencer states the loss from the potato disease in the United Kingdom at about $160,000,000.

WORTHY OF NATURALIZATION.—In the U. S. Senate last week, Mr. DIX, from the Committee on Commerce, reported a bill providing for the issue of a register for the barque Canton, which was passed. This vessel was built of teak-wood, in the East Indies, nearly one hundred years since. She was originally owned by the Dutch East India Company, but after various mutations of fortune, recently came under the Haytien flag. Early last winter she got ashore on the Muscle ledge, at the mouth of the Penobscot, where she remained combating with the storms during the whole winter. But the strength of her timbers, notwithstanding her great age, proved more than a match for the winds and waves, and she was got off in the spring and taken to Bath, where she had been purchased. She was found to be *but little injured*, was repaired, and is now again navigating the ocean.

☞ The Philadelphia Enquirer of Friday morning says: we have seen a letter of late date from an officer of the army, which states that an insurrection was about to break out in the city of Mexico, that it had been discovered by General SCOTT just in time to prevent serious results.—The affair had created great excitement, and a more rigorous policy of vigilance and precaution had immediately been adopted.

☞ Miss CATHARINE E. BEECHER publishes a letter in the N. Y. Tribune denying the truth of the report which has obtained a wide circulation in the newspapers, that two of the female teachers who went from New England west under the direction of Gov. SLADE, had turned Catholics and become nuns. Nothing of the kind has occurred.

CINCINNATI, Jan. 7.

TREMENDOUS EXPLOSION.—The steamer Sea-Board from New Orleans for St. Louis, having 1000 kegs of gunpowder on board, took fire on Wednesday, near Cape Gerradeau. The fire soon communicated with the powder, when a tremendous explosion took place, the report which was a distance of 40 miles.

The boat was blown to atoms. The passengers and crew escaped before the explosion took place. No lives lost.

RECALL OF GEN. SCOTT.—The rumor that Gen. SCOTT is to be recalled from Mexico gains strength. A correspondent at Washington of the *Courier & Enquirer* writes as follows:

The question whether Generals Scott, Worth and Pillow are to be recalled, was at full length debated in the Cabinet meeting of yesterday, and I believe they will be called home; were it but to give the army a lesson of obedience to the institutions and laws of their country. All the heavy service being done, and the heart of Mexico fairly in our possession, our military generals will answer quite as well for garrisoning towns and clearing the high roads of robbers and vagabonds, as Scott himself. After the recall of Scott, Worth and Pillow, the command will devolve on Maj. Gen. Butler, of Kentucky, who stands in the most intimate relation to the President, and would carry out his views without the appointment of a Lieutenant General. If Scott, Worth, Pillow and Duncan come home, they will undoubtedly be court-martialed.

Our readers may remember the outcry of the *British Press*, some months since, when a seaman was executed in our squadron in the Gulf since the commencement of the War, for the crime of striking an officer—a Lieutenant, we believe. It was denounced by the entire newspaper press of England, as an act of savage cruelty, &c., and was made the occasion for renewing the abuse and billingsgate which, upon every possible opportunity, they heap upon the United States. The following paragraph from a late English paper, shows that in this case, as usual, *John Bull* is denouncing in us, precisely those things which he is most ready to do himself:

MILITARY EXECUTIONS IN INDIA.—Two military executions have taken place at Meerut. *An artilleryman was shot on the 19th of December for striking an assistant surgeon.* Fourteen men of Her Majesty's 32nd were ordered as his executioners; they fired, but strange to say, only one ball struck the unfortunate man in the thigh, when the provost-sergeant put an end to his existence by shooting him through the head with a pistol. The whole of the firing party were in confinement for not doing their duty. The murder of a fellow soldier in cold blood would appear to have chilled the blood of those brave fellows, who in the hour of battle would think nothing of putting a score of their enemies to death; and who will say that he might not also have been affected as they were? Alas! The poor man seems up to the moment of his being blinded to have been confident that he would not be put to death. Alas! what must have been his feelings when he heard the discharge of musketry, and found himself wounded? How agonizing the few moments which intervened till his life was taken by the provost-sergeant! Another man of Her Majesty's 6th Lancers was to be shot for throwing his cap in the face of his commanding officer.—*Bell's Life in London.*

☞ WARSAW.—The metropolis of the adjoining County of Wyoming, is a flourishing place and enterprizing withal. Since it has become the county seat, it deports itself in a manner becoming that dignity, spreading and stretching far over the fertile plain where it is situated with a rapid and healthful growth.—*Rock. American.*

OSWEGO HARBOR.—During the heavy gale of Wednesday night, the schooner Independence was sunk at her moorings in our harbor, and the Canadian schooner Ellen was driven from her moorings and carried ashore in the East harbor. These disasters and loss of property are owing to the condition of the East pier, a portion of which is gone, having been carried away by the storms of 1846.—*Times.*

☞ MARTIN HARE —Our readers will remember that this is the name of the individual who enticed a young girl of 15 from her parents in New York, he being already married, and lived here last summer, and was arrested at Milwaukee, we believe, by Mr. BEST. He has been tried in New York for bigamy, and was after a long trial acquitted on Friday last, on the ground it is said that the agreement between Hare and the girl was a private agreement, rather than a marriage. He has now been arrested for seduction, in a suit for damages. Woman's folly and man's rascality have seldom been exemplified more thoroughly than in this case.

DISCOVERY OF AN ISLAND.—Capt. L. Paulson, of the Danish brig Triton, reports having discovered a new island on his last voyage from Santa Cruz to London. The following is his account of the discovery: "A few days after we had left the roads of the Antilles, on the evening of the 21st of March, wind blowing hard from the southwest, one of the men at the bows called out that he saw land. I did not believe this to be the case, but on casting the lead, it gave 16 fathoms, and again shortly after it gave five fathoms. We passed the night in the neighborhood lying to, and in the morning distinctly saw an island before us, and we cast anchor in a bay seven fathoms deep, with sandy bottom, and affording good protection and anchoring ground. Several of us landed, and found the island covered with the most luxuriant vegetation. One of our sailors found on the beach the skeleton of a man, and boat partly built. We could only form conjectures on the subject. This island is situated in lat. 23 19 N., lon. 42 39 W."

It is strange that a large Island in a latitude so frequently traversed, should have been so long undiscovered. Capt. PAULSON is an intelligent shipmaster.

Appointments by the President.

Seth Barton, of Louisiana, Charge de Affairs to the Republic of Chili.

John W. Davis, of Indiana, Commissioner to China, vice D. H. Everett, deceased.

John Rowan, of Ky., Charge de Affairs to Naples, vice W. H. Polk, recalled at his own request.

Nathaniel Niles, of Vt., Charge de Affairs to Sardinia, vice Robert Wickliffe, Jr., resigned.

Thomas J. Morgan, of Ohio, Secretary of Legation to Brazil, vice R. Welch, re-called.

W. J. Staples of N. Y. Consul at Havre in place of M. Beasly, deceased.

Charles Huffnagle, of Pa., Consul to the port of Calcutta, vice J. B. Dickinson, recalled.

Hugh Keenan, of Pa., Consul to the por of Dublin, vice Thomas Wilson, recalled.

John McPherson, of Va., Consul to the port of Genoa, vice, C. Edwards Lester, recalled.

Geo. J. Fairfield of Maine, Consul to the port of Buenos Ayres, vice, Thadeus Sanford, declined.

Elezer P. Kendrick, of Ohio, Surveyor of Virginia military district in Ohio, vices W. A. Anderson, resigned.

LIGHT FROM ELECTRICITY.—Mr. Straite is lecturing in England on his new mode of lighting by electricity. The Literary and Philosophical Society of Sunderland gave a public soiree last November, at which his mode of lighting was the principal attraction. The *Newcastle Guardian* says:

"The light, which was of astonishing brilliance and beauty, was placed under an air-tight glass vase. When the gas was turned down it sufficiently lighted the spacious building, and bore the closest resemblance to the great orb of day of any light which we ever witnessed. The electric light was next exhibited in a vessel of water with equal success. Mr. S. stated that it was the cheapest as well as the best for all practical purposes; and the marvellous invention was hailed with rapturous plaudits."

FROM CENTRAL AMERICA.—We learn from good authority that a British man of war arrived at San Juan, in Central America, on the 27th of October last, with the King of the Mosquito Shore at board: and that the commanding officer gave formal notice of his intention to take possession of that place in the name of the Mosquito King, on the 1st day of January, 1848.

The inhabitants were very indignant, and were about, it is said, to appeal to the government of the United States for aid in resisting the encroachments of the British.

This step is in conformity with our former intelligence from this quarter. Our readers will recollect that we published some documents recently, embracing a protest from the authorities of San Juan against the design then apprehended, and since, it seems, put in force, of the British to seize upon that port. If the intelligence now received proves to be authentic, and an appeal is made to the United States, difficulty may ensue. But we do not believe England would run the risk of an embroilment with this country, for the sake of the advantages which the possession of that country may confer. The President has repeatedly announced his intention, so far as his department of the government is concerned, of not permitting any foreign power to acquire any new foothold upon this continent: and we are inclined to believe that in this position he would be sustained by the general sentiment of the American people. The possession of the Mosquito Shore could not be of any great value to Great Britain, except that it might enable her to interpose a barrier to the progress of the United States towards the Southern portion of the Continent;—and just in proportion to the extent of her apprehensions of our passing the isthmus, would be her eagerness to stand in the way.

However, we anticipate no difficulty from this quarter at present. The step taken may, nevertheless, prove to be one of some importance.—*Cour. & Enq.*

THE PHŒNIX.—Capt. Dorr has just returned from Sheboygan, Capt. Sweet of the Phœnix in in company. They report the Phœnix in 4 or 5 feet water, and the ice piled up some 10 or 12 feet high, so as to make it almost impossible to get the machinery out until spring, when the ice melts.

Capt. J. W. Tuttle of the propeller Delaware, has libelled the wreck of the Phœnix and all the goods saved, for salvage. He claims her as his prize, having found her a burning wreck out in the lake and towed her into Sheboygan. The United States Marshall has taken possession of the wreck and all property saved, on behalf of the libellants. He has inventoried all the property and appointed appraisers. The goods saved are appraised at $775. The hull and machinery at $2,125.

There are some iron goods yet in the wreck.—Some chains belonging to the merchants here. A part of the hull has come ashore on to the beach, and the balance is badly broken up. The machinery is all that holds the wreck together.—*Chicago Adv.*

THE PANIC.—The panic, mischievously formented by dishonest men for dishonest purposes, is fast subsiding. But it will result disastrously. Many of the Free Banks are sending in their bills to the Comptroller and withdrawing their stocks. Some $70,000 or $80,000 were sent in yesterday. It is, of course, unknown to what extent this will be carried; but the withdrawal of any very considerable amount from circulation at this time, would result disastrously.—*Alb. Eve. Jour.*

From the Buffalo Commercial Advertiser.

Drawback on Canadian Wheat.

Memorials to Congress are now in circulation in Rochester, Oswego, and other eastern towns, representing that a very important trade is growing up on the Northern Lakes between the British Provinces and the United States, that the greater part of Canada West is a fertile and highly productive region, that the peninsula formed by Lakes Ontario, Erie and Huron, especially, is not excelled in soil or climate by any part of the Northern or Northwestern portion of the United States, and that the export of wheat and flour by the River St. Lawrence—almost exclusively the production of the West Province—on the 10th day of Nov., 1847, amounted to 626,684 barrels of flour, and 1,951,203 bushels of wheat, both equivalent to one million and sixty thousand bbls. of flour, and exhibiting a pecuniary value exceeding six millions of dollars.

In view of these facts the memorialists ask that the principles of the laws regulating drawback and warehousing should be so extended to our trade with Canada, that Canada wheat may be imported into the lake and river ports of the Northern frontier, admitting to entry under bond, to be manufactured into flour in the United States, and upon the exportation of the flour the bonds may be discharged under such regulations as Congress may provide. They believe the manufacturers of flour in the lake country may largely participate in the manufacture of Canadian wheat, should Congress release the duties incident to its importation. They conceive it will be a mere extension of the field of operation to American commerce and manufactures, without subjecting our agricultural industry to increased competition—that in fact it will not in any manner affect our agriculture or our industry except beneficially. The wheat surplus of Canada will seek a foreign market, whether the prayer of your memorialists is granted or not. The question is the very simple one, whether Congress will permit the flour manufacturers and the owners of tonnage upon the Northern Lakes and Canals to participate in the manufacture of Canada wheat, and in the commercial profits incident to the import and export of the same.

Your memorialists respectfully submit that under existing acts of Congress, and regulations of the Treasury, a drawback of the duties is allowed on the exportation of sugar refined in the United States from foreign sugars imported, and a like drawback is allowed on the exportation of spirits distilled from foreign molasses.

The transactions under these acts and regulations are known to be highly profitable, and are conducted with entire safety to the revenue.—Your memorialists submit whether the countenance of Congress, so benignly shed upon the manufacturers of spirits, will be withheld from the manufacturers of bread.

A copy of this memorial, of which the above is the substantial part, was sent to us some days ago, with a request that we would aid its circulation, and in giving effect to its prayer. We see that it is noticed with commendation in several of the New York and other eastern papers, some without qualifications, others recommending that the trade with Canada be put on the same footing as between the States, without any restrictions or duties whatever.

It would give us pleasure to comply with the wishes of the esteemed friend who sent us the memorial, if we could do so consistently with our sense of public duty; but the consideration we have given the matter compels us to take a view of it adverse to the prayer of the memorialists.

That the arrangement proposed would, if sanctioned, prove beneficial to the millers of Rochester, Oswego, and other points that could be named, and that it would, in some degree, benefit the shipping interest on Lake Ontario, the canals, and on the ocean, is very probable. But these advantages, if realized to the fullest extent anticipated, would be dearly purchased by the injury that would be inflicted on the producers of Ohio, Indiana, Michigan, Illinois and Wisconsin.

The fertility and capacity for production ascribed in the memorial to the Canadian peninsula, are not exaggerated. It is one of the finest countries in the world, and with proper encouragement and stimulus to its industry, might easily produce ten times more than it now does. Under a state of things somewhat different from that now existing, we should be gratified to see Canada flourish to the utmost. But we very much question whether it is any part of our duty at present to do more than we have already done to stimulate its producing power, and increase its commercial facilities. Under our laws regulating drawback and warehousing she has the unlimited use of our works of internal improvement, for all her commercial purposes, and it is now proposed to give her large additional advantages.

Look for a moment at the practical effect of the system proposed. Every bushel of wheat she can raise would find a ready market at Rochester, Oswego and other prominent milling points, at the highest price that the state of the foreign market—which controls all operations of this kind—would allow. The Canadian wheat thus manufactured into flour would not, it is true, compete with our own directly in the home market, but it would constitute a very large portion of the flour exported from this country, and by so much would injuriously affect the market value of the products of our own people. Besides this, its proximity to the United States is such that the Canadian producer could, in the case of a sudden rise of prices abroad, send his wheat here, have it ground, and on board a ship half across the Atlantic, in a way to take full advantage of the rise, before a vessel could go from this port to the upper lakes and take on a cargo of American grown wheat. The Western producer would, by the plan proposed, be completely headed. His products would be thrown upon a glutted or falling foreign market, the full benefits of which would be reaped by an alien people.—A measure more unjust or injurious cannot, in our view, well be imagined. The shipping and milling interests of particular localities would profit largely by the proposed arrangement; but all other interests would suffer in a still greater degree.

We are willing to concur in a liberal line of policy toward the people of other countries, but are not prepared to favor a policy that would, in effect, give aliens an advantage over our kindred, those who have subdued the forest and the prairies, those who have added more than an empire's extent and resources to our country, who have freely borne more than their share of common burdens, and who have at all times manifested a patriotic readiness to uphold their country's interest and honor. Something, too, is due our western brethren from this State, to whose power and greatness they have so largely contributed. If we cannot be generous toward them, we should at least be just.

In these hastily written remarks we have but indicated some of the objections to the plan proposed. We throw them out in the hope that they will arrest the attention of our readers, and induce them to take some steps in opposition to the contemplated measure.

☞ EXPENSES INCURRED BY ERIE COUNTY, FOR THE SUPPORT OF THE DESTITUTE.—The following statement was presented by Mr. LESTER BRACE, one of the County Superintendents:

Between Oct 1, 1843 and Oct. 1, 1845, the sum thus expended was nearly $33,000.

From 1st of Oct., 1845, to 1st Oct. 1846, the whole number relieved or supported was 2,241. Expenses at the poor house were $5,934 99; for temporary relief, $9,151 77; making $15,083 76. From Oct. 1st, 1846 to Oct. 1st, 1847, the whole number of paupers relieved or supported was 4,301. The number of all such persons who were temporarily relieved was 3,292. The aggregate expense of relieving and supporting all such persons was $17,146 83; of this aggregate sum, the amount expended for tempora y relief was $8,367 24; poor house expenses, $8,779 59. The whole number received into the poor house during the last year was 978; died in the poor house, 113. It may be added here that the City Sexton buried during the same time 216, by request of the Overseers of the Poor. It will readily be seen that while pauperism has been annually on the increase, that at no time does its increase compare with the last year, there having been in that time an addition of a little less than fifteen hundred, all of whom were in a most miserable, destitute and sickly condition. Scarcely a family that has stopped here since last July, but more or less of its members have brought with them ship fever; and I am fully satisfied that one thousand have been proper subjects for a hospital.

Of the 4201 paupers the last year, 3804 were foreigners, viz: 1781 from Ireland. 1265 from Germany; 198 from England; 113 from Scotland; 92 from Holland; 71 from France; 47 from Canada; 18 from Prussia; 16 from Wales; 6 from Halifax; 74 colored, and 929 native citizens.

Besides these, from 800 to 1000 who have passed thro' this city, have been more or less aided, and of whom no official record has been kept.

The bill passed at the last session of the Legislature provides a common fund for the support of sick immigrants landing on this frontier, for three years after their arrival. But a considerable proportion of our sick paupers come by way of New York. We understand that the great practical difficulty consists in the identification of the individuals as having already paid the tax, or "hospital money." The fact that to large a proportion of the paupers for whom we incur expense here are foreigners is worthy of notice and is worthy of increased attention from the State.

MAINE SENATOR.—The Governor of Maine has appointed the Hon. WYMAN B.S. MOOR, now Attorney General of that State, a Senator in Congress, to supply the vacancy occasioned by the death of Mr. FAIRFIELD, or until the legislature shall elect.

☞ MECHANICS' PROTECTIONS.—Another institution of this character was established in this city on Thursday evening. It is called Mechanics' Mutual Protection No. 45. The following officers were elected for the current term:

JOHN S. PUTNAM, *S. P.*
B. F. SALISBURY, *J. P.*
F. W. ROGERS, *R. S.*
N. W. THAYER, *F. S.*
JOHN BURDETT, *T.*

We understand that these institutions are increasing in other parts of this State.

A FAMILY POISONED.—The following is an extract of a letter from a friend, residing at the Falls St. Croix. The persons referred to were a poor but respectable family, who removed from this place last spring.

"In a letter written you a short time since, I attempted to tell you of a terrible calamity that had then just befallen the family of our mutual friend, Mr. John Lightner. Owing to the irregularity of the mail, the letter has probably not reached you. The family were all poisoned! The two eldest of the boys died. Three other members of the family partook of the poison, but it did not prove fatal. This extraordinary occurrence was brought about by the criminal agency of an old antiquated root doctor, who had just come to the place. It afterwards appeared, that he had cultivated a kind of reverence for the root medicines of Indian tradition, and though twice previously told that the root he was digging was wild parship, and was poison, yet he persisted in calling it by another name, and seemed to be bent and recommending and trying its virtues. That poor family were the victims of his first reckless experiment."—*Galena Gazette.*

LOCKPORT AND ROCHESTER RAIL ROAD.—The Lockport Daily Courier says that the statement of the paper at Brockport that it has been decided to locate the above named Road upon the Ridge route, is without foundation, as there has been no meeting of persons competent to locate the road—and further, it understands that the question of location depends entirely upon the amount of stock taken upon the several routes, and the terms upon which releases can be obtained. And it appears from what we learn that there is room as well as time for exertions on the line of the Canal route. One thing is quite certain, those on this route must soon manifest greater interest in the matter or the question will be settled in favor of the Ridge.—*Exchange Paper.*

☞ The *Tribune* has a letter from Puebla giving some account of the recent action at Matamoros. Matamoros is a town about 30 miles from Puebla, and the fight was between Gen. LANE and Gen. REA.

The engagement was a warm one and resulted in the loss of about 100 men and two pieces of artillery on the part of the Mexicans, and a loss of two men on the American side.

☞ The N. Y. *Herald* of Saturday has a despatch from Washington giving a rumor of a treaty of peace between TRIST and the Mexican Commissioners. It was generally believed to be a humbug.

☞ WILLIAM W. MUNFORD, Esq., one of the oldest and most respected residents of Rochester, died in that city yesterday morning of apoplexy, with which he was attacked Friday evening.

THE RIGHTS OF WOMAN.

BY MRS. E. LITTLE.

"The rights of Woman"—what are they?
The right to labor and to pray;
The right to watch while others sleep,
The right o'er others' woes to weep;
The right to succor in distress,
The right while others curse to bless;
The right to love whom others scorn;
The right to comfort all that mourn;
The right to shed new joy on earth,
The right to feel the soul's high worth;
The right to lead the soul to God
Along the path the Savior trod—
The path of meekness and of love,
The path of faith that leads above;
The path of patience under wrong,
The path in which the weak grow strong;
Such woman's rights, and God will bless
And crown their champions with success.

MARRIED.

On the 6th inst., by Dr. Tucker, JOHN MAGEE, and Miss CAROLINE O'BRIAN.

At Albion, on the 6th instant, by the Rev. William N. McHarg, ROSWELL L. BURROWS, Esq., of this city, and Miss MARIA, daughter of Rev. J. W. French.

On the 6th instant, by the Rev. Mr. Hosmer, Mr. THOMAS THOMPSON, of this city, and Miss MARY JANE BELL, of Dundee, Mich.

DIED.

On the 7th inst., GEORGE EDGAR, son of George and Ann C. Crooker, at the age of 1 year and 2 months.

On the 10th instant, Mrs. ADELINE, wife of William Tucker, aged 33 years.

January 4th, Mrs. IRENE RICHARDSON, consort of Charles Richardson, Esq. of Strykersville.

SPLENDID LITERARY PREMIUMS
WORTH CONTENDING FOR.

WESTERN LITERARY MESSENGER
VOLUME TENTH.

GREAT INDUCEMENTS TO AGENTS!!

On the 5th of February, 1848, we shall commence the Tenth Volume of the Western Literary Messenger. It will appear in an entirely new dress and with an increased list of able contributors; and the publishers are determined to make it second in value to no family news and literary paper in the country. They will aim to render it alike the delight of the fireside, an ornament to the centre table and an honor to Western Literature.

Desirous of enlarging its circulation in all parts of the United States and Canada, and willing to give ample encouragement to agents, we herein offer the following flattering inducements to any person who will interest himself in increasing our list of subscribers:

Any one who will send us the names of eight subscribers, to be sent to one Post Office, and ten dollars, we will give a copy of Frost's Pictorial Wonders of the World, a splendid work in one volume; or Simpson's Overland Journey round the World, in one volume, tastily bound in scarlet cloth.

Any one who will send us twelve subscribers to one Post Office address, accompanied with $15, we will give Headley's Napoleon and his Marshals in two volumes, 12mo., with plates; or Headley's Washington and his Generals, in two volumes, do., or Miss Bremer's Novels, or D'Aubigne's History of the Reformation, in one large octavo volume, bound in muslin and illustrated.

Any one who will send us sixteen subscribers addressed to either one or two Post Offices, accompanied with $20, we will give Lardner's Lectures, two volumes, with plates and illustrations, or Griswold's new and magnificent work, the Prose Writers of America, or D'Israeli's Works, or Maryatt's Novels complete.

Any one who will send us thirty-two subscribers, to be sent to not more than three Post Offices, accompanied with $40, we will give M'Cullough's Geographical Dictionary, in two very large octavo volumes, bound in sheep; or Ure's Dictionary of Arts, Manufactures and Mines, in one magnificent volume, and also the supplement to the same; or Dickens' Novels complete, in three volumes.

Any one who will send us sixty-four subscribers, to not more than four Post Office addresses, accompanied with $80, we will give Sir Walter Scott's complete works in ten octavo volumes bound in cloth; or a splendid quarto Bible, worth at least $16,

Any one who will send us one hundred subscribers, to not more than five Post office addresses, accompanied with $125, we will give the Waverly Novels, a splendid edition in 27 vols., of Harper's magnificent illuminated Bible, worth at least $25.

Persons making out either of the above lists between the first and fifteenth of January, may premise new subscribers four numbers of the present (ninth) volume, GRATIS.

Persons sending over sixteen subscribers can have till the middle of April to make out their list, allowing each subscriber will take the back numbers of the volume.

Competitors for any of the above splendid literary Premiums, would do well to at once set about procuring names, which should be sent in to us at once.

☞ The terms of subscription, to mail subscribers, remain as usual at $1,50 per annum, payable in advance.

JEWETT, THOMAS & CO.

BUFFALO, Dec, 22, 1847.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n3

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main-Street, Buffalo.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 168 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.
PUBLISHERS,
COMMERCIAL ADVERTISER BUILDINGS
MAIN STREET, BUFFALO.

TERMS.—To mail subscribers, $1,50 per annum in advance, four copies for $5,00, ten copies for $10,00. To city subscribers who receive their papers from the carrier, $2,00. Mail subscribers will also be charged $2,00 if payment is not made in advance.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

☞ All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

WESTERN LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, JANUARY 22, 1848. NUMBER XXV.

For the Western Literary Messenger.

The Pilot.

BY H. W. ROCKWELL.

"And specyally am I of rehyt goode cheer when that I be with such like folk as doe occupy their business in ye perilles of ye elements. Such be they who doe sail on ye high seas;—likewise they who doe bring ye great ships with ye riches thereof into ye desired havens."

I.

Who is it in yon white-winged skiff
That stands in from the sea,
With oars so long,
And hands so strong,
And a face so full of glee?

II.

'T is he whom the lighthouse-man knows well:
It is the Pilot bold,—
With whom he laughs
As he nightly quaffs
The beer so brown and old.

III.

The pilot,—a queer old man is he,
And the hairs on his head are grey,
And the village boys
Make a merry noise
When he landeth in the bay.

IV.

A short, fat man is the pilot-man,
And at eventide and dawn,
You may see him stand
On the white sea-sand,
With his boots o'er his breeches drawn.

V.

But when the lighthouse lamp is lit,
And the night winds make a din,
Oft through the dark
Steers he his bark,
To pilot the good ship in.

VI.

His broad sail flaps in the driving scud
Like the sea-bird's glancing wing,
Where the signal light
Of the ship gleams white,
And the dismal fog-bells ring.

VII.

He hears the boom of the thunder's gun,
And sees the lightning's chain,
As it swings through the air
With a terrible glare,
From the throat of the hurricane.

VIII.

The fire-bolt shines in his wrinkled face,
Yet he fears not the raging blast,—
But he tugs at the wheel
With his arms of steel,
And he holdeth the tiller fast.

IX.

Thus plain old truths in a homely guise,
Though scorned of the world they be,
May pilot the Soul,
When the wild waves roll,
O'er the bosom of Life's wild sea,

X.

And guide at last to that better land,
Where the life of the Soul is blest,
Where the common lot
Of woe, falls not,
And the weary are at rest.

UTICA, N. Y.

From the Saturday Evening Post

The Betty.

BY ONE WHO KNEW HIM.

Mr. Smith was a "Betty," there is no denying it; not that his name was Elizabeth, no, he was plain John Smith; but he was a "Betty."

This fact had been strongly suspected by his mother and sisters, as he grew up, but it was not until a too confiding and rash young woman in an unhappy moment consented to marry him, and a house was furnished for them by her father, that the melancholy truth burst upon every one who knew him, and Mr. Smith became stamped for life with the appellation of a "Betty."

Young ladies, who listen to the insinuating speeches of gay and agreeable men, before you allow your affections to become hopelessly entangled, go to their sisters, their mothers, those who have had opportunities of finding it out; ask above all things, before all things,

"Is he a 'Betty.'"

"There is no use in telling his wife," said his mother to her two daughters, as they retired from their first visit to the new house, "poor thing, she will see it soon enough."

And so she did see it, like many another of her sex, when it was entirely too late to take any measures against her fate.

"Mr. Smith is so kind," said she to her mother, in answer to her inquries, "he really saves me a great deal of trouble. There are a great many little things about the house, which he attends to; I am sure I do not know what I should do, now as I am to housekeeping, if he had not that way."

But all is not gold that glitters, and as we must not always trust to appearances in this world, (though who is there that does not?) Mr. Smith's "kind little ways" soon developed themselves, and if we may be allowed the expression, his horns began to show themselves.

House cleaning time came. That purgatory of all other men was a Paradise to Mr. Smith. He ran backwards and forwards without his coat, knelt down and took the nails out of the carpets himself, and did quite as much work as any of them. He moved the sofas and the piano himself, won the white-washer's heart by mixing the lime for her, and turned the other woman out of doors, because, in spite of all his entreaties to the contrary, she would persist in scrubbing the floors, "across the grain of the wood."

Unavoidable business prevented his being present when the mats were put down. I believe Mrs. Smith seized that opportunity to have them put down, when the business *was* unavoidable; Mr. Smith said it was very wrong in her, because he had a new theory of his own about putting down mats.

Then he took a fancy to catch rats in a trap of his own construction.

A large cheese was gradually consumed in this scheme, but no rats were caught, the trap was abandoned.

One day Mr. Smith came home to dinner in unusually high spirits. He had been elected churchwarden. "A situation," as he told his wife, "of great importance."

His wife did not think very highly of any situation, which was unaccompanied by a salary, but women are more avaricious than men.

Christmas time came. The church was to be dressed with evergreens. Was ever man so happy or so busy as Mr. Smith. With a monstrous ball of twine, and a gigantic pair of shears, he applied himself to his duties.

The effect was certainly very pretty when it was all done, and Mr. Smith had managed his share of the duties so well as to save several yards of the twine, which he carefully pocketed for his own use.

Not long after, he did not come home all day. Mrs. Smith could not conceal from herself that it was somewhat of a relief, and yet towards night she began to be uneasy. She indulged herself in lighting the lamp half an hour earlier than Mr. Smith's economical ideas would have permitted, and began to read. The evening passed on—ten o'clock came! eleven! but Mr. Smith did not come.

Mrs. Smith's book closed, she could read no longer.

Suddenly, at half past eleven the door opened, and in came Mr. Smith, very red.

"Oh, Mr. Smith, where *have* you been?" Suspicions that he had fallen a victim to intemperance crossed her sleepy brain.

"Where have you been?" repeated she.

Mr. Smith sat down and began to fan himself with his pocket-handkerchief.

"I *was* afraid that you would be uneasy about me, and I did thing in the early part of the evening of writing you a note, a little note to inform you of the cause of my protracted stay. The fact is, oh! how tired I am! You see, we had a meeting some days ago in the vestry room, to debate upon the question of buying a new carpet for the middle aisle. I thought it an extravagant plan, for, said I to them all, what can we do with the old one,—it has three large holes, to be sure, and eleven small ones, would you believe it, Mary, eleven small ones. I counted them myself on my hands and knees, the week before last.

"I always thought it would not last much longer,"

"Then you were wrong, by-the bye, now that I remember it, did you see the milk-man this after noon."

"Yes, I did."

"And you mentioned, I hope, the flies that I complain of so much."

"No. I did not. I really felt ashamed."

"Ashamed! I do not understand how that can possibly be—ashamed! what, when there are three or four flies in the milk every morning, ashamed to tell the man that unless he takes them out carefully himself, in future, I will look out for another milk-man."

"But you were going to tell me where you have been all day."

"So I was, only you interrupted me, well let me see—where was I?"

"On your hands and knees, looking at the carpet."

"So I was—yes! Well, as I said, we had a meeting about buying a new carpet for the middle aisle; and Johnson, and Harmer and Stevenson were all for it. I and Roan against it. 'A new piece,' said I, 'carefully and neatly inserted, will make it look as good as new.' To this the other party objected, that a new piece would make the old part look still older, as the colors are very much faded. At last, after much consultation, we agreed that a new one was indispensable. So a deputation was appointed, that is to say, a committee, to go and purchase a new carpet, This committee was composed of two membes, myself and Gardiner."

"But Gardiner is lame."

"So he is, my dear, I alone, therefore, was left to attend to the business."

"I wonder you wasted your time upon it, at all, when you have so much business that is really profitable."

"My dear, how can you talk so?—a matter of such importance."

"Did you choose one?"

"I Chose an excellent one, it is a red, with large green medallions—inside of each green medallion is a black one, through which runs a white cornucopiæ. Have you a pencil, I can draw the pattern for you."

"There is no need to draw it, I understand it perfectly well from your description."

"This was three days ago—the carpet was to be sent at eight o'clock this mornig. Punctually at eight we all met in the vestry room, but the carpet did not come."

"You know those people are never punctual."

"I know that punctuality is a virtue, and I also know that virtue sometimes exists even in carpet stores."

"What did you do?"

"Do!—we waited. Still the carpet did not come. Nine o'clock struck, ten, eleven, but no carpet. The church-wardens began to get tired of waiting."

"I don't wonder."

"They said they would wait no longer. I remarked that it would not do for us all to go away, as very probobly the moment we left the building the men would arrive with the carpet. I proposed to remain myself. They agreed to this, and left me, promising to return at two o'clock.

"At one, the men came with the carpet, all sewed together and fitted just the size of the aisle. Finding them very nice, well behaved young men. I took off my coat and assisted them to unfold the breadths, thinking what a pleasant surprise it would prove to thr other church wardens to find the carpet all nailed down. The white figures contrasted beautifully with the red ground, and the intervening green acted as a beautiful sort of middle tint. We had it all fastened at the end nearest the door, and I assure you, my dear, it was beautifully done. Then we all walked up to the chancel end, and having nailed a piece neatly round the chancel, we began to stretch the other part covering the aisle upwards to meet it."

"And did your friends come back?"

"Punctually, yes, at two o'clock. They were as I had supposed they would be, very much astonished to see the great progress we had made, and said several very civil things about it, principally to my exertions, which it was, you know, and would have been more so, if we had not had but two hammers for three men."

"But that did not keep you all this time, did it?"

"Let me tell you everything in its proper course, my dear. I am just about coming now to the best part of my story."

"I thought it was nearly finished."

"No. my dear; but you women are always so impatient."

"Go on, then."

"Well, we then began to nail it at the upper end, but whether it was drawn too tight, or whether there was much cotton in the carpet, or wheth-

er the nails were made of inferior metal, I really can't take it upon me to say, but somehow or other, it invariably slipped from us."

Mrs. Smith would have laughed if she had not been engaged in a yawn, at that moment.

"We stood aghast. Like the waves of the sea, the carpet slipped from our hold and rushed from us down the aisle, until stopped, perhaps, by its own violence, it lay in loose heaps at the farther end. After running down there a great many times to catch it, and creeping backwards on my hands and knees, holding the carpet in my teeth, but always with the same want of success, a bright idea came across me."

"I am glad to hear it."

"I hope you are—a bright idea came across me. I think, my dear, my ideas are apt to be bright on these occasions. Can you guess what I did?"

"Never! never!"

"Then I must tell you. I got up, put on my coat, smoothed my hair, begged the church-wardens and the two clever young men from the carpet-stone to excuse me, went out, crossed over to Mrs. Hope's little store—and what do you think I bought. A box of the prettiest shining little things—they cost me four cents. Not dear, I think. I have brought you the rest of them home.

And getting up Mr. Smith came forward, and open a little round box, emptied the contents into his wife's lap.

"Hooks and eyes. I do declare."

"Yes. Genuine double silver-plated. No. 5, twenty-five pairs, if we may believe the lid of the box. I was back in five minutes. I must not forget to mention that I bought a skein of black thread. With this and a big needle, I set to work and sewed the hooks all along the end of the long piece of carpet; the eyes across the piece which runs past the chancel. I hooked it, one by one, in the nicest manner, and a very pretty little job I made of it."

"You actually hooked it?"

"Yes just like your dresses. So much for having a little thought, a little reflection. All those men have been married men a great deal longer than I have. Hooks and eyes are things they must have seen and heard of oftener than I have. But yet, I was the only one who thought of it."

It was ascertained a few days after, that a gentleman had called repeatedly upon Mr. Smith, on Wednesday, the ninth of January. It was the day he was sewing hooks and eyes to the middle aisle carpet. The business was of much importance; the gentleman went to some one else.

"If you had been at your store that day, you might have made two hundred dollars," said his wife.

"And a very neat little job I made of the carpet that day, my dear."

Ladies' Waists.

It would be a task by no means easy to ascertain at what period began the custom of diminishing the waist by means of the corset. It certainly cannot claim the honor of an origin in the present generation. It savors so much of darkness and ignorance that we presume it arose in the dark ages. That it has continued, that it prevails among civilized and enlightened nations at the present time, has been a subject of wonder to scientific men. Dr. Ticknor expresses his astonishment that those who possess not a little of shrewdness, intelligence and taste, should yield to the dictates of a fashion so absurd. The mystery, we think, on due consideration can be explained.

The custom of diminishing the waist is chiefly confined to the female sex, though some, mostly the ignorant, vain, and foppish among the other sex, in a measure, follow the fashion. Among the ladies, it very widely prevails. It has been said that the fashion was a fortunate one for the world: inasmuch as it "killed off" the weak and flaunting. This is an erroneous idea of the character of the victims; for, not a few of those who conform in a considerable degree to this preposterous fashion are young ladies in the best circles of society; sometimes possessing as elegant accomplishments of mind as any of their sex. The fashion so far from narrowing its circle, is increasing it with the widening limits of fathionable influence. It now claims its devotees not from cities only, but from the country at large. I think the following considerations explain the mystery of the prevalence of this fashion: first, with regard to the origin of the custom. It may have arisen anciently in compliment to the predictions of certain poetical minds of the higher order, for slender sylph-like forms, and from a passion for artificial novelty. Sylph-like forms, of the very slender order may be beautiful to some eyes, but can only be beautiful when proportion and graceful outlines are preserved; hence, Nature alone can give a shape in this order of beauty;—but of this more hereafter. And with respect to the passion of artificial novelty in dress and figure, a glance at the pictures of persons and costumes in those ages when we suppose the customs to have arisen, shows how potently it raged. Look at the hair: not flowing in natural beauty, but tightly, drawn back from the brow, if not powdered, frizzled to the most fantastic appearance; the neck hidden by stiff, wide, frilled collars, darting out "like quills upon the fretful porcupine." A few more fantastic absurdities might harmoniously have been added—eyelids painted with vermillion, or purple, and pictures of flowers, dragons, and serpents tattooed upon the cheeks and temples.

Now, as man is imitative, the custom, once begun in society esteemed refined and elegant, is followed by the rising generation. Moreover, this fashion is not easily set aside, if to do so be the desire of those who yield to it. The hair may, in a trice, be washed of its powder and combed to a natural beautiful flow; the tattooing may in time wear off, and the lace be folded away in the drawer; but who can in a day, or a year, or ever (!) restore to it natural and healthful fulness and fine contour the form which Fashion in her Death-plighted hands has pressed? Hence those who began the custom apparently countenanced it, while they lived; and those who imitate, do the same.—The number of its devotees is larger than is supposed. Thousands *prevent the growth and development* of the waist by not giving freedom to nature in their youth, who imagine they are the living examples of a natural shape. The truth is, *they prevent development*. And as to many, "so insidious is the gain of those fatal cords," so unsuspiciously does the corset continue, from month to month, to intrude upon the sacred provinces of nature and health, that though they allow that there are victims decked for the sacrifice, they know not that they themselves are included among the number. But Nature will be avenged, and those who prevent her due development, as well as those who repress them, if the glow of the cheek change not soon; if the heart sicken not immediately with the decay of the fresh sensations of health, will eventually be obliged to pay the dreadful forfeit, at an hour, perhaps, when life, if health were theirs, will seem to promise its fullest harvest of pleasures.—*Evergreen.*

Love's Disappointment.

A TRUE STORY.

Near the large village of M———, in the County of Cork, there resided, some years since, a wealthy gentleman named Arden, whose only daughter and sole heiress was, at the time of which we speak, near her sixteenth year, having been educated in the seclusion of her father's house, by a governess of rigid principles; she was as little acquainted with the world as it is possible to imagine a young lady of her age to be.

Happy would it have been for her, had she been earlier taught the value of men's vows, and the danger that threatens the peace of mind of those who place too fond a reliance upon them; indeed, we might remark, *en passant*, the error into which too many guardians of the young fall, in keeping them so completely secluded, as to render them unfit, on their entrance into the world, to cope with the evils that surround them; they look upon it either as filled with care and snares, from which there is no escape, or trusting and believing all, they find themselves and their young hopes wrecked.

On a lovely day in June, 18—, a detachment of the — regiment marched into the town of M———, and, in the course of that and the following day, the officers were waited upon by most of the gentry of the neighborhood;—among the rest, by Mr. Arden, who piqued himself on the preservation of that hospitality for which his ancestors and their compeers were so famous.

One of the officers in command, was a young man named Walter L———, the son of a younger brother of a good family, whose whole fortune was his pay; unless, indeed, being of the weaker sex, we include a tall and handsome figure, fine blue eyes, and noble features, relieved from the charge of effeminacy by the hue of bronze that overspread them; an ardent sportsman, he soon became a favorite of Mr. Arden's, and a constant guest at his house, where, of course, he frequently met Louise, and, being also a draughtsman, his society soon became as agreeable to her as to her father, and he her constant companion in her walks and rides; together they sketched many of the lovely views of the charming neighborhood; and though he never spoke of love, nothing was wanting on his part to win the favor of the fair and wealthy girl; and, as the sequel will show, with too much success.

Some months passed in this manner, when a rumor was circulated that the regiment was ordered on foreign service, and at the thought of parting all else was forgotten. Walter declared his affection, was hesitatingly accepted by the daughter, and indignantly rejected by the father, who, while reminding him of his poverty and his position as a subaltern in a marching regiment, termed him "a presumptous fortune hunter;" enraged by this treatment, he rushed from the house, and on reaching his quarters found the route had already arrived, The regiment was ordered to proceed to Cork, whence it was to embark for Madras; he now wrote to Mrr Arden, entreating permission to take leave of his daughter—the answer to which was his own note unopened; but, accompanied by the few gifts, (principally drawings from the surrounding scenery,) she had formerly accepted. Many were the attempts he made to obtain a parting look from her (he believed) he fondly loved. We will leave him to pursue his voyage to the land of which so much is written, and, at the name of which, such glorious visions arise of all that is splendid and luxurious, some of which fall far, far short of the reality, (even though dimmed by the dismal reverse of want of health, the greatest of human blessings,) and follow the future steps of the loving, devoted Louise.

Never having known grief, the frantic excess of passion alarmed her father, who at last decided upon placing her temporarily in a convent, a few miles from her home; trusting that quiet, seclusion, and above all, the reasoning of the sisters on the folly of all earthly attachments, would restore her once more to peace of mind, and eradicate all thoughts of her banished lover. Lamentably was he mistaken! for a fortnight only had elapsed, when one morning the gate being unguarded, our heroine passed through and found herself on the road to Cork. We dare not occupy the space necessary to detail the manner in which she accomplished her wishes and arrival in that city, in time to find that the vessel had already sailed with Ulysses. With an energy wonderful in one of her age, sex, and former habits, she purchased the habiliments of a sailor boy, stained her face, hands, and throat; and having passed to Liverpool, presented herself to the captain of a ship about sailing for Madras: and strange to relate, was engaged as his cabin-boy.

Behold our heroine now transformed into that ill-used specimen of humanity—a sailor boy.—The captain with whom chance had thrown her, and who was accompanied by his wife, was far more lenient than usual; and although, of course, unaware of her disguise, allowed her many privileges, among the greatest of which, was that of being permitted to convert the bottom of the table to the purpose of a dormitory. For three months she fulfilled the duties of her new station, and preserved her secret inviolable: the ship laboring under a heavy sea, her foot slipped, and she fell, with a cry of pain so feminine, as to astonish all who heard it. Raising her, they found her ankle sprained; and while it was dressed, the agony it caused was sufficient to throw her off her guard, and she found herself compelled to reveal the deception she had practised, and acknowledge the sex other than she seemed. Every attention was paid to her by the kind-hearted captain and his wife; the latter, although blaming her for the steps she had taken, participating warmly in the feelings of the devoted girl.

A few more weeks witnessed their arrival in Madras; and Louise, with an indescribable mingling of feelings, found herself within sight of the haven of all her hopes; she pictured to herself the delight of their meeting; already in imagination heard his ardent thanks for so unheard of a proof of devotion; and with a buoyancy of temperament, for which she was remarkable, appeared to have forgotten the past, and to be totally unaware of the impropriety of the steps she had taken, further, than as an instance of disobedience towards her father, of whose pardon she assured herself.

On anchoring in the Madras Roads, the captain proceeded on shore; and returning soon after, announced that the regiment was still at Madras, that he had written to Lieutenant, now Captain L———, stating the circumstances, and requesting his presence at the agent's office, at a certain hour on the following day. The morning came after a sleepless night to Louise, and passing the surf in a Messallah boat, she reached Madras, and there awaited the arrival of him she loved. The time passed; but soon after she heard the approach of footsteps, and found herself in the presence of her lover; but how different the meeting to what she anticipated. Shall I describe it, or close our story truly and succintly in the words of the poet?

"Man is inconstant ever;
One foot on sea, and one on shore—
To one thing constant never."

Where were all her brilliant hopes of happiness? where her delightful anticipations? when the words, "How could you have acted so imprudently," reached her as the first salutation from the lips that had formerly breathed words only of love; and even they, not in the onset of fond reproach for the perils and trials she had undergone! but of cool and deliberate vexation. Her senses reeled, a dizziness passed before her, and she fell senseless. On her recovery, which did not take place for some hours, the following note was handed to her by the captain; who, imagining it might contain something to cheer her who had so sadly needed it, had watched anxiously for her return to consciousness that he might deliver it—

MADRAS, May 18, ——.

Dear Miss Arden:—I was both surprised and distressed to learn from Captain S—— the very imprudent step you had taken. You must be aware, after the very equivocal position you have so lately occupied, I could not for a moment entertain the idea of making you my wife, even were it otherwise possible; but you will remember, when first I knew you, I believed you would bring a sufficient income to render marriage prudent. Under present circumstances, it could only entail misery on both. Captain S—— returns to England in the course of the ensuing month; and should you feel disposed to place yourself under the protection of his wife, I shall be happy to defray the expenses; or should you prefer remaining here, I have no doubt you will be able to procure a situation as companion to some lady; and I have no doubt, you will marry both soon and well. With best wishes, I remain, yours truly, W. L.

Poor Louise! No home was needed for her; for ere one short week was passed, her heartless lover followed her to the grave.

ROGUE OUTWITTED.—A gentleman in Massachusetts, whose name we shall call Harden, once held a note against a knavish neighbor named Griffin, and which had become, as the phrase is, outlawed. Harden was unwilling to believe Griffin scoundrel enough to defraud him of the debt, and had neglected to compel him to pay it, although he was abundantly able. The law is, we believe, that if a man acknowledge himself to be indebted to a person before evidence after the expiration of the period allowed for the collection of a debt, then the claim is valid, otherwise it must depend entirely on the honor of Griffin the debtor. Griffin was aware that he held the staff in his own hand, and he determined to use it. He would speak of his obligations to Harden with perfect freedom, when no one was present, acknowledge that the debt was justly due, and declare his intention of paying it eventually! but maintained the most obstinate silence when they were in company with a third person. Experience is the profit of events. Harden was finally convinced that Griffin meant to cheat him out of the money; and with true Yankee sagacity, set about some plan to outwit his neighbor. He called on Griffin one morning with a sleigh, and invited him to take a ride. During their ride the old topic, the note, was introduced.

"Why, really, friend Griffin, it seems to me that you ought to pay that $500; it is no inconsiderable sum for a farmer to lose. To be sure I have no legal claim on you, but time has not removed the moral obligation."

"I will pay you as soon as I can make it convenient," said Griffin. "It is, as you say, a just debt; and you shall have the money."

"I intend to, and no thanks to your honesty neither," replied the other. "Mr. Derby, you have heard sufficient for your purpose."

As he spoke, a hogshead which lay in the bottom of the sleigh suddenly colapsed, and the person of a deacon of the parish presented itself to the swindling debtor. Griffin paid the note without further ceremony.

Much attention has lately been drawn, in London, to some new cabs, of which the chief novelty consists in the absence of all springs. A hollow tube about fourteen inches in diameter, composed of India rubber, and inflated with air, is made to encircle each wheel in the manner of a tire; and the carriage rolls along without the slightest noise.

From the Union Magazine

The Thriving Family.—A Song.

BY MRS. L. H. SIGOURNEY.

Our father lives in Washington,
And has a world of cares,
But gives his children each a farm,
Enough for them and theirs,—
Full thirty well-grown sons has he,
A numerous race indeed,
Married and settled, all, d'ye see,
With boys and girls to feed.
And if we wisely till our lands,
We're sure to earn a living,
And have a penny, too, to spare,
For spending, or for giving.
A thriving family are we,
No lordling need deride us,
For we know how to use our hands,
And in our wits we pride us;
Hail, brothers, hail,—
Let nought on earth divide us.

Some of us dare the sharp north-east,
Some, clover fields are mowing;
And others tend the cotton plants
That keep the looms agoing.
Some build and steer the white-winged ships,
And few in speed can mate them;
While others rear the corn and wheat,
Or grind the flour to freight them.
And if our neighbors o'er the sea
Have e'er an empty larder,
To send a loaf their babes to cheer,
We'll work a little harder.
No old nobility have we,
No tyrant king to ride us;
Our Sages in the Capitol
Enact the laws that guide us.
Hail, brothers, hail,—
Let nought on earth divide us.

Some faults we have—we can't deny
A foible, here and there;
But other households have the same,
And so, we'll not despair.
'Twill do no good to fume and frown,
And call hard names, you see,
And twere a burning shame to part
So fine a family.
'Tis but a waste of time, to fret,
Since Nature made us one,
For every quarrel cuts a thread
That healthful love has spun.
So draw the cords of union fast,
Whatever may betide us,
And closer cling through every blast,
For many a storm has tried us.
Hail, brothers, hail,—
Let nought on earth divide us!

Combat Between a Rat and a Ferret.

A striking proof of the sagacity, courage, and I may say *reasoning* powers of these animals, has been recently given me by a medical friend living at Kingston. Being greatly surprised that the ferret, an animal of such slow locomotive powers, should be so destructive to the rat tribe, he determined to bring both these animals fairly into the arena, in order to judge of their respective powers; and having selected a fine, large and full-grown male rat, and also an equally strong buck ferret, which had been accustomed to the haunts of rats, my friend, accompanied by his son, turned these two animals loose in a room without furniture, in which there was but one window, and the two philosophers determined to watch patiently the whole process of the encounter. Immediately upon being liberated the rat ran round the room, as if searching for an exit. Not finding any means of escape, he uttered a piercing shriek, and with the most prompt decision took up his station directly under the light, thus gaining over his adversary (to use the language of other duelists) "the advantage of the sun." The ferret now erected his head, sniffed about, and seemed fearlessly to push his way toward the spot where the scent of his game was strongest, facing the light in full front, and preparing himself with avidity to seize upon his prey. No sooner, however, had he approached within two feet of his watchful foe, than the rat, again uttering a loud cry, rushed at him with violence and inflicted a severe wound on the head or neck which was soon shown by the blood which flowed from it; the ferret seemed astonished at the attack, and retreated with evident discomfiture; while the rat, instead of following up the advantage he had gained, instantly withdrew to his former station under the window. The ferret soon recovered the shock he had sustained, and erecting his head, once more, took the field. This second rencontre, was in all its progress and results an exact repetition of the former, with this exception that on the rush of the rat to the conflict, the ferret appeared more collected, and evidently showed an inclination to get a firm hold of his enemy; the strength of the rat, however, was very great, and he again succeeded not only in avoiding the deadly embrace of the ferret, but also in inflicting another severe wound on his neck and head.—The rat, a second time, returned to his retreat under the window, and the ferret seemed less anxious to renew the conflict. These attacks were resumed at intervals for nearly two hours, all ending in the failure of the ferret, who was evidently fighting to a disadvantage from the light falling full on his eye whenever he approached the rat, who wisely kept his ground, and never for a moment lost sight of the advantage he had obtained. In order to prove whether the choice of this position depended upon accident, my friend managed to dislodge the rat, and took his own station under the window; but the moment the ferret attempted to make his approach, the rat, evidently aware of the advantage he had lost, endeavored to creep between my friend's legs, thus losing his natural fear of man under the danger which awaited him from a more deadly foe. The ferret by this time had learned a profitable lesson, and prepared to approach the rat in a more wily manner, by creeping insidiously along the skirting, and thus avoiding the glare of light that hitherto had baffled his attempt. The rat still pursued with unabated energy his original mode of attack, namely, inflicting a wound and avoiding at the same time a close combat; while it was equally certain that his foe was intent upon laying hold of, and griping his intended victim in his murderous embrace. The character of the fight, which had lasted more than three hours, was now evidently changed, and the rat appeared conscious that he had lost the advantage he originally possessed, and, like the Swedish hero had taught his frequently beaten foe to conquer in his turn. At last, in a lengthened struggle, the ferret succeeded in accomplishing his originally intended grapple; the rat, as if conscious of his certain ruin, made little farther effort of resistance but, sending forth a plaintive shriek, surrendered his life to his persevering foe.—*Jesse's Natural History.*

Hon. Zadock Pratt's Tannery.—The August number of Hunts Merchants' Magazine contains an article in respect to the Prattsville Tannery, from which the following is a brief extract:

"The Prattsville Tannery, furnishes one of the most striking examples of individual enterprise which our country, fruitful as it is in such examples, affords. A little more than twenty years ago, the district of country in which it stands was a perfect wilderness. Although just back of the well known Catskill range, and not more than thirty-six miles from the banks of the Hudson, the great thoroughfare of our interior trade, the depths of its hemlock forests, the solitude of its tumbling brooks, had been explored only by the foot of the hunter, and were as little known to the public as the slopes and valleys of the Rocky Mountains. In 1824, Col. Pratt visited this district, and with unerring judgment at once decided upon it as the proper location. With a man of Col. Pratt's energy from the conception of a project to its execution, is but a single step. With such men, to will and to do is one and the same thing. In less than ninety days he had a tannery erected, and ready to commence operations.

"This tannery is an immense wooden building 530 feet in length; 43 feet in breadth, and two stories and a half high. Within this area contained 300 vats, with conductors to draw the liquor to the pump, affording about 46,000 cubic feet of room for tanning purposes. A large wing 40 feet by 80, extending over the stream, contains 12 leaches, six of which have copper heaters, each 28 feet long. The cubic contents of the leaches amount to about 12,000 feet, and also the bark loft through which, in the course of the year, passes more than six thousand cords of bark. The mills through which it is ground, are capable of grinding over a cord of bark per hour, and it has connected with it a pump of sufficient capacity to deliver 1,000 cubic feet of 'ooze,' or water charged with tanning, in 30 minutes. The beam house contains thirty vats, equivalent to 7,640 cubic feet. It has connected with it three hide mills, for softening the dry Spanish hides, and two tolling machines, capable of rolling 500 dides per day. Outside of the building, but connected with the beam house by an underground communication, are eight stone sweat pits, with pointed arches and flues. The pits are of the most approved size, being in area 10 feet by 14, and in depth 8 feet, with a spring of water at one corner.

"The labor employed, directly or indirectly, may be set down at two hundred men daily.—The ramified branches of business and trade that it fosters, the comfort, refinement and intelligence of which it becomes the centre, and its final influence upon the growth and populousness of the surrounding district, cannot be too highly estimated."

An Association has been formed in Boston for the purpose of advancing and promoting the interests of the poor seamstresses.

American and Mexican Affairs.

LIFE IN MEXICO.

Correspondence of the N. O. Commercial Times.

CITY OF MEXICO, Dec. 1, 1847.

The weather here has been of late excessively cold; I do not know that I have ever suffered more from cold in the north of the United States. The houses have no fire places, and in winter one is obliged to take some violent boldly exercise, or, if the sun should happen to shine out and emit heat enough, to bask in his rays until he is warm. Our governor, as we call the Captain, has ordered a large stove to be made for our quarters, something like those extensive ones observed in the hotels at New Orleans. I was out yesterday with him on the Paseo, in one of the handsomest coaches in the metropolis. We brought with us from New Orleans a covered Jersey wagon, which cost a trifle more than $100, and for this and an old white horse, we have been offered $500. We shall, perhaps, sell them and purchase the coach, for which they want $700.—The Paseo is the Mall of Mexico: here, every evening, all the fashion of the city may be seen riding; some on horseback, some in buggies, with a single horse, and others sporting tandem; whilst the rich families exhibit themselves in fine coaches and landaus, sometimes drawn by four horses.

The aristocracy never fail making an imposing appearance, through the multitude of servants clad in rich liveries surrounding them, and their splendid horses. I was forcibly reminded by the spectacle yesterday on the Paseo, of Hyde Park, London, on a gala day, when the nobility throng its avenues with their magnificent equipages.—The position of the people here is a singular one; it exhibits an anomaly, such as the world never saw before. With their conquerors in the high seats of power, filling the capital with the echo of their military parade, they move on their course, of life, as if nothing had occurred to disturb their serenity. What is to become of Mexico? What are the government and people of the United States going to do with the country? These are questions which are daily asked, and are answered as many different ways as there are interrogatories. I believe, however, from attention I have paid to the tone of opinion here, that a majority of the United States officers in the Army of Occupation, think the best policy would be, to have an army of from 80,000 to 100,000 men quartered in the country, holding military possession, until our laws and institutions, customs and manners, have taken firm root. This mode of action, I have heard well sustained in argument, and based on the most benevolent feelings and intentions toward Mexico, which only by such a system, properly carried out, could be regenerated morally and politically. Among the plans suggested with this object in view, is the following: as the period of service of volunteers and regulars should expire, to locate them on certain tracts along the road from the capital to Vera Cruz, which should be procured for them by purchase or otherwise, and be granted to them as rewards for honorable conduct during their enrolment. In all the departments of Mexico this could also be done; and thus, by the gradual disbanding of three or four armies, with the establishment of proper encouragements to emigration, a sufficient quantity of healthy blood would be introduced into the decayed republic, to renovate her thoroughly. The Mexicans, at least those who are sufficiently enlightened to think, feel that they have been for years enslaved, under the captivating name of liberty; its sweets, its national blessings, they have never enjoyed, and there is no bond of union between them and their government. Indeed the latter would cease to exist altogether, if we were to cut off the resources which still remain to them. These are to be found in the rich mining districts of Zacatecas, Guanajuato and San Luis Potosi. We should take prompt steps to seize on these departments. A foreign gentleman here, largely interested in mining operations and a resident for twenty-seven years in Mexico, lately told me that the mines were never at any period so productive as at present. Taking the annual produce at $20,000,000, three per cent., the sum exacted by the government, amounts to $600,000. This is an important item, in a budget.

The mine of Real del Monte, 30 leagues from here, pays the government $5,000 monthly. The house of Macintosh & Co., in the city, exercised predominant influence on the powers that were in this country; they had the controlling of the mints in Mexico, Guanajuato, and Zacatecas, receiving the bars of silver from the mines at so much per mark, (8 ounces.) As this silver, in bars, contained 16 grains of pure gold to the mark, this house made a handsome profit by the arrangement, since no allowance was made for the purer metal. It is the custom, I believe, in every country, when bar silver is coined in any quantity, to give the owners the value of the gold, after the expenses attendant on separating it are paid. I have heard that the house above alluded to has represented to the Government of the U. States that it would be better for the latter to prevent the exportation of silver in bars, unless at a high per centage. I think sound policy indicates the propriety of taking the supervision of the mines into our own hands, if we contemplate making a long stay here.

Many respectable Mexicans fancy that the great commercial house above spoken of is playing a double game with Santa Anna and our Government. They say that Santa Anna, before leaving the capital, made over to the head of the firm his haciendas at Encierro, and Mango de Clava, with all the real estate he possessed in the republic. This same gentleman is not in the best odor, either with his own countrymen or Americans, for the conspicuous part he played in the armistice at Tacubaya. It is reported that the Mexicans are fortifying between this city and Queretaro. There are, unhappily, no precedents on record by which we can judge this singular people. A meeting of all people, without distinction of party or country, favorable to the construction of a railroad between Mexico and Vera Cruz, has been, for some time, announced in the daily papers. It is to take place, tomorrow evening, at the National Palace. Considerable interest is shown in the project. I know an officer of our army, who intends to take 500 shares. If the project is embraced with spirit, it is believed operations will commence within the next 6 months. What a great people are we! A gentleman here proposed to me, the other day, to take a trip from the other side of Real del Monte down a river which runs into the Pacific. It is the river Lerma, which falls into the Pacific at San Blas; and were I circumstanced differently, I would be off with him on a voyage of discovery, and cross the Isthmus of Tehuantepec. Courts Martial have not yet been convened for the trials of Generals Worth and Pillow, and Colonel Duncan. The opinion is, that the two latter will be convicted, and that the sentences on them will be very severe.

A DELICATE DISTINCTION.—"Will you have me, Sarah?" said a young man to a shy young lady. "No, John," said she, "but you may have me if you like."

"The Face of the Dead."

"The dignity with which Death invests his victim inspires us with an awe no living thing can create.... We shrink with horror from the touch of that hand which but yesterday was firmly clasped in our own. – [Marriage; a Novel.

I.

We gaze with deep awe on the face of the dead,
As they lie in their solemn and dreamless repose;
And we shrink from their presence with feelings so dread,
That the heart in its terror seems suddenly froze.

II.

It little avails though the loved one now cold,
When life-warm was gentle as Music's own breath;
The arm that our infancy once could enfold
Has a touch how repulsive, when stiffened by Death!

III.

Ah! well I remember the morning in June,
Though twenty long years have since vanished away,
When first my young heart learned its dirge-notes to tune,
As my "Angel of Youth" in her winding-sheet lay!

IV.

The eyes whose mild light on my spirit first shone
For ever had ceased in their sweetness to beam,
And her smiles, which in sickness no dimness had known
Like tender young orphans, did hotter seem.

V.

Yet I could not approach her and touch her pale lips,
Though the first that my infantile cheek did e'er meet,
And though sweet as the dew that the honey-bee sips
Were the prayers I had caught there, and learned to repeat,

VI.

I thought as I gazed on her cold livid face,
That the Angel of Death, who the havoc had wrought,
Was lingering still in that sanctified place,
Which seemed with the presence of Deity fraught.

VII.

O God! must the child that now looks in my eye,
And smiles as its sweet little image it sees,
When the mirror is hidden, and pulseless I lie,
Behold me with awe which its feelings shall freeze?

VIII.

O call me away to the home of my hopes,
When afar from the few who may cherish my name,
And then, when the morn of their sorrowing opes,
No death-cloud shall shadow grief's love-kindled flame.

J. CLEMENT.

Jacob's Well and the Samaritans.

BY HARRIET MARTINEAU.

Our last view of Jerusalem was very fine. We looked back from a ridge on the northern road, and saw it lying, bright and stately, on its everlasting hills; but it looked lower than from most other points of view, from the Moab Mountains forming its lofty background. We descended the slope before us, and lost sight of the Holy City forever.

Again we were struck with the vivid coloring of the scenery. All this day, the hills were dressed in brilliant hues;—the soil, red, grey and brown; the tilled portions of the brightest green; and the shadows purple or lilac. All the hills show traces of having been once terraced; and they were still completely so in the neighborhood of our encampment this evening,—the terraces following the strata of the stone, which all lay slanting. This gives a singular air of wildness to the most cultivated spots. Here and there were basins among the hills, the red soil dropped all over with fig and olive trees, or full of corn; and the upland tracks winding among slopes all strewn with cistus, iris, cyclamen, and anemones, and bristling with tall flowering hollyocks. On we went, past deep old wells yawning in the hollows, or stone cisterns, few camels here and there, browsing in the dells; past groups of Arabs with their asses, carrying corn to the city; past stone villages crowning the steeps, till, at 6 P. M., we encamped beside a beautiful old pool. We were under the shelter of a rock whose moist crevices were fringed with delicate ferns. While dinner was preparing, I went back on our road—the narrow, stony road, which wound round the verdant promontory opposite to our rock—to find a honeysuckle which I had seen climbing and blossoming to a great height! and I brought back a charming handful of flowers.

While we were at dinner in the tent, a sound of scuffling was heard outside; and when our dragoman next entered, he was out of breath. We afterwards heard the whole story, and were amused to find how zealous our Mahommedan servants could be in the cause of Christians. Some Arabs, with their loaded mules, had come with the intention of encamping beside the pool; and, on finding the ground partly occupied, tho' there was plenty of room left, they became abusive, and wondered aloud what business these cursed Christians had in their country. Our dragoman resented this, and threw the speaker down over the tent-ropes. There was then a stout scuffle, and our cook coming to help, and the Arabs falling one upon another over the tent-pegs in the dark, they had the worst of it, and went off vowing vengeance. We heard no more of them, however.

The next morning we saw the Mediterraneau, like a basin of deep blue water between two hills. We were not going towards it, however, but to Nablous, the ancient Sychar; where lies that Jacob's well at which the woman of Samaria was wont to draw water.

Our road lay through a most fertile valley now called Hawarrah, where the crops were splendid for miles, and the villages were thickly planted on the hills. The ground rose in a series of table lands, of which there was a succession of three, when we were leaving to the Hawarrah valley.—The roads in this part of the Holy Land were mere lanes full of stones between walls, or tracks through olive grounds and meadows, or paths running along shelves of the rocks, with a bit of rocky staircase at each end, about ascending or descending which our good horses made no difficulty.

Before entering the valley where old Sychar lay, between the mountains Ebal and Gerizim, we came to the fine fertile parcel of ground which Jacob bought. The valley opens out into this wide basin; and near the junction of the valley and the basin is the old well which is the supposed scene of the conversation of Jesus with the Samaritan woman. Some of our party wound round the base of the hill to the well; and some (and I for one) rode by the upper path, over the shoulder of the hill, and came down on the other side. I had thus a fine view of the whole locality; of the valley where the city lies—a narrow valley, rich with fig and olive groves, and overhung by the rocky bases of Ebal and Gerizim, where the square black entrances of tombs dotted the strata of the rocks. From this height, Jacob's land looked a beautiful expanse. The well is a mere rough heap of stones, with a hole in the middle, nearly closed up. What there is below ground, I cannot say; but this is all that is to be seen on the surface. It is not a well likely to be in use now, for there are many springs and shallow cisterns (though no well) between this and the town, which lies about a mile and a half off.

Everybody knows that the Jews had no friendly dealings with the Samaritans in the time of Jesus. The quarrels had then lasted above 500 years. How many suns had gone down upon their wrath! The Samaritans had wished to assist the Jews in rebuilding the temple of Jerusalem; but the Jews hated them as a mixed race, and would not admit that they had any right to share in temple worship, or any other Jewish privileges. It really was a most serious objection to the Samaritans, that they were of a mixed race; not only because the Jews believed that they held the promises on the very ground of the purity of their race; but because the intermarriages of the former Samaritan Israelites with Assyrians and others disposed them to idolatry, or at at least to a worship as mixed as their race. So the Samaritans were excluded from the rebuilding of the temple, above 500 years B. C. And not being permitted to help, they did all they could to hinder!

About one hundred years, after, they obtained leave from the Persian court (to which both the Jews and they were subject) to build a second temple to Jehovah; and they built it on Mount Gerizim. This was a shocking impiety in the sight of the Jews; and it was the occasion of a number of lax minded Jews, who had broken the law, by marrying heathen wives, or otherwise, and who yet wished to worship Jehovah in the temple, resorting to Sychar, to join the Samaritans, and render their race yet more mixed.—This was the quarrel which the woman of Samaria referred to when she spoke of the question, whether "men ought to worship in this mountain or in Jerusalem!" and thus is explained her wonder that Jesus being a Jew, should ask water of her who was a Samaritan. There was also a quarrel about their scriptures; the Jews insisting to this day, that the Samaritans had altered two or three texts, relating to these two mountains, Ebal and Gerizim, in their own sacred copy of the books of Moses; the Samaritans insisting, of course, that theirs was the true copy.

From my early youth, I had always taken a strong interest in this old quarrel, feeling sympathy with both parties, and a keen delight in the wise and soothing words of Jesus concerning it. What a truth it was for both parties to hear, that God was now to be worshipped every where; and that all places were henceforth to be as sacred as the Jerusalem temple, or the mount of Sychar! And what a lesson in liberality it was to the Jews when he gave honor to the Samaritan in the parable, on account of his good works, above the sacred priest and the servant of the temple at Jerusalem. Both parties were, of course, wrong in their fierce anger; but each had much to plead on his own side. The Jews were bound to keep their race and worship pure; and held, as an essential matter of faith, that Jehovah would have but one dwelling-place; which was their view of their temple. And the Samaritans were surely right in persisting in their endeavor to worship Jehovah, in accordance with the laws of Moses, as they did not believe in strange gods; and, if the Jews could not admit them to worship in the temple at Jerusalem, they could not be blamed for building one for themselves.

Such was always my view of the matter; and such being my view, it was with indescribable interest that I looked this day upon Mount Gerizim, and remembered that somewhere in the city we were approaching, was treasured that sacred copy of the Samaritan Pentateuch, (Books of Moses) which the possessors believe to be the true one, and to be 3500 years old. The most learned men among the Christians do not believe it to be near so old as that; but they have a high opinion of its value, and would follow it sooner than any other, I believe, excepting instances where the disputed texts about Ebal and Gerizim are concerned.

The present inhabitants of the city hate the Christians as heartily as the old inhabitants used to hate the Jews. The present inhabitants are Mohammedans of the most bigoted character; and they would admit neither Jews nor Christians within their gates, till within a few years; when the government of the country (then Egyptian) compelled them to better manners. They dared not refuse us admission; but they behaved with great insolence. We had to ride from end to end of the city, our tents being pitched on a green on the other side. Our horses had to go as slowly as possible through the narrow street, which would not hold two abreast, and was paved with large slippery stones. As we rode along, one behind another, at this funeral pace, all the people came out to stare, and many to mock.

Three times things were thrown into my face; men and women laughed and sneered, and children thrust out their tongues. I felt what a lesson this was to intolerance about matters of opinion. These people hold a faith which is very noble and beautiful. Few of us know how noble and beautiful is the Mohammedan faith.—And there is no need to say what their visitors thought of the Christian faith as they hold it; and yet, what a scene of hatred and misunderstanding was here! And thus it is, but too often, in the streets of other cities, where men ought to know better than to despise each other for worshipping the same God in a different manner.—In the streets of other cities, men take upon themselves to pity and despise one another, with no better knowledge in reality of one another's views and feelings, than these Mohammedans had of ours, or we of theirs.

At last we were through! and glad I was to issue from the gate at the farther end. But a sad sight awaited us there. A company of lepers were under the trees, crying out to us for charity, and stretching out their maimed hands. It is a terrible sight, which we see too often in that country. It saddened us at Jerusalem, almost every day.

Our tents were pitched on a woody plot of ground, among gardens, orchards, and rippling streams, and looking up to Ebal on the one side, and Gerizim on the other. Ebal is still the sterner looking mountain of the two; but Gerizim has lost much of its fertility. Both have tombs and votive buildings on them, which show them to have been places of pilgrimage.

After dinner, we ascended a height, past the Mohamedan cemetery, whence we had a fine view, in the last sunlight, of this most beautiful city. It was once the capital of Samaria; and it is still, and must ever be, from its situation, a very striking place. It completely fills the valley, from side to side, and ascends a little way up the skirts of Gerizim. Its houses, with their flat white roofs, are hedged in by the groves which surround the town; vines spread from roof to roof, and from court to court; two or three palms spring up in the midst, and higher aloft still, a graceful minaret here and there.

Then, to my delight, we descended to seek the Samaritan synagogue: We were guided to it, and I saw nearly all the Samaritans of the place; goodlooking people, the men wearing the high, helmet-like turban which we see in the portraits of Josephus, and other old Jews. They said their number was sixty in this place, and about forty more elsewhere; only a hundred in the whole world. They declared their chief priest and the rest of their sect to be at Genoa. They

keep three great feasts in the year, going up to Gerizim as the Jews used to go up to the Temple.

The synagogue was a small, ordinary looking chapel, within a curtained recess of which is kept the old copy of the Pentatench. It was shown to us, after some entreaty on our part: but I found it was impossible that I could be allowed to touch it.

I felt it a great event to have seen it. It is written on a sort of vellum, in the Samaritan text, clear, small, and even. The vellum is tattered; but it is well mounted on parchment.—The priest himself, dares not touch the MS. without careful purification; and he holds it by the ends of the rollers on which it is fixed as a scroll, like the copies of the Jewish law in synagogues.

We were lighted through the archways of the street on our way home, and dow the hill, by a single candle which burned steadily in the still air.

Our employment this evening was reading aloud the history of the Jewish and Samaritan controversy, and the fourth chapter of the gospel of John. While we were thus reading in our tent, the jackal was in full cry on the slopes of Gerizim.

Parisian Gossip.

From the Boston Atlas.

Paris, Nov. 30.

The commencement of the season was sterile; no incidents occurred to break the monotony.—A sort of dull quiet succeeded the emotions which had agitated the city for awhile. This calm was not of long duration, the excitement has returned; two new catastrophes have broken the monotony which surrounded us, and the world, which was complaining of having nothing to say, can now talk, at its ease, of the suicide of M. le Comte Bresson, French Ambassador at Naples, and the murderous madness of M. le Comte Mortier, French Ambassador at Turin.

Always great names, always high stations, always aristocratic titles linked with these deplorable events! The spirit of madness has flown into lofty regions; it is a sort of moral cholera which has attacked the high classes of society.

The melodramatic fever is at its height. The Count Bresson cuts his throat in bed; the Count Mortier holds his razor an hour over his own and his children's throats. An hour of agony, in which a wife, a mother, is present, restraining her shrieks, not daring to move, enduring this terrible torture until the moment when the madman is seized and disarmed!

What was the stupor of the public when these two events were announced at the same time, the same day, one upon the other, as if they had given each other the cue!

The same mystery surrounds the causes of the suicide which was committed, and that which was intended, and the double madness which has at once destroyed two noble minds. The two dramas are both alike, except the denouement; there were two Counts, two Ambassadors and two razors:—singular coincidences!

Who can explain the predilection of statesmen for the suicide which consists in cutting one's throat? Lord Castlereagh set the example twenty-five years ago, and since then, the example has been followed by many of the political notables of England and Germany. A profound mystery envelops the causes which determined the celebrated English Minister to execute such a despairing act. He had arrived at the summit of greatness, and those who knew him were aware that he was insensible to the hatred and contempt which had been raised against him, by his persecutions in Ireland, his fury towards France, his servile devotion to the absolute ideas of the holy alliance, and his disloyalty toward Napoleon. The commentators were, therefore, reduced to conjectures; those who appeared to know the most, attributed his suicide to domestic trouble. Those statesmen who most courageously support the weight of public business, and who maintain, with the greatest vigor, party conflicts, are generally the most harassed by the petty troubles of private life.

Amiable and attractive in his social relations, as much as he was perfidious and depraved in the political ones, Castlereagh had obtained great success in the world, and was noted for the number and eclat of his adventures. Like most men addicted to the pleasures of love, who are sustained in their career by their renown and station, after youth and its advantages are flown, he reformed his life, and married at an advanced age, too late, indeed, for so old a man to marry, as he did, a young and beautiful woman. Perhaps he might have avoided the troubles of a mis-anion, if he had also given up, with his dissipation, all public business, and bade adieu to the turmoil of statesmanship, which absorbed a large portion of his time and intellect, to devote himself to the peaceable happiness of conjugal life; but the intoxication of power overcame him, and he wished to enjoy, at the same time, the sweets of ambition and domestic felicity; to follow the double avocation of minister and husband, as if he were only thirty,—and he was fifty-three. It was thus that he brought about the troubles which overpowered his reason. He saw plainly that the statesman was interfering with the husband; that his parliamentary occupation was but poor amusement for his young wife, too often neglected, and left to herself entirely, when imperious politics called for his presence. Jealousy soon came in to add new tortures; unfounded jealousy, indeed—the unjust suspicion of a heart prompt to suspect. The assiduities of the Duke of Cambridge were particularly disagreeable to him, and he forbade his wife to receive him, without thinking that common politeness and etiquette would render the execution of his wishes extremely difficult. In England, as everywhere else, a court lady is greatly embarrassed when called upon to shut her door upon a prince of the blood.

One evening the Minister entered the apartment of the Marchioness, (Lord Castlereagh had taken the title of Marquis of Londonderry, on the death of his father;) he found her alone, and asked her if she had not received a visit. The Marchioness appeared slightly embarrassed, and replied in the negative, to avoid a scene. But the Duke of Cambridge had called, and had been received. Unfortunately, the prince, who had just returned from the Epsom races, had paid his visit in his sportsman's costume, and had carelessly left his riding whip upon the chair. Lord Castlereagh had perceived this, with the penetrating and diplomatic glance of a jealous man, who allows nothing to escape him; he seized it and saw the prince's arms graven in gold upon the handle. He then broke out into reproaches and imprecations. The falsehood, which seemed to him an avowal, exasperated him to such a pitch, that, losing all command of himself, he raised the accusing whip to strike the Marchioness.

Then, his paroxysm of anger stopped. His fury had carried him so far that he was ashamed of his action. It was the arm of a clown which had raised the weapon,—it was the hand of a gentleman which slowly descended and tremblingly opened, to allow the vile instrument, with

which he had threatened his wife, to fall to the ground.

The Marchioness did not utter a word; Lord Castlereagh retired confused, humiliated, and with desolation in his soul. He had ordered his carriage to carry him to the House of Lords, and, as it was early in the evening, he went. His colleagues remarked his agitation. A violent attack was made upon the Ministry that evening, and he, generally so prompt to reply, so impatient of all opposition, remained silent and motionless in his seat. On leaving the House, he went to pay his respects to the King, and conversed a few moments with His Majesty, calmly and apparently unmoved. But the constraint which he had imposed upon himself had destroyed all his powers; he returned home, overcome with emotion, cast down, with his mind disordered and his soul despairing. He knew that his brutal action was one of those that were not to be pardoned, and for which he should never forgive himself on seeing the bonds, which were so dear to him, severed by his own fault. His reason gave way under the weight of these thoughts; he took a little penknife with a hooked blade, and with a sure hand cut his carotid artery, with the precision of the most skillful surgeon.

Thus ended the man who had done so much evil, and whose memory bears the indelible stamp of Lord Byron's revengeful stanzas.

Among the illustrious guests whom winter has brought, Paris possesses now one of Napoleon's brothers, Jerome Bonaparte, who was King of Westphalia, and whom the family proscription has for a long time exiled from France. We must acknowledge, in justice to public feeling, that the presence of this Prince has produced no symptoms of agitation or insurrection. It would probably be the same, if the Count Chambord came to reside in France. The residence of neither would occasion any fear. The exile of fallen royalty is therefore a useless as well as cruel precaution, which ought to be stricken from the code of State policy. The ex-king Jerome is accompanied by his son, who is reported to be a distinguished young man.

Paris lost last week one of its notables, M. Deschapelles, our most skillful player at all kinds of games of calculation. He excelled in whist, boston, reversis, trictrac, chess, checkers, and domino. He was a man of most singular organization;—the genius of Newton applied to games. His extraordinary aptitude exhibited itself in the rapidity of his conceptions. "I learned," said he, "the movements of the chess-men in one lesson; one day sufficed for the theory, the next day I tried the practice, and after my second game, I was an excellent player." He said this unostentatiously and without affectation, for he was not vain of his merit. He also practiced games of skill, and although deprived of one of his arms, he was an admirable billiard player. A profound theorician, M. Deschapelles was the arbitrator in all difficulties, the sovereign judge in all the doubtful cases, which play will often produce. He gave his advice willingly, and every time that he played, it was an amusement and study for the amateurs who assembled around his chair, and followed with a curious interest the calculations of his mind, so fruitful in resources. The circle of the boulevard Montmartre where M. Deschapelles generally took his game, should have adopted a three months mourning, by playing their whist with cards bordered with black.

A Street Barber in Canton.—At the distance of a very few yards from the landing-place, an object certainly worthy of record presented itself. This was a portable barber's shop, consisting of a stool, which was fitted up with drawers to contain all the necessary instruments of his vocation, and at the same time served for a seat, and a small chafing-dish, upon which was placed a small vessel containing water. This simple apparatus was readily transported from place to place by being slung upon a bamboo, the stool at the one end balancing the chafing-dish at the other. As soon as a customer was perceived, the stool was immediately set down, no matter where the situation might be, and there, in the open street, the operation was expeditiously performed, and the shop again in motion.—*Hutton's Five Years in the East.*

Editorial Department.

J. CLEMENT, EDITOR.

Doing things Doggedly.

Reader, did you ever have the head-ache? Did you ever feel that the upper story of your pericranium, like the roof of an old building in a hurricane, had been blown off, and that a burning simoon was whistling through all the crevices of the brain, and thereby creating all manner of dissonant and painful sounds? Then you know how to sympathize with us to-night. And you will exercise due forbearance, should you discover any "short coming's" in perspicuity, on the subject which we have thought fit to briefly discuss in this, our leader.

There is such a thing as sitting down doggedly to work and performing a task in spite of disinclination and even greater impediments. If we are not mistaken, Dr. Johnson recommended such a practice in composition. Certain it is that some persons never would write, did they wait for the natural and irresistible flow of thought. While it is true that "those who write after their wit is exhausted, may be compared to those old maids who give us one cup of good tea, but all the rest of milk and water," it is also true that the person who is obliged to make up his wit by commencing to write, may not always fail in the first cup.—There is such a feeling as the glow of composition, which may be created on the same principle that a fire is made to burn. Thoughts *forced* into action, come in contact with each other, as flint meets flint, and in either case, sparks are emitted. A fire may be kindled even though the combustibles are in a somewhat unfavorable condition. It may not be roused so suddenly as it would be under more favorable circumstances; but if made with green wood, however slow in kindling, its heat is, in the end none or less intense.

Head-ache is sometimes engendered by dissipation of thought; and in such cases it is often prolonged for the want of mental application. The best way to cure it is to sit down doggedly to hard study. The most certain cure is a dose of mathematical problems. Euclid is an excellent physician to call home wandering and dissipated thoughts and to settle the stomach of an intellectual sensualist.

As is mental so is every other kind of labor, self-coaxing is, at times, indispensible in order to the accomplishment of any thing. If mankind should wait for a disposition to work before commencing, the majority, at least, would make their Sabbaths preponderate over their working days. Their "rest" would be a perennial day of *ennui*. Idleness is a disease which many court, but the consequences of which none covet. And since there is a "certain and infallible remedy" for it, we herein present the recipe to all our readers for their careful preservation and, if need be, their use: *Go, doggedly if it must be, at any rate,* GO TO WORK.

YOUNG MEN'S ASSOCIATION.—The lecture before this body last week on Thursday evening, was given by the Rev. DUNCAN KENNEDY, D. D., of Albany: subject, *Incentives and Aids to Mental Culture.* Among the *incentives*, the speaker mentioned the wonders which the mind itself reveals to its student; the power or influence which a disciplined mind has over mankind; the passport which, under free institutions, like ours, mental culture furnishes the young man, to eminence; and the favorableness of profound learning to virtue. As among the most important *aids* to mental culture, he spoke of a noble and fixed determination; of habits of manly and independent thinking; and of system and choice in reading. He recommended the study of human nature, as seen in *self*; of the natural sciences; of history; and of polite, or sound and elegant literature. The lecture closed with an elegant reference to the moral powers and the importance of their healthy training. The performance was an able, yet modest display of a strong, well-balanced and highly-cultivated mind; was very suggestive and instructive in its character, and was received with warm approval by a large and refined auditory.

TO READERS AND CORRESPONDENTS.—We hope our friends are making strenuous exertions to increase the list of subscribers for the new volume. We are looking to them for aid, trusting that the premiums offered are sufficient inducement for them to lend a helping hand.

We have received a sweet and tender lyric from Mrs. SIGOURNEY, called "*The Flower of Scotia's Clime.*" I send to you," she writes, "almost the only unpublished poem in my possession, for a New Year's gift." A very acceptable "*gift.*" it is, and our readers shall share it mutually with us. It will grace the first number of next volume.

Many thanks to our new contributor at Utica, for the favor on our first page this week. Any thing, at any time, from his pen will be gratefully received.

SONGS FOR THE PEOPLE, is the name of a new monthly magazine of music, published by ZIEBER and Co., Philadelphia. The first number contains a large and choice variety of popular national aire, and cannot fail to please the class of individuals for whose benefit the work has been established. It is got up in superb style, and is afforded at the reasonable price of three dollars a year. Subscriptions received for six months, which makes a volume.

YOUNG AMERICAN'S MAGAZINE OF SELF IMPROVEMENT.—This highly instructive two-monthly periodical closes the first year of its publication with the issue for January. The second volume will commence in March. The price is reduced to one dollar a year. The last number contains a splendid steel engraving of "YOUNG FRANKLIN." GEORGE W. LIGHT, Boston, publisher.

MISSING NUMBERS.—We can supply subscribers with any number of the present volume except the *sixth*; and with most of the numbers of the last volume. Friends wishing to complete broken files; will please write, post paid, and we will cheerfully send any numbers wanted.

PRINCIPAL OF THE NORMAL SCHOOL.—We learn with great pleasure that Mr. GEORGE R. PERKINS has been appointed to succeed the late lamented Mr. PAGE as Principal of the Normal School.—Mr. PERKINS has been in the School, as its Professor of Mathematics, from the beginning, and an intimate acquaintanceship with him of several years, enables us fully to endorse the following commendatory remarks of the *Evening Journal:*

"Mr. Perkins is wholly a self-made Teacher. He knows, from long and large experience, just what is wanted in a Teacher. His associations have been, and his sympathies are, with those whom he is training up for usefulness. His appointment was desired by all who are connected with the institution, whether as Professors or pupils. He will take the business up just where Mr. Page left it, and carry it on, we are persuaded, with an ability and devotion which will transfer to him that grateful confidence which his estimable predecessor enjoyed."

BUFFALO MEDICAL COLLEGE.—A statement, from which a misunderstanding might arise, having appeared in some of the papers, we call the attention of those interested to the fact that the faculty have resolved the lecture session for 1848–9 shall commence on the last Wednesday of November, and continue *five months*, with a preliminary course of practical Anatomy for *one month*, making, *with this preliminary course*, a six months' session, which was recommended by the late National Medical Convention. The *new arrangement for* 1848–9 *does not interfere with the coming spring course, which will commence on February 24th, and continue sixteen weeks.*

☞ We had another break-up on Saturday. We are now in the middle of the usual season for winter and yet have had scarcely any severe weather. We keep looking for its approach, and the time for it is slipping away. We fear there will be a late spring if the severe weather should not commence soon.

☞ A Stolen Child.—The attention of Western and Canadian editors as well as of those residing in the counties adjoining our own, is directed to the following particulars. By their publication it will be seen that they may essentially serve parents who are in great distress.

On the 14th of December last, Alonzo, the son of Mr. William H. McElroy, aged about 3½ years, strayed from the house of his parents at Napanoc, a place 20 miles distant from Kingston, in Ulster County. He has not since been found. He had dark blue eyes, brown hair, and a fair complexion. About the middle of his forehead was a perpendicular scar, three-fourths of an inch in length and running up under the hair. He was dressed at the time in a check flannel suit, and cotton drawers, cloth cap, and thick boots. Every search that seemed likely to be useful, was made by the inhabitants of the village, for several days, but all was unsuccessful.

On the day when the child was missed, a stranger with a span of large bay horses and a rather light spring wagon with a blue or green box and something answering to the description of a dry goods box in the hind part of the wagon passed through the village. He was afterwards seen about a mile from the village with a child which the father has no doubt was the lost boy. He has been traced as far as North Boston, in this county. There he enquired the way to Black Rock, indicating that he wanted to go to Canada, but it is not improbable that he went in some other direction. No doubt exists in the minds of the father and those who assisted in the pursuit that the child was stolen by this man. It is unnecessary to enter into a detailed account of the evidence on which this opinion is founded. Any information in relation to the child can be communicated to Mr. John Stewart of this city, or to the parents.

The incidents connected with this affair aptly illustrate the romance of real life. Apart from the painful sense of manifest insecurity which the successful accomplishment of such a deed must produce in the minds of many parents, the sufferings of those who have been thus bereaved entitle the incident to public notice, as by it the child may be discovered and restored. The mother is in extremely bad health and from the mental affliction she now undergoes it is probable that her life will not long continue. Whoever may give information leading to the discovery of the child will be liberally rewarded, and the guilty party is reminded that the parents and their friends seek to recover the child, not to be revenged upon the perpetrator of this cowardly and most criminal act.

☞ Aurora Borealis.—There was quite a splendid display of this singular phenomenon last night, from about half past seven to eight o'clock. It commenced with a luminous appearance in the Northern sky, near the horizon. Soon afterward it assumed the shape of a low, long, and narrow arch. Then the streamers, shafts, or columns of light began to shoot upwards extending almost to the center of the sky. Their colors were less brilliant than we have sometimes seen on such occasions, but had a light silvery appearance which was exceedingly beautiful. Afterwards the hues varied from a violet or bluish tinge to a color nearly crimson. They might have been much more brilliant if the moon (the 'Cynthia Sue' of a cotemporary) had been more chary of her welcome favors. Take it all in all we seldom look upon the like of such a night as the last—clear, calm, and in temperature "kindly though frosty."

Danger in using Anthracite Coals.—Never neglect ventilation where this is used. About a week ago a physician narrowly escaped the loss of his life at Albany for want of such precaution.—He retired to rest in a small room with the door and windows entirely closed, and a grate full of burning anthracite. About half an hour after midnight he awoke in excessive agony, from violent strictures across the chest and forehead. He was instantly aware of the cause, and had just strength to get out of bed. After vain efforts to ring the bell and to raise a window, he staggered to the door, and was just able to open it, when he fell headlong into the hall. A servant happened to be within hearing, and came to his aid. Had he fallen inside of the door his death would have been inevitable.

From the Buffalo Commercial Advertiser.

Frauds upon Immigrants.—We thought that the last Legislature might have had time to procure the completion of a bill to prevent the nefarious and cowardly frauds of the utterly unprincipled scoundrels who prey upon and enrich themselves by robbing honest, unsuspecting and ignorant immigrants, who seek a home in this country, and scarcely one of whom passes Westward without contributing, by the results of his labor, to the prosperity of this city and State. But there was so much else to be attended to, so many irons were on the fire, that this was not done.—Nor, on the whole, are we sorry for it. It is thought that a better practical measure will be the result. But the law-makers of the State will badly fulfil their duty if another season is allowed to pass without farther legislation on this subject.

Those upon whom the frauds are practiced, being strangers among us, are little noticed, and have no means of making their grievances known, except through the friendly efforts of the Press, which, throughout the State, has been strenuously exerted; and no public paper has dared even to apologise for, or palliate, these iniquities. The Committee appointed by the Legislature to investigate the subject, has made a report, of which we have received copies from Mr. Mills, Deputy Clerk to the Assemply, and Mr. Nelligan, Agent at Albany for the Commissioners of Immigration, who has made great exertions in this humane cause. The Committee has been astonished at the extent of the frauds committed.

The immigrant is robbed in almost all imaginable ways. It appears that, first, on his arrival, he is decoyed into boarding houses where he is charged double and thribble the fair and ordinary rates. These houses are usually kept by foreigners, mostly Irish and German, who easily gain the confidence of their customers, and often succeed in stripping them of their all. Next are the "*runners*," who sell fraudulent tickets at enormous prices, which prove utterly worthless beyond Albany. Thousands of immigrants during the past summer paid the regular rate of steamboat and railroad fare from New York to Buffalo to these bogus agents, and received therefor their "tickets!" On reaching Albany, the only means provided for forwarding them by the "house" to which they were directed, were the ordinary line boats. Next, according to the Committee, is a system of using *false scales* in weighing the immigrants' baggage, and certifying to false statements in reference to the amount forwarded.—

At Albany, these agents very often insist upon extra pay for luggage, when the terms of the bargain in New York expressly included that charge.

The St. Andrew's Society of Albany state a case where one JAMES HYSLER actually was made to pay one hundred and forty-five dollars, when the proper charge was $8 61. Suits were commenced, but the agents of *Smethurst* decoyed the dupe out of the city.

As a specimen of the falsehoods used to deceive the dupes, we publish the following extract from the testimony in the case of CHRISTIAN DUENSING, a German:

Forty-seven dollars were demanded for over weight of his freight. Mr. Smith—a runner—said, "you must not imagine we can carry you so cheap—great deal of this money is to go to the government of the canal, which has laid out *upwards of eighteen millions of dollars;* he said if he took a cent more than was due, 'may his wife and children become blind'—you must take me for an honest man, for I am your countryman—I also am German." Nothing else was said in reference to the money, but that he gave assurance that he should have a cabin passage. His luggage weighed he dont know how much himself, but it is put on the ticket (by Shoemaker, another runner) to be 1,000 pounds.

Mr. Brisk—the broker—*put on his ticket that his luggage should go free.*

A set of men are kept at Albany as a fighting gang. Of the profits made some idea may be formed from the attested fact that one of the runners employed has a salary of $2,000 for 3 months, *being at the rate of $3,500 a year more than is received by the Governor of this State!* Others are engaged at the rates of $2,500, or $1,200 a year. Another has been paid $1,500 for 3 months. How little of all this has yet been made public! Surely publicity will ensure an effort to prevent the perpetuation of such a system.

A MODERN OTHELLO.—Prince Puckler Muskau, in his new work upon Africa, thus describes a French Mameluke who reminded him of the noble Moor:

What was strangest, and to me most attractive, at the governor's dinner table, was an extraordinary handsome Turk, magnificently dressed in violet-colored satin and gold, a scarlet turban on his head, and adorned with the cross of the legion of honor. This was the celebrated Jussuf, commandant of the French spahis at Bona, who, suffering from the fever, had come to Algiers for his health. This man's origin is unknown, and he himself says nothing of it, perhaps because he knows that the enigmatic is always interesting. Some say he is a stolen christian child, others that he is the son of an European slave by a noble Turkish lady; all that is really known is that he was brought up as a Mameluke in the seraglio of the Bey of Tunis, and had a love affair with his master's daughter, in consequence of which he fled to Algiers, and entered the French service. Jussuf's behavior was as refinely courteous as it was impressive in its natural simplicity; not destitute of pride towards the men—confidential and flattering towards the ladies. Yet was there a something fearful, as in Othello, of whom he often reminded me. He one day said of a handsome and much-admired lady, "I durst not love her; how should I bear to see so many courting her?" He wore in his girdle a superb Persian knujar, which the company, after dinner, curiously examined. As the beautiful Countess Erlon held out her hand for it, he said, with the softest possible smile, "You may touch it boldly, madam; with that I have not yet cut off a head."

A singular incident occurred at the Bishop's Church in Montreal, lately, which is thus described:

During the celebration of the evening service, a poor idiot wandered, unobserved into the church, and her attention being attracted by the brilliant light of the wax tapers on the altar, she suddenly called out "Fire!" The alarm spread instantly, and a scene of indescribable confusion ensued; a general rush was made to the doors, which were speedily blocked up. Those in the gallery pews precipitated themselves in their fright down the narrow stair cases, which were already wedged up, and numbers were trampled under foot, and so severely injured by the frantic efforts of the crowd to escape, that they were afterwards taken away insensible. It was not until after some time, and by dint of great exertion, that the Bishop and the clergy succeeded in assuring the affrighted congregation that there existed no cause for alarm, and in restoring order for the conclusion of the service.

Arrival of the Missouri.

NEW YORK, January 18—4 P. M.

The Steamer *Missouri* arrived, bringing dates from Havre 22d, and from England to the 20th ult. News unimportant. Cotton dull and heavy at Liverpool. Money Market tight at London on the 20th.

At Havre, no demand for flour or wheat 33 francs offered for Genesee, 36 asked.—Revolutionary spirit awake in Greece and Sicily. Tripoli is in full insurrection against the Pasha. The French army was closely hemming in ABDELKADER.

The question of Ferara between Austria and the Pope has been settled. Party spirit has been raging strongly in Switzerland, and the adherents of the Sunderband are proscribed.

The arrival of the English mail in India with the account of recent commercial disasters, caused great stagnation in trade. Business in the manufacturing districts of England dull.

It is currently reported and generally believed that Gen. SCOTT will return immediately, and that the Court of enquiry is to be transferred to Washington.

NEW YORK, 7 P.M

New Orleans papers of the 7th announce the arrival of the Schooner Eleanor bringing papers from Vera Cruz to the 29th—four days later.

Gen. Scott had issued orders announcing that the United States army is about to spread over, and occupy the whole republic of Mexico, of which it will hold possession until Mexico sues for peace, on terms acceptable to the United States.

Col. Miller was about to leave Vera Cruz.

His regiment was entertained at Vera Cruz by a splendid supper.

The Mexican Government is silently taking measures for the suppression of an intrigue of foreign Monarchies. In consequence of the State Governments not fulfilling their promises to aid the General Government with such resources as they could command, the latter was much cramped for means.

Lieut. DeDonelly, of the 3d Artillery, and other officers, with a small party, left Puebla for Jalapa on the 15th, having charge of considerable money.

They were attacked in the night by fourteen robbers, and although only three of our countrymen had arms, they defeated the ladrones, and arrived safe at their destination.

Judge Wayne of the Supreme Court of the United States, in session at Washington, yesterday delivered an opinion in Mrs. Gaine's case, sustaining her claim to the vast tracts of land in the Western States.

FROM HAYTI.—The schooner Bridgewater, Capt. Mathews, 27 days from Aux Cayes, arrived yesterday.

Capt. Mathews states that when he left, an overthrow of the Government was about to take place. The President is very unpopular with the people.

LATEST CASE OF SUPPOSED SPONTANEOUS COMBUSTION.—The *Gazette Medicale* relates the following facts in a recent number. On the 6th of January last, the body of a man was found lying in bed, and in a state of combustion, by some persons who entered his bedroom in the morning.—The chamber was filled with a dense smoke, and one of the witnesses asserted that he saw playing around the body of the deceased, a small whitish flame, which receded from him as he approached. The clothes of the deceased, and the coverings of the bed were almost entirely consumed, but the wood was only partially burnt. There were no ashes, and only a small quantity of vegetable charcoal; there was, however, a kind of mixed residue, altered by fire, and some pieces of animal charcoal, which had evidently been derived from the articulations. The deceased was in the habit of carrying lucifer matches in his waistcoat pocket and according to his usual practice, he had had a hot brick placed on his feet when he went to bed the preceding evening. Two hours after, his son and daughter-in-law passed by the door of his room, but there was nothing which attracted their attention. It was only the following morning early, that his grandson found his body in the state described. The deceased was seventy-one years of age. He was not fat, nor was he addicted to drunkenness. The temperature of the air was low, and there were no indications of electricity. The son and his wife were suspected of having murdered the deceased, and burnt the body, in order to conceal the traces of the crime; and a Dr. Masson was commissioned to investigate the case. The body, which had been buried, was exhumed and examined. The cravat, partially burnt, was still around the neck, and part of a sleeve of the night shirt was found. The hands, completely burnt, were only attached to the forearms by some carbonized tendons, which gave way on the slightest touch. The thighs were completely detached, so as to resemble a wilful mutilation, but for the discovery of animal charcoal about them. From the facts, Dr. Masson (considering it impossible to ascribe these changes to the effects of accidental burning, and that, under common circumstances, they could only be produced by a violent combustion continuing some time,) drew the inference that the burning must have resulted from some inherent cause in the individual, probably roused into activity by the hot brick placed at the feet of the deceased. The burning once commenced, would be easily supported by the state of the tissues.—Hence, the case was, in his opinion, to be referred to the class of spontaneous combustion. It is said that Orfila coincided with Masson in this opinion, and the accused were acquitted.—*Am. Jour. of the Medical Sciences.*

A TOUCHING SCENE.—A scene of an affecting and interesting character, was witnessed last evening in Canal street, near the corner of Camp. A young girl, pale and worn, accompanied by a little boy, seated herself on the stone steps of a house, evidently exhausted, and the little fellow knelt by her side and looked silently and sadly into her face. While they were thus resting together a comfortably dressed man and woman, with the flush of health upon their cheeks, who were passing down Canal street, stood before them, and it was painfully interesting to witness the changing countenances of all. The tide of feeling which surprise and happiness had stopped in its course, burst the barrier, and the young girl rushed into the arms of the woman, crying, "my mother." She was soon caught to the heart of a father, as also the little boy, and the happy couple told the persons who were present that the girl and her little brother were their children whom they left with their friends in Ireland, being unable to bring them when they emigrated, but had subsequently sent money to pay their passage to this happy land.—*New Orleans Mercury.*

CHOLERA.—The London correspondent of the *National Intelligencer* in his last letter says:

A more alarming piece of news is, that the *Cholera is undoubtedly in London*, and has broken out with extreme virulence in *Golden Lane*, and other densely populated parts of the city.—The police keep watch and ward there to interdict communication. The symptoms of the disease are of a very alarming nature, exhibiting itself in *plague spots* and other fearful characteristics. This is truly a melancholy close to my communication. I hope the matter is made the worst of, but have many fears.

Some of the English papers received by the last Steamer, make reference to this report, and positively deny the existence of Cholera in London.

It is possible that an individual case may have occurred, but it is certain that the disease does not prevail as an epidemic.

SEE WHAT THE GIRLS OF THE BAY STATE DO.—We have received the statistics of the various branches of industry in Manchester, for 1845, taken with the State census of that year. To show our young ladies, that it is no disgrace to work in the Pilgrim land, we give them the particulars of the straw bonnets and hats, and straw braids, and palm leaf hats, made there in one year:

	Number.	Value.
Straw Bonnets and Hats.....	1,047,954	$1,057,892
alue of Straw Braids.....		102,307
Palm Leaf Hats.....		450,337
		$1,610,596

All this by females, mostly farmers' daughters. Worcester, Hampshire, and Franklin cos. do the most. Are not such industrious girls worth going after? Instead of street yarn, they care for the dollars and cents. They don't constantly bother their parents or husbands with teasing for a new silk or $40 shawl. They have the money in their purse, from their own industry. There are lots of rosy cheeks who have their hundreds deposited in Banks, from the Straw Braid employment. We once knew two sisters who bought a farm for $1000 for their parents, from the savings of Braid.—*Roch. Amer.*

PRINTING IN CHINA.—According to the best authorities, the art of printing was known in China upwards of 900 years ago. In the time of Confucius, B. C. 500, books were formed of slips of bamboo; and about 500 years before Christ, paper was first made; A. D. 900, printing was in general use. The process of printing is simple. The material consist of a graver, blocks of wood, and a brush, which the printers carry with them from place to place. Without steel, or wedge, or screw, a printer will throw off more than 2,500 impressions in one day. The paper (thin) can be bought for one-fourth the price in China that it can in any other country. The works of Confucius, six volumes, four hundred leaves octavo, can be bought for ninepence. For a historical novel, of twenty volumes, one thousand five hundred leaves, half a crown is the price among the Chinese.—*Montgomery Martin's China.*

☞ The Happy Girl.—Ay, she is a happy girl—we know by her fresh looks and buoyant spirits.—Day in and day out she has something to do, and she takes hold of work as if she did not fear to soil her hands or dirty her apron. Such girls we always love and respect wherever we find them, in a palace or hovel. Always pleasant and always kind, they never turn up their noses before your faces or slander you behind your back. They have more good sense and better employment.—What are flirts and bustle-bound girls in comparison with these? Good for nothing but to look at: and that is rather disgusting. Give us the industrious and happy girl, and we care not who worships fashionable and idle simpletons.—*Anon.*

Persian Wisdom.—It is said that in the treasury of one of the monarchs of Persia, was found a vase, with the following lines tinged with humor, as well as philosophy, inlaid in gold:

He who has no wealth, has no credit; he who has not an obedient wife, has no repose; he who has no offspring, has no strength; he who has none of these, *lives free from every care.*

A Greek maid being asked what fortune she had for her husband, answered—"I will bring him what is more valuable than any treasure—a heart unspotted and virtue without a stain, which is all that descended to me from my parents." How beautifully expressed.

MARRIED.

In Franklin, Portage Co., Ohio, on the 26th Dec. 1847, by Rev. Ira Tracy, Mr. JOHN D. BOWLAND, of Akron, to Miss CORDELIA E. HOGAL, of Franklin.

On the 12th inst., by the Rev. Geo. W. Hosmer, Mr. GEORGE CHARLES, of Rochester, and Miss SARAH E., daughter of J. P. Needham, of this city.

In St. John's Church, on the 12th instant, by the Rev. Mr. Schuyler, Mr. LOCKWOOD BEARDSLEY, of Scipio, Cayuga county, and Miss CATHARINE MYER, of this city.

At Clarence, on the 1st inst., by Rev. D. B. Lawton Mr. HARRISON CORRUTH, of Lancaster, and Miss ELIZABETH VAN WIE, of the former place.

At Clarence, on the 19th inst., by the same, Mr. ALEXANDER McMILLAN, and Mrs. MAHETABLE PERRY, both of Batavia.

DIED.

This morning, 12th inst., at 3 o'clock, aged three years, HANNAH, daughter of Jefferson and Minerva Wilson.

On the 14th inst., at the Hydraulics, EMMA, wife of Edward Higgins, aged 28 years.

This morning, 17th instant, CHARLES HENRY, only only son of Charles and Judith Wormwood, aged 1 year, 11 months and 21 days.

This morning, 17th instant, of consumption, ELIZABETH, wife of Capt. Robert Williamson, aged 22 years.

In Hamburgh, on the 8th inst., FRANCES C., daughter of Chauncey and Charlotte Abbott, aged 3 years.

At her residence in Astoria, L. I., in the 63d year of her age, Mrs. CHARLOTTE MULLIGAN, mother of Mr. Eugene Mulligan of this city.

SPLENDID LITERARY PREMIUMS

WORTH CONTENDING FOR.

WESTERN LITERARY MESSENGER

VOLUME TENTH.

GREAT INDUCEMENTS TO AGENTS!!

On the 5th of February, 1848, we shall commence the Tenth Volume of the Western Literary Messenger. It will appear in an entirely new dress and with an increased list of able contributors; and the publishers are determined to make it second in value to no family news and literary paper in the country. They will aim to render it alike the delight of the fireside, an ornament to the centre table and an honor to Western Literature.

Desirous of enlarging its circulation in all parts of the United States and Canada, and willing to give ample encouragement to agents, we herein offer the following flattering inducements to any person who will interest himself in increasing our list of subscribers:

Any one who will send us the names of eight subscribers, to be sent to one Post Office, and ten dollars, we will give a copy of Frost's Pictorial Wonders of the World, a splendid work in one volume: or Simpson's Overland Journey round the World, in one volume, tastily bound in scarlet cloth.

Any one who will send us twelve subscribers to one Post Office address, accompanied with $15, we will give Headley's Napoleon and his Marshals in two volumes, 12mo., with plates; or Headley's Washington and his Generals, in two volumes, do., or Miss Bremer's Novels, or D'Aubigne's History of the Reformation, in one large octave volume, bound in muslin and illustrated,

Any one who will send us sixteen subscribers addressed to either one or two Post Offices, accompanied with $20, we will give Lardner's Lectures, two volumes, with plates and illustrations, or Griswold's new and magnificent work, the Prose Writers of America, or D'Israeli's Works, or Marryatt's Novels complete.

Any one who will send us thirty-two subscribers, to be sent to not more than three Post Offices, accompanied with $40, we will give M'Cullough's Geographical Dictionary, in two very large octavo volumes, bound in sheep; or Ure's Dictionary of Arts, Manufactures and Mines, in one magnificent volume, and also the supplement to the same; or Dickens' Novels complete, in three volumes.

Any one who will send us sixty-four subscribers, to not more than four Post Office addresses, accompanied with $80. we will give Sir Walter Scott's complete works in ten octave volumes bound in cloth; or a splendid quarto Bible, worth at least $16,

Any one who will send us one hundred subscribers, to not more than five Post office addresses, accompanied with $125, we will give the Waverly Novels, a splendid edition in 27 vols., of Harper's magnificent illuminated Bible, worth at least $25.

Persons making out either of the above lists between the first and fifteenth of January, may promise new subscribers four numbers of the present (ninth) volume, GRATIS.

Persons sending over sixteen subscribers can have till the middle of April to make out their list, allowing each subscriber will take the back numbers of the volume.

Competitors for any of the above splendid literary Premiums, would do well to at once set about procuring names, which should be sent in to us at once.

☞ The terms of subscription, to mail subscribers, remain as usual at $1,50 per annum, payable in advance.

JEWETT, THOMAS & CO.

Buffalo, Dec, 22, 1847.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n3

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main Street, Buffalo.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 188 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.

PUBLISHERS,

COMMERCIAL ADVERTISER BUILDINGS

MAIN STREET, BUFFALO.

TERMS.—To mail subscribers, $1,50 per annum in advance, four copies for $5,00, ten copies for $10,00. To city subscribers who receive their papers from the carrier, $2,00. Mail subscribers will also be charged $2,00 if payment is not made in advance.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

☞ All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

Western Literary Messenger.

VOL. X. BUFFALO, SATURDAY, FEBRUARY 5, 1848. NO. 1.

For the Western Literary Messenger

The Flower of Scotia's Clime.

To the Memory of a Lady, who recently died in New-York

BY MRS. L. H. SIGOURNEY.

Where Elilden hills in beauty rise,
And Tweed's bright water's spread,
And the romantic Leader rolls
Along its pebbly bed;
While birds among the heather sang
At the sweet vernal time,
A youthful lover fondly woo'd
The flower of Scotia's clime.

Rear'd in the shaded manse, she bloom'd
Beneath fraternal care,—
Yet where old Dryburgh's turrets rise
With oriel windows fair,
A bridal train went wandering on,
'Mid summer's freshest prime,
For he, that ardent youth, had won
The flower of Scotia's clime.

He bore her to the broad, green West,
Across the billow's sheen,
And plac'd her in his garden fair
To be his Eden queen,
While tender plants of trusting love
Sprang round her matron-prime,
And well their ripening fragrance cheered
The flower of Scotia's clime.

But sorrow steals o'er earthly joy,
As winter strips the bower,—
Nor can affection's sleepless watch
Repel the spoiler's power,—
For when autumnal blossoms rare
Were in their glorious prime,
Low, on her death-cold pillow lay
The flower of Scotia's clime.

Yet grace like hers survives the tomb,
The immortal essence rose
To Him, on whose undying word
The pure in heart repose,—
And where unfading garlands bloom
'Mid harmony sublime,
She finds a home, whom here we called
The flower of Scotia's clime.

For the Western Literary Messenger

Scene in the Inner Temple.

I was sitting alone a short time since in my quiet room enjoying a very lawless revery of a very idle hour. My mind had strayed through all the faded paths of the long gone past, and wondered what the undeveloped shadows of the future might reveal, till, having wearied my more sober senses with its childish prattle, they gave it the reins of perfect liberty, and sank into a comfortable nap. My mind being free from the motherly watchfulness and restraint of the waking senses, went down into the secret council chamber of my soul and called up the following scene.

I suddenly saw the different faculties of my being, assume individuality and rise into human shapes; though of such diminutive stature as enabled them to operate in the circumscribed apartment of a soul as small as mine. At the farther end of this private council chamber, upon a raised seat, resembling a throne, sat in magisterial dignity, my Conscience. His eye, though somewhat near-sighted, was yet clear and piercing. His mouth was firmly closed, indicating firmness of purpose, and the veins in his forehead were large and superficial, intimating the stern energy of his character. He bore many deep scars, the memorials of awful battles with my headstrong passions; but yet his whole manner indicated his indomitable purpose to be heard and obeyed.

On his right hand, and before him, sat a calm philosophic little personage with the balances of *comparison* in his hand. In him I recognized my Reason. He was weighing little substances, of a very unsubstantial character, called *pros*, and *cons*. On the left hand of Conscience, and opposite to Reason, sitting very restlessly upon a splendid cushion, I saw one of my largest and strongest passions; full grown and muscular. At times his eye was fierce, and his brow clouded: and again the softest languor, and the gentlest humility, seemed to steal over his frame. He could storm and threaten in awful wrath; and he could plead with the most bewitching entreaty. One moment he was all made of frowns, and threats, and obstinacy: the next he was all made of sights, of tears and gentleness.

On the side of the room, reclining in supreme selfishness and complacency, with large, full-moon face, and portly body, I saw my Self-love. He was taking his pipe of comfort on a spacious sofa, and seemed to dread nothing so much as the breaking of his pipe, which had long been threatened.

In the corner, a half starved, lean, wild eyed Fear was glaring around, and muttering unintelligible threats. A pensive, mild eyed form, which I knew to be my *Memory*, was bringing in and carrying out, all sorts of past things as they were called for by Conscience, Passion, Reason or Fear.—The matter in hand was Passion's obstinate purpose to have his own way in a particular matter which seemed to be understood without being declared. He rose and made a long and eloquent speech. He tried to convince Conscience that it was right; and then labored to show Reason that it was prudent and wise. He promised Self-love abundance of comfort for his pipe; and soothed the shivering Fear with strong assurances that there was no danger. He threatened to murder them all if they did not let him have his wish, and concluded with a most pathetic appeal to their indulgence.

Fear came forward, and with solemn, mysterious manner, told them it was not safe. He pointed out the dangers of Passion's course, and lifting his long, bony fingers, and fixing his wild eyes upon Passion, said, in warning tone, "beware." Passion poured contempt upon his warning; and told him to go to his corner, and hold his silly tongue.—Self-love, without rising from his sofa, said he did not think it was best. It was running too great a risk; he should like very much the comfort which Passion promised; but he was afraid he should get more pain than comfort from the course Passion proposed. Passion called him an old fool, a miserable, lazy coward. But as he was indulging

himself in these pleasant epithets, he was interrupted by Reason, who, in his speech compared by his balances, the relative weight of all the arguments: and it was very evident, he said, from this candid comparison that there were far more considerations against Passion's request than for it, more *cons* than *pros*, and therefore it could be nothing but sheer folly to allow Passion to go on. Passion heard this speech with extreme impatience, determined not to admit the force of Reason's conclusion. He put his hands upon his face, and swung his body backward and forward with a great deal of energy.

But now, last of all, Conscience arose, and after calmly reviewing the danger and folly, and consequences of the course which Passion proposed to take, he sought to settle the question by declaring that it was *wrong*, and that Passion *must* yield his purpose. He said in his stern address, that Passion had ever been seeking to break the peace of the whole household, he had always resisted wholesome restraint, and would now, by his rash and presumptious course, bring them all into disgrace and suffering. Turning to Passion he said, "thou foolish and insubordinate child! can you think to indulge yourself at our expense, to set aside our dignity and disgrace it—can you think to govern us, who were set to govern you? Your request is unreasonable and *wrong*. In the name of God and Duty I require you to abandon it.

Passion for a moment seemed all humbled by the universal opposition which he met, his tears flowed rapidly down his agonized features. But suddenly assuming a determined energy, he rose and said: "It may be dangerous, but so is every thing else; dangers attend every enterprize, and this no more than others. And if we do only what is free from all danger, we never shall do anything. 'Nothing venture, nothing have.' It may seem foolish to a phlegmatic, heathen philosopher, like Reason; but what does he know of that world of feeling and impulse, upon which he passes his cold opinions He has no heart, he cannot judge those who have." And teeming with bold effrontry to Conscience, upon whose brow was gathering a dark and heavy frown, he said, "you accuse me of being ever rebellious and contentious, it is you, who, by your arrogance and eternal criticisms are marring all our pleasures. You have ever defeated and opposed my plans, and sought to render me the slave of your unsympathizing and iron will. But all my unseen impellings, press me on and I *will* go. Why do I possess these strong tendencies if they are not to be followed? I tell you I will not be governed: I will make my own bed, and I can lay upon it."

At this bold and rebellious language, my indolent Self-love groaned for his comfort, and Fear shivered with his gloomy apprehensions. Reason with folded arms, calmly sneered at his contempt; and Conscience rose to chastise the rebellious passion with his whip of scorpions. But at this moment my *Attention* came in and said the Senses were waking up. At this alarm the light was suddenly extinguished and the assembled dignities fled in great confusion. And to this day, Mr. Editor, I do not know whether that rebellious Passion was subdued, or succeeded in boldly defying all my graver faculties. The case I must confess looked rather hopeless in this closing scene of my mind's secret session. There may possibly be a new trial, and it is to be hoped that the authority and power of Conscience will, in all cases, be regarded and obeyed.

IRON FURNACES IN VIRGINIA.—Five are now in operation in Botetourt county, and others are springing up in various parts of the iron region, under Pennsylvania and eastern managers.

"It Grows as it Goes."—An Occurrence in Real Life.

BY MRS. E. F. ELLET.

"There, sir, take that for your sauciness." cried the beautiful Ellen Stanley to her husband; accompanying her exclamation with a slap on his cheek, from the whitest and softest hand in the world.

The young wife had been exhibiting with great pride, a new baby-dress she had just finished, wrought with her own delicate fingers, and the work entirely of her own taste and skill. The neat pattern of embroidery which had cost her so much trouble to draw—the leaves and sprigs, so like nature in their form—the tiny wreaths which a fairy might have woven;—such an exquisite specimen of feminine art as it was! and such a Goth and Vandal as Mr. Stanley was, to answer her demand for his admiration, by making fun of it; and telling her, she might have laid out her month's labor in something better!

Mr. Stanly loved to tease his wife a little now and then; and when he saw the playful curl of her lip, he went on laughing at the dress still more unmercifully, till his naughtiness was punished by the accolade and the exclamation recorded.

Another personage in the group was an infant about eighteen months old, who, wakened by the talking, sat up in its crib, and looked from one to the other of its parents; when the father, pretending to weep bitterly at the chastisement he had received, appealed to the boy's compassion with a lachrymose, "Is n't my d:rling Henry sorry for poor papa?" The little one appeared to enter into the spirit of the joke; for, after a moment's attention, he burst into laughter, and clapped his hands with childish merriment.

A fourth occupant of the room, did not seem so perfectly to understand what was going on. Old Elsie, the colored nurse, was sitting quietly at her work in a corner, but dropped it, and looked up, when she heard the mock-sobbing, her large eyes dilating with astonishment. The voice of her mistress bidding her take the child down to give him his supper, roused her from her lethargic surprise, and she obeyed in silence.

Ellen Stanley was the ideal of a young wife. Taken when but a child in years, from the home of a father who idolized her, to be the presiding angel in the household of one to whom she had given her pure heart, she carried into the matron all the graces of the blooming girl. The goodness of her heart, and the sunny joyousness of her disposition, overflowed in a thousand acts of artless gaiety. She sang to every capricious melody as it came into her head; she laughed at all times, when there was cause and when there was not. Her motion was almost a dance when she moved through the house; and her smile, bright and cheerful as the sunshine, was nearly as constant. Ever active, because she found it tedious to be unemployed, and a most exemplary housewife, she was

> "The blithest bee
> That ever wrought in hive!"

and altogether the lightest, brightest, most graceful, most winsome creature, that ever man won to be the idol of his domestic sanctuary. Her husband called her his fay, and bestowed on her all poetical epithets of admiration and fondness; for, no name that was not poetical and melodious would have suited to express her innocent loveliness. With the gifts nature had bestowed, she united a rare cultivation; her father had trained her mind in all the studies which are the higher branches of female education; and of the accomplishments she was thoroughly mistress. Indeed, they came

naturally to her; and lessons were useful, chiefly, in repressing the wild gaiety she infused into everything she did; especially her musical performances — if such they might be called — which were outbursts as impulsive and spontaneous as the song of the mocking-bird of her native clime.

Sweet Ellen! As yet, she had known no sorrow; and if beauty and goodness could have turned aside the shaft that enters the bosom of every mortal, she would have passed her happy life in a perpetual round of joy!

But there is an arrow, swifter and more cruel than the shaft of woe: it is winged and barbed by hate, and its aim is ever the young, trusting and loving heart; it is sped bo the hand of envy!

The morning after the little occurrence we have mentioned, old Elsie might have been seen, with a basket on her head, entering a garden-gate belonging to a neat looking white house, with green blinds, overrun with luxuriant climbing roses, about half a mile from her master's residence. Passing through the yard, she ascended the steps of the piazza, and entered the house. In the back room were seated two middle-aged ladies, of spare figure and grave aspect; There was an asperity in the expression of both, and a primness of demeanor, usually associated with the idea of an old maid; yet, Miss Hannah and Miss Winifred Linwark would have highly resented being called such. They still recounted their conquests, and were indefatigable frequenters of balls, concerts and parties.

"Come forward, mom Elsie, and show us what you have in that basket," said Miss Hannah.

The old negress set down her load; and, removing a snow-white napkin, displayed with no little pride, a store of fresh figs and flowers, sent by her young mistress to Mr. Stanley's cousins, the Misses Linwark. It was a daily habit with Ellen, to send fruit and bouquets from her garden to her relatives; but these were far choicer than usual; for the Misses Linwark were to give a tea party that evening. At the bottom of the basket was a round box, which contained a large cake, covered with delicate icing, beautifully wrought in various devices: around its edge was a minute wreath of natural flowers.

Expression of surprise and admiration passed, as they always did in that locality, into searching questions, not only respecting the household management of Mrs. Stanley; but her goings out and comings in; her sayings and her silence; her commissions and omissions; her every word and action; nay, her thoughts; for in all these the Misses Linwark had a profound interest. The replies of the servant were delivered with an oracular air of mystery; and with divers nods, gestures and half-uttered sentences; which were readily interpreted by the ingenuity of the maiden ladies. They had kept up, by means of Elsie and some other servants, a regular system of *espionage* over Ellen, ever since her marriage.

Of course, the little incident of the preceding evening was not forgotton. The spinsters held up their hands, and uplifted their eyes, in one accord of amazement.

"A blow!" exclaimed the petrified Miss Winifred.

"Poor Henry!" cried Miss Hannah; "what did he do, Elsie?"

"Ki, Miss Hannah, he cry hard for true, an beg for mercy," answered the black woman.

"Dreadful! horrible!" exclaimed both sisters in a breath.

"To think of her proceeding to that! And he so slight and delicate; and she so tall and strong! I always had a kind of fear of her. She beat him several times you say, mom Elsie? And he cried for help! And she sent you out of the room with the child? How dreadful! She will kill him one of these days. Poor Henry! what shall be done to save him?"

The groans and exclamations of the Misses Linwark wrought powerfully upon the imagination of the old woman; and she expatiated to their heart's content, upon the horrors of the scene. "Young missus was an awful woman, for true; and made mass' Henry ac just as she pleased, Poor massa! enty him cry, and beg her hab pity, when she gwine kill him an beat him 'bout de head; un he face all swell up! He look like he bin murder dis mornin. Poor massa! he no long for dis wul'—dat de trute for true!

When mom Elsie departed on her walk homeward it was with a more stately gait, and a head more elevated than usual; muttering to herself, and gesticulating at intervals; and at other times closing her mouth with a forced compression, as an indication that she was in possession of some secret she was determined not to reveal. She strictly obeyed the injunctions of the Misses Linwark, to keep silence regarding what had passed between them.

The tea-party took place; and there was Ellen, looking like a fairy, in her dress of white muslin, falling around her symmetrical form, with an airy and floating grace, that rendered every movement a study for an artist. Her redundant hair was simply parted over her temples, and reposed in a massive braid; the bloom of youth and happiness was on her cheek; she looked exquisitely lovely and was the admired of all observers. She little dreamed, that while she was talking and laughing in the gaiety of her heart, with my acquaintance who chanced to be near, a tale of scandal was passing around the rooms: repeated to group after group by the Misses Linwark and whispered in turn by those who heard, until it was almost the sole subject of conversation. She heard not the exclamations of wonder and indignation; nor noticed the curious looks fastened on her. Nor did Henry suspect anything from the unusually tender attentions of his cousins; from their solicitous remarks that he did not look at all well; that he was growing thiner and paler every day; that his face appeared to be swollen, and his eye inflamed; and that Miss Winifred was going to send him a preparation of her own, for all manner of bruises and contusions.

The next day, the whole circle of the acquaintance of the Misses Linwark were in the full tide of talk respecting the information they had received at the party. The walks and drives that were taken, and the calls long due that were paid —to discuss the matter! It was curious to hear how many different versions the story received in its propagation—each "on the very best authority."

To mention the various versions of the tale, and the sundry embellishments it received in its progress, would be a task too great for our pen. It spread far and wide—as usual in such cases—before the parties most concerned heard a word of the matter. The anxious inquiries as to his health and hints that he had better travel, which were bestowed on Henry, caused no suspicion in his mind; while Ellen was too happy and too much occupied to observe the demeanor of sundry of her acquaintance. At length a letter from one of her old friends, who had heard and believed the story and wrote to remonstrate against such unwomanly and indecorous behaviour, and advise reformation for the future—roused Ellen from her blissfull ignorance. A few inquiries and explanations, and she was informed of the whole.

Not long after, invitations were issued for a large party. to be given in honor of Mrs. Stanley's birthday. Those who had been most violent

in their asseverations that they would not again visit Ellen, were most eager to accept her invitation. The rooms were crowded. The Misses Linwark in their rustling silks, were among the first arrivals.

Mrs. Stanley, with her accustomed grace and elegance, did the honors, dispensing courtesies and attentions to every guest. When the evening was nearly concluded, she led the way to the supper room. After the company had been served, and had returned to the drawing-room, Mr. Stanley called their attention, and observed that his wife had something to say.

Ellen felt it was not a time for embarrassment; and with a heightened color and a manner that showed both feeling and perfect self-possession, she entered at once upon the subject. Only in one matter, she said, was there any alloy to her pleasure in welcoming her friends on occasion of this, her eighteenth birth-day. This matter, she was resolved, should now be set right. She then detailed the story as it had come to her knowledge; and demanded, first of one, then of another, his or her authority for the various statements that had been made.

It was not difficult, with Ellen's dignity and determination, to trace the tale in its serpentine windings; and to fix it at least upon the Misses Linwark. The spinsters wriggled in their chairs, and looked the picture of uneasiness; but they resolved to put a bold face on the business; and accordingly declared, that old Elsie had given them the information.

Elsie was summoned. She came dressed in her best gown, of brown ground with crimson flowers; her head covered with a yellow turban. She curtseyed right and left to the company; and advanced to the spot where her mistress stood.

"Elsie," said Mrs. Stanley, "these ladies say you came to them, the morning of the sixteenth of July last; and said I had cruelly beaten your master the evening before. Is this true?"

The old woman opened her mouth and eyes, but made no reply. Miss Hannah and Miss Winifred rose indignantly; declaring they would not be confronted with a servant.

"Be seated, ladies," said Mrs. Stanley, calmly. "You did not scruple to make assertions on the authority of this woman, and must now submit to hear her questioned. Speak, Elsie, and have no fear; but speak the simple truth."

"May de Lor' hab mercy upon me!" ejaculated the negress. "I will speak the honest truth, massa; for old Satan bin hab me in his power ebber since I tole dat lie 'bout my missus You see, massa, dey ladies ax me big heap o' questions ebbery day, 'bout you and Miss Ellen, and put all sorts o' tings in my poor head. But dat no excuse for old Elsie, for tell wicked lie 'bout her good, kind missus!"

"This is too much!" exclaimed Miss Hannah —sister let us go."

"Go on, Elsie," said Ellen, while her husband stood in the way of his irritated cousins.

To be brief: the whole matter was explained to the delight of the penitent old nurse, and the confusion of those among the guests who had been most active in spreading the calumny. The Misses Linwark were highly incensed at this exposure of their malignity; and rejected the forgiveness offered by Ellen and her husband. But they dared not give vent to their vexation by any more slanders. For six months, they actually held their tongues; and the penance evinced such a depth of mortification, that Ellen pitied as well as pardoned them. Her presents of fruit and flowers were resumed; the spinsters were invited to her family dinner-parties; and all was again on a friendly footing between them.

I do not know that the Misses Linwark profited long by the severe lesson they received. But others took it to heart; and the foregoing record of unembellished facts, may be a warning to gossips in general.

Eugene Sue.

So much has been said and written, of late, concerning this remarkable writer, that we fancy anything fresh concerning him will be read with interest, by thousands. The Paris correspondent of the Boston Atlas gives a sketch of the author of the "Mysteries of Paris," which we slightly abridge.—*N. Y. Exp.*

One evening in Jan., 1828, two young men were walking up and down the *salon* of the Grand Opera at Paris, familiarly chatting as old friends do who meet after a long separation—one was the editor of a Literary Review, the other had just returned from the Mediterranean squadron, and was narrating the battle of Navarino, in which he had taken part. "Capitally told," said the editor; "you must write me some naval tales for my Review in the same spirit: I pay fifty francs the page." "Willingly—but upon what incidents shall I base them?" "Oh, you can recall thousands; if not, my coachman, who served in the navy when a boy, will give you any quantity.—No longer than yesterday, I remember, he told me that once his vessel having attacked a Barbary corsair, the pirate captain found himself destitute of ball and altogether the faster sailer of the two, loaded his pieces with dollars captured from a Spanish galleon the day previous, prodigally firing away his hard won plunder, in order to sustain an honorable combat." "It is a characteristic trait," replied the young man "and I will write you a tale introducing it. Fifty francs per page, I think you said." Eight days afterwards the tale appeared in print, and the young writer received his pay—signing the receipt Eugene Sue.

Who that had known him at school would have prophesied his becoming an author, confirmed dunce as he then was always at the foot of his class, and never receiving a prize? Unable to gain a degree, he studied drawing awhile in the atelier of Gudin, the marine painter; then read medicine under the direction of his father; scribbling meanwhile short theatrical articles for the *Figaro*, and composing two comedies now no longer in existence *Enfant de Paris*, he led a gay, licentious life, lavishing the intellect he possessed and the fortune he expected to have—making all round him laugh, and nevertheless bearing in his own heart bitterness and melancholy. When twenty-three his father, a worthy Paris physician, found that his course of life must be changed, and obtained for him the post of surgeon in the Navy. For six years his home was on the deep. He visited all the ports of the Mediterranean, fought at Navarino, and returned to Paris to call most accidentally, as I narrated in the preceding paragraph, the first floweret of his literary wealth.

The story was so popular that others were called for, and paid for liberally—so that Sue was enabled to resign his post, and reside in Paris, where he published his first novel, *Plik Plok*. It was replete with intrigue and interest, sea and shore, vice and virtue, pitch and poetry—of course it succeeded, and six weeks afterwards came another compound of interest, *Atar Gull*. This established Sue's reputation, for he was, the French critics say, the first of their writers who gave an interest to the mighty roar of the deep ocean, and the wild passions and frantic enjoyments of its shores—enclosing an entire drama between the

four sides of the ship. The ship is this world—he speaks its language—knows its streets—all the kinds of ambition which hide within it—and he tells you of all its unknown virtues—all its mysterious *self* devotion—all its thoughts, great and small. Into that frail edifice of wood and canvass, Sue introduced all the interest and variety which other romance writers had found with so much difficulty in drawing rooms, and hotels, and cottages, and palaces, and on all the highways of the ordinary world--establishing a new generation in French romance. Bold marines, sanguinary pirates, poor though merry cabin-boys, gentlemen of the epaulet, officers of fortune, admirals, fishermen, all appear one after the other,—and speak, and act, and smoke, and fight, and get drunk,—and greatly astonished would they be, had they either the ability or the time to read, to see themselves thus reproduced, to the life, in books written for fine ladies and idle wits.

La Salamandre, *Stello* and *La Vigie de Koat Vin* brought the writer much money, and yet Sue treated the liberal public with perfect indifference, treading all received ideas under foot, exalting vice, and scoffing at virtue. Does the tar and pitch of shipboard disgust you, you find the scene of the next chapter laid at the frivolous court of Marie Antoinette—one moment you read of low debauchery, the next momant mix with the gay crowd which flutter around the death-bed of the Bourbon monarchy, killed by the prodigalities of its adherents.

* * * * *

The French authors, when they strike a fortunate vein of literature, extract oil and everything from it—to use their current phrase, they cultivate it. Sue's marine romances had exhausted his nautical imagination, but ere leaving his favorite element he determined to gain a few thousand dollars more by clothing its history in a pleasing, fictitious garb.

The *History of the French Navy*, in four large volumes, it is a most interesting work, for one becomes acquainted with all the leading personages of the times. Where Anquetil says: "Louis XIV promised to send his fleet to the aid of the Dutch, but at last refused," Sue introduces d'Estrades and Colbert, who in a dialogue explain the motives which induced their sovereign thus to break his plighted word—a most attractive way of narrating history; but, after all, such history is but fiction. The book had an immediate sale, however; the author was received into the first Parisian society; he became involved in intrigue and debt—money was necessary. To procure it Sue wrote *Mathilde*, in which Lugarto, an Italian wretch, is balanced against the heroine and her devoted Rochegune. This is his best production despite its immoral improbabilities, and the publishers of the *Debats* saw that its author could write startling portraits of real life. They wished an attractive romance for their paper, made a very liberal proposition, and Sue commenced the *Mysteries of Paris*.

The viciousness and free style of this work gave it a fair popularity in France—nothing more—but it had an unprecedented circulation in the States, as a moral work. Clergymen recommended it to their people—fathers gave it to their sons—and young girls read to their mothers such scenes as the passionate temptation of Jacques Ferrand for Cicily! Fielding's works had been removed from the library shelves, only expurgated editions of Shakspeare were to be found there, and yet room was made on the drawing-room table for the *Mysteries of Paris*, a narration of passions, crime and corruption. Sympathy was excited for a girl sunk in the lowest scenes of infamy, who is finally raised to perfection—another has "been unfortunate, but not guilty," and vice is thus held up for imitation. This book made Sue rich; he purchased a country-seat at Beaugency, and relinquishing his gay life affected to be a Reformer, just as Dumas lavishes money, or Horace Vernet drives a Russian carriage—a sort of puffing advertisement, to attract the attention of the public. With all his pretended sympathy for the lower classes Eugene Sue is notoriously an imperious and severe master, who vents his ill temper upon his domestics.

* * * * *

His next work was the *Wandering Jew*, a long, tedious tissue of improbabilities, soiled from time to time by accounts of orgies and intrigues; the work disappointed the public. There were not as many hundreds sold of the last volume as there were thousands of the first. As for its successor, the *Memoirs of a Valet de Chambre*, I have never seen any one who had read it through.

Sue has a handsomely furnished house at Paris, but of late shuns society, and shuts himself up at Beaugency, where he has a fine country-seat. The grounds are said to be handsomely laid out, and the garden to contain many rare flowers. I never saw Monsieur Sue but once—that was at the office of the Constitutional. He is rather a good looking man, with dark hair, black whiskers framing his face, a piercing eye, and a voluptuous mouth. It was with apparent effort that he sustained a part in conversation; and the cynical view which he took of several topics was that of a satiated Parisian, who looks into his own clouded heart for pictures of life.

Sue has never sat for his portrait, and the engravings of him are from stolen sketches, taken at the theatre or some public place. Mr. Brisbane, of New York, ordered a young American artist who was in Paris year before last, to paint his portrait, and gave him a letter to Sue begging a few sittings. This letter was sent to the romancer, enclosed in one from the artist, who counted on the money he was to receive for the portrait, and stated that his daily bread depended upon it or charity. He never received an answer.

I began this "portrait" with a story, and shall close it with another. Not many months since, Sue used to visit almost daily one of the most fashionable ladies in Paris, Madame de——, and hold forth in her richly furnished boudoir on the condition of the poor.

"Do you ever relieve their distress?" asked Madame de——, at the close of one of these harangues. "To a trifling extent," answered Sue; "but though my gifts are small, they are always cheerfully bestowed—I give one-fourth of my income in alms." That afternoon, as he left the *Cafe de Paris*, where he had been eating a costly dinner, an apparently old woman, clad in rags, prayed for charity. "Go away," was the stern reply. "But I am starving—give me a single copper to purchase bread with." "I will give you in charge to a police officer if you thus annoy me." "You will?" said the beggar; "and yet, Monsieur Eugene Sue, you are the man who writes about the misery of the poor—you are the working man's champion—you are"—"Who are you?" exclaimed Sue. "Madame de——," was the reply, and the disguised lady stepped into her carriage which was in waiting, leaving the novelist to his reflections.

RAILROAD IN THE WEST.—A great Railroad meeting was called at Chicago on the 18th inst., for the purpose of taking into consideration the construction of a Railroad to connect the Upper and Lower Mississippi with the Lakes, and petitioning Congress for a donation of land to aid in that object.

SKETCHES IN THE LIFE OF HONORA SHEPARD. —The life of Honora Shepard has been one of crime for many years (she is now but thirty) and, although often tried at our Sessions courts for her counterfeiting propensities, she has, by her personal beauty, tact, and winning address, managed ever to escape—save only in one instance.—In February, 1843, she was convicted of passing counterfeit money, by a Sessions jury, and sent to Sing Sing for eight years and three months.—Honora—whose maiden name was O'Brien—the whole family from whence she sprang being addicted to a fatal dabbling in forged paper, several of her brothers and a sister, we believe, having been graduates of our State prisons, or those of other States, as was also her husband—was at that time younger than now, and on her way up to Sing Sing, after sentence, she very plainly indicated to Sherif Jones, who had her in charge, her plan of operations. Perfectly acquainted with human nature, she had measured the lady keeper of the institution and laid her plans accordingly. "Just now you keep still," said she, addressing the Sherif, during their ride, "and see how I will work it? I'll be the very devil for the first three weeks, and then I'll let Mrs. Farnham convert me! I'll be as meek and quiet as a lamb! I'll make her think me an angel, and I'll flatter the old woman until she will imagine that she herself is an archangel. Won't I do it? You see I am not going to stay in those stone walls long, now, I tell you." And Honora was right. On the 16th of April, 1845, she was pardoned, through the intercession of Judge Edmonds, Mrs. Farnham, and other mistaken philanthropists, by Governor Wright, and hurried off to the banks of the Mississippi, so that, with her supposed new and praiseworthy resolves, she might commence a new and praiseworthy career. We have no certain information of her course of life out west, but charitably presume that she lived as correct as the frailty of her nature would admit. She corresponded with Mrs. Farnham regularly until a year or so since, and her letters were frequently read before the members of certain philanthropic associations, as a proof of the vast benefit of the societies instituted for the amelioration of the condition of the erring ond unfortunate. Honora was a trump card in all their operations, and was ever referred to as a living proof of the good effects of their organization. The hour of trial came, however, and Honora Shepherd, the reclaimed counterfeiter—the regenerated Magdalen—the once almost irresistible Honora, fell from her high estate, and is again in the clutches of the law! What induced her to re-visit the city, we know not. She had been living in Alton, Ill. and in St. Louis, where, rumor said, her course was tolerably upright for the most of the time during her absence; but about two months since, unable any longer to endure her grievous exile, the once dashing lady convict re-appeared in her former haunts—faithlessly to her benefactors, took to her former criminal calling, and is now in an indisputable road to her former residence at Mount Pleasant. Mrs. Farnham will, no doubt, welcome her with open arms As we before stated, she is now about 30 years old—the traces of her youthful beauty are still discernable, but time and trouble have made sad inroads, and she has lost much of her attractions which were once to her as a shield and buckler against legal proceedings. Honora Shepherd is above the medium height, has an oval face, with dark hair and eyes, and extremely arching eyebrows. She appears somewhat *passe*, but is yet what may be termed a winning woman. She has great powers of language, and well understands the effect of female tears upon judge and jury. She has various *aliases;* her address in the Western States having been, Hannah Shepherd, Ann Forrest, &c. She is the most talented, sagacious, scheming and dangerous female counterfeiter in this country; and, after this present demonstration, any attempt to shield her will be fruitless. Her reform is among the impossibilities of earth.—*N. Y. Globe.*

A Ship on the Ocean.

Some years ago there was published in the *North American Review*, an article on some naval subject—we do not remember precisely what, but it opened with a very fine description of a ship. We were reminded of that description by reading the following which is an extract from an article on the Wonders of the Deep, written for the February number of *Godey's Lady's Book*, by the Rev. JOHN PIERPONT. It is very forcibly written:

That a fabric so gigantic as a first-rate ship, of traffic or of war, framed of ponderous timbers, compacted with bolts and bands of still more ponderous iron, holding in its bosom masses of merchandize, under whose weight strong cars have groaned, and paved streets trembled, or bearing on its decks hosts of armed men, with the thundering armament of a nation—that a fabric thus framed and thus freighted, should float in a fluid, in which, if a man fall, he sinks and is lost, is in itself a wonder. But that such a fabric should traverse oceans, struggling on amid the strife of seas and storms, that it should hold on its way like "a thing of life," nay, like a thing of intellect, a being endued with courage, and stimulated by a high purpose, a traveler that has seen the end of his voyage from the beginning, that goes forth upon it without fear, and completes it as with the feeling of a triumph, is, as it seems to me, a greater wonder still. Let me ask you to stand, as you perhaps have stood, upon the deck of such a ship,

"In the dead waste and middle of the night,"

now in the strong light of the moon, as it looks down upon you between the swelling sails, or now in the deep shadow that the sails throw over you. Hear the majestic thing that bears you, breasting and breaking through the waves that oppose themselves to her march! She is moving on alone, on the top of the world, and through the dread solitude of the sea. Nothing is heard, save, perhaps, the falling back of a wave, that has been showing its white crest to the moon, or, as your ship is ploughing her way, the rushing of the water along her sides. Yet she seems to care for all that she contains, and to watch, while they sleep as sweetly in her bosom as in their own beds at home; and though she sees no convoy to guard her, and no torch-bearer to guide her, she seems as conscious that she is safe as she is confident that she is going right. Is not all this a wonder? Is it not, indeed, *immediately*, one of "the works of the Lord;" nor do we see anything in all creation like this. All the wonderful works that we behold in the sea, or on the shore, are created and made through such instrumentalities and agencies, as to Creative Wisdom seems wise and good; and the coral reef, the beaver's dam, the Grecian temple, and the ship of war, are as strictly parts of creation, and in their respective places as truly works of God, as is the cloud, or the volcano, or the globe. In this view, all works of art are works of nature; for the artist has produced each of them by following the impulses of that nature which has been assigned to him by his Creator; and it is by such considera-

tions as these, that, whether we are contemplating things produced by the medium of lower instrumentalities, or those which have been effected by that of of higher agencies, we are led to exclaim with the apostle, "*All* things are of God!" This ship, then, which travels through the solitary deserts of the sea, is a part of God's great creation, and may be fairly named among the works of the Lord, and enumerated as one of "his wonders in the deep."

Youth and Influence of Washington.—After long years of strife, of repose, and of strife renewed, England and France solemnly agreed to be at Peace. The treaties of Aix la Chapelle had been negotiated by the ablest statesmen of Europe, in the splendid forms of monarchical diplomacy. They believed themselves the arbiters of mankind, the pacificators of the world—reconstructing the colonial system on a basis which should endure for ages—confirming the peace of Europe by the nice adjustment of material forces. At the very time of the Congress of Aix la Chapelle, the woods of Virginia sheltered the youthful George Washington, the son of a widow.—Born by the side of the Potomac, beneath the roof of a Westmoreland farmer, almost from infancy his lot had been the lot of an orphan. No academy had welcomed him to its shades, nor college crowned him with its honors: to read, to write, to cipher—these had been his degrees in knowledge. And now, at sixteen years of age, in quest of an honest maintenance, encountering intolerable toil; cheered onward by being able to write to a schoolboy friend, "Dear Richard, a doubloon is my constant gain every day, and sometimes six pistoles;" "himself his own cook, having no spit but a forked stick, no plate but a large chip;" roaming over spurs of the Alleghanies, and along the banks of the Shenandoah; alive to nature, and sometimes spending the best of the day in admiring the trees and richness of the land; among skin-clad savages, with their scalps and rattles, or uncouth emigrants, that would never speak English; rarely sleeping in a bed; holding a bearskin a splendid couch; glad of a resting place for the night upon a little hay, straw, or fodder, and often camping in the forests, where the place nearest the fire was a happy luxury—this stripling surveyor in the woods, with no companion but his unlettered associates, and no implements of science but his compass and chain, contrasted strangely with the imperial magnificence of the Congress of Aix la Chapelle. And yet God had selected, not Kaunitz, nor Newcastle, not a monarch of the house of Hapsburg, nor of Hanover, but the Virginia stripling, to give an impulse to human affairs, and, as far as events can depend on an individual, had placed the rights and the destinies of countless millions in the keeping of the widow's son.—*Bancroft.*

The Beggars of Paris.—Begging being prohibited, innumerable artifices are in use to evade the law. In the portals of the churches, old men and women sit with a brush wet with holy water, and expect a sou or two for their trouble. On the bridge called Pont des Arts, sits a blind old woman, with a roll or two of pencils before her. Give her a sou, and take or leave a pencil, as you please. She prefers the latter. Sometimes one is accosted a dozen times an hour by persons, who have a paper-cutter, which they pray you to buy for the love of Heaven, and in mercy for many starving wives and children at home.—Hand-organs, wonderful infantine prodigies, who play marvellously on wretched fiddles and harps, accompanying their instrumentation with voices, calling on the spirits of the high notes of a song, but which refuse to come when called. A few days ago, in the court of a respectable house, I heard a strange noise, which no fancy in fine frenzy rolling on my part was able to manufacture into music. On examination, I found it was a man who owned good lungs, if he had no ear. Unable to procure a crank-going instrument, and lacking skill to perform on any other, he had got a French horn, and through this he was blowing a hurricane, till the occupants of the chambers should be willing to capitulate.—*Old Wine in New Bottles.*

Courage in Women.—There is a branch of general education which is not thought at all necessary for women; as regards which, indeed, it is well if they are not brought up to cultivate the opposite. Women are not taught to be courageous. Indeed to some persons, courage may seem as unnecessary for women as Latin and Greek. Yet there are few things that would tend to make women happier in themselves, and more acceptable to those with whom they live, than courage. There are many women of the present day, sensible women in other things, whose panic terrors are a frequent source of discomfort to themselves and those around them. Now, it is a great mistake to imagine that hardness must go with courage; and that the bloom of gentleness and sympathy must all be rubbed off by that vigor of mind which gives presence of mind, enables a person to be useful in peril, and makes the desire to assist overcome that sickliness of sensibility which can only contemplate distress and difficulty. So far from courage being unfeminine there is a peculiar grace and dignity in those beings who have little active powers of attack or defence, passing through danger with a moral courage which is equal to that of the strongest. We see this in great things. We perfectly appreciate the sweet and noble dignity of an Anne Bullen, a Mary Queen of Scotts, or a Marie Antoinette. We see that it is grand for these delicately bred, high-nurtured, helpless personages to meet death with a silence and a confidence like his own. But there would be a similar dignity in women's bearing small terrors with fortitude. There is no beauty in fear. It is a mean, ugly, dishevelled creature. No statue can be made of it that a woman would wish to see herself like. Women are pre-eminent in steady endurance of tiresome suffering: they need not be far behind men in a becoming courage to meet that which is sudden and sharp. The dangers and the troubles, too, which we may venture to say they now start at unreasonably, are many of them mere creatures of the imagination—such as, in their way, disturb high-mettled animals brought up to see too little, and therefore frightened at any leaf blown across the road. We may be quite sure that without losing any of the most delicate and refined of feminine graces, women may be taught not to give way to unreasonable fears, which should belong no more to the fragile than the robust.—*Friends in Council.*

Knowledge.—One of the most agreeable consequences of knowledge is the respect and importance which it communicates to old age. Men rise in character often as they increase in years: they are venerable from what they have acquired, and pleasing from what they can impart. With uneducated women when youth is gone, all is gone. A woman must talk wisely or look well. Every human being must put up with the coldest civility, who has neither the charms of youth, nor the wisdom of age.—*Sidney Smith.*

For the Western Literary Messenger.

The Modern Eve.

From the German of Langbein.
BY HORATIO GATES.

"Heavens! why should we fare so cruel,
Like the pack-horse toiling round,
Sawing logs and splitting fuel,
Till the sweat falls to the ground:
We, with every good believer,
Might have dwelt in Eden now,
Had Eve, spurning the deceiver,
Left the apple on the bough.

"Fond am I, as wives in common,
Of sweet fruits, in proper season,
But I'm not so weak a woman
As was Eve—so void of reason!"
So said Betty, grieved in spirit,
To her Walter—good old man—
But a rich one chanced to hear it,
And to chide he thus began:—

"Mother! prove before you censure,—
And your foolish boast recall:
If the same lot you should venture,
Much I fear you, too, would fall—
Yes; would fall like her! But, mind you,
For the trial come with me,—
Cast your saw and axe behind you,
And try boldly: we shall see!"

Well—she promised not to falter;—
And as glad as fish in brook,
Good old Betsy and her Walter,
Went the path the rich man took:
There he gave them room and bedding,
The best chamber in his hall;—
"Good folks,—here's no need of treading
Poor Eve's false steps to her fall.

"Daily shall my servants treat ye—
Seven rich dishes cooked to hand:
Of the six, unstinted, eat ye;
Let the seventh uncovered stand.
Happiness, concealed within it,
Will not bear the touch or light.
Lift the cover, and that minute
Happiness will take its flight."

In this Eden, Bet and Walter
Bore their comforts well and free:
But the eight day—(thus to falter!)
Mad with curiosity,—
"Daddy! how my fingers tickle!
Oh how strange! now don't you wish
Just to peep into the victual
Under that forbidden dish?"

"Hush!" said he; "will you give over
Ease and happiness, and all?
Lift but that forbidden cover,
And like Eve we surely fall!
Do you seek a lot as cruel
As a pack-horse, wandering round
Sawing logs and splitting fuel,
Till your sweat shall reach the ground?"

But his lecture was unheeded—
Betsy could not change her will:
More than Eve's restraint was needed
But to keep her fingers still.
Curiosity—the devil—
Tempted her to raise the lid,—
And a mouse,—not even so civil
As to thank her,—fled and hid.

Oh, what wringing hands and crying!
But it brought not back the mouse,
He—(and Eden, too,)—were flying
To his own deserted house.

Soon the patron learned the story
Of the prisoner's release,
And, in Eden's fading glory,
Bade them leave his house in peace.

Forth they shrunk—borne down with sorrow—
Through their Paradise's gate,
And, with tears, looked for to-morrow,
Toiling in their former state.
And as Walter walked behind her,
Thus he gave his spouse a hit:
"Any fool can be fault-finder,—
But will seldom purchase wit."

BUFFALO, January 31, 1848.

For the Western Literary Messenger

The Prose Writers of America.*

BY THE EDITOR.

Without literature a nation cannot be truly and permanently great. Her poets, her historians and her philosophers are the luminaries by which she is seen from afar, and which give elevation, splendor and glory to her name. Take from Greece a few such names as Homer, Thucydides, and Plato; from Rome such as Virgil, Sallust, Cicero and Polybius; from modern Italy such as Dante, Tasso, Lionardo, and Poggio Bracciolini; from Portugal such as Camoens, Barros, and Lobo; from Spain such as Herrera, Calderon and Cervantes; from France such as Corneille, Fenelon, Guizot and Laplace; from Germany such as Schiller, Goethe, Tholuck and Kant; and from Britain such as Shakspeare, Milton, Hume and Bacon; and how little of true greatness would attach to these several nations.

Depending on its literature for laudable fame and in a measure for the perpetuity of its institutions, with what interest should a young nation watch its rise and progress in her midst. How great the responsibility, how important the duty of the citizens of this—we are proud to say—"*Model* Republic." Of greatness in action, heroism of spirit, energy of character and the genius of invention, no nation can boast more than ours: we have but to strengthen the growth, encourage the nationality and preserve the purity of our *literature*, and we shall soon have no superior in any thing that gives honor and true glory to a people.

What the condition of American Literature *is*, and what are its *prospects*, may be readily seen in its concise yet comprehensive "survey," by Dr. Griswold. This work will be examined by thousands with pride and by multiples of that number with surprise. It shows that more has been done than many of our own people expected, or than could be reasonably looked for by other nations, when they consider the age of this Republic. In theology the writings of Edwards, Dwight and Barnes; in history those of Prescott, Bancroft and Sparks; in biography those of Marshall, Wirt and Wheaton; in politics and jurisprudence those of Jefferson, Hamilton, Madison, Jay, Story and Kent; in philology, philosophy and science, those

* The Prose writers of America; with a survey of the history, condition, and prospects of American Literature. By Rufus Wilmot Griswold. Illustrated with portraits and original pictures. Philadelphia: Carey and Hart. 1847.

of Noah Webster, Franklin, Bowditch, Silliman Hitchcock, Audubonand Wayland; in forensic debate those of Webster and Calhoun; in poetry those of Bryant, Halleck, Dana and Longfellow; in romance those of Cooper, Paulding, Bird and Miss Sedgwick, and in general literature those of Irving, Hawthorne, Brown, Poe, Sanderson, Stephens, Willis, Hoffman, the Neals, Mrs. Child, Mrs. Kirkland and many others, are amongst the standard works in our language; and no inconsiderable portion of them have been translated into German and most of the languages of Southern Europe.

Jonathan Edwards has been pronounced by Dr. Chalmers, "the greatest of theologians," and Sir James Mackintosh affirms of him that "in power of subtile argument he was perhaps unmatched, certainly was unsurpassed among men." Of the three historians mentioned above, Frederick Von Raumer says "that they have effected so much in historical composition, that no living European historian can take precedence of them, but rather might feel proud and grateful to be admitted as a companion." Lord Brougham says that the genius of Franklin "ranks him with the Galileos and the Newtons of the old world." Professor Wilson considers Audubon as "the greatest artist in his own walk that ever lived," and Cuvier pronounced his works "the most splendid monuments which art has erected in honor of Ornithology. "In noticing Mr. Cooper's novels, a writer in the Edinburgh Review says:—"The empire of the sea has been conceded to him by acclamation: in the lonely desert or untrodden prairie, among the savage Indians or scarcely less savage settlers, all equally acknowledge his dominion. 'Within this circle none dare walk but he.'"

Dr. Griswold does ample justice to Washington Irving, a name of which we feel more proud than of any other American writer. From a sketch of five pages devoted to an enumeration and criticism of his works, in the book under notice, we make the following extract as a specimen of Dr. Griswold's style and his critical acumen:

"Mr. Irving has a genuine poetical temperament, and unites to a peculiar sensibility to beauty, in all its manifestations, a quick observation of the follies of society, which he has the art of setting in the most comic and whimsical point of view, without ever sacrificing his refinement or delicacy. His humor is bold, original, and indiginous, but never offends the most fastidious by unchasteness or vulgarity. He has a great deal of common sense, and the most perfect candor; and as the true course is usually the middle one, and calls for no special subserviency or acrimony, his tone, which is manly, though gentle, conciliates all, while it shuts him from the sympathies of none. He has a very great variety of scenes and characters, to all of which his manner is adapted with singular skill and felicity. It would scarcely be supposed that the Spanish history, the English essay, and the American legend, were by one author, or the Fray Antonio Agapida, Geoffrey Crayon, and Diedrich Knickerbocker, had ever even read each other's works.

"His style has the ease and purity and more than the grace and polish of Franklin; without the intensity of Brown, the compactness of Calhoun, or the strength and splendor of Webster,—American authors who preceded him, or were in the strictest sense his contemplations. His words are selected with the most careful taste, and so arranged as to produce the effect of finished versification. He is not always correct: such unauthorized forms as "*from* thence," and others, occur frequently, and evince more regard for a nice modulation than for perfect grammatical accuracy; but his variously constructed periods, his remarkable elegance, sustained sweetness, and distinct and delicate painting, place him in the very front rank of the masters of our language. It may be said of him, that in whatever he has proposed to himself to do, he has been among the most successful of all authors."

The question, "who reads an American book," impudently asked by a British reviewer a few years since, has, we suppose, become obsolete. Foreign writers, as we have shown, praise our authors: hence we conclude they read their works. While our prose writers—and these alone we are mainly noticing—continue their present course, they are worthy of enthusiastic admiration at home and respect, at least, abroad. They have learned to think for themselves, and to despise English *models*; most of them are strictly American both in thought and expression; and understanding our necessities and sensible of our resources, they are rearing a national literature of which we may already be proud, and which, from the character of our institutions, will expand with our dominions, and be likely to assume the grandeur and stability of our mountains.

Dr. Griswold seems to have performed this work as a "labor of love," and he has certainly done it well. It exhibits extensive research; the profoundest knowledge of bibliography; perfect honesty of purpose; a candid, fearless, independent and patriotic spirit; the most cultivated taste and the highest abilities as a critic. We can think of no man in America who could have performed the task better; and let him have the hearty thanks of his countrymen for so rich and servicable a contribution to our literature.

For sale by Derby and Hewson.

For the Western Literary Messenger

The Family Jewel.

BY J. CLEMENT.

Radiant little household treasure,
Magnet of the ingle side!
Not a star in night's broad cluster
Shines with softer, purer lustre,
Fondest parents' hope and pride!

Words, though passion-lit, and burning,
Might not breathe the joy they feel
That their lives, in one united,
By thy smiles are daily lighted,
Love connubial's golden seal!

Pure as in thy primal setting
In thy parents' love enshrined,
Be thou long their spotless treasure,
Source of hope and sacred pleasure,
Pearl of truth, by grace refined.

Then shall He, the great Refiner,
When, ere long, his eye shall roam
Through the earth for "jewels," beaming
Fresh in light from glory streaming,
Snatch thee to his bosom home.

Rural Department.

Encouragement to young Farmers.

At the Cattle Show in Waldo county, a few days since, we made the acquaintance of an aged nd agreeable farmer, William Sibley, Esq., of Freedom, who is now one of the wealthiest farmers in that county, and who raises a large quantity of good table fruit, which he ships to foreign markets. His case furnishes much encouragement to young farmers in Maine, and we allude to it and give a few incidents in his life for their benefit.

Forty-five years since he made his way by means of spotted trees to his present home, there to make him a farm. His humble house, with its roof of bark, was constructed. and thither he took his wife to share his burthens and lighten his pathway by her smiles. As he first went through the woods to commence upon his present farm, he was not worth enough to pay for an axe. He has raised forty-four crops, and since his first crop he has not had in his house a quart of meal or a pound of flour not raised upon his own farm. He has in some seasons raised 500 bushels of corn and large crops of wheat. He made preparations for raising fruit, and has succeeded finely, and is still active in introducing into his acres the choicest varieties of fruits. He has given his children a good literary and a good business education, and they severally reflect high credit upon their parents. His property is now estimated at about twenty thousand dollars.

Mr. Sibley was one of the active contributors to the Fair, exhibited various specimens of fruit, &c., and manifested great interest in all that seemed calculated to advance the noble art to which he has devoted his life. He is a man of active habits and sound health, and is a worthy example of what farmers can do when they unite an active mind with an industrious hand in their pursuit, and where the culture of the soil and of the mind go forward together.

It may be thought that we have trespassed too much upon the personal history of Mr. Sibley, but our excuse must be found in the encouragement which is given to young farmers who are about commencing life as he did. For this purpose we think it well occasionally to point out the success of those who have gone forward in the thorny path, and from small beginnings, by their industry and skill have accomplished that which is praiseworthy and honorable.—*Bangor Whig.*

The Hog Concerto.—Gottfried Pepusch, leader of the band of oboe-players of the grenadier regiment in Pottsdam, having, on occasion of some circumstances that occurred in the king's smoking club, taken it into his head to compose a piece for six bassoons, which were called *porco primo, porco secondo,* &c., the king was much surprised at this conceit, and had the music performed several times, always laughing heartily at it. The crown prince, (afterwards Frederick the Great) came just at this time to Pottsdam, and as he disliked bass instruments, (the flute being his favorite, and on which he performed himself) and having a more refined taste in music, there were many jokes among his companions at this court about this piece.

One day, Pepusch crossing the parade while the prince was exercising his regiment, the latter called him, and said, with feigned seriousness, he had heard that he had composed a fine piece of music in six parts, and begged him to have it performed that afternoon in his apartments. Pepusch would have excused himself, saying it was a trifle, but the prince would take no denial.

In the afternoon accordingly, a large company was assembled at the prince's to hear the music and laugh at the composer. Pepusch made his appearance, accompanied by six of his band, and with great gravity spread his music on the desks, and when all six were full, he looked round as if in quest of something, holding another sheet of music in his hand. Little expecting the trap he had fallen into, the prince enquired if he was looking for anything? 'There is a desk wanting,' said the musician. 'Surely not,' said the prince, smiling, 'I thought there was only *six hogs*, in your music.' 'That was right up to this morning,' said Pepusch, 'but since then, in honor of your highness's commands, a *sucking pig* has been added, *Flauto solo !*'

Prince Frederick entered into the joke, though at his expense, and speaking of the manœuvre to Quantz, he added, laughing—"the old fellow completely took me in, and I was obliged to sooth him with fair words not to produce the "sucking pig" before my father.'—*Forster's Life of Frederick William I. of Prussia.*

Marrying Cousins.—Mr. Fowler, in his work on "hereditary descent," has a frightful catalogue of facts to show the evil consequences of marrying blood relations. We give a short extract:

C. W. has six children by his cousin, one boy and five girls; of whom three are deaf and dumb.

The King of Hanover, cousin of Victoria, and the offspring of cousins, is blind.

The noble families of the old world are fast running out, and their deterioration is generally ascribed to their aristocratic custom of marrying blood relations. It is doubtful whether the present royal nurslings of Albert and Victoria will ever astonish the world by their talents.

Mr. B. Meredith, of New Hampshire, married his cousin, and had eight children, four of whom are dead; one kept his cradle till he was five years old, when he died; three had moderate capacities; two are complete idiots; and one, the only bright one of the eight, has no legs, and only a stub of the right arm. Mr. B. by a second marriage, had two bright children.

Mr. N. and his cousin, both intelligent, married, and out of seven children three were crazy, two flats and simpletons, one barely passable, and one fair.

D. H.'s parents were cousins, and two of his brothers became blind young, while he had a small head and causality, and a sluggish organization.

W. G. of S——, Massachusetts, brother of Professor G. of New Hampshire, married his cousin, and all his children are lame, or some way out of joint.

Mr. B., a man of considerable sagacity, lived as a husband with his niece; and his children, numbering some eight or ten, were much inferior, physically and mentally, to either of the parents. Four were helpless, and two, a male and female, had uncommonly large but diseased heads. The male's measured about 36 inches in circumference, the female's a trifle less.

Mr. Foster, Teacher in the Deaf and Dumb Asylum of Philadelphia, says that of seven children of first cousins whom he knew, six were idiots, and one mute, but smart; and of another family, two were mute idiots, and three mute, but smart.

J. CLEMENT, EDITOR.

Letters on Chemistry.

CHEMISTRY, *and its application to Physiology, Agriculture, and Commerce.* By PROFESSOR LIEBIG. New York: Fowlers and Wells. 1848.

This is a work interesting and useful alike to the farmer, the manufacturer and the mechanic. It shows the importance of a knowledge of chemistry in these departments of labor; and imparts, in the familiar and modest style of letters, a vast amount of practical knowledge. The edition before us has been carefully revised by JOHN GARDNER, M. D., is printed on good material; and is offered, in paper covers, for the low price of twenty cents. The following extract touching the manufacture of soda will be found of peculiar interest:

The manufacture of soda from common culinary salt, may be regarded as the foundation of all our modern improvements in the domestic arts; and we may take it as affording an excellent illustration of the dependence of the various branches of human industry and commerce upon each other, and their relation to chemistry.

Soda has been used from time immemorial in the manufacture of soap and glass, two chemical productions which employ an immense amount of capital. The quantity of soap consumed by a nation would be no inaccurate measure whereby to estimate its wealth and civilization. Of two countries with an equal amount of population, the wealthiest and most highly civilized will consume the greatest weight of soap. This consumption does not subserve sensual gratification, nor depend upon fashion, but upon the feeling of the beauty, comfort, and welfare, attendants upon cleanliness; and a regard to this feeling is coincident with wealth and civilization. The rich in the middle ages concealed a want of cleanliness in their clothes and persons, under a profusion of costly scents and essences, while they were more luxurious in eating and drinking, in apparel and horses. With us a want of cleanliness is equivalent to insupportable misery and misfortune.

Soap belongs to those manufactured products, the money value of which continually disappears from circulation, and requires to be continually renewed. It is one of the few substances which are entirely consumed by use, leaving no product of any worth. Broken glass and bottles are by no means useless; for rags we may purchase new cloth, but soap-water has no value whatever. It would be interesting to know accurately the amount of capital involved in the manufacture of soap; it is certainly as large as that employed in the coffee trade, with this important difference as respects Germany, that it is entirely derived from our own soil. France formerly imported soda from Spain, Spanish soda being of the best quality, at an annual expenditure of twenty to thirty millions of francs. During the war with England, the price of soda, and consequently of soap and glass, rose continually, and all manufactures suffered in consequence.

The present method of making soda from common salt was discovered by Le Blanc at the end of the last century. It was a rich boon for France, and became of the highest importance during the war of Napoleon. In a very short time it was manufactured to an extraordinary extent, especially at the seat of the soap manufactories. Marseilles possessed for a time a monopoly of soda and soap. The policy of Napoleon deprived that city of the advantages derived from this great source of commerce, and thus excited the hostility of the population to his dynasty, which became favorable to the restoration of the Bourbons. A curious result of an improvement in a chemical manufacture.

Other passages are marked for insertion at a future period. The work is for sale by Hawks.

TO READERS AND CORRESPONDENTS.—We trust the present will be an acceptable issue. Some improvement will be seen in the mechanical department; and the literary matter will speak for itself. We have only to say in regard to it that the original poem by Mrs. SIGOURNEY, is one of her many happy efforts; that the "*Scene in the Inner Temple,*" displays great power of imagination, and that the selected story, "*It Grows as it Goes,*" is one of the best articles in the Union Magazine for this month.

Our thanks are due to Mrs. SIGOURNEY, Mrs. EAMES, Miss HENDEE, Mrs. EDMOND, Mrs. CHAMBERLAIN, Messrs. HOSMER, ROCKWELL, KENDRICK and all others who have contributed of late to the Messenger; and we solicit a continuation of their favors.

Correspondents will oblige us by writing their articles on separate sheets of paper. We sometimes get two poems on the same half sheet, which has subjected us to some trouble in one or two instances. Three or four half sheets can be put in one envelope without inconvenience.

"*A Sketch,*" "*Lines,*" "*Elgiva,*" "*Song,*" and "*The Reformer and the Conquer,*" will have an early insertion. Who is the author of the long mislaid poem, "*The Mystic Star?*"

DEATH OF HON. GEORGE P. BARKER.—Just after our paper went to press last week on Thursday, the Hon. George P. Barker of this city, breathed his last. He was one of the most conspicuous politicians and ablest men in Western New-York. His funeral, which took place on Monday at the North Presbyterian church, was attended by a vast concourse of his fellow citizens, who sought in this way, to pay their respect to the gifted dead. An able discourse was delivered on the occasion, by Dr. LORD.

ST. JOHN'S (THE NEW EPISCOPAL) CHURCH, the most magnificent structure in this city, located at the corner of Washington and Swan streets, is completed, and was opened last Sabbath for religious services. It is built of gray lime stone; is of the Gothic style of architecture; and is 134 by 82 feet on the ground. The tower is 151 feet high. Rev. MONTGOMERY SCHUYLER is the pastor.

RIGHT SMART.—A lady in Chautauque Co., has sent us a club of eight subscribers accompanied with ten dollars, for which she chose, as her premium, *Frost's Pictorial Wonders of the World.* How many other ladies will "do likewise?" They can have two months in which to try.

THE DEAD OF 1847.—The following is an abridged list of the names of conspicuous individuals who died in 1847. Among them will be noticed several of the best American writers. Kent, Wilde, A. H. Everett, Colton, Neal, W. B. O. Peabody, etc., were *scholars* and men of genius.

Hon. James Kent, chief justice and chancellor of New York, author of the celebrated commentaries. Hon. Silas Wright, senator U. S., and Governor of N. Y. Chancellor Harper, S. C.; Hon. Richard H. Wilde, Lou., formerly M. C., Geo., Poet and Author of Distinction; George H. Proffit, M. C., In., Ex-Minister to Brazil; Alexander H. Everett, Minister to China; Richard Biddle, Pa; Joseph C. Neal, author of "Charcoal Sketches;" A. D. Patterson, Editor Anglo American; A. A. Phelps, Editor National Era; Thomas Newton, for thirty years a member of Congress, Va.; Professor Fiske, Amherst College; George H. Colton, Editor Whig Review; W. B. O. Peabody, Poet; Timothy Clowes, LL. D.; Peter R. Livingston, N. Y.; George Rapp, founder of Economy, Pa.; Peter G. Stuyvesant, N. Y.; Rev. Dr. Codman, Mass., a distinguished Presbyterian Divine; Hon. John Fairfield, Ex-Governor and U. S. Senator from Maine.

THE REV. CHARLES RICH, pastor of the North Presbyterian Church, was installed on the 27th ult. The sermon on the occasion, delivered by the Rev. G. W. HEACOCK of the Lafayette street church, is spoken of in high terms.

The new edifice where Mr. R.'s congregation worship, is a very large and elegant brick structure; and we are happy to learn that the society is in a prosperous condition.

LECTURES TO YOUNG PEOPLE.—A series of lectures, addressed to young people, is being delivered in this city. The first was given on Thursday evening at the Washington Street Baptist Church, by Dr. LORD. The next will be given by Dr. TUCKER, on Thursday evening of next week, at the North Presbyterian Church. We sincerely hope that the class of community for whose especial interest the series is designed, will be constant in their attendance.

REVIVAL IN BUFFALO.—There is a revival in the Methodist Episcopal Church on Niagara st.; in the Cottage Baptist Church; and in the Lafayette street Presbyterian Church. In the last two the work has just commenced, and though devoid of excitement, it is deep and bids fair to be powerful and extensive. Three or four—perhaps more—in each, give evidence of a change of heart; and others are in an enquiring state of mind.

PICTORIAL HISTORY OF ENGLAND. Harper and Brothers: New-York. Complete in about forty numbers. No. 37.

The last number issued of this great work, brings the history down to the eighteenth century. It contains, as the numbers usually do, several well executed and valuable embellishments. For sale by Hawks.

INTRODUCTION TO THE SCIENCE OF GOVERNMENT; and compend of the Constitution and Civil Jurisprudence of the United States. With a brief treatise on Political Economy. By ANDREW W. YOUNG. Fourteenth edition—Revised.—Buffalo: Derby and Hewson. 1848.

This book is designed and admirably adapted for the use of families and schools, and the fact that it has run through thirteen editions, speaks well for its usefulness. The work is divided into four parts, which treat of the principles of Government; the Government of the United States; Civil Jurisprudence of the United States, and Political Economy. This edition is from the press of JEWETT, THOMAS and Co, and in the language of the new publishers, "has been made to appear in a superior style, and in a more attractive form than former editions."

For sale by Derby and Hewson of this city and by book sellers generally.

NOW AND THEN: By Samuel Warren, F. R. S. New-York: Harper and Brothers. 1848.

A quaint title to a very interesting novel, which we would recommend all, including the most *fastidious* christian, to read. The style is chaste; the narative interesting; and the impression left upon the mind, highly salutary. Mr. Warren is known far and wide as the author of "Ten Thousand a Year," and "The Diary of a late Physician." Now and Then can be had of Hawks, in two parts for twenty five cents each, or in one elegantly bound volume, for seventy-five cents.

THE COLUMBIAN MAGAZINE for this month looks interesting, though we have not had time to examine it thoroughly. It has two excellent embellishments, "*Wordsworth*" and "*Antiock on the approach from Suadeak.*"

THE LITERARY WORLD, by far the best "gazette for authors, readers and publishers," in the United States, has just complete the first volume. It is published in New-York, at $3 per annum. C. F. HOFFMAN, ESQ., editor.

FIRES.—A fire broke out in the Sidway block on the creek, in that part occupied by Tiffany and Lockwood, a little before one o'clock on the morning of the 28th ult., but owing to the promptness and efficiency of our alert firemen the damage done was not extensive. All losses were covered by insurance.

Another occurred on Monday night, on Pine street near Swan, destroying the house occupied by Cross, the "popped-corn candy" man. It was a very cold night, and the corn, we are told, "popped" beautifully.

ETIQUETTE.—The editor of the Philadelphia *Evening Post* says that "if a gentleman attends a lady to an assembly, he not only has a right, but is bound in courtesy, to take a seat next to her, and there remain during the evening." So we think. It is n't *wicked* to do so, *except on Sundays!*

AGENTS WANTED.—The publishers of this paper wish for a good local agent in each of the towns where we are now sending copies. Persons willing to act and who will interest themselves in the work, shall receive ample encouragement by addressing us a line. Our patrons who are in arrears will oblige us by making remittances without delay. The Editor, who has been accustomed heretofore to travel much of the time, will hereafter devote himself more particularly to the literary interest of the paper, and will aim to elevate its character still higher. If our friends in the country will be prompt in their payments and aid in the circulation of the Messenger, they shall have a paper of which they may feel proud.

PARDONED.—Governor Young has pardoned "JOCKEY WOOD," who is well known—*too* well known to our citizens; and also POLLOCK, who attempted to take the life of Mr. JEWETT, last summer, and who was sentenced to Auburn State Prison for the term of five years.

We send this number of the Messenger to a few individuals who have never encouraged the work, for their examination. Should they wish to become subscribers, they will please apprise us of the fact.

MADISON UNIVERSITY.—The catalogue of this institution for 1847-8, exhibits the following summary: Theological department, 41; Undergraduates, 140; Grammar school, 35; total 216.

☞ FUNERALS.—One sincere regret or feeling of respect for the departed is worth more than all the pomp and pageantry of woe that has been since the world began—and so the dead must think if they are permitted to behold the events passing on earth. We hear of some singular instances in which persons have ridden to Black Rock in carriages provided for funerals, and when there, instead of attending the appropriate services spent their time in the comfortable occupation of visiting their living and chatty friends; and a worthy Justice of the Peace tells us that he knows of some children so much accustomed to enjoy a cheap ride on these occasions that they look forward to a death in their neighborhood as a season of especial festivity.

RAILROADS &C. FROM MILWAUKEE TO NEW YORK.—The rate of travelling on Railroads between Buffalo and New York may be expected soon to attain the maximum at which cars run on any Railroad. Gov. Young's message was carried on the Schenectady & Utica Railroad (78 miles) in 2 hours and 1 minute, and the first 43 miles were run at the rate of nearly 50 miles an hour. When the heavy rail is laid down the whole distance between this place and Albany, as is expected will be the case during the present year, the whole distance can be performed in 10 instead of 24 hours.

The "*Daily Wisconsin*" makes the following calculation, and expects that the works to which it refers will be fully completed in the course of four years:

When the *Canada* Railroad is completed to Detroit, and the *Michigan Central* Railroad to New Buffalo, with a fast steamer to cross the Lakes, Milwaukee will be but 50 hours from New York. The *Hudson river* Railway now building, and to be finished in 1849, will reduce the time between New York and Albany at all seasons of the year, to five hours.

The time of the route will be thus divided:
5 hours from New York to Albany.
1 hour detention there.
10 hours to Buffalo.
2 hours there or at Niagara.
10 hours on Canada Railway.
1 in Detroit.
9 on Michigan Central.
10 hours for Steamer from New Buffalo to Milwaukee.
48 hours for whole distance, leaving two hours for contingencies.

TORONTO, February 1st, 1848.

GREAT FIRE!—About twenty minutes past one this morning the alarm of fire was given through the city, the seat of which proved to be in the block bounded on the north by Colborne, on the west by Church, and on the south by Colborne and Front streets.

From some mismanagement, access could not be had to the belfry, and, in consequence, the fire had made great headway before the arrival of the engines at the scene of conflagration. On arrival, the best exertions of the Fire Department were given to stay the progress of the fire, and these were crowned with success, but not until the whole block, with the exception of the south-eastern angle, was destroyed. We note the destruction of 23 houses, of which some 16 or 17 were taverns. Among those destroyed are the "Edinburgh Castle,"—"Prince of Wales,"—the "Royal Standard,"—the "Exchange,"—"Renney's Hotel,"—the "Sir John Moore,"—the "Royal Saloon,"—the "Tam O'Shanter,"—the "Lion,"—and other taverns.

We have no means of estimating the loss, nor can we learn who were insured. The houses, we have reason to believe, were not covered by any insurance, with one or two exceptions.—*Com. Adv.*

☞ A meeting has lately been convened at Lockport, and a plan was submitted for a road from Niagara Falls to Rochester, intersecting the Tonawanda Road at Byron. The Lockport *Courier* advocates the construction of a line running along the Canal or Ridge route and connecting directly with the eastern road at Rochester.

SUICIDE.—Last evening, about 10 o'clock, R. Kewin, a carpenter by trade, residing at the corner of Lydius and Dallius streets, being intoxicated, threatened death to every member of his family. With razor in hand, he went about attempting to put his threat into execution, when his family became alarmed, and cried for help.—The Night Police being near at hand, immediately came to their rescue by bursting in the door of the house, but before they could get within reach of the maniac, he, instead of killing others, cut his own throat with a razor, and expired almost instantly.—*Alb. Eve. Journal.*

Arrival of the Acadia.

NEW YORK, Feb. 2—11½ A. M.

LIVERPOOL MARKETS, Jan. 14.

There is a limited demand for most articles of the trade. Western canal flour less demand; Indian corn and Indian corn meal but little inquiry. On the 7th inst. best samples of wheat and choice superfine flour maintained previous rates.

Yesterday, January 14th, wheat was 2d to 3d per 70 lbs. Flour, 6d per bbl. Indian Corn, 1s to 2s per quarter, and Indian Meal 1s per barrel cheaper than on the 11th inst. Bacon as well as Middles are dull—prices 30s to 40s per cwt., according to quality. Hams are not in request.

All other articles turned in favor of buyers. Superior brands American flour merely sustained 29s 6d to 30s per bbl. Indian meal declined further today. Quotations 2s per quarter and 1s per bbl. below terms this day week.

Lard moves off slowly at 60 to 65s per keg, and 59s to 60s in bbls. Transactions in beef, limited demand quite good, and fine 50s to 56s, and inferior and middling 30s to 45s.

Cotton without change—tendency downward. Money market favorable. Some farther failures.

NEW YORK, Feb. 2—3 P. M.

The news by the Acadia is not important. Farther failures in London, Glasgow, and on the Continent

The prices of stocks had advanced. Consols rose from 85 3-8 to 85 3 4. The Bank of England held over 12 millions in coin and bullion, and the money was easier.

The Princess ADELAIDE, sister of the King of France, is dead.

The ship *Helen McNab*, of and from Dundee to New York, went on shore on the 15th Dec., near North Ronaldshay. Six persons reported drowned.

Her Majesty's steam frigate *Avenger* lost off the Northern coast of Africa. 270 persons on board, all of whom it is feared were drowned excepting a Lieutenant and four men. Vessel commanded by a son of Admiral NAPIER.

Specie continues to arrive in London from various parts of the world. There was but little diminution in the extent and nature of crime in Ireland. The agrarian outrages have extended to the north of Ireland. The distress in the south and west was becoming daily more severe.

Abdel Kader has surrendered to the Duc Daumala at Algeria.

The Queen of Spain is in a most critical state, expected to be fatal.

A farther reduction of the army of occupation of Switzerland has been ordered. Austria, Prussia and France have determined to demand the withdrawal of the troops from the different Cantons, and to restore their independency.

Pius IX, progresses with his constitutional reforms to the great satisfaction of his subjects.—An immediate revolt was expected in Naples.

Reports of a collision between the military and the people at Milan, are confirmed. A sanguinary massacre has taken place.

DANGEROUS COUNTERFEITS.—We copied, a short time since, a notice of a counterfeit quarter eagle, purporting to be of the New Orleans mint, dated 1843, and so admirably executed that the best judges in New York pronounced it genuine, and even at the mint in Philadelphia, where it was submitted to the usual tests, it was thought to be good. Upon being sawed in two, however, it was discovered to be a mere shell of gold, the interior being filled with silver, or more probably an amalgam of siver and platina, as its specific gravity was equal to gold.

Counterfeit silver coin, scarcely less perfectly executed, has lately been detected in Cincinnati. The *Gazette* of that city says:

We were shown a few days ago, a couple of counterfeit Mexican dollars, which were paid out at one of the Banks in this city, to a broker, who received them without any suspicion as to their genuineness, and discovered their true character rather by accident than otherwise. In appearance they are fac similes of the genuine coin, in weight neither deficient nor too heavy, and in ring so true as to excite suspicion in only the most practiced ear, and even then a suspicion which would be quite as likely to vanish as to lead to further trial. The aquafortis, and all other tests commonly applied in banks, they set at defiance. This counterfeit consists of a thin silver case, a head and a tail part, joined together at the edges so nicely as to prevent detection, filled in with copper. The only way of detecting counterfeits of this kind is by the file, and that must be applied to every piece separately. A matter of very pleasant contemplation, we should think, to that class of politicians styled "the hards," who get up a regular storm of indignation every time a new counterfeit bank note appears.

In one respect this counterfeit is even more dangerous than that of the gold coin first mentioned, inasmuch as silver is generally taken with less scrutiny than gold.

MORE OF THE RUMORED PEACE.—The Albany *Atlas* of Thursday publishes the following extract from a letter dated Mexico, Dec. 26, 1847:

We have information this morning of the strongest prospects of peace. Capt. —— was at Headquarters yesterday, and says the General seemed to have full confidence in present appearances. He gave it as his opinion that we would go home in all the month of April. It seems that every branch of the new government that has been elected is in favor of pacific measures. Herrera, the chief advocate of peace, is elected President. This certainly looks like coming to terms, but it don't do to put too much confidence in appearances here; before matters have been brought to a conclusion, some one may make a successful pronunciamento, and turn the present government out of doors.

The Vera Cruz *Arco Iris* of the 7th instant has the following:

THE TREATY OF PEACE SIGNED.—In a letter received by us yesterday from our correspondent at Jalapa, he informs us that an individual holding a position in the American army, and whose assertions deserve entire credit, said publicly, and without the least reserve, that from letters received at Jalapa from Puebla, on the 1st inst., it was positively known that a treaty of peace had been signed in Mexico. On being told that it was strange that this should be the case, as Mr. Trist had not the power to sign such treaty, he answered that Gen. Scott had taken it upon his own responsibility to sign the treaty, in consequence of which the treaty had been sent to Queretaro for the approbation of the Mexican Government.

The *Free American*, also published at Vera Cruz, puts no faith in the rumor, and assigns the following reasons for its disbelief:

It is very strange, indeed, if this be true. Gen. Scott, if he is directed by his Government not to sign any treaty, would certainly not sign one. He is too well known for his obedience to superior orders to put himself in a position that his countrymen might not approve; he has too much at heart the friendly feelings of those whom he serves.

The last annual message of the President assures us that Mr. Trist's powers had been revoked, and that he was recalled. It is true that Mr. Trist has not yet left the city of Mexico; but this he may do to await farther orders from his Government relative to the propositions of peace lately made by the Mexican Commissioners, to which he could certainly not have received any answer from Washington *before* the first of the present month.

The Mexicans could not have been in such a hurry to make the peace, as they have always refused the propositions made by our Envoy, and we are certain that Gen. Scott is not so anxious for it as to grasp at the first shadow of an opportunity.

We wish to receive the news of peace from a better source before we give credit to it.

These extracts, and other accounts that we have published, relieve the rumor from the suspicion of its being a mere ruse to affect the stock market, but still leave the fact of a treaty having been negotiated, in a deal of doubt.

HISTORY OF GUTTA PERCHA.—The following is taken from the London *News*. The material to which it refers was first introduced into this country, as an article of manufacture, by S. T. ARMSTRONG, Esq.:

"This substance is of recent introduction to England, and was first brought under the notice of the Society of Arts in the autumn of 1843.—The history of its discovery is thus given by Dr. Montgomerie: "While at Singapore, in 1842, I, on one occasion, observed in the hands of a Malayan woodsman, the handle of a *parang* made of a substance which appeared quite new to me My curiosity was excited, and, on enquiry, I found it was made of the Gutta Percha, and that it could be moulded into any form, by simply dipping it into boiling water until it was heated thro'-out, when it becomes plastic as clay, and when cold, regained, unchanged, its original hardness and rigidity. I immediately possessed myself of the article; and desired the man to fetch me as much more of it as he could get. On making some experiments with it, I at once discovered that, if procurable in large quantities, it would become extensively useful." The discovery was communicated to the Medical Board of Calcutta, and subsequently to the Society of Arts in London.

Sir W. J. Hooker states the tree from which Gutta Percha is procured to belong to the natural order *sapotacea*, found in abundance in the Island of Singapore, and in some dense forests at the extremity of the Malayan peninsula. Mr. Brooke reports the tree to be called *Niato* by the Sarawak people, but they are not acquainted with the properties of the sap; it attains a considerable size, even as large as 6 feet in diameter; is plentiful in Sarawak, and, most probably, all over the Island of Borneo. The tree is stated to be one of the largest in the forests in which it is found.—The timber is too loose and open for building purposes; but the tree bears a fruit which yields a concrete oil, used for food.

Gutta Percha is contained in the sap and milky juice, which quickly coagulates on exposure to the air; from twenty to thirty pounds being the average produce of one tree. For collecting the sap, the trees are felled, barked, and left dry, and useless, so great is the demand for the Gutta, the importation of which already reaches many hundred tons annually. Hence, the forests will soon be cleared of the Gutta trees; whereas, it is believed that a constant and moderate supply might be secured by incisions in the bark, as in the case of caoutchouc.

The Gutta is received in scraps, or in rolls of thin layers. It is first freed from impurities by deviling or kneading in hot water, when it is left soft and plastic and of a whitish grey color.

When thus prepared, the Gutta has many curious properties. Below the temperature of 50 degrees, it is as hard as wood, but it will soon receive an indentation from the finger nail. When softened in hot water, it may easily be cut and moulded; and it will harden, as it cools, to its former rigidity; and it may be softened and hardened any number of times without injury to the material. Unlike caoutchouc, it has little elasticity; but, it has such tenacity, that a slip, one eighth of an inch substance, sustained 42 pounds weight, and only broke with a pressure of 56 lbs. When drawn out, it remains without contracting.

In solution, Gutta Percha is applied, like caoutchouc, for waterproofing cloth. It is likewise used for numerous purposes for which leather is used; in mastics and cements, &c. In short, it promises to become as important an article of commerce as caoutchouc itself.

The name is a pure Malayan one; *gutta* meaning the gum, or concrete juice of a plant, and *percha* the particular tree from which this is procured. The *ch* is not pronounced hard like a *k*, but like the *ch* in the English name of the fish perch. It has been suggested to Dr. Montgomerie, that the Gutta Percha would be found useful in stopping decayed teeth."

In February last, the London Company, in connection with the East India Company, took measures to stop the felling of the trees, and, at an expense of some ten or twenty thousand pounds sterling, introduced the mode of tapping the trees and drawing the sap, the same as caoutchouc is drawn, and in this way it is all gathered, and all Gutta Percha or Gutta Tuban collected in that country must pass through the hands of the Rajahs to the merchant.

NIAGARA FALLS SUSPENSION BRIDGE.—It is with great satisfaction that we have noted the increasing evidences of preparation for work on the Suspension Bridge. A force has been collecting on the ground during the past week, and lumber and other materials are going forward. Shanties and shops are beginning to spring up, and many tokens of business are now visible. It is a great work and requires extensive preparations to carry it on economically.

We are informed that it is the intention of the Engineer to erect a Foot Bridge as soon as the weather will permit—perhaps by the first of June—using the cables and other materials designed for the main edifice in suspending a temporary platform for the convenience of conducting the works.

This temporary structure will be of extreme lightness, vibrating in the wind, and bending under the weights of the loads which will cross it.

Considering its position—220 feet above a furious torrent—the sight of this frail structure swinging in the air must be awfully grand.—*Iris of Niagara.*

WASHINGTON, Jan. 25, 1848.

ANOTHER COURT MARTIAL.—Great excitement exists among the naval men here this morning, in consequence of a prevailing report that the officers of the Gulf Squadron, in reply to a circular from the Commodore requesting information upon the subject, have returned for answer that "the conduct of a Post Captain at the batteries before Vera Cruz was unbecoming an officer in the presence of an enemy."

THE VAN NESS CASE.—The Supreme Court dismissed the appeal of Mrs. Conner, who claimed to be the wife of Gen. John P. Van Ness, on the ground of a want of jurisdiction, which, in effect, confirms the decision of the court below, which settles the case adversely to the plaintiff.

☞ National Hymn of Italy.—To Pius the Ninth. Which has been set to music by Rossini. Translated from the Italian by Dr. Bowring, M. P.:

Italy is waking now,
Light upon her matin-brow:
And her Pontiff, heaven-inspired,
Leads her on her glorious way.
And the day so long desired
Dawns—the bright, the promised day.
Still of her salvation dreaming,
All her sleeping was but seeming.

Listen! how the snowy Alp,
As from Etna's blazing scalp,
Our united voice breathes forth,
Waking transports as it runs:
North to south and south to north
Calls Italia's noblest sons,
Not the tears of shame to drop,
But of glory, joy, and hope.

Hail! all hail! thou noble one!
Seated on earth's highest throne;
Scatterer of all evil, thou
Bounteous fountain-head of Good!
Not alone Italia now
Bends in fervent gratitude.
But the world—the world is pouring
Praise—and heaven and thee adoring.

Perfect thy majestic plan,
Thou of men the noblest man!
God is smiling on thy deed,
Earth is waiting thy decree!
Tell the fettered they are freed—
Smite the arm of tyranny.
How shall tyranny withstand,
If thou bless the patriot land?

Peace! shall be the patriot-cry!
Peace! and light and liberty!
Liberty! and peace and light!
Thou shalt give as thou hast given;
O'er thee, round thee smiling bright,
Crowd the messengers of heaven,
Pointing out thy pathway here,
And thy crown of glory there.

The flag and seal of the new republic of Liberia are described as follows:

Flag.—Six red stripes with five white stripes—alternately displayed longitudinally. In the upper angle of the flag, next to the spear, a square blue ground covering in depth five stripes. In the centre of the blue, one white star.

Seal.—A dove on the wing with an open scroll in its claws. A view of the ocean with a ship under sail—the sun just emerging from the waters. A palm tree, and at its base a plough and spade. Beneath the emblems the words "Republic of Liberia," and above the emblems the national motto, "The love of liberty has brought us here."

Baptist Statistics.—The Baptist Almanac and Register for 1848, gives the following grand total of Baptist organization, &c., in the United States:

Ministerial associations 564; churches 9888; ordained ministers, 5657; licensed preachers, 1,199; number of church members, 761,906.

In the entire world, there is said to be 15,364 Baptist churches; 3,469 ordained ministers and 1,031,836 church members.

Somebody, who writes more truthfully than poetically, says:—"An angel without money is not thought so much of, now-a-days, as a devil with a bag full of guineas."

Hon. John Davis, of the U. S. Senate, died at Washington on the first inst.

Pierce Soule, Democrat, has been elected to the U. S. Senate from Louisiana in place of Johnson, Whig.

MARRIED.

On the 27th inst., by Rev. S. R. Smith, Mr. EDWARD L. FURSMAN, and Miss ANN ELIZA CORBIN, both of this city.

DIED.

At 11½ o'clock this morning, 27th inst., Gen. GEORGE P. BARKER, late Attorney General of this State, aged 40 years.

This morning, 31st instant, ALMIRA, wife of Ralph Church, aged 36 years.

On the 29th inst., MARY A. BETTIS, only daughter of Wm. and Ann Bettis, aged 16 years and 22 days.

At Aurora, on the 29th ult., of scarlet fever, JULIA, daughter of Albert Sawin, Esq., aged 8 years and 1 mo.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n3

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main-Street, Buffalo.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 180 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.

PUBLISHERS,

COMMERCIAL ADVERTISER BUILDINGS

MAIN STREET, BUFFALO.

TERMS.—To mail subscribers, $1,50 per annum in advance, four copies for $5,00, ten copies for $10,00. To city subscribers who receive their papers from the carrier, $2,00. Mail subscribers will also be charged $2,00 if payment is not made in advance.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

*** All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

Western Literary Messenger.

VOL. X. BUFFALO, SATURDAY, FEBRUARY 12, 1848. NO. 2.

For the Western Literary Messenger.

Elgiva.*

Ah who could name them all, the ills of humanity, in their manifold, pale dispensations! There are crime and sickness, the shriek of despair and the long, deep, silent torture.—[Miss Bremer.

She stood on a wide and lonely heath,
Beneath a wintry sky;
Night too had flung out many a dusky wreath,
And the wailing blast went by.

The wailing blast from a leafless tree
Came chill to her forehead fair,
And the snow-like crystal jewelry
Lay white in her braided hair.

Yet heeded she not, and even did seem
As a form of chiseled stone,
Save that an earnest, soul-fraught gleam
From her dark eyes clearly shone.

The veiled moon mourned in the darkening west,
More wildly the storm-wind rose—
Ah! surely unblest was the youthful breast
That sought in such drear scene repose.

Why strayed she there I never may guess,
But strangely there, I ween,
Seemed a being of rarest loveliness
With the port of a sceptred queen:

And a queen she was, though none had wrought
For her brow a diadem—
Unless ye deem that a burning thought
Is bright as a flashing gem.

* This name will of course remind the reader of the melancholy story of the beautiful bride of Prince Edwy of England.

MAYVILLE, N. Y., January. 1848. THE RECLUSE.

From the Knickerbocker for January.

Aunt Patty Saltonstall.

Aunt Patty was my natural aunt. I was the only daughter of her youngest and favorite sister, and at my mother's death was adopted by her, and lived with her until my marriage. Although for many years she had been confined to her sofa, in consequence of an accident, yet her general health was so good, her mind so unimpaired by age, and her spirits so lively, that in leaving her for a month, in the heat of summer, to go into the country, I neither feared or anticipated the possibility of any change in her; more especially, as I had placed myself at so short a distance that I could see her from time to time. I was therefore much shocked by receiving a letter in the almost illegible hand of Aunt Patty's faithful maid Betty, informing me that she had died suddenly the evening before. I set off immediately for the city where she resided, and it was with mournful thoughts that I passed over the well-known road leading to her house; and the familiar objects were so painful to me, that I drew up the blind of the carriage and resigned myself to meditations and remembrances of my departed friend. The first feeling was a selfish one; how I should miss her, and where should I ever find such a friend and adviser; so sympathizing and yet so rational.

She was one of that much-abused class, Old Maids, who have the reputation (so often undeserved,) of being cross grained and selfish; but though she had suffered many severe afflictions and heavy disappointments, yet no one had more of the milk of human kindness than she, and none of the storms of life had ever turned it sour.—Nearly the last of an old and respectable family, she had a few aristocratic prejudices, a lingering reverence for the "good old times" (which, by the way, are thought no better while passing than any other, but only when past) and rather an anti-republican contempt for the new families that were gaining foot-hold in fashionable society, whose grand-fathers and grand-mothers she remembered in quite different stations. In vain I pleaded with her that in our country education and merit were all that should make difference of rank; and pointed out all those in high places whose talents had raised them from obscurity. All in vain; Aunt Patty was unconvinced, and met all my arguments with:

"Well, my dear, it may be so; and certainly in the cases you mention, there is some truth in it; but," she added, shaking her head, "when you've lived as long as I have, my dear, you'll find there is a great deal in *blood*; blood, my dear, is thicker than water."

This proverb was unanswerable, and finished the discussion. One or two such favorite ideas, and some little notions of rigid punctilio which the "hail-fellow-well-met" freedom of modern manners has abrogated, I may truly say were Aunt Patty's only failings, if they even deserved so harsh a name; for a better Christian or a kinder friend never "bade the world good night."

For many years, as I have said, she had been entirely confined to her sofa. She had seen every one of her family pass away excepting myself; and yet though often lonely, and always more or less a sufferer, her cheerfulness, and unvarying interest in the world around her, were always sustained. Every body who wanted sympathy was sure to find it in Aunt Patty. For every one who was happy, she had a bright smile, and a warm pressure of the hand; and for those who were in sorrow, a softened and tender tone of voice, and a tear of pity. Her face in fact seemed to say, "Come, ye disconsolate;" and I used to tell her she was like David in the cave of Adullam, "for every one that was in distress, and every one that was in debt, and every one that was discontented, gathered themselves unto her."

But I loved her smiles best. Her teeth were still handsome, her eyes undimmed; and she smiled with both; not the cold uncertain smile of the mouth only, like the sun on an iceberg, but a warm glow shining in her eyes, and overspreading her face, like that same luminary when he sheds his ray over a summer landscape. You saw when she smiled that her heart was in it. And this was why every one loved her so much; with no weakness, no "sentimentality lachrymarorum," she had real heart, real sensibility, which, united to true Christian benevolence, made her, in my partial opinion, almost perfect. Occasionally there was a little proud curl of the lip, when any thing mean or disgraceful was spoken of, and a hearty, truthful relish of the ridiculous and absurd, which showed that Aunt Patty might have a little lurking satire about her; and there was now and then a

dash of it in her delightful stories of the Past and Present; just enough to make them spicy, and give them flavor, but not enough to make them tingling and biting. Indeed, she owned that she was sometimes severe in her youth, when beset by impertinence, or resentful of meanness, but it must have been rather indignation than sarcasm; and when I knew her, sorrow had taught its softening lesson, and she "had," as a modern poet so beautifully expresses it, "unlearned contempt." (Would that this same poet, though he may have "unlearned" it himself, had not taught others to feel it for him!)

To return to my character. Aunt Patty was a chronicle and a prophet; she "looked both 'fore and after.'" She was a chronicle, for she could tell as well as the parish-register how old every body was, and who their grand-fathers and grandmothers were, and who they married, and where they lived, and what business they did, and what relation they were to So-and-So, and if they had quarrelled, and why; and how much property they had, or if she did n't know exactly, "she could guess pretty near it."

She was a prophet, for she always knew what was coming to pass; she could foretel whether Mr. So-and-So would make his bow to Miss This or That, and whether Miss That or This would smile on Mr. So-and-So; love affairs, by the way, being always particularly interesting to Aunt Patty. She always could tell what the weather was going to be, and prophesied our deepest snows and heaviest rains, and brightest sunshines, and longest droughts, with much more than almanac fidelity. I never entered Aunt Patty's little parlor, but I was saluted with, "I knew you would be here today, my dear, so I told Betty to make some of her nice muffins for tea;" or "I knew we should have snow, and you could not came for a day or two;" and even when I informed her of my engagement, which I fancied was known only to Mr. Lacey and myself, she stroked my cheek slily, and said she knew it was to be, and she could even tell the very day when it must have taken place. Her sagcity was vexatious for one reason; you could never surprise her, never tell her any news; and had she lived a hundred years earlier, I am afraid she would have been burnt for a witch, had any one been ill-disposed enough to accuse her. But Aunt Patty could have had no enemies.

Having from her confinement to the house, comparatively few sources of amusement, she had become a keen observer, and a close student of character in its minuter and every-day developments, and thus her unfaltering discrimination might be accounted for. To one less benevolent, such a power might have been dangerous; but her mantle of charity was thrown over what her truth-seeing eye could not but discover, and hid a multitude of sins.

Aunt Patty was a great maker of pin-cushions and needle-books and those old-fashioned articles, "house-wifes" and "reticules." She always had one of the former, made of red morocco, with its store of thread, needles and silk, for any young gentleman-friend who was going from home; "for men never knew how to take care of themselves, poor things;" and one of the latter for every young lady that was fitted off for boarding-school, for "girls are always scolded for leaving their handkerchiefs about, dear young creatures; and there was generally with the latter gift an addition of "a pair of warm gloves, my dear" and "don't tell any one."

These reminiscences brought me to Aunt Patty's; a pleasant, small two-story house, in a little retired court; and sad was the look that her queer little withered maid, Betty, gave me as she opened the door, the tears rolling down her cheeks. As nearly as I could gather from her incoherent account, broken by her sobs, these were the circumstances of her calm departure: She had seemed quite as well as in general through the day; in the evening, when Betty was reading the newspaper to her as usual, she sighed very heavily, and complained of some oppression for breath, but told her to go on, as she might fall asleep. After finishing the paper, she began as was her custom to read a chapter in the Bible. It was from St. John: "In my father's house are many mansions; I go to prepare a place for you." A heavy sigh from Aunt Patty attracted her notice, but she read on, after a moment's pause, and when she had finished, on looking at her, she thought her asleep. She left her, to close the house for the night, and on returning, after a considerable time, alarmed by the length of her sleep, tried to waken her and found she was dead. Her spirit had passed away with that long sigh to the mansion prepared for her. "She died," said Betty, "with the poetry of real feeling, "like the autumn leaves that fall with their bright colors on, before they grow brown and shrivelled and faded."

A Startling Fact.

The principal incident in the anecdote I am about to relate is so startling and singular, that I must, at the outset, assure the reader of its absolute truth. As the persons concerned are still living, I have, for obvious reasons, adopted a form in which the real circumstances are disguised, and only the important experience is preserved. The story was told me at dinner by one of the medical men engaged in the affair.

"We live surrounded with mystery and horror," said Captain Hurst, "and, by George! the more we strive to explain the mystery, the more does its dim ghastliness reveal itself."

"What reference has that magnificent aphorism so magniloquently expressed, to mesmerism?" I asked.

"Little enough. Mesmerism brings one of the mysteries of our being into evidence, viz., the power of inducing a complete insulation of one part of our organization from the other; so that the mesmerized patient shall be absolutely insensible to pain, and yet not insensible to other sensations."

"And the mystery?"

"The mystery is how, in an organization so marvellously complex as ours, wherein the parts are so inter-dependent, there should be a violent interruption of one portion of the organic action, without a corresponding interruption of the other. Men have stupidly talked of the vital mechanism, as if the frame of man where like the works of a watch. But you cannot so interrupt the action of the watch.

"Well, captain, I grant that you have made out a mystery; but what of it? Is not every thing about us a mystery? And wherein lies the peculiar horror of which you spoke?"

"Did I never tell you my famous story of Death-in-Life?" he inquired.

"No. But let us have it now."

"Ay, let's have it!" exclaimed the other guests.

"And we drew closer round the fire as Captain Hurst, filling his glass and placing it on the mantel-piece, passed the claret round.

"Our conversation about mesmerism," he began, "recalled to me one of my early experiences, and it was so horrible that I seldom think of it without some prosy reflection, such as I favored you with just now. In the mesmeric state—as in that induced by the inhalation of ether—the sensations of pain are wholly deadened. I have

experienced the reverse. I once had paralysis of the nerves of motion only. Every nerve of sensation was uninfluenced; but every nerve of muscular action was completely deadened.

"I was with my regiment at the time. The attack was so sudden, that, seated on the sofa, I fell back as one asleep. I tried to call for assistance; but it was in vain. I could not stir; I could not move my arm; I could not even open my eyes. I heard the sounds of merriment above me; I heard every footstep on the stairs; but I was as if perfectly lifeless, except as to my sense of hearing. It was most horrible! I might perish there, if no one came unasked, without a chance of getting assistance. The sense of imprisonment was absolutely overwhelming!

"How long I lay thus, I know not. Time was 'leaden-footed' indeed to me. Every footstep I heard was interpreted into a lucky omen of speedy assistance. But not a soul came into my room. The footsteps all passed my door with cruel indifference. After many 'a hope deferred,' I heard at last, to my infinite satisfaction, the noisy ascent of my cousin Charles, and a brother-officer, named Thresher. They, at least, were coming to me! Yes—the lock was turned—and the two came boisterously into the room.

"'Now, then, Harry!' exclaimed my cousin, 'up with you! Ullo! pretending to be asleep—won't do!'

"'Trim his mustache!' exclaimed Thresher.

"They shook me. Of course I gave no signs of waking. They pulled my hair; I was immovable. They ran pins into me; I should have winced if I could, but I was fixed in immovability. They began at length to suspect that something was the matter with me. But I was warm. Could I be shamming! After many ineffectual attempts to rouse me, they sent for the army surgeon. He came, examined me, and to my horror, I heard him say,—

"'It's very extraordinary. I'm afraid he's no more.'

"Then I should be buried alive! Conceive my feelings at such a thought; conceive my struggles to tell them I was not dead—that I heard all they were saying—these struggles being totally ineffectual, because I could not move a muscle!

"All sorts of remedies were applied, but I remained as insensible as before. A second surgeon was called in, who thought that I had, possibly, only an attack of paralysis. I had hopes again!

"Vainly should I endeavor to convey to you any idea of the moral and physical torture to which I was subjected. The surgeons thought it necessary to stimulate my nerves, and restore them to their sensibility; but their sensibility was frightfully acute! and the pain I suffered in the attempts to restore my sensation of pain was indescribable. One proposing a mustard bath; another saying—'Oh! that will not be half strong enough!'—and I unable, even by wincing, to express that their remedies were not only already too violent, but absolutely applied to an imaginary evil. It was the nerves of muscular action which needed stimulating. But they could not know it.

"For two whole days—they seemed years—did I remain in this insensible state. I despaired of being rescued. I knew not how my medical men were to discover their mistake and my malady; and the fear of being given over and buried alive still haunted me.

"A still more ghastly thought pursued me. I began to ask myself, 'Is this death? Am I really alive? Do the dead hear and feel?'

"I then thought of the imperishable nature of my soul. It, of course, preserves itself through all bodily decay. Is it imprisoned in the body as long as the body holds together? and shall I be liberated only on the utter falling away of those fleshy walls that encompass me? Am I to be buried, sensible of all that is going on around me? And this soul which survives, how long is it to remain on earth? Is the grave its purgatory?'

"Such was the nature of the thoughts which harrassed me. Neither sleep nor cessation of my fears had I. The weary hours slowly rolled on, but to me they brought no repose; one incessant rush of horrible ideas tormented me, at those times when I was not suffering agonies from the attempts to restore my sensibility.

"Suddenly I opened my eyes.

"My rapture was so great, that, fearing it might be some illusion, and anxious not to dispel it, I continued for some moments to look steadily, and with intense pleasure, at the furniture of the bed, and the bottles on the mantle piece. I then moved my hand. It obeyed me, although feebly. I moved my head, I opened my lips. I spoke!

"The astonishment of the nurse, the astonishment of every one, except the surgeon, who, with professional coolness, took my recovery quite as an expected occurrence, was unbounded. And the surgeon also deigned to be surprised when I repeated to him certain things I had heard him say to his colleague respecting my state!

"I recovered. My illness interested the 'faculty' very much; because it was to them a novel case. But, as usual, they pretended to see no mystery in it. They *explained* it by saying that the nerves of motion had been paralysed, and the nerves of sensation had been untouched. Yet that is surely no *explanation*. It is simply a technical expression of the fact. But men always fancy when they have named anything they have explained it. Like a friend of mine, who, on his child asking him how it was that crystal, which was heavier than wood, could be seen through? exclaimed somewhat patronisingly, 'Why, my dear boy, you can see through the crystal because it is a *transparent substance*.' Of this sort seems the explanation of my case."

Captain Hurst finished his story with an anecdote, like an accomplished narrator who is unwilling to leave a painful effect on the minds of his audience.

We laughed at his adecdote, and the laugh certainly took away some of the unpleasant effects of his story. But we all remained silent and thoughtful for some minutes.

I broke silence, at last, by saying—"Doubtless the many instances of persons being buried alive, which we read of, especially in the Italian anecdotes, are to be mostly explained as the fate of persons affected as you were, Captain. The horror of the unfortunates aware of what was coming must have been terrific. Conceive also the feelings of a man in that state overhearing the undisguised sentiments of those who, while he was alive, treated him with such hypocritical tenderness! Now he would curse his inability to awake and confound them!"

"I don't put much faith in those cases," observed my right hand neighbor. "People *have* been on the point of being buried alive, we know; but authenticated cases are few."

"But remember," said I, "that of all those who have been buried alive, none have come back to tell the tale."

"Yes, in *some* cases, they have escaped. In the *Observatore Florentino*, there is a story told of a lady who was buried, and who awoke in the vault and escaped. Leigh Hunt dramatised the story in his *Legend of Florence*."

"There's a good anecdote," said the Captain, 'in Tallemant des Reaux, of a man whose wife was supposed to be dead, but who was brought to life again by the shock of the bier, against a house, the bearers having stumbled in turning a corner. Some time afterwards, she died in earnest. As the funeral procession was about to set forth, the disconsolate husband approached the priest, and between his sobs said, 'Be careful in turning the corners, will you!' "

The following extract from a letter in the *Commercial Advertiser*, touching the storming of Chapultepec, will be found very interesting. After mentioning the manner in which Gen. PILLOW's division became master of the place, being "the first that put feet inside the Castle," the writer proceeds:

Extract from the letter of an Officer in Mexico.

We had scarcely formed again upon the parade of the castle, when we got farther orders to move. We were to take part also in the fight before the Capital. Having led in the morning we were to act as reserve, and sustain the artillery in its advance upon the works along the road. On the right of my sketch, you will see part of the aqueduct that leads from a spring at Chapultepec to supply the town with water. On either side of the aqueduct, as it runs along the causeway, the track is perhaps three rods wide, and there were three breast works across the whole, to be carried before getting into the city. They were built of sods and mud and were very thick and strong.—I need not tell you they commanded the way most perfectly. Added to the rest, the whole road was flanked, in its entire distance, by the lakes whereof you have heard.

One of the works had been carried by QUITMAN's men just by the foot of Chapultepec hill, and against the next one, our artillery was now advancing. Some *ricochet* shot bounded along by us as we went up, but we soon learned a good trick, and every time we saw the smoke from the enemy's guns, we just dodged under the arches of the aqueduct.

So far however as actual fighting was concerned, we did nothing more that day, nevertheless, we were most uncomfortably situated.—As the artillery went forward, we kept up at a certain distance in the rear, pausing sometimes an hour or two under the arches. But the enemy had found us out, and while the road was raked from their batteries, the citadel deliberately began a shell practice in our direction, both mortar and howitzer. The infernal missiles would sometimes burst in the air, sometimes upon the very edge of the aqueduct over our heads, sometimes along the road, scattering their fragments at every point of the compass. As illustrative of their power, I saw one plunge in at the root of a large tree by the the road side, and, bursting, tear the whole trunk bodily from its hold, and cast it ten feet from its position, prone upon the ground.—We lost more men by these shells than at the storming—a single one of them killed three men and shattered the legs of two others.

In the afternoon we got so near the scene of action as to be in range of the enemy's musket balls, which now and then hit upon the jutting piece of the aqueduct and fell down as flat as a dollar. In despite orders to the contrary, the men would at times leave their safe concealment and dodge out to see what was going on, and one of those, who was eating a piece of bread at the moment, was pierced through the temple and fell dead, with the bread in his mouth. Lieut. JACKSON, passing up for orders, was hit and saved only by a testament in the breast pocket of his coat—We have all read of such instances; I never expected to see it happen exactly so, but I assure you it took place before my own eyes—and JACKSON staggered up against the arches like a drunken men.

But the dangers were most dreadful that met the brave men in advance. I should have said that a number of regiments had passed us during the day and were now hotly engaged. Foot by foot, as it were, they won their way, and work after work, they carried before them. Never men displayed more dauntless courage, especially too our artillerists, who almost crossed guns with the enemy through his embrasures.

Across the lake at our left, about a quarter of a mile away, ran the causeway, up which WORTH was sternly urging his path toward the city. How we gazed over, watching the flashes of his cannon, and counting every inch of ground, as he fought slowly onward against the odds that met him. Towards evening WORTH's infantry had a terrible fight about the Garitas, but a cheer that came at length, though faintly heard, assured us he had effected an entrance inside the walls and made good his hold. We had learned from the wounded, that continually passed us on their way to the rear, that the fellows on our side of the lake were doing well, and another cheer that now made the arches ring about our ears, convinced us that they too, had carried their object and were safe in their position.

We lay that night in the arches of the great aqueduct and under the lee of the last breastwork taken from the enemy, excepting that at the Garita itself. The cannon and howitzers were generally left, for the time, as they were found, for we had heavier pieces, taken at Contreras and Churubusco. There were dead men lying all aroune us and among the rest five Pennsylvanians said to have been killed with a single ball from the battery. The heads of three were shot entirely off and the other two were torn all to pieces in the breast.

A good deal of ammunition went up in wagons during the night, and some additional pieces of cannon of the heaviest calibre. Everything, indeed, looked like another day of fighting. But I need not tell you what took place on the morning of the 14th September. For ourselves, we

got news of the surrender just as we were entering the gates of the city.

Our quarters are now in an old Convent. We have regular live monks here, and a queer looking set of folks they are too. They go about in long frocks about as fine as a door mat, and with cowls upon them very like the hoods on the overcoat of a Canada Frenchman. Over these frocks they wear a sort of flannel half-gown, resembling a petticoat exactly. Their shoes are of white goat skin, with holes cut in at the toes—probably for ventilation, or to let out the water. They don't step off like men, but have a kind of sly, cat-like pace, and to hear them go pit, pat, at night, along the old corridors of the Convent, you might imagine yourself carried back to past centuries. The old fellows are almost always fat, with thick, bull necks, and have shoulders that would fit them for porters, or some other useful members of society. The priests are the only fat men in Mexico, and well they may be, for, as Newman Noggs said in contemplating Squeers' children in comparision with Squeers' scholars, "they get it all." Still, I won't be too hard upon them, for there's an old fellow just by my quarters that keeps a bottle of the best brandy for such of his friends as like it. He is a rare one, and buries you in fat every time you get caught in his loving embraces. He has taken a great fancy to my guitar playing, and waddles out every time I touch a chord, listening with his head on one side, and a greasy sort of smile that is quite flattering.

Earthquakes would seem a superfluous horror to introduce to the scenes I have been describing, though, perhaps, you are aware we have had an uncommonly severe one since entering the city. It nearly destroyed some towns in the mountain districts: in one place alone forty persons are said to have been crushed by the falling buildings. I presume the shock was lighter here,—and if earthquakes be attributed to electricity, it may be accounted for by the great body of water in the valley. It was sufficiently strong, though, all about, and the walls of our quarters are rent with cracks full an inch in width. As we rushed out,—monks and all, from the old Convent—it was a strange sight to see the hackster men and women in the principal yard, all down upon their knees: the priests, also, came down in an instant, and began praying and telling their beads, as if they were as accountable as other folks. For myself, the movement of the earth produced a sickening sensation with me, and I could hardly keep my footsteps. The motion was so strong from side to side that some water in a deep stone basin in the yard was thrown half of it out upon the ground. It was an awful occurrence—and made men feel their littleness—when the firm set earth went to and fro beneath them. I never in my life experienced an alarm that took such hold of me.

But there is a joke in everything if you only get hold of it. Even an earthquake failed to terrify some of the spirits of the 9th. While the earth swayed beneath their feet, some of the more hungry of the men just occupied themselves in grabbing the fried potatoes and pancakes from the stalls of the absent venders. Let them appropriate as many as they might, they would not more than make the account even, for the Mexicans cheat them like the cunning scamps they are.

A Demon in Man's Shape.—The Warsaw (Ill.) Signal, of the 15th ult., says: "We have heard of a case of parricide, near Mendon, in Adams county, which, for demoniacal spirit, exceeds anything we recollect to have heard before. It is that of a man starving his own mother to death!

The man's name is Jesse R. Hull—and the statement is, that, for some cause, supposed to be merely to release himself of the burden of keeping her, he shut his mother up in a cold room, and kept her without food, until she literally starved to death—having first gnawed the paper from the walls and eaten her own excrement! Her deplorable situation was accidentally discovered by some of the neighbors, and measures taken to have her cared for—but their kind attentions came too late—she died.

What is the most astonishing, the neighbors still allow the fiend to go at large—waiting the tardy operation of law through the action of the Grand Jury. A man who could thus treat the mother that bore him, and sustained him in his infancy, should have no opportunity to escape the justice which the law would meet out to him.—We hope, for the sake of humanity, that there are mitigating circumstances.

A similar case to the above, we are told, took place at Richmond Grove, in Mercer co., about the 25th of December, but not being in full possession of the circumstances, we refrain from giving particulars.

Negotiations for Peace.—The President, in reply to the resolution of the Senate, has transmitted to that body the correspondence between Mr. Trist and the Mexican Commissioners during the suspension of hostilities which followed the battles of Contreras and Churubusco. It contains nothing new, as the general character of the letters on each side and the final result, were known already: and we have nothing whatever concerning the negotiations said to have taken place subsequently. The latest letter in the correspondence now transmitted, is Sept. 6th: some time previous to the capture of the Mexican capital: whereas negotiations are said to have been renewed very late in December.

These documents have, therefore, but little interest, except from their connection with the history of the war. In this respect they may be of value hereafter.—*Cour. & Enq.*

Anti-Rent Outrage.—Sherif Tyler, and his deputy, Mr. Ferguson, and a clerk from the office of Teunis Van Vechten, went out to Bern, yesterday morning, to sell some property belonging to a man named McIntosh. The sale attracted the attention of about two hundred of the inhabitants, who, when anything was offered, set up a hooting and hollowing.

The party were snow-balled and maltreated in various ways. Mr. Younglove, the clerk from Mr. Van Vechten's office, was tripped up with a rope and rolled down a bank. He escaped without injury. The Sherif was obliged to abandon the ground without selling anything.—*Albany Knickerbocker.*

Letter from Gen. Taylor to the War Department.

We give below the letter of Gen. TAYLOR to the War Department, transmitted to the House of Representatives by the President, in accordance with a resolution of that body. It will be read with great interest, being written in the usual bold and forcible style of the General:

HEAD QUARTERS ARMY OF OCCUPATION,
AQUA NUEVA, March 3d, 1847.

I have had the honor to receive your communication of Jan. 27, enclosing a newspaper slip, and expressing the regret of the Department, that the letter copied in that slip, and which was addressed by myself to Maj. Gen. Gaines, should have been published. Although your letter does not convey the direct censure of the Department and the President, yet, when it was taken in connection with the revival of the paragraph in the regulations of 1825, touching the publication of private letters concerning operations in the field, I am not permitted to doubt that I have become a subject of Executive disapprobation. To any expression of it, coming with the authority of the President, I am bound by my duty and my respect for his high office, patiently to submit; but lest my silence should be construed into a tacit admission of the grounds and conclusions set forth in your communication, I deem it a duty which I owe to myself, to submit a few remarks in reply.

I shall be pardoned for speaking plainly. In the first place, the published letter bears upon its face the most conclusive evidence that it was intended only for private perusal, and not at all for publication. It was published without my knowledge and contrary to my wishes. Surely, I need not say, that I am not in the habit of writing for the newspapers. The letter was a familiar one, written to an old military friend, with whom I have been for many years interchanging opinions on professional subjects. That he should think proper under any circumstances, to publish it, could not have been foreseen by me. In the absence of proof, that the publication was made without my authority or knowledge, I may be permitted to say, the quotation in your letter of the 650th paragraph of the superseded regulations of 1825, in which the terms "mischievous and disgraceful" are employed to characterise certain letters or reports conveys, though not openly, a measure of rebuke, which, to say at least, is rather harsh, and which many think not warranted by the premises.

Again, I have carefully examined the letter in question, and I do not admit that it is obnoxious to the objections urged in your communication.—I see nothing in it which, under the same circumstances, I would not write again. To suppose that it will give the enemy valuable information touching our posts or respective line of operations, it is to know very little of the Mexican sources of information, or of their extraordinary sagacity and facilities in keeping constantly apprised of our movements. As to my particular views in regard to the general policy to be pursued towards Mexico, I perceive from the public journals that they are shared by many distinguished statesmen; also, in part, by conspicuous officers of the navy, the publication of whose opinions is not, perhaps, obstructed by any regulations of the department. It is difficult, then to imagine how the diffusion of mine can render any peculiar aid to the enemy, or especially disincline him to enter into negotiations for peace.

In conclusion, I would say it has given me great pain to be brought into the position in which I now find myself in regard to the department of war, and the government. It has not been of my seeking. To the extent of my abilities and the means placed at my disposal, I have sought faithfully to serve the country, by carrying out the rules and instructions of the Executive; but it cannot be concealed, that since the capitulation of Monterey, the confidence of the department, and I too much fear, of the President, has been gradually withdrawing, and my consideration and usefulness correspondingly diminished. The apparent determination of the department to place me in an attitude antagonistical to the government, has an apt illustration in the well known fable of Æsop. I ask no favor, I shrink from no responsibility, while entrusted with the command in this quarter. I shall continue to devote all my energies to the public good, looking for my reward to the conscientiousness of pure motives, and to the final verdict of impartial history.

I am sir,
Your very ob't. Servant.
Z. TAYLOR.
Major General U. S. A. Commanding.
For Hon. W. L. Marcy, Secretary of War,
Washington, D. C.

Mr. BARROW immediately moved that 10,000 extra copies be printed.

Mr. HOLMES, of S. C., moved that 15,000 extra copies be printed.

The motion lying over, the usual number was ordered.

MADAME ADELAIDE.—Among the items of news brought by the *Acadia*, was the announcement of the death of Madame ADELAIDE, sister of the King of the French. Her death at this time, says the N. Y. *Express*, awakens apprehension for the health of LOUIS PHILIPPE. He is older then his sister was, and, as he was sincerely attached to her, his period of life is not calculated to resist very powerful grief, and the thoughts that must inevitably accompany it. The death of the King cannot, in the nature of things be very remote.

Madame ADELAIDE's history forms a romance, to which reality gives a deeper interest than could be imparted by fiction. Nursed in a palace, a fugitive in youth, she spent long years in exile, but ultimately returned to live honored and beloved in the shadow of a throne. She had suffered persecution, and had learned the value of goodness. Though with much more than a woman's strength of mind, and equal to great occasions, her ambition was disinterested. She taxed her intellect for her brother's benefit, but sought happiness herself in the exercise of the domestic virtues.—Her pure affections overflowed upon the family of LOUIS PHILIPPE, and her influence was directed to make them respected abroad and beloved at home. She was, perhaps, the only adviser behind the throne who excited neither suspicion nor malevolence. The people respected her motives, and confided in her prudence.—*Com. Adv.*

DREADFUL ACCIDENT.—A man named Sherman, fell from one of the cars of the Housatonic train yesterday, at West Cornwall, Conn., while they were on their way to this city, and was run over and cut in two, causing his death immediately. He has left a wife and family at Bridgeport—*Alb. Eve. Jour.*

An old Family in New Hampshire.—The Dover *Inquirer* says that *Eben Leathers*, and his sons *Eben Leathers* Jr. and *Richard Leathers* of Barrington, have lately been sentenced to punishment for Manslaughter, and adds that the prisoners received their sentence with the indifference which they had manifested through the trial.—The old man is between sixty and seventy years of age, and the sons from thirty to forty. They belong to the well known '*Leathers Tribe*,' which has been settled in Barrington for the last hundred years, and are said to be the descendants of a gipsy family, which came over from England with some of the early settlers of Portsmouth, as their servants or retainers. At almost every session of the New Hampshire Legislature more or less of them petition for an alteration of their names. This is looked upon as a great offence by those of the tribe who take pride in their descent. Stephen Freeman, the victim in this fight, was one who had thus abandoned the name of his 'illustrious sires'—and from this cause, in part, probably, arose the differenecs which resulted in his death.—*Com. Adv.*

☞ Geneva Medical College.—The *Genesee Evangelist* gives an account of the Anniversary exercises of this College, a part of which will interest many of our readers—the College being already, substantially a "Home Matter" for us of Buffalo:

Another course of lectures has closed, and a fine class of graduates, about thirty in number, has received the honors of the institution, and, this day been dismissed to their homes. The address, by Prof. Hamilton, tho' eminently practical in its aims, was, particularly in its opening and concluding portions, of a high literary order.

Then followed a recommendation of the inductive system to the students—advice to keep a record of the facts which they should observe in their professional practice and carefully to analyze them and seek out the principles they involve—urging the sound rule of logic that no man should start with a conclusion and seek facts which may appear to support it, but should first observe, then generalize and make inferences.

The professor also took occasion to vindicate the noble science which he cultivates, from alleged skeptical or dehumanizing tendencies. The surgeon does not use the knife, as the soldier does the bayonet or the sportsman his fowling-piece, to *take* life for honor or for pleasure's sake.

Substituting the word Buffalo for Geneva the concluding remarks of the *Evangelist* are so perfectly applicable to our own College that we have much pleasure in publishing them. We omit a portion which might appear to be fulsome praise of our fellow-citizens:

These college commencements appear to be among the proudest days for Geneva, and bring together large and brilliant audiences; and it may become one who has no peculiar interest in her literary institutions, to say that if they are not appreciated abroad, it will not be from any deficiency in faculties or boards of instruction. The medical college has probably never afforded a more able or satisfactory course of lectures than that which has just closed. Under the auspices of such men as Lee, Coventry, Webster, Hadley, Hamilton and Flint, we may not only wish but anticipate for it, continued prosperity.

☞ Lieut. Burke, of the Bombay Engineers, has published a pamphlet, in which he states, that one of the salt beds of Scinde contains an area of 300 miles of salt, on an average thickness of 3 feet, or a supply equal to the consumption of 100,000,000 of people for 1600 years.

Quick.—A telegraphic despatch was forwarded a few days since, from the office in Pittsburgh to St. Louis, and an answer received in five minutes.

Rural Department.

Buffalo Horticultural Society.

Annual Report of the Buffalo Horticultoral Society for the year 1847: to which is added the address of Lewis F. Allen, delivered before the Society, September 30th, 1847. Buffalo: steam press of Jewett, Thomas & Co., 1848.

This is a beautifully printed and an able report of an important and, we are happy to say, thriving association. "This Society," says the report, "was organized in January, 1845, by a few enterprising gentlemen, who, seeing and feeling the necessity of awakening our citizens to a subject at once momentous in its results,—of utility to our rapidly increasing population, by securing an increased supply of culinary vegetables, and the introduction of the more choice varieties of fruit,—in improving the taste and skill in floriculture,—and by the advancement of the science of Horticulture generally."

At the time of its formation, as we learn from Mr. Allen's address, it was the second in the State. "A little Society existed in a small but beautiful village, Aurora, on the bank of one of our loveliest inland lakes, in and around which dwell people of cultivated taste in Horticulture. Now more than half a dozen flourishing Horticultural Societies are scattered over our State, in the success of which, our best men—our wisest statesmen—our active politicians—our merchants—our mechanics—our clergymen, lawyers, physicians, in fact all professions are engaged, for the promotion of scientific and practical Horticulture."

"Ere this society became existant, three years since," says the report, which was prepared by our friend and contributor, W. R. Coppock, "the common Garden or June Roses, with very rare exceptions, were the only roses known here. The present season, however, has demonstrated that we are not behind our suburban friends in this beautiful class of plants; all or nearly all the leading *Hybrid Perpetual*, *Tea*, *Bengal*, *Noisette*, and *Bourbon Roses*, that have attained celebrity either in this country or Europe, have bloomed with us. These Hybrid Perpetual and Bourbon Roses are a truly magnificent class, and are fast driving away all competitors. They prove themselves hardy with us, with a very slight winter protection, and bloom abundantly in the garden throughout the summer, and, indeed, until the frost cuts them off in November; their flowers are finely formed, often very large, very double and very fragrant, with a peculiarly rich foliage."

This Society is deserving of high commendation for the valuable services it has rendered to the cause of taste during the short period of its existance, and we most heartily wish it continued and still greater prosperity. For it is a fact—to quote the conclusion of the report—that "wholesome vegetables, fine fruits, and beautiful flowers, conduce as much to the health and happiness of a community, as any of the other productions of a rich and teeming soil." J. C.

For the Western Literary Messenger.

A Sketch.

I knew a boy, a fair and lovely boy
As ever blessed a parent's heart and shed
Bright gleams of joy, like sunshine, round his way.
And he was blest, for love was ever near
To bind his brow with flowers, and whisper words,
Such words of peace and hope as soothe the soul,
And make us joy to live.

'Twas thus with him—
The proudest bird that wings its boundless flight
Above the threatening clouds, was not more free—
His spirit soared above this lower world
And drank heaven's nectar dew of blessedness.
Perched on some crag that overhangs the deep,
He loved, alone, to watch the warring winds
Do battle with the waves; or list the sound
Of booming thunders near and nearer come;—
To see the vivid lightnings play about
Some hoary mountain-top, and rend old trees
That centuries have dared the wintry storms
And laughed at wind and frost. He loved the awe
Such scenes inspired his soul with, for it bore
Him nearer to his God.

The calmer scenes
Of Nature's beauty won his love. The rose
Had brighter tints for him—the violet
A softer eye, and gentle breezes touched
Their hidden harps, when fairy-like, a gush
Of low-toned melodies arose for him.
For him alone—no other ear had caught
The spirit voice of song that swelled upon
The evening air, then sunk, then rose again;
Then fell in low bewitching cadences,
Thrilling the soul of him who drank its might,
With visions of a bliss he knew not yet
But in his happy dreams.

Oh! beauteous boy!
I see thee now with flushed and rosy cheek,
Chasing the rolling hoop or bounding ball,
And ringing back half-mockingly the while
With merry shout the echo from the wood.
Play on! — Thy day of joy like this is brief—
But yet a spirit beams from every glance
Of thine, which tells the looker-on that thou
Canst not be less than happy in thy life.
Peace with thee, then,—and may she ever dwell
Within thy soul, and keep thee as thou art
"Blessing and blessed."

ROYALTON, N. Y., Jan. 10, 1838. IDA.

For the Western Literary Messenger.

The Reformer and the Conqueror.

Some centuries ago there appeared in Asia Minor a person of extraordinary character. He was born of humble parents, in a city of small distinction; but the remarkable events which transpired at his birth, and which were known to many, fortokened the greatness of his nature. At an early age he gave evidence of the most wonderful powers of mind. When but twelve years old, he astonished the wisest doctors of his time by the wisdom and shrewdness of his questions. As he advanced in years he "increased in wisdom," although deprived of all the ordinary advantages of education; and before he arrived at the age of manhood, he was found able to exert a miraculous control over the agencies of nature.

But if the powers of his mind were wonderful, the goodness of his heart was still more so. In him was perfected every moral grace. Though eminently qualified for the society of the great, his associates were principally the humble and the poor. Unassuming and free from ambition, he sought not the honors of the world. He was peaceful and law-abiding — always submitting cheerfully to those in authority, and choosing rather to yield even to an oppressive law than to sanction, by his example, a spirit of insubordination. A prominent trait in his character was his uncommon piety. He habitually spoke, with the deepest reverence, of his Father in heaven, ascribing to him the power which he possessed and the glory of his wonderful works. But perhaps his most striking characteristic was his universal benevolence. Human misery of whatever form, elicited his strongest sympathy; and the most of his miracles were performed to aid the needy, to relieve the distressed. O! what a generous heart was his! Through his short but eventful life, he literally "went about doing good." Wherever were poverty and suffering, there was he to be found, supplying the needy, healing the sick and comforting the afflicted.

But the *physical* necessities of those around him called not forth so anxious a solicitude as did their moral. He was emphatically a "teacher of righteousness." He saw the race of men shrouded in moral darkness and strove to pour into their minds the light of Heaven. His precepts were pure and his example was perfect. They were such as met an instinctive response in the moral sense of every human being; such as, if universally followed, would transform earth from a desert of sin and suffering to a Paradise of joy, and men from a crowd of miserable mortals to a company of blissful angels. O! surely such a teacher must have been welcomed with joy by all classes of men. The poor and the lowly must have hailed him as their greatest benefactor, gladly receiving his precepts as their rule of life. The rich and the great, in the honesty of their hearts, in their generous desire for the happiness of their fellows, must have gathered anxiously around him, to learn of him and to assist him in accomplishing the great object of his mission. Alas, no! Few only of the lower classes sought to know and follow his precepts; while the great and the powerful joined together to vilify his character and abuse his person. He was dragged before a mock tribunal to be tried for imagined offenses. Every kind of indignity was there heaped upon him. He was spit upon and smitten on the face. A crown of thorns was placed upon his brow and a reed for a sceptre put in his hand. Men were suborned to testify against him—he was condemned to death and led away amid the scoffs and jeers of a factious multitude. By those whom he came to bless he was nailed to the cross; and while he died in agony, the thoughtless world passed by, wagging their heads!

Not many years ago a person of remarkable character appeared in Europe. He was born of a somewhat distinguished family, on a mountainous island in the Mediterranean. His childhood was marked by an inordinate love for sports of a martial character; and he gave early evidence of a great capacity for those sciences which are requisite for the commander of armies. Following the natural bent of his mind, he devoted all his energies to the cruel art of war; and at the early age of seventeen was entrusted with a somewhat important command. From that time his advancement was rapid, and he soon found himself at the head of one of the most powerful armies the world ever saw. The wildest ambition took possession of his mind. Visions of universal empire flitted before him, leading him on to conquest. Strange indeed was the charm in which he held his blind, deluded followers. The scenes of carnage through which he led them were, beyond description, revolting to a generous heart. The countless thousands, whom, at his command, they wantonly murdered, had never offended them; and yet, as if bound in a satanic spell, they adhered to their despotic leader, although the misery, which, to gratify his caprice, they every where inflicted, recoiled with terror upon themselves. Wherever he went ruin and desolation followed in his footsteps. Vast cities vanished before him —their arts, their wealth, their inhabitants buried in the flames. Fields were laid waste and all the great resources of life destroyed. Husbands and fathers were slain in battle, and widows and orphans sent out homeless and naked to perish of cold and famine. Governments of long standing were overthrown, and the blessings of wise and cherished institutions abolished forever.—Whole territories were depopulated. Rivers were dammed up by the bodies of the slain and fields were drenched in human gore.

Surely the wretch who could wilfully cause all this human suffering, must have become an object of universal execration. The great and the good must have joined to make his name every where a reproach; and he must eventually have been driven out from civilized society to herd with monsters, whose nature he emulated. In life he must have been shunned and abhorred, and in death his name and his memory must have perished together!

Ah! no. Men were charmed by the splendor of his achievments. The learned and the noble delighted to do him honor. His name became the theme of eloquence and of song. On the canvas of the painter and the marble of the sculptor his lineaments were traced to receive the adoration of future ages. A powerful nation hailed him as chief with shouts of "Long live the Emperor!" and the whole world passively bowed the head and did him reverence!

Thus has it always been. The world has seldom known its friends. Those who, with honest hearts and sinewy hands, have labored for the good of mankind, have by mankind been despised and abused: while the most cruel oppressors have, by the oppressed themselves, been deified as heroes. Men, prostrate and bleeding in the dust, have cursed the hands that were extended for their relief, and shouted hallelujahs to those whose iron heels were crushing them to the earth!

Alas for the blindness and ingratitude of fallen men! Unless an influence from the Eternal shall lead them upward, their case is dark and hopeless

C. S. Percival.

Laughter.—A Scrap.

Nature hath formed strange fellows in her time,
Some that will evermore peep through their eyes
And laugh, like parrots, at a bag-piper.

Merchant of Venice.

Few persons are more to be dreaded than the long-visaged and tight mouthed — those whom Shakspeare has pictured as

"Of such vinegar aspect
That they'll not show their teeth in way of smile
Though Nestor swear the jest be laughable."

Their presence is like a sunless November day, when it is neither fair nor foul, yet bleak, cheerless and forbidding, and very nourishing to a suicidal disposition. They are more to be dreaded than the fever and ague, for while they give one the "fever" of uneasiness and petulence, they also subject him to the worst kind of chills,—those of the heart. Laughter is the warm overflowings, the surplus waters, of a sympathetic heart; in other words, the out-gushings of inward melody; and the individual who has no ear for it, and who refuses to cultivate it, is a dissonant strain in the great orchestral performance of life.

Though an advocate of laughter, let no one take it for granted that we are a professor of horse-laughter, or believe in it as an every day exercise—unless it be in livery stables and such like places. It may be indulged in, at times, elsewhere, but only on "great occasions," such as when a mechanic offers voluntary regrets that some neighboring mechanic of the same trade, cannot do work as well as himself, or when a politician expresses a willingness to sacrifice himself for the interests of "the dear people."

It is the temperate, yet free, soul-full laugh which we love to hear. It falls on the ear like the voice of many waters, with a balmy and sweetening influence which makes one forget, for the time, that there is such a thing in existence as a heart out of tune. A good wholesome laugh is the diapason of a congenial spirit—or more properly speaking, the key-note to the song of Cheerfulness. The man whose laughing capacities are like a full-charged revolver, and whose go off has a "snap" to it, is as handy as a pocket pistol, as a self-defence against the blue devils. *How* sure a defence against robbers!—robbers of pleasantry and kindred rarieties which load at times, the table of the inner sanctuary. Let the reader

keep one of these self-charging, sentient and *sensible* revolvers by his side, and deacon-faced despondency will receive many wounds which, if not mortal, will keep him laid up most of the time. In conclusion we have only to hint that one of the best pictures to hang up in the chamber of the mind is

"LAUGHTER HOLDING BOTH HIS SIDES."

EDITOR.

Legislature of New York.

SENATE—Jan. 31.

PETITIONS PRESENTED AND REFERRED.

By Mr. Smith, of stockholders of Buffalo and Hamburgh Turnpike Co., against being compelled to make a draw in their bridge over Buffalo Creek.

THIRD READING OF BILLS.

The committee of the whole took up the bill to authorize the formation of Bridge Companies. Progress.

The same committee, Mr. Clark in the chair, passed the bill to authorize the Canal Commissioners to drain certain lands near Black Rock. Third reading.

The same committee, Mr. Wilkin in the chair, reported progress on the bill to amend the act establishing the State Lunatic Asylum. [Giving to the Superintendents of the poor authority to send indigent lunatics to the Asylum, or county poor house, upon the decision of a jury that the person is insane.] Adjourned.

ASSEMBLY—Jan. 31.

PETITIONS.

By Mr. Spaulding, for an appropriation to complete the Ohio and Erie basin in Buffalo; by Mr. Irish, of the board of supervisors of Erie co., to reduce the fees of the county clerk.

REPORTS.

By Mr. Butrick, a general bill for the incorporation of Gas Light Companies.

ASSEMBLY—Feb. 2.

REPORTS.

By Mr. Ransom, favorably on the Senate bill, to incorporate the Clinton Monument Association.

Also, a bill to incorporate the association to improve the dwellings of the laboring classes in the city of New York.

By Mr. Pruyn, by bill, providing for the election of City Superintendent of Schools in Rochester.

THIRD READING OF BILLS.

To authorise the formation of Gas Light Companies. Passed.

GENERAL ORDERS.

The House, in committee of the whole, Mr. J. V. Peck in the chair, rose and reported on the bill appropriating $30,000 to the Buffalo City Hospital, for the purchase of a site and the erection of suitable buildings thereon.

SENATE, Feb. 3.

PETITIONS PRESENTED AND REFERRED.

Mr. Bush, for an agricultural school, &c.; affidavit of Isaac Sherman, relative to the bridge across Buffalo creek.

MOTIONS AND RESOLUTIONS.

By Mr. Fine, that the Literary committee be instructed to inquire into the propriety of making a yearly appropriation to the several counties to aid in the education of teachers of common schools, of $100 for each member of Assembly, on condition that a like sum be raised by the county,—the supervisors to designate the academy to which the money shall be paid. Agreed to.

THIRD READING OF BILLS.

For draining certain lands near Black Rock.—Passed.

The committee of the whole, Mr. Treadwell in the chair, took up the bill to provide for the incorporation of Charitable and Religious Societies.

The committee reported progress.

ASSEMBLY—Feb. 3.

PETITIONS.

By Mr. Irish, (8) to extend the Buffalo and Hamburgh turnpike Co.

To allow the supervisors of certain towns to collect tolls on the Cayuga creek road.

MOTIONS, RESOLUTIONS AND NOTICES.

Mr. J. V. Peck, on notice, brought in a bill to establish free schools.

BUFFALO CITY HOSPITAL.

The House went into committee of the whole, Mr. W. Sidney Smith in the chair, on the bill making an appropriation to the Buffalo City Hospital.

Without taking any question, the committee rose and reported progress.

ASSEMBLY—Feb. 4.

PETITIONS PRESENTED AND REFERRED.

By Mr. Spaulding, in relation to the White's Corners and Buffalo Plank Road Co.

REPORTS.

By Mr. Spaulding, with amendments, the bill in relation to the office of Chief Engineer and Surveyor and the Engineer's Department.

[There are but two amendments proposed to the Bill. First, giving the Chief Engineer the same power with the Commissioner of the section, to suspend an Engineer for delinquency, until the case is reported and acted upon by the Canal Board; and, secondly, providing that "the several division, resident and assistant Engineers shall perform such other duties not inconsistent with the previous sections of this act, as shall, from time to time, be presented by the Canal Commissioner in charge of the division where such Engineer may be located."

By Mr. Upham, a bill to incorporate the Troy and Boston Railroad Co.

By Mr. Pray, against the petition to require the Buffalo and Hamburgh turnpike Co. to maintain a draw in their bridge.

The annual report of the Buffalo Savings Bank was received.

ASSEMBLY—Feb. 5.

THIRL READING OF BILLS.

To amend the act in regard to the commencement of suits against foreign corporations. Passed.

GENERAL LIEN LAW.

The House, in committee of the whole, Mr. Brigham in the Chair, resumed the consideration of the bill for the better security of mechanics erecting buildings and furnishing materials therefor.

The question pending was the motion to strike out "cities," the word towns having been previously stricken out.

Mr. Spaulding opposed this motion. It would entirely defeat the bill. There should be some such law as this passed. He believed it was earnestly desired by the mechanics in his city.

Mr. Upham moved to strike out the first section of the bill. As the bill had been amended, it was an absurdity. It contained the muck talked of "Oriskany clause;" it makes the contractor liable for twice the amount he agrees to pay.

Mr. Spaulding was opposed to this motion, although he did not think the bill went as far as it should go. It should be so amended as to secure the laborer as well as the builder. He would deprecate the defeat of the bill.

The motion to strike out the first section prevailed.

The committee then rose, and in the House Mr. Coe moved to indefinitely postpone the bill.

Mr. Upham did not wish to kill the bill. He thought an acceptable bill might be fixed upon.—If this motion carries, the subject might be called up at any time.

The motion to indefinitely postpone prevailed —ayes 54—noes 22. Adj.

Congressional.

WASHINGTON, Feb. 4.

SENATE.—The Senate convened at the usual hour, and after the transaction of the ordinary business, Mr. Rusk of Texas submitted a resolution, which was laid over, for the purchase of maps of Mexico for the use of Senators.

Mr. Johnson of La., gave notice to introduce a Pre-emption bill.

Mr. Sevier defended the President, declared himself in favor of prosecuting the war, and denied the receipt of any treaty propositions through Mr. Trist. He said he would be glad to hear from that gentleman whether the citizens were urging Gen. Scott to propose terms of peace, regardless of the President.

Mr. Bell of Tenn., replied that we had no right to answer for another; it is news to us, and that is sufficient.

Mr. Sevier said he considered it a farce and a hoax, to think that the annexation of Texas had caused the war, when, after a brief and spirited speech, he concluded.

Mr. Foote interrogated Mr. Bell, as to whether he knew of any treaty having been made by Gen. Scott or Mr. Trist.

Mr. Bell replied that he had merely heard from rumor, that a treaty had been received, but knew nothing positively.

Mr. Foote desired to put another question, but Mr. Mangum objected, and said that such catechising was not only irregular, but improper, and he wished they would let it drop.

Mr. Foote insisted that the system commenced on the other side of the hall.

Mr. Foote then asked Mr. Bell what amount of indemnity he would require, and what kind of security, did he favor either?

Mr. Bell considered the Rio Grande the boundary, and was not opposed to indemnity under proper circumstances honorable to both countries.

Adjourned till Monday.

HOUSE.—A message was received from the President in relation to Gen. Taylor's answer to the War Department.

☞ CONDITION OF HAVING THE EXHIBITION OF THE STATE AGRICULTURAL SOCIETY HERE.—The following resolution was adopted at a meeting of the Executive Committee of the New York State Agricultural Society, held January 21st, 1848, as an indispensable preliminary:

Resolved, That the Fair for the ensuing year be held at the city of Buffalo, on the 12th, 13th and 14th of September next, *Provided* the citizens of Buffalo deposit the original subscription list for defraying the expenses of the Fair (a copy of which has been deposited with the Secretary, with the certificate of the Mayor of Buffalo as to its availability,) with the President of the Society. And also furnish an agreement of the keepers of public houses, that the prices during the Fair shall be the ordinary charges of such houses, stating the price of each.

CHANCE FOR SPORTSMEN.—The St. Louis *Republican* of the 24th ult. says: "We are told that the islands between the mouth of the Missouri and St. Charles are literally swarming with wild turkeys. Our informant states that he saw upwards of *one thousand* on one roost.

Editorial Department.

J. CLEMENT, EDITOR.

Evangeline Again.

Most of our readers will recollect that we lately found fault with this new hexameter poem (!) of Longfellow's, objecting to its measure and its silly affectations. A much higher authority finds the same faults with it. A writer in the *American Review* for this month, after making an extract and then asking if the same is natural poetry, proceeds as follows:

"Where was the necessity of choosing such a form? It cannot be that the idea of its appropriateness rose up spontaneously in the author's mind in his first conceiving the piece, and that he used it because he felt *it to be the best*; at least it is to be hoped it did not. That motive which Coleridge calls the life of poetry, is here a very melancholy life indeed. It is 'a body of this death.' Was it because it was a new form and the author wished to show that 'some things can be done as well as others?' Then he should not have attempted it for three reasons: *first*, the motive is unworthy of a poet: *secondly*, the same thing or others very like it had been tried before it a hundred times, and it is evident to any student that it has never succeeded, because it does not accord with the structure of our language; and, *thirdly*, no one has a right to try such novelties without being, like Collins in his ode to evening, successful. Was it because the old forms were exhausted? How much richer would be an imitation, were it necessary to make such, of the melody of Comus, than such a monotonous tune as this! We have tried all ways of reading it, now minding accents and pauses, now reading it as prose; but *is neither one thing nor the other*, and whether as prose or verse, is equally *cold, affected and unnatural.*"

We have taken the liberty to italicise the most truthful parts of the above, because we wish the reader to remember them. Speaking of the two following lines,

"Silently, one by one, in the infinite meadows of heaven
Blossomed the lovely stars, the forget-me-nots of the angels,"

the reviewer says: "This is altogether *too* fine. It is sickening. We cannot away with it. A writer who feeds American boarding school misses with such *bon-bons*, is fair subject for mirth. He ought to be laughed out of the folly. Next thing his bust will appear in some barber's window in Broadway—if indeed the ideal is not there already. One would think this should suffice for the stars in one poem; but no:—

"Over her head the stars; '*the thoughts of God in the heavens.*"

This is *naughty*, we fear we shall never meet Mr. Longfellow in the place he mentions, if he allows himself to use such expressions."

We refer the reader to the article. He can find it at Hawk's.

REVIVALS.—In addition to those mentioned last week, revivals are now going on in the Washington street Baptist Church and the Swan street Methodist Church.

BRYANT.—We have no recollection of having ever read a *tame* poem from the pen of WM. C. BRYANT. As he is the best American poet, we have, during the last four years, published every new effusion eminating from his brain. His last appeared in Graham's Magazine for this month, and is called

THE SAW MILL.

In yonder mill I rested,
And sat me down to look
Upon the wheel's quick glimmer,
And on the flowing brook.

As in a dream before me,
The saw with restless play,
Was cleaving through a fir-tree
Its long and steady way.

The tree through all its fibres
With living motion stirred,
And, in a dirge-like murmur,
These solemn words I heard—

Oh, thou who wanderest hither,
A timely guest thou art!
For thee this cruel engine
Is pressing through my heart.

When soon in earth's still bosom,
Thy hours of rest begin,
This wood shall form the chamber
Whose walls shall close thee in.

Four planks—I saw and shuddered—
Dropped in that busy mill;
Then, as I tried to answer,
At once the wheel was still.

IMPROVEMENTS IN OUR EXCHANGES.—The Boston Saturday Rambler, an excellent weekly literary and newspaper, and the New-York Baptist Register, published at Utica, have been enlarged of late and otherwise improved. The Register is the organ of the denomination in this State, and is deserving of a wide circulation.

SONGS FOR THE PEOPLE.—The number of this popular musical companion for February, contains The Men of Churubusco, Black-eyed Susan, My Heart and Lute, Rory O'More, Heaving of the Lead, My Heart's in the Highlands, The Battle of the Kegs, Uncle Sam and Texas, What Fairy Like Music, Old Dan Tucker and Home, sweet Home. Published by ZIEBER & Co., Philadelphia, and to be had of Hawks at twenty-five cents a number.

EDGAR A. POE.—We learn, from the *Home Journal*, that this gentleman is delivering lectures at the "Society Library" in New-York, for the purpose of raising funds to establish a magazine to be called "THE STYLUS." We wish him success. Mr. WILLIS say that "if there be in the world a born anatomist of thought, it is Mr. Poe." Nothing more true.

THE HORTICULTURIST, an excellent monthly periodical, devoted to rural art and rural taste, may be obtained of Hawks. He has the February number.

WATER CURE IN AMERICA: Two hundred and twenty cases of various diseases treated with water; with cases of domestic practice; with notices of water cure establishments, etc. Edited by a water patient. New-York and London: Wiley and Putnam. 1848.

In this book is very fully told, to use the language of the poet Shelley,

"—— the hidden powers of *springs*."

Mr. "Water Patient" should have taken liberty enough with the reports of the two hundred and twenty cases, to have made them read grammatically, which, as it regards some of them, has not been done. For instance, "his flesh was completely wasted away, strength gone, dry cough," etc. is a bungling use of language. Were the words "dry cough" transposed, the verb *was*, might be understood and then the sense would be good. If a fourth part of these "cases" are correctly reported, and we are not prepared to deny that they are, the book is well worth fifty cents, the price for which it may be obtained—at Breed's.

HARPERS' PUBLICATIONS.—Hawks has received Nos. 27 and 28 of the Pictorial History of England, and "Adventures in Mexico and the Rocky Mountains," by Geo. F. RUSTON, Esq. The latter is in two parts at twenty-five cents each. We shall have more to say of it anon.

NEW CHURCHES.—The Pearl Street Presbyterian and the Second Universalist Societies are about erecting new churches. Notwithstanding the many large ones in this city, the editor of the *Commercial Advertiser* says that there are not enough to hold more than one third of the inhabitants.

THE SUPREME COURT commenced the regular term in this city on Monday. Seventy-five cases are on the calender for trial. Judges SILL, HOYT, MULLETT and MARVIN are on the Bench.

BUFFALO MEDICAL COLLEGE.—We omitted to mention last week that the dissecting course of this Institution had commenced. The regular term will commence in about three weeks.

☞ DEDICATION OF THE NEW GERMAN MISSION HOUSE.—This Church, situated on the corner of Sycamore and Ash streets, was dedicated to God yesterday afternoon. The exercises consisted of prayer by Rev. Mr. SEAGER, of Rochester, reading of Scriptures by Rev. Mr. WRIGHT, of Swan street Church, and dedicatory sermon, by Rev. Mr. SEAGER. It is intended that services shall be held in this house every Sabbath, under the superintendence of the Pastor, Rev. JOHN SAUTER, appointed by the Parent Society of the Methodist Episcopal Church, from which, as we now learn, he receives his support.

☞ For the White's Corners and Buffalo Plank Road, upwards of 20,000 are now subscribed. A meeting of the Stockholders, and others interested, will be held at the house of DANIEL BUCHLAN, White's Corners, on the morning of the 16th inst.

From the Buffalo Commercial Advertiser.

Census of this City.

We have been politely favored by Mr. E. W. PALMER with the following tabular statement of the census of our city, taken under the direction of the School Superintendent, by order of the Common Council. The primary object of this undertaking was to ascertain the number of children in the several School Districts; but as it was but slight additional trouble to make the census complete, Mr. PALMER has done so. By the census taken by the same gentleman last winter, just about a year ago, our population was 30,993—showing an increase of nearly 10,000 in twelve months. The census, an abstract of which we now give, it should be borne in mind, has been taken at the dullest season of the year, when navigation is entirely suspended, and when most out-door operations that give employment to large numbers, are necessarily interrupted, and cause a considerable diminution of our population, as compared with the spring, summer and fall months. The loss from these causes cannot be estimated at less than 1,500 or 2,000. We are glad that the census has been taken at this season for by presenting the worst show that can be made, it prevents misapprehension or exaggerated notions respecting the growth of our city:

NEW YORK, Feb. 8—3 P. M.

The Washington correspondent of the *Tribune* says that Col. BURNETT has been or will be appointed a Brigadier in place of HOPPING, deceased. The same correspondent says that the current report is that FREMONT has been cashiered by the Court Marshal. It is thought that the President will not sanction the decision.

☞ ST. JOHN'S CHURCH.—This unusually handsome and substantial building was consecrated to Divine service yesterday, in the presence of a crowded audience. The Right Rev. Bishop DELANCEY, with the Rev. Messrs. SHELTON, SCHUYLER, IRONSIDE, BOLLES of Batavia, and several other clergymen, officiated in these impressive ceremonies. Bishop DELANCEY delivered a polished and appropriate discourse, selecting as his text the words, "Holiness becometh thy house for ever."—*Commercial of Monday.*

Congressional.

WASHINGTON, Feb. 7.

The P. O. General was directed to report the causes of the frequent failure of the Southern mail, also what Legislation is necessary to prevent the mails being beaten by private expresses.

Mr. Benton's resolution instructing the President to inform the Senate, why the article relating to the promotion of Cadets was inserted in the army register, was adopted.

Mr. Douglass from the Committee on Territories reported a bill to establish a territorial government in Oregon. The bill extending the provision of the act granting half pay to the widows of volunteer militia dying of wounds received in battle, to widows of soldiers of the regular army was taken up and passed.

The consideration of the 10 regiment bill was resumed. Mr. Hunter addressed the Senate in opposition to the policy of the Administration.—He advocated Mr. Calhoun's project of a defensive line. Adj

HOUSE OF REPRESENTATIVES.—The joint resolutions of the Legislature of New York, voting thanks to General Scott and the army in Mexico, and urging the presentation of a gold medal to the former, was presented.

Mr. Houston, of Alabama, moved to amend so as to include all other Generals engaged in active service from the commencement of the war.

Joint resolutions were presented by Mr. Stephens, of Georgia, complimenting General Taylor and the army under him for the victory of Buena Vista, and directing the presentation of a gold medal to General Taylor, which were read three times and passed.

The vote on their passing was, yeas 181, nays 1. Mr. Wilmot made a personal explanation in relation to an article which had appeared in the Union newspaper, accusing him of having thrown another firebrand into Congress, because he had recommended direct taxation. He denied the accusation indignantly, and castigated the editor of the Union with great energy.

He spoke against the nomination of Buchanan for the Presidency, and charged that the Pennsylvanian which opposed the proviso, did so for the purpose of obtaining government patronage.

Mr. Thompson of Pennsylvania replied and defended Mr. Buchanan from the charge made by Mr. Wilmot.

DUTIES RECEIVED AT BUFFALO.

The following statement of the amount of duties received at the port of Buffalo in the District of Buffalo Creek, New York, from 1843 to 1847 inclusive, has been kindly furnished us by H. W. ROGERS, Esq., the Collector of the port. The increase, it will be observed is very great, and is an evidence of the growing importance of the foreign trade of this point. This is the first district off the seaboard that has ever paid its expenses. This year the amount collected has not only been sufficient to defray all expenses of the office but to leave a surplus of $2000, to be paid into the treasury.

Statement of amount of duties accrued at the Port of Buffalo in the District of Buffalo Creek, New York, from 1843 to 1847, inclusive:

1843	$4,346 34
1844	8,129 18
1845	12,047 45
1846	13,369 49
1847	24,302 58

H. W. ROGERS, Collector.

CUSTOM HOUSE, BUFFALO, N. Y., February 7, 1848.

☞ THE BRIDGE AT THE FALLS.—On Saturday a half inch cord was hung across the river, and a foot bridge will be completed by the 1st June. Major FISK and his men are laying out the town of Bellevue, where it is intended very soon to erect a large Hotel.

From Mexico.

A telegraphic despatch from Baltimore, says that tolerably reliable reports had been received in that city from Washington, that peace has been arranged with Mexico.

An arrival at New Orleans brings later accounts from the Rio Grande. Lieut. Franklin's Topographical engineers, who left Monterey on the 18th, report that just as he left, an express was received from Saltillo, stating that a report had reached there from Col. Homtramick to the effect that 10,000 Mexicans under Gen. Bustamente, were marching upon Saltillo. Very little credit was attached to the report.

Our forces were in good condition, and willing to be attacked whenever the enemy think best to make the experiment.

The latest accounts from Queretaro by the Edith, at New Orleans, state that Anaya had gone out of office by the expiration of his term, and that ¿Pena y Pena, by right of his office as Chief Justice, had succeeded to the Presidential Chair again.

One account states that he has been elected President, but this is probably a mistake. He declares that he will pursue the policy of Anaya, and is supposed to favor peace. The letter which brings this news is dated at Queretaro, 8th ult., and says the Cabinet has been re-organized by the appointment of Rosas as Minister of Foreign Affairs and temporary Secretary of the Treasury, Salacio, Minister of Justice; and Pedro Maria Anaya, Secretary of War.

The Iowa legislature has adjourned *sine die* without electing a U. S. Senator or Judges.

A German woman was burnt to death at a fire which occurred in Baltimore on Saturday last.

A forgery to the amount of $20,000, is stated to have been committed in Philadelphia last week.

The store, No. 108 Wall street, destroyed by fire yesterday morning. Loss $10,000 or $15,000.

Gen. Scott's order, issued at the City of Mexico on the 15th had been received at Matamoros, and Capt. Chapman, upon its receipt, at once sent out a circular requiring that all duties levied upon animals, goods, wares, or merchandise entering the city from any part of the State, or any other State within the Republic of Mexico, should immediately cease; and that all such duties, paid since the 1st of January, should be refunded, upon presentation of the certificate of payment at the Collector's office.

Gen. Wool issued an order from Monterey, of the 6th, requesting all persons arriving there to report themselves to the Governor, and give their names for registration. Also requiring merchants to exhibit their invoices, and a failure to comply with the regulations will subject their goods to seizure and confiscation for the benefit of the U. States.

New York, Feb. 8—7 P. M.

A letter from Monterey says that three privates, Galbraith, Nucente, and D. D. Loun, had been sentenced to suffer death; the first for mutiny and the others for murder.

Arrest of Mr. Trist.—The Washington correspondent of the Philadelphia Enquirer learns from a very reliable source that orders have been forwarded to Maj. Gen. Butler to arrest Nicholas P. Trist, and send him home.

The New Orleans Picayune learns that Col. Carasco, a Mexican officer who has rendered himself rather conspicuous, is at Monterey, proposing to enter into negotiations with Gen. Wool for a Pronunciament against the existing Government of Mexico and in favor of the U. S. on the part of the States of Tamaulipas, Nueva Leon, and Coahuila. He also proposes to bring in Gen. Canales, that cowardly chief of guerrillas, who has given us so much trouble on the Rio Grande.

Col Carasco has been for a long time residing in Matamoros with his family, and appears friendly to the Americans. We know not what degree of credit to attach to this report.

The following is an extract of a letter to the Picayune dated Mexico, Jan. 12, 1848:

At last accounts Santa Anna was at Tequacan, in the state of Puebla. He has with him a large number of chiefs and officers, and appears to be awaiting the action of the Mexican Congress.

A soldier belonging to the 1st dragoons was hung on Wednesday at the Penon Gate, for murdering a Mexican. The murder was a most unprovoked one, and there is no doubt he deserved his fate.

Canal Appointments.

Rochester.—Nathan H. Blossom, Collector.

David H. Richardson, Superintendent.

Porter Taylor, Weigh Master.

A. E. Pardee, Boat Inspector.

D. D. Spencer, Superintendent Genesee Valley Canal.

Brockport.—E. T. Bridges, Collector.

Scottsville.—John Dorr, Collector.

John Ryan, of Medina, has been appointed Superintendent on the 12th section of the Erie Canal.

Mr. Usher, of Little Falls, Superintendent of the Herkimer section.

Railroad Accidents—A Coincidence.—One of the brakemen on the Housatonic road, last Friday slipped off, and fell lengthwise between the cars. The train passed over him, cutting off one of his legs, and dividing his body completely in half from his head down, and of course killing him instantly. In connection with this accident the *Albany Argus* says it has heard the following curious incident:

Some time ago, one of the conductors sold to a brakeman a watch, to be paid for at a future time. Shortly after, this brakeman was killed through some accident on the road, and the watch returned to the possession of its former owner. At the commencement of the winter, the same watch was sold on the same terms, to this brakeman, and now we are called upon to note a similar unfortunate accident. There certainly seems to be a strange fatality attached to this watch.

A Roguish Trick.—A man whose business led him to buy often ten or twelve bushels of fine sand at one purchase, had good reason to suspect that he did not receive quite as much as he paid for. For a long time he did not detect the fraud, although the sand man passed close by him with every bushel, which seemed to be a fair measure and properly filled. At the seventh or eighth time however, the rogue carried his apparent burden a little too much elevated on one side, betraying the fact that he had inverted the measure and filled only the half inch cavity at the bottom of it. This being done twice or thrice in each delivery made a tolerable extra profit.—*N. Y. Com.*

☞ A careless countryman ran both wheels of his wagon over a small child yesterday, near the corner of Swan and Ellicott streets. He seemed perfectly unaware of what he had done. Such carelessness may be less wrong than intentional brutality, but is in itself highly criminal.

A Curious Piece of History.—About the year 1785, Alderman J. Boydell, of London, conceived the project of establishing a "a Shakspeare Gallery," upon a scale of grandeur and magnificence which should be in accordance with the fame of the poet, and at the same time reflect honor upon the state of the arts in Great Britain, and throughout the world. Mr. Boydell was at this time a man of great wealth and influence, and a patron of the fine arts, being an engraver himself, and having accumulated his fortune mostly by dealing in works of that character.

He advertised for designs from artists throughout Great Britain, and paid a guinea for every one submitted, whether accepted or not; and for every one accepted by the committee, a prize of one hundred guineas. The committee for selecting these designs was composed of five eminent artists, Boydell himself being the president. The first painters of the age were then employed to paint these pictures, among whom were Sir Joshua Reynolds, Sir Benjamin West, Fuseli, Romney, Northcote, Smirke, Sir William Beechy and Opie.

Allan Cunningham, in his "Lives of eminent British Artists," mentions that Sir Joshua Reynolds was at first opposed to Boydell's project, as impracticable on such an immense scale, and Boydell, to gain his approbation and assistance, privately sent him a letter enclosing a £1000 Bank of England note, and requesting him to paint two pictures at his own price. What sum was eventually paid by Boydell for these pictures was never known. A magnificent building was erected in Pall Mall to exhibit this immense collection, called the Shakspeare Gallery, and was for a long time the pride of London.

The first engravers of England were employed to transfer these gems to copper, and such artists as Sharp, Bartolozzi, Earlom, Thew, Simon, Middiman, Watson, Fyttler, Wilson and many others exerted their talents for years in this great work. In some instances the labor of more than five years was expended on a single plate, and proof impressions were taken for subscribers at almost every stage of the work. At length in 1803, after nearly twenty years, the work was completed. The price fixed (which was never reduced) was two guineas each for the first 300 impressions, and the subscription list was then filled up at one guinea each, or one hundred guineas a set, of one hundred plates.

Besides these subscriptions, large donations were made by many of the noblemen of England, to encourage the undertaking and to enable Boydell to meet his enormous outlay. The cost of the whole work, from the commencement, is said to have been more than one million pounds sterling; and although the projector was a wealthy man when he commenced it, he died soon after its completion, a bankrupt to the amount it is said of £250,000.

After these plates were issued, Boydell petitioned Parliament to allow him to dispose of his gallery of paintings by a lottery. The petition was granted, and the whole collection was thus disposed of. One of the finest of these pictures, King Lear, by Sir Benjamin West, is now in the Boston Athenæum.

One fact in relation to these plates gives great value to them. All the principal historical characters are genuine portraits of the persons represented in the play; every picture gallery and old castle in England was ransacked to furnish these portraits.

After a certain number of copies had been taken from the plates they were laid aside, some of them having been worn but little, while others required much labor to restore them to their original beauty. A few copies of the work have been brought to this country at different times, and are now to be found in the hands of amateurs, and in public libraries. Many of the single prints have been sold in this city at from 15 to 25 dollars each. But it is now almost impossible to procure them at any price, and nothing but the occasional breaking up of a public, or extensive private library, gives any opportunity of procuring them.

By some means which cannot now be accounted for, all the plates have found their way to this country, and the one hundred, weighing nearly 4000 pounds, have been purchased by Dr. S. Spooner, of this city. This gentleman, who has long been conversant with works of art, has been for many months silently but steadily pushing on the work of restoring the plates, and has been peculiarly fortunate in securing the services of Mr. George Parker, an engraver of no ordinary merit. It is a little singular that this gentleman was a pupil of the celebrated "Thew," when the latter was engaged on these same plates originally, and as Thew was considered almost the inventor of the art of stipple engraving, it will be seen that there is every reason to suppose Mr. Parker well qualified to do justice to the work. Dr. Spooner spares no pains or money in the prosecution of the labor, and has succeeded in restoring a number of the plates to such perfection that proofs from them cannot be distinguished from the original impressions. Some two years will be consumed in accomplishing the entire restoration and publication, and although he will be obliged to expend a large sum of money, there can be no doubt that he will be compensated by the admirers of the arts in the United States.—*N. Y. Com. Adv.*

Later from Mexico.

Two American deserters were taken with Torejon and Minion.

A Mexican company, with one hundred stand of arms in the city of Mexico, was captured on the 12th of January.

There was a rumor in Tampico on the 19th, that Guadalajara had pronounced in favor of Santa Anna and the Dictatorship.

A Mexican officer had been detected in endeavoring to induce American soldiers to desert. A military commission was in session at the city of Mexico, trying him for the offence. If found guilty he would be executed.

Col. Riley's brigade was at Tacubuya and Cushing's at San Angelo.

Young Men's Association.—The lecture before this society on Monday evening, was delivered by R. W. Haskins of this city. The subject was *Philosophy of History.*

Navigation Open.—The United States, Capt. H. Whitaker, left Buffalo on the 8th instant for Detroit, taking, with other freight, fourteen tons of wire for the Telegraph. It is a very unusual thing for a Steamboat to cross lake Erie in February.

The Whigs are to hold a National Convention at Independence Hall, in Philadelphia on the 7th of June, 1848. The Democrats hold one in Baltimore in the month of May.

Bring Music.

Bring music for earth's children—
For the beautiful and young;
For the strong of hand and the silver-haired,
Let the sounding chord be strung!
For the woodman in his cottage,
And the lordling in his hall,
Bring the liquid notes of harmony,
With their measured rise and fall.

Bring music for the joyful—
For the gay and wild of soul,
When the heart leaps up for pleasure,
And the pulses spurn control;
A softer charm outflowing,
Bears the sunny thoughts along,
And more gladly gleams the fancy,
In the Orphean tide of song.

Bring music for the tearful,
O'er whose sky a night is hung—
From whose brow the withered crocus
On the very winds is flung;
Lo, the syren call comes softly,
On that sweet and winning strain,
'Till the moon and stars of glory
Gild the path of hope again.

Bring music for the lover,
When his vows his passions speak,
And his answer is the roses
That hath blossomed on her cheek;
Then the song, in distance swelling,
By a magic undefined,
With a sense of dreamy beauty
Fills the palace of the mind.

Bring music for the mourner,
As he bends above the tomb
Where the loved and lost are lying,
'Neath the buds of vernal bloom.
Oh! as he fondly listens,
He lifts his yarning eyes,
And he thinketh of those angel-harps
They touch beyond the skies!

Bring music for earth's children,
In every scene and hour—
At festival and burial,
In battle and in bower;
Enhancing joy and pleasure,
And soothing care and pain,
The Beautiful is throned in sound
By music's glorious strain!

☞ The Play Things.—

CHILD.

Oh, mother, here's the very top
That brother used to spin:
The vase with seeds I've seen him drop
To call our robin in:
The line that held his pretty kite,
His bow, his cup, his ball,
The slate on which he learned to write,
The feather, cap, and all.

MOTHER.

My dear, I'd put the things away,
Just where they were before:
Go, Anna, take him out to play,
And shut the closet door.
Sweet innocent, he little thinks,
The slightest thought expressed
Of him that's gone, how deep it sinks
Within a mother's breast.

Albany, Feb. 8—3 P. M.

The Canal Board have appointed Uriah Dayton Canal Superintendent, L. A. Burrows Canal Collector, G. B. Gates, L. E. Harris, C. B. Morse, Andrew F. Lee, Inspectors of Boats.

Death of ex-Senator Jones.—The Hon. John W. Jones, formerly Speaker of the House of Representatives, and who recently resigned his seat in the Virginia House of Delegates, of which he was also Speaker, died at his residence in Chesterfield last week.

A Resurrectionist Shot Dead.—On the 28th ult., at Cincinnati, a resurrectionist who was in the act of removing a body from the grave for the purpose of his unholy traffic, was shot dead. He was found next morning, lying by the body he had attempted to steal.

VOL. X. BUFFALO, SATURDAY, FEBRUARY 19, 1848. NO. 3.

For the Western Literary Messenger.

To Miss H.

A CANDIDATE FOR MEDICAL HONORS.

Maiden of earnest thought, heroic heart!
God speed thee on thy way to win the prize,
And well reward thy struggle *to be wise*:—
Heed not detraction!—for thou hast a part
On the wide, shifting stage of life to play
That will confer renown on thee for aye.
When gentle woman learns the healing art—
Studies the moulding of man's frame of clay;
And from the elements—*earth, water, fire*
And *air* draws power to make disease retire,
While baffled Death throws down his blunted dart,
Brush should the *painter* seize, the *bard* his lyre;
And on a tablet fair, with pen of flame,
The Muse of History inscribe her name.

Avon, N. Y. W. H. C. Hosmer.

A Story of Mount Etna.

Giuseppe, a young vine-grower in a village at the foot of the mountains looking towards Messina, was in love with Maria, the daughter of the richest bee-master of the place: and his affection, to the great displeasure of the father, was returned. The old man, though he had encouraged him at first, wished her to marry a young profligate in the city, because the latter was richer and of a higher stock; but the girl had a great deal of good sense as well as feeling, and the father was puzzled how to separate them, the families having been long acquainted. He did everything in his power to render the visits of the lover uncomfortable to both parties; but as they saw through his object, and love can endure a great deal, he at length thought himself compelled to make use of insult.

Contriving, therefore, one day to proceed from one mortifying word to another, he took upon him, as if in right of offence, to anticipate his daughter's attention to the parting guest, and show him out of the door himself, adding a broad hint that it might be as well if he did not return very soon. "Perhaps, Signor Antonio," said the youth, piqued at last to say something harsh himself, "you do not wish the son of your old friend to return at all." "Perhaps not," said the bee-master. "What," said the poor lad, losing all the courage of his anger in the terrible thought of his never having any more of those beautiful lettings out of the door by Maria, "what! do you mean to say I may not hope to be invited again, even by yourself?—that you yourself will never again invite me or come to see me?" "Oh, we shall all come, of course, to the great Signor Giuseppe," said the old man, looking scornful, "all cap in hand." "Nay, nay," returned Giuseppe, in a tone of propitiation, "I'll wait till you do me the favor to look in some morning, in the old way, and have a chat about the French: and perhaps," added he, blushing, "you will then bring Maria with you, as you used to do; and I won't attempt to see her till then." "Oh, we'll all come, of course," said Antonio, impatiently, "cat, dog, and all; and when we *do*," added he, in a very significant tone, "you may come again yourself."

Giuseppe tried to laugh at this jest, and thus still propitiate him; but the old man, hastening to shut the door, angrily cried. "Aye, cat, dog, and all, and the cottage besides, with Maria's dowry along with it; and then you may come again, *and not till then*." And so saying, he banged the door, and giving a furious look at poor Maria, went into another room to scrawl a note to the young citizen. The young citizen came in vain, and Antonio grew sulkier and angrier every day, till at last he turned his latter jest into a vow: exclaiming with an oath, that Giuseppe should never have his daughter, till he (the father), daughter, dog, cat, cottage, bee-hives, and all, with her dowry of almond-trees to boot, set out some fine morning to beg the young vine-dresser to accept them.

Poor Maria grew thin and pale, and Giuseppe looked little better, turning all his wonted jests into sighs, and often interrupting his work to sit and look towards the said almond-trees, which formed a beautiful clump on an ascent upon the other side of the glen, sheltering the best of Antonio's bee-hives, and composing a pretty dowry for the pretty Maria, which the father longed to see in the possession of the flashy young citizen.

One morning, after a very sultry night, as the poor youth sat endeavoring to catch a glimpse of her in this direction, he observed that the clouds gathered in a very unusual manner over the country, and then hung low in the air, heavy and immoveable. Towards Messina the sky looked so red, that at first he thought the city on fire, till an unusual heat affecting him, and a smell of sulphur arising, and the little river at his feet assuming a tinge of a muddy ash color, he knew that some convulsion of the earth was at hand. His first impulse was a wish to cross the ford, and, with mixed anguish and delight, to find himself again in the cottage of Antonio, giving the father and daughter all the help in his power. A tremendous burst of thunder and lightning startled him for a moment; but he was proceeding to cross, when his ears tingled, his head turned giddy, and while the earth heaved beneath his feet he saw the opposite side of the glen lifted up with a horrible deafening noise, and then the cottage itself, with all around it, cast, as he thought, to the ground, and buried for ever.

The sturdy youth, for the first time in his life, fainted away. When his senses returned, he found himself pitched back into his own premises, but not injured, the blow having been broken by the vines. But on looking in horror towards the site of the cottage up the hill, what did he see there? or rather, what did he *not* see there? And what *did* he see, forming a new mound, furlongs down the side of the hill, almost at the bottom of the glen, and in his own homestead? Antonio's cottage:—Antonio's cottage, with the almond-trees and the bee hives, and the very cat and dog and the old man himself, and the daughter (both senseless), all come, as if, in the father's words, to beg him to accept them!

Such awful pleasantries, so to speak, sometimes take place in the middle of Nature's deepest trage-

dies, and such exquisite good may spring out of evil. For it was so in the end, if not in the intention. The old man (who, together with his daughter, had only been stunned by terror) was superstitiously frightened by the dreadful circumstance, if not affectionately moved by the attentions of the son of his old friend, and the delight and transport of his child. Besides, though the cottage and the almond-trees and the bee-hives had all come miraculously safe down the hill (a phenomenon which has frequently occurred in these extraordinary *landslips*), the flower gardens, on which his bees fed, were almost all destroyed; his property was lessened, his pride lowered; and when the convulsion was well over, and the guitars were again playing in the valley, he consented to become the inmate, for life, of the cottage of the enchanted couple.

From the Young American's Magazine for January.

The Literature of Humbug.

In our age of universal intelligence and universal education; when war and industry are rapidly passing from the sphere of the sinews to that of the soul, from the bones to the brain, it would be strange indeed if the knaves did not feel and follow the general impulse. Pickpockets, highwaymen, burglars, pirates, the time-honored professors of stealing and stabbing, are of the past, and, like other forms of antiquity, may be profitably idealized and represented in novels; but, in themselves, they do not meet the great wants of the age. It is a philanthropic age, in which more is thought of human life than of human nature; and thieves therefore must contrive to make medicine do the work of murder, and pill the fool they formerly pistolled. By this method also, they may not only obtain the money he has about his person, but likewise what he has in the bank. It is an intellectual age, and why capture a ship on the high seas when you can do it more comfortably on 'change?—why drain blood from a man by a dagger when it can be done more securely by a discount?—why knock out his brains with a cudgel when you can bamboozle them in a bargain, or addle them with a fanaticism? It is an age of peace, and words must therefore perform the office of bullets, and blarney do the work of bludgeons. And above all, it is an age of activity and enterprise, an age of new discoveries and new deviltries, an age of magnetic telegraphs and Mississippi bonds, and it would be indeed odd if, in the swift race of progress, the rogue did not keep his natural station in the van of the movement.

Humbug, therefore, expresses the method by which avarice, deceit, theft, piracy, all grades of sin and folly, may gain their objects of plunder in a legal and peaceful way. And as its essence is pretence, as it drives its trade under a cloak of seeming benevolence, patriotism, or philanthropy, it gets gratitude as well as gold from the intelligent public it bamboozles. Its relation to mankind is like the relation of Iago to Othello. The former was not content with ruining the Moor; but his villany would have wanted its finest zest, if it had not been honored with the thanks of its victim for making him "egregiously an ass."

The genius of Humbug has many modes of compassing its designs, and it would be impossible to limit its energies within any one sphere of operation. But its most influential assault on the human head and pocket, is by a species of written composition which we take the liberty of calling its literature. This literature of Humbug, in some cases compounded of brass and brains, in others wholly brazen and brainless, runs through various degrees of talent and turpitude, and runs into many departments of thought and action. But whether it invades medicine, metaphysics, politics, theology, reform, trade or philanthropy, its one object is to bring all men under the despotism of King Quack; and its one mode of procedure is to tickle the conceit or flatter the ignorance of mankind, by the declaration, inscribed in shining characters on its brazen brow—EVERY MAN HIS OWN EVERYTHING. This magnificent puerility, this ingenious nonsense, is the most admirable device ever invented by craft to lure men from the old tracks of wisdom into the slavery of error and folly. Every man his own physician, his own statesman, his own priest, his own lawyer is but another form of expression for—Every man under the dominion of the quack, every man his own fool, every man his own ruin. And this messenger of Humbug, proclaiming universal liberty, and breaking all the bonds which bind the weak to the strong, will be found at last to be of that democracy of rascality whose sway is the most galling and remediless of tyrannies.

First, let us refer to the literature of quack medicine, the most remarkable literature ever spun from the brain of Impudence. The country is flooded with quack doctors,

"Rained down from heaven in a shower of pills,"

whose cunning of mind and fingers is incessantly occupied in preparing doses of death or delusion for "the most enlightened nation on the face of the earth." They are unmatched for the skill with which they develope and stimulate the credulity of the public through the press. Their great engine is the newspaper advertisement. It is needless to describe the character of this, and the peculiar extravagance of falsehood it embodies. It is commonly a tissue of lies, more or less ingeniously woven, which could only provoke a roar of laughter from a man in health; but it is so managed as to strike directly at the volitions of the sick. Its palpable absurdity only indicates the depth of its practical cunning. The quack's advertisement, indeed, is one of the most sagaciously ridiculous products of the literature of Humbug. The test of its excellence is in its influence. It induces the sick to purchase the small compact death-dealing pills it celebrates, and no one in the custom of visiting graveyards can fail to acknowledge its perilous efficacy.

The humbug of medicine is of two kinds—the vulgar and the genteel. The former is most universal; but the latter is growing fast. The literature of genteel quackery is of course more Addisonian in its diction, and more blandly insinuating in its style of thought, than its "rough and ready" companion; but its object and "grand idea" are the same. It operates on clergymen, lawyers, the literary and educated classes, who, as they are learned in their own professions, and as they are known under the general name of intelligent men, are apt absurdly to be set up as judges of medicine. The opinion of a clergyman or lawyer, on the treatment of a disease of which he knows nothing, is commonly considered more valuable than that of a physician who has made it a special study. The folly of this would be instantly seen if a physician should dogmatize on theology and law. Because a man's opinion is good in some special department of science he has made his own, people are prone to imagine that it has authority on subjects of which he is as ignorant as other men. From not considering this plain distinction, a large number of the "upper ten thousand" and middle ten hundred thousand, are daily delivered over to quacks as avaricious, ignorant and impudent, as ever paraded universal panacea in newspapers or bullied the unintelligent into pill-taking. The cemeteries, doubtless, have a story to tell of genteel as well as vulgar

quackery. Many persons have found a watery grave without risking a voyage on the ocean, and doses have been found none the less efficient from being as infinitesimal as the honesty of the dosers.

As a benevolent concern for the bodily health is the motive of the medicine quack—as it would be ungracious to suppose he was actuated by any impulse having its spring in the pocket—so we must suppose that philanthropy is the great source of the lies and blunders of the reforming quack. Reform is a noble thing in itself, and Reformers are among the noblest specimens of the species; but as all good things have a shell as well as kernel, an appearance as well as a substance, and as everybody can distinguish appearances while few can detect substances, every good thing is liable to gross perversions. Quack philanthropy is the product of perverted reform and its operations in the present age are among the most astounding marvels of humbug ever witnessed. Under the cover of a love for mankind, a love which, when genuine, is accompanied by a charity for all men, it enables its disciples to glut their appetite for defamation and detraction; to dignify their vituperation with the name of moral courage; to set up their little clique of wordy fanatics as the Sir Oracles of wisdom; and to prank out their ignorance, conceit, rancor, and unreason in the guise of universal philanthropy and pure religion. The written and spoken compositions, in which they embody their frenzied fooleries, are whisked and hawked about all over the land to direct the moral and intellectual judgments of the people. Their great cry (and it may be added, their little wool) is "oppressed humanity;" and certainly we should be inclined to echo it, if we supposed that any large portion of "humanity" read the windy diatribes, in which such aspiring mediocrity asserted its phenomenal existence. Of the best of this class of pseudo reformers, charity can only say, in the words of Bacon, that they have "small matter and infinite agitation of wit." Most of them are mere repeaters of tortured commonplaces and stale frenzies, about liberty, slavery, free air, chains, whips, lashes, and the like, which they have caught from some excitable gentleman laboring under an opulence of clanking words and a poverty of striking thought. And yet this galvanized imbecility goes under the name of fine writing, and is deemed be some wiseacres to be unmatched for vigor and eloquence.

Such furiously verbal love of mankind is bad enough when it is the natural expression of the boiling conceit of the writer. But bad as it is, "worse remains behind." This humbug philanthropy has become a trade as much as making nostrums; and its disinterested benevolence, in all the glories of its strained expression and strangled thought, is manufactured to order.—After a man has failed in everything else, he is apt to turn reformer, and convert the wealth of his vocabulary into the more substantial coin of the pocket. He becomes accordingly a dealer in slander and vituperation, makes merchandize of railing, and regales himself on the profits of his rancor. As every man who is not a natural fool who has sufficient intelligence to be a rogue, can command the cunning and shamelessness necessary to make him a trading hack of reform, the business, in these hard times, does not lack activity.

This debauchery of intellect as displayed in a carousing in words, is especially seen in political compositions. The subject is a tender one, but no essay on the literature of humbug would be complete which omitted to notice the literature of politics. Here we have a field as wide as free government. The object of quack politicians is to gain under the forms of liberal institutions the same objects which courtiers intrigue for in a despotism. Servility, trickery, fraud, falsehood, nonsense, they accordinly set to the tune of the Declaration of Independence; and try hard to make it appear that the primal object of a free government is to reduce its citizens to a vassalage to King Quack. Each has some universal panacea for the cure of every malady of the state, and for the filling up of every vacuum in his own purse; and to compass both objects, all of them address flatteries to the people which would disgust the Grand Lama or Russia's autocrat, and which an experienced courtier of a despot would have too much sagacity to employ. The written and spoken compositions which contain the principles, both obvious and latent, of the quack politicians, are too familiar to need quotation or analysis. They ever suggest the image of a slippery knave, pouring praise into the public ear while he is quietly engaged in picking the public pockets.

There is another department of political literature which almost equally deserves the honor of being stamped with the broad seal of Humbug. This is political abuse, which consists in using fierce language having no applicability to its objects, and springing from no enthusiasm or passion in the writer. It is denunciation on mechanical principles, and has no more heart in it than if it proceeded from Babbage's calculating machine. Men of straw, named after some prominent statesmen, are set up, and pommeled with the pet epithets of party; and no pretension is made to nicety of touch or felicity of application. All individual traits are lost sight of in a mass of wildering vituperation. Hyperbole is placed upon the rack, to wring strong epithets from its agonies and contortions, and these are used by men who are in the blandest temper in the world, and who affix no meaning at all to the sounding expletives they send rattling over the page. Such writing requires no talent, and indicates poverty rather than opulence of langnage; but still is taken as evidence of a great genius for politics, and is read with profound attention by all whose feeble bigotry it gratifies and stimulates.

The most influential deception in politics is practised by party catch-words and cant phrases. A few captivating rallying cries will often carry the day against reason and truth. They are addressed to the ear rather than to the mind, and though instantly resolved by analysis into follies—though they are bubbles which break into suds at the slightest touch of argument—they are still wonderfully effective. They commonly neither express the objects nor opinions, good or bad, of the parties who use them, and depend altogether for their existence on an immunity from examination; and yet they constantly pass from mouth to mouth as embodiments of principles. It would be impossible to calculate the amount of popular delusion they represent. In selecting a party cry, the universal custom is to invent one which shall operate on popular prejudices or desires, not one which shall express the principles and intentions of the party leaders. The consequence is, that the rank and file of a party are always more disappointed when they triumph than when they fail. To obtain their votes, pledges have been given which cannot be redeemed. When people wish foolishly, politicians have no resource but to promise recklessly. These promises, whether directly expressed or only implied, constitute a rich department of the literature of deception.

☞ We learn from the Union that the Surgeon General of the Army of the United States has forwarded a supply of Chloroform to the Armies of the United States for hospital purposes.

The Dying Boy.

Correspondence of the N. Y. Journal of Commerce.

SARATOGA Co., Jan. 1848.

I may have somewhat singular ideas on this matter, but such as they are, they have been many years deeply impressed on my mind, that the death of a child is not only a release of the soul from chains that would ere long have proved galling, but is in every respect one of the lightest afflictions, when viewed in the light of its accompanying consolations, that the hand of God ever deals to his wayward children. Nor have I ever looked on the eyelid which hides forever from a mother's gaze, the earthlight that once gladdened her in her infant's eye, without the thought that if there was a winning voice calling from heaven to one on earth more melodiously than any other, it must be that voice which has never been heard here in other than tones of innocence and affection, as it calls the dear one (dearest on earth!) to come up and behold the rest which the child is taking on the arms of its Father.

I am apt to linger longer in a grave yard, by the little mounds that are between the larger ones, and to fancy the astonishment which will fill the eyes that have wept countless tears thereon, when they behold their little one grown glorious in the Sabbath land. And while I have never doubted that the affections of earth would be sanctified, and thus stronger in heaven, I have wondered by what tone, or feature, or smile, the mother would recognise there the long lost idol child, she buried once so sadly.

I was standing in the recess of a deep window, looking towards the west. The sun was gone, but the summits of the Kayderoceros mountain, were not cold after his last kiss. Without interruption, I stood thus watching the sky, till a star peered stealthily out, and then shrunk back, as if a wandering twilight ray had brightened it, and I sought vainly to discover it again. The cold gray of the sky contrasted forcibly with the white mantle of the earth, which has become whiter since I last wrote you, and fences and fields were alike dressed in the robe of purity. Would to God, that the taints of earth might as easily be covered with a spotless garb. Would to God, that the stains of guilt on the soul of man might as easily be hidden from the all-seeing Eye.

"They may be, just as easily, my dear sir."

I had unconsciously been thinking aloud, and was startled by the interruption of my quaint but most excellent friend Dr. Williams, who had entered unperceived, and turning, joined in a conversation, which continued until the entrance of Miss M—, for whom he had asked. The object of his call was to ask her to Mr. T—'s, whose little boy was dying. Miss M— instantly consented, and I agreed to drive over with her. Dr. W. proposed to meet us at the Grove in two hours from that time, but yielded at length to an urgent invitation to remain to dinner, which was now on the table. I learned while sitting at the table, that Mrs. T— was a friend of my companion Miss M—, whom I introduced to you in my last letter. She was a few years her senior, but of much the same cast of mind, and in the country you are aware how very close an intimacy will grow between ladies of similar tastes and pursuits. They had been companions at school and at home since the days of their mere childhood, and hence the readiness with which Mrs. T— had sent for her friend in her hour of affliction. Is it not a pleasant sight, that dependence of friend on friend? Had she wished to borrow a book, she would have had no less confidence in sending for it, than she had, when Dr. Williams told her that her child was dying, in asking him to call as he drove by and ask Miss M— to come and stay with her. I may be wrong in supposing that this contrasts forcibly with the relations existing between neighbors in some parts of the country I could name, but I find here that this is no solitary instance. Every family feels a sort of bond connecting it with every other, and that bond grows stronger (not weaker) when the hour of need is at hand. Dr. Williams informed me that little Harry T— had been running about merrily three days before, but had fallen and injured his head, and had remained insensible since then. That he had been called instantly, and was alarmed at the outset, but that Mrs. T— had refused to believe that he was so seriously hurt, and until this evening would not allow the neighbors to be told of it. "I do not think," added the kind physician, "that she yet believes it, or realizes fully that her boy is so near his end. I wish, Miss Jean, you would try to prepare her for the result. I do not believe it possible that he can live until tomorrow night. Indeed I feared the approach of death within the next five hours, and therefore desired to return instantly."

In a half hour the horses were at the door, and Dr. W— led the way, while we followed. It was a bitterly cold night. I had no conception of the state of the air, but we were well protected and drove swiftly. The three miles were passed in a little more than twenty minutes, and at the door I met Mr. T—, who insisted on my coming in. Sending the horses around to his stables, I entered.

The stillness that is the characteristic of a house in which the fear of death prevails, was here most profound. No footstep could be heard. No door made audible opening or shutting. No one spoke aloud or whispered, (for whispering is more painful to the ears of the sick than loud voices,) but each one who spoke used that low suppressed murmur, which falls upon the ear of one who is at a little distance, only as the sound of the wind out of doors.

Taking my arm Mr. T— led me to the room in which his boy lay. A dim light shaded from the bed, made the room appear sombre and gloomy, but a scene by that bedside made it appear instantly afterwards rather as an abode of beauty and of the holiest affection. Mrs T— was kneeling with her face buried in the covering of the bed, her right arm wound around my friend Miss M—, who knelt by her, and was murmuring in her ear words of most heavenly consolation. As my eyes became somewhat accustomed to the light, I saw the occupant of the bed. He was a noble boy, of five years, or thereabouts. A high and very broad forehead was half hidden by luxuriant curls of dark brown hair, and his full lips were matchlessly chiseled. But he was pale and white now as the pillow on which his head lay, and it was with difficulty that we perceived any indication of breathing. Yet as he lay there, so still, so pale, so very pale, he was eminently beautiful. A boy around whom a mother's love might be supposed to entwine its strongest cords. I never saw a fairer. But it was the wreck of golden hopes, the wreck of glorious fancies, that lay before me. A breaking heart was yearning to hear again his prattling, to see again the merry eye of rejoicing infancy. But he heeded not that heart. Never before had he been silent if she called. In his bright sleep, sweet sleep of childhood, watched by angels, did she even stand by his side and look at him, he smiled a holy smile, and if she pressed her lips to lips, his tiny arms were round her neck, and he was wide a wake, and giving back his warm caresses, murmuring with many a laugh "Dear Mama." Did she look into his eyes, it was brimful

of gladness and fun, and if she wept he wept with her, albeit he knew not why nor cared, only that he knew she grieved. But now—another hour, young mother, and his cold forehead will be colder yet, and his dear limbs rigid for the grave.—Another hour, and you will have one less, and God one more within his fold. Another hour, and the big heart of your bright boy will cease to throb even with these heavy painful pulsations, and you will look to heaven as the home of your long cherished one.

"Oh Mr. W—," said she, at length, looking up and seeing me standing by the bedside, fixedly regarding the face of her boy. "Oh Mr. W—, Harry is dying." "I fear that he is Mrs. T—. I fear for your sake, but for his I am glad."

"Jeannie has been telling me all that. But it is hard to listen, harder to believe it necessary. I cannot realize that he is dying. I cannot realize that I need such comfort. But yesterday he was so full of life."

"You forget, Mary;" calmly said Mr. T——. "You forget. It is three days since he was hurt."

"And what have days been to me? It has seemed but one long hour."

"It will be more difficult, my dear madam," said I, "to realize the time that will have passed when you meet him again."

"Shall I meet him again? It seems to me I was losing him forever. I shall meet him. Jeannie, why didn't you tell me this?"

"I did, again and again, but you would not hear me."

By a careful leading of the conversation thus, we at length succeeded in calming the excited mind of the mother, and she listened and joined in a low toned conversation, in which Dr. Williams proved himself as good a physician to the mind as to the body. I had been in the room nearly an hour, and had sent for the horses to be brought around preparatory to starting, when I observed a motion of the lip of the boy. His watchful mother had seen the same, and in an instant her head was bent down over him. Five minutes passed in perfect silence.

All eyes were directed to the bed, and all hearts beat in the first return of hope. All save one.—The calmness of Doctor Williams's face was unchanged, as he said in a low tone to Mr. T——, "You must prepare yourself now, my dear Sir." "Is this an indication of death?" exclaimed Mr. T——. "It is one of many indications."—"Then God be with his mother. She has not yet given up hope." "Not yet—oh not yet, Doctor. He is not dying yet. You said he might live till the morning, dont say he's dying now." "He is dying Mrs. T——. Every effort has been vain to excite any action of his brain, and there are indications of the close approach of the end."

A sob of agony was the only reply, as she turned her face to that of her boy. And at that instant, he opened his eyes. It was too dark to see their blue depths, yet she—oh, she needed no light to catch the look of love she knew was there. We saw a smile. I know the brave boy smiled, for it stole across his face like a gleam of the sunshine he was passing into. He did not move, or hand, or foot, or lip, but only fixed that holy gaze of earnest love on the face of her he had known as fondest, faithfullest. from the first day of his short life—then closed his blue eyes dreamily, as if to sleep. But he was dead.

One instant—only one—the mother strained the lifeless form of her boy to her heart, and then the almost instinctive conviction that what she held was clay and nothing more, overpowered her, and she fell into the arms of her husband. W.

A Good Sermon.—We have heard a story of the elder Dr. Beecher, now of Cincinnati, that is said to be true, and is worth putting into type, as illustrating the truth that we never can tell what may result from an apparently very insignificant action. The doctor once engaged to preach for a country minister, on exchange, and the Sabbath proved to be one excessively stormy, cold and uncomfortable. It was in mid-winter, and the snow was piled in heaps all along the roads, so as to make the passage very difficult. Still the minister urged his horse through the drifts, till he reached the church, put the animal into a shed and went in. As yet there was no person in the house, and after looking about, the old gentleman—then young—took his seat in the pulpit. Soon the door opened, and a single individual walked up the aisle, looked about and took a seat. The hour came for commencing service, but no more hearers.

Whether to preach to such an audience or not was now the question—and it was one that Lyman Beecher was not long in deciding. He felt that he had a duty to perform, and he had no right to refuse to do it, because only one man could reap the benefit of it; and accordingly he actually went through all the services, praying, singing, preaching and benediction, with only one hearer. And when all was over, he hastened down from the desk to speak to his "congregation," but he had departed.

A circumstance so rare was referred to occasionally, but twenty years after, it was brought to the doctor's mind quite strangely. Traveling somewhere in Ohio, the doctor alighted from the stage one day in a pleasant village, when a gentleman stepped up and spoke to him, familiarly calling him by name. "I do not remember you," said the doctor. "I suppose not," said the stranger; "but we spent two hours together in a house alone, once, in a storm." "I do not recallect it, sir," added the old man, "pray when was it?" "Do you remember preaching, twenty years ago, in such a place, to a single person?" "I do, indeed—and if you are the man, I have been wishing to see you ever since." "I am the man, sir; and that sermon saved my soul, made a minister of me, and yonder is my church!—The converts of that sermon, sir, are all over Ohio!"

So striking a result made no little impression upon the old veteran's mind. He learned that the man was at the time a lawyer, who was in town on business; and, tired of a Sunday morning at a country hotel, went, in despite of the storm, to church, to hear that sermon. The doctor often tells the story, and adds, "I think that was about as satisfactory an audience as I ever had.—*Boston Bee.*

A Singular Case.—The Easton Argus of the 20th, has the following account of a very mysterious transaction: Sometime in the beginning of last September, two men came to this place, representing themselves as the Sherif and his Deputy from Milwaukee, Wisconsin, with a warrant from Gov. Shunk, made out upon a requisition from the Governor of Wisconsin, for the arrest of a German named Simon Schweitzer, charged (as they said) with the crime of forgery. They arrested him and confined him for several hours in our county jail, when they appeared before one of our Associate Judges, and procured the proper authority to take him off. Mr. Schweitzer had formerly been a resident of Easton, but went out to Wisconsin, remained there some time, purchased considerable land there, and then returned to this place. The pretended Sherif and his aid took him away the same afternoon, and since

then, nothing has been heard of him. Being a member of Fatherland Lodge of the Odd Fellows of this borough a motion was made to expel him from the order for misconduct, but milder councils prevailed, and a committee was appointed to enquire into the facts. This committee addressed a letter to Milwaukee Lodge, No. 2, in Wisconsin, requesting its officers to inquire into the facts of the case. They did so, and received a reply from Governor Dodge, of that state, that he had never made any requisition upon Gov. Shunk for said Schweitzer, and that if he had been arrested, it was done without authority. It is thus evident that Mr. Schweitzer was not taken by any real officers from Wisconsin, and the suspicions are strong that he has been foully dealt with. The members of Fatherland Lodge are making diligent enquiry into this mysterious case, and if the truth can be obtained, they will surely get at it. Mr. Schweitzer was always considered a worthy and respectable man, and he was perfectly thunderstruck at his arrest, declaring his entire innocence of the crime imputed to him.

"Hanging up the Stocking."—Major Jones, of Pineville, is a 'cute old fellow, and is always saying something racy. The *Western Continent* contains an article from the Major, in reference to the good old custom of children of hanging up their stockings on Christmas Eve, an extract from which we give below:

But there's more hanging up of stockings in this world than goes by the name. Older people who laughs at the children's innocent superstition, don't forget to hang up their stockins, tho' they don't always go to bed with as quiet, trust-in hearts, nor as *clean* hands and faces, and of course don't always git their stocking as well filled.

The politician hangs up his stockings for Buncomb, and waits to see 'em swell with popularity. There's four or five pair of stockings, hung up now for the next Presidency, sum bran new ones and sum that's been darn'd up for the occasion before; and ther'll be more old stockings hung up this winter at Washington than would hold all the offices of the government for half a century to come. I'd jest like to be old Uncle Sam instead of old Santa Claus for a little while—sum of 'em would find empty stockings, I'll be bound.

The lawyer and the doctor hangs up their stockings when they stick up their shingles.—Sometimes, they're a long time getting 'em full of clients and patients, but if they do succeed, they're very apt to keep up the practice.

The merchant hangs up his stockings over his door, and sometimes you'll see 'em hangin in the winder and all around the door. So, if they don't always git fortin enuff in 'em, it aint because they don't have a fair showin in the world.

Editors hang up their stockings, and if any people deserves to have 'em well filled it's them. But, poor fellers, most of 'em is no strangers to hope deferred. They know what it is to give their lives to a labor of love, and are contented to see the stockings of others filled with the good things of this world, though their own swings empty in the chill winds of adversity.

Miniature of Benjamin West.—We have just been shown an extraordinary relic. It is a miniature of Benjamin West, aged 18, as painted by himself in the year 1756, and presented to Miss Steele, of Philadelphia, to whom he is said to have been engaged. The painting is beautifully executed on ivory, and is enclosed in a silver case. Miss Steele was the daughter of James Steele, Surveyor General of the Province of Pennsylvania under William Penn. This relic was among the effects of the late John Cook, of this city, No. 298 Chesnut st., and will be sold by public auction on Friday, at the house, by Mr. Ewing, the administrator. Surely there will be many bidders.—*Phila. Enquirer.*

From the Buffalo Commercial Advertiser.

Addition to Gray's Elegy.

Perhaps no poem in our language has been more universally read and admired than Gray's Elegy in a Country Churchyard. It is as familiar to the reader of this day, as it was to the contemporaries of the writer—indeed it is probably more so. Its exquisite sentiment reaches every heart, while its unaffected simplicity and purity charm alike the accomplished scholar and the unlettered reader. It has passed through a period when to revile it was the fashion with some critics whose fame it has now long survived. To attempt to add to or amend it would seem, at first thought, almost a literary sacrilege. Yet the author of the following lines, published anonymously many years ago in a Rhode Island paper, from which we take them, was inspired by the same high spirit that guided the pen of the immortal author of the Elegy. We think these verses—extravagant as this praise may sound—quite equal to any part of the Elegy and a valuable addition to it. The author believed "that Gray had not given to the subjects of his muse enough of religious character to make the charm complete." Who was their author? Can any one of our readers tell us? He is believed to have been an American and these lines alone should stamp him as a poet of extraordinary genius and highly cultivated mind.

The verses were intended to follow the Stanza in the Elegy beginning with the words—

"Far from the maddening crowd's ignoble strife."

No airy dreams their simple fancies fired,
No thirst for wealth, nor panting after fame;
But truth divine, sublimer hopes inspired,
And urged them onward to a nobler aim.

From every cottage, with the day, arose
The hallowed voice of spirit breathing prayer;
And artless anthems, at the peaceful close,
Like holy incense charmed the evening air.

Though they, each tome of human lore unknown,
The brilliant path of science never trod,
The sacred Volume claimed their hearts alone,
Which taught the way to glory and to God.

Here they from Truth's eternal fountain drew
The pure and gladdening waters day by day;
Learned, since our days are evil, fleet, and few,
To walk in wisdom's bright and peaceful way.

In yon lone pile, o'er which hath sternly passed
The heavy hand of all destroying Time,
Through whose low mouldering aisles now sighs the blast,
And 'round whose altars grass and ivy climb;

They gladly thronged, their grateful hymns to raise,
Oft as the calm and holy Sabbath shone;
The mingled tribute of their prayers and praise
In sweet communion rose before the Throne.

Here, from those honored lips, which sacred fire,
From Heaven's high chancery hath touched, they hear
Truths which their zeal inflame, their hope inspire,
Give wings to faith, and check affliction's tear!

Whenn life flowed by, and, like an angel, Death
Came to release them to the worlds on high,
Praise trembled still on each expiring breath,
And holy triumph beamed from every eye.

Their gentle hands their "dust to dust" consign;
With quiet tears the simple rites are said;
And here they sleep till at the trump divine,
The Earth and Ocean render up their dead.

THE RUINS OF NINEVEH.—Mr. Azariah Smith, in a letter to Prof. Silliman, an extract of which is given in the last number of the Journal, remarks that it was his rare fortune to travel, a few weeks previously, in company with Mr. Layard—the English gentleman who, aided by a scientific Society in Great Britain, has been employed for the last year or two in making excavations about the Ruins of Nineveh. His main work has been done at Nimrood, at or near the junction of the Zab and the Tigris, some twenty miles south of the excavations made by Mons. Botta, at Khorsabad. From inscriptions, partially deciphered, it would appear that one of the three places disentombed at Nimrood, and that at Khorsabad, were built by father and son, or other near relations; and from other inscriptions disentombed by Mr. Layard from the mound of Zoyunjonk—the mounds of long repute directly opposite the city of Mosul—it would appear that that also sustains a similar relation to the others. From this fact, the view formerly assumed that Nineveh was lately made up of several collections of houses interspersed with gardens, receives additional support, and *all doubt* is now removed from those passages of Sacred and Profane History which make it an exceeding great city of three days' journey.

Among other most interesting stones, sculptured and carved, sent to England from the disentombed Palaces of Nimrood, there is an obelisk of considerable size—containing, as appears from the partially deciphered inscription, a Chronological List of the Kings of Assyria—beginning with Ninus, and it would seem that it agrees with authoritive Egyptian Chronology. But space forbids farther detail. The public will soon have all the inscriptions, translated, before them.

Rural Department.

The Delights of Gardening.

EXTRACT FROM AN ADDRESS BY LAMARTINE.

From Downing's Horticulturist.

God, in his changeless works, heeds not our chimeras. Nature has no complaisance for our false systems. She is sovereign and absolute as her author. She resists our foolish attempts; she overthrows, sometimes rudely enough, our illusions. She seconds our efforts, aids them, and rewards them abundantly if directed in the right sense; but if we make a mistake, or attempt to force her, to compel her out of her course, she at once asserts her power, and blasts our labors with sterility, by the wasting away and the death of everything we have attempted to effect in opposition to her laws, and in her despite. We and others may with impunity make mistakes, and for ages at a time, in history, in philosophy, in religious and in social systems, even in astronomy.—We may devise on these heads the most absurd chimeras, and impose them upon the world for a long time as truth. That cannot you do, gardeners and agriculturists. Your longest error cannot outlast a single season, (applause,) the period of a crop, one spring, one year at most.—Such is the term of your error, for it is the term of your experiments. That once past nature prevails and sets you right. She reveals her will to you that you may make haste to conform your labors to it. You interrogate her unceasingly, respectfully, experimentally; and she always makes true and prompt replies. You register those replies in your memoirs, in your books, in your manuals; and from this intercepted dialogue between man that questions and nature that replies, you form those catechisms of the farmer and the gardener which become the science of vegetation.

Thus it is through these elementary books, and the congresses of cultivators of nature, such as this now assembled, that your science is deep-rooted, extended, improved and wide spread.—Thus it has been since Pliny, who made a catalogue of all the plants within the Roman empire; since Charlemagne, who in his Capitularies, which were in some sort his character or constitution, particularised the sorts and the number of vegetables he wished cultivated; since Cato, the most severe of statesmen, required that each Roman citizen, however poor he might be, should cultivate some flowers in his plot, in order that the elegance of such culture should contribute elegance and refinement to the manners of the people; for, though he aimed at correcting the excessive luxuriousness of the Republic, he desired no sumptuary law in vegetation—down to the various maritime and plant-seeking expeditions of the Crusaders, the Dutch, the English, to gather, one by one, from all parts of the globe, those ninety-eight vegetables or flowers with which your kitchen garden or flower beds are now enamelled—the art of gardening, rudely sketched by the Romans;, greatly extended and carried almost to marvellous perfection by the Chinese; taking, in England, the character and proportions of an aristocratic luxury; depreciated and belittled in Holland, down almost to the adoration of a tulip; elevated in Italy to the dignity of a splendid art associated with statuary, sculpture, and architecture; rendered useful in France by its alliance with the higher walks of agriculture, of which it is the path-finder—has finally, thanks to our efforts, reached in various parts of Europe the condition of a national industry, giving employment to millions of men, and the aliment of a commerce in fruits and flowers worth millions of money.

Thus it is, and I pray you to consider it, gentlemen, that gardening, which heretofore was only a sort of amusement or domestic luxury, an adornment of the soil, has become now-a-days a new and magnificent object of commerce. At a time when labor fails for man more than man fails for labor—at a time when to invent a new industry is to invent wealth, occupation, wages, life itself for numberless workmen—is not this a view fitted to impress the statesman, to touch an intelligent minister of agriculture and of commerce? Do not, gentlemen suppose this is mere hyperbole—exaggeration. I am just returned from the South, and have seen on the shores of the Mediterranean a very considerable coasting trade in flowers! Tuscany and Genoa exported to the amount of several millions of money, from their flower beds. And one art gives rise to another. After the art of successfully cultivating flowers, has come that of gathering and assorting them according to their shades, odors, colors. This art has made such progress at Genoa, for instance, has been so studied there, that they can combine, intertwine, plait, and, as it were, so weave together roses, pinks, dahlias, and ranunculuses, that the bouquets prepared to decorate tables on gala days, bouquets often a yard in circumference, resemble Turkey carpets, vegetable stuffs, odorous velvets, mosaics of plants. There are there vegetable weavers of flowers who turn out their perfumed fabrics; the flower girls there, as at Athens, form a class apart. The bouquets which you admire you inhale at the *fetes* of Toulon, Marseilles, Bourdeaux, and even of Paris are woven at Genoa or at Florence. Hence the gardening of luxury becomes each day more and more a regular business. Go on and render it more perfect, and it will one day become a fine art—a school of painting of which the pallet will be the garden.

For the Western Literary Messenger

Lines.

My heart is straying backward to the time
When on the scenes of other days there fell,
Like brightness of some pure and better clime,
The gentle beauty of thy love-wrought spell.

It was the summer of my soul: thy smile
Made bright its long and lingering sunny days,
And O, my soul did swim in music, while
I listened to those yet remembered lays.

But ah! the blight of autumn's power now
Has breathed on all those scenes a baleful breath;
Beneath that blight the smitten heart-flowers,
And all is songless as the cave of Death.

For thou art changed. Thy smile, and tone, are cold—
Cold as the moonbeam upon winter's snow;
Amid such tones the heart would soon grow old,
Beneath such smiles no gentle heart-flowers grow.

Yet I do love thee still; no time, no place
Can ever change the impress of the Past on me;
I see thee not, yet time will ne'er efface
The record that my heart contains of thee.

JANUARY, 1848. * * *

For the Western Literary Messenger

"My Leanness! my Leanness!"

There are three kinds of leanness, physical, moral, and intellectual. Physical, may be induced by various causes; such as improper diet, food taken at improper times, an insufficiency of it, indigestion, etc.; moral, is the result of the indulgence of deprated passions; and one or two causes of intellectual leanness I propose to notice more particularly.

The language of the prophet just quoted, is simply expressive of the lamentation of every humble aspirant after true excellence. The inspired writers, though "men of like passions" with others, by the exercise of a living faith, and an earnest devotion to the study of God in his works and oracles, obtained that apprehension of His character, whereby, in their spiritual breathings, they bear us to the foot of the throne, and often into the very presence-chamber of Jehovah himself. Their glowing imaginations seemed touched with a "coal from off the altar;" and as forms radiant with heavenly beauty start into life from almost every page of the Holy Book, we become, if I may so speak, enshrouded in the same cloud of glory, and wish, with the disciples on the mount, to remain there forever. The keen eye of prophecy measured not the limits of its vision by mortal compass, but piercing the dark veil of futurity, saw the captive daughters of Zion weeping by the "cold streams of Babylon," and the day-star of hope arise over Judea's hills to gladden, by its cheering beams, a darkened world, groping its way amidst the scattered objects of a mystic faith, down to eternal death. Such was the result of the prophets' knowledge. Though we may not, with them, possess the gift of inspiration, yet by a diligent study of the past, and a careful observation of the present, we may obtain that which shall enable us to look with much certainty for events in time to come. But knowledge comes not by instinct; it is the fruit of steady, persevering, self-denying toil; and by this term, I mean not merely the facts we have gathered from books and piled up in the storehouse of memory as the miser heaps up his gold, to look at, not to use, but knowledge well digested by thought, and properly appropriated in the various relations of life.

One of the most prominent reasons for much of the intellectual leanness that exists, may no doubt be found in the spasmodic, ill directed efforts that are put forth to obtain knowledge. Impelled by some extraneous circumstance, instead of a deep-felt, intellectual necessity, we seize whatever presents itself in the form of a book, read and study indiscriminately and without purpose, till the mind is filled with all the confusion of Babel. We have gained something, to be sure—but a something which we know not how to use, and scarcely what it means; for it has been learned without reflection, and as bearing no relation to our fellow beings and the various phenomena by which we are surrounded. Consequently it soon loses all definiteness, and the mind is as barren as before the acquirement. More particularly is this the case, though I am pained to say it, with women. Impressed with the false idea that the duties and responsibilities of their sphere, require less thought, and knowledge, than the sterner one of the other sex, their acquirements are generally made by spasms, during the earlier period of their lives, before they become wives and mothers. By this training they are wholly disqualified to make "life's cares," its most refined "joys." Sidney Smith observes, that "With uneducated women, when youth is gone, all is gone. A woman must talk wisely or look well."

Another reason for the leanness of which we are speaking, exists in a lack of self-discipline. No one can be truly great without it. A general on the field of battle would have little prospect of conquering his foe, were his forces in confusion, and he, undecided as to the chief point of attack; no more can we hope to conquer a difficult subject, unless the forces of the mind are under such discipline that just those which are needed can be called out and brought to bear upon it in all its relations and dependencies. This was the distinguishing feature in the character of Dr. Chalmers. He would conceive some profound idea, and like the sculptor, who, from the rough block, chisels the "breathing marble," trace it out in all its bearings, till there was neither beauty nor strength that he did not lavish upon it.

The desire to avoid study and thought has generated a class which may be termed *intellectual skeletons*. Scorning to make a workhouse of their own brain, or shrinking from the task of scourging the poor drones to labor, they pick a little from this and that author, and by a kind of tact,

patch up a garment to cover their leanness, and pass themselves off among the multitude for giants. When listening to, or hearing the *productions* of these *soi disant* great men, I have seen, in fancy, these picked authors coming up in a body, each selecting his own patch, till there was not enough left of the choicely woven fabric, to serve the poor skeleton for a winding sheet. But as the great secret of all true knowledge is evolved, and men—and *women* too—learn to think for themselves, we trust this class will become extinct; and that instead of the leanness which now exists to a greater or less extent in every class of society, will be found the healthy, well-developed mind.

BUFFALO. ELIZABETH.

Popular Education.

LOCKE AMSDEN, or, the Schoolmaster: a tale. By the author of May Martin, The Green Mountain Boys, etc. Boston: B. B. Mussey. 1847.

The author of this book, D. P. THOMPSON, Esq., of Vermont, always writes with a good object in view, and we are not aware that he has ever made a literary failure. One thing is certain, the work before us, is not only above the ordinary run of romances, but is deserving of a place in the library of every family in the United States. The author says it is "written less with the hope of gaining literary fame, than of awakening an interest, and imparting useful hints on an important, and, with all our boasts, a still sadly neglected subject;" and the service it renders to popular education and to self-culture, commends it at once to the attention of all classes, old and young, parents and children. Though strictly a romance, it is devoid of sickly sentimentalism; takes a correct view of human society; shows the true exaltation of honest poverty and worth above self-conceited and aristocratic affluence; and, in short, most happily accords with the instructions of Pope:

> "In every scene some moral let us teach,
> And, if we can, at once both please and preach."

Locke Amsden, the hero of the story, is a mathematical genius, who struggles with adverse circumstances, poverty, envy, slander, etc., and manages to triumph over foes, get through college, and into Congress. The reader might not thank us, should we give the plot, so let it pass. Perhaps, however, he will pardon us for publishing an account of a law-suit, which happily illustrates the importance, to a merchant, at least, of being able to read and write. Locke Amsden is in search of a school to teach, and on the way to a place called the *Horn of the Moon*, where he has heard of an "opening," he meets a man belonging there, who, on inquiry informs him that Bill Bunker is the committee-man, that he lives "right on the road about a half a mile ahead," and that his place of residence may be known from the fact that his name is "chalked on a sort of a shop looking building, which he uses for a store." The narrative proceeds as follows:

"He rode on, and soon reached a rough-built, but substantial-looking farm-house, with sundry out-buildings, on one of which he read, as he had been told he might, the name of the singular occupant. In the last-named building, he at once perceived that there was a gathering of quite a number of individuals, the nature of which was explained to him by the hint he had received from his informant on the road. And tying his horse, he joined several who were going in, and soon found himself in the midst of the company assembled in the low, unfinished room which constituted the interior, as parties, witnesses, and spectators of a justice's court, the ceremonies of which were about to be commenced. There were no counters, counting-room, or desk; and a few broad shelves, clumsily put up on one side, afforded the only indication, observable in the interior arrangement of the room, of the use to which it was devoted. On these shelves were scattered, at intervals, small bunches of hoes, axes bed-cords, and such articles as are generally purchased by those who purchase little; while casks of nails, grindstones, quintals of dried salt fish, and the like, arranged round the room on the floor, made up the rest of the owner's merchandise, an annual supply of which, it appeared, he obtained in the cities every winter in exchange for the products of his farm; ever careful, like a good political economist, that the balance of trade should not be against him. The only table and chair in the room were now occupied by the justice; the heads of casks, grindstones, or bunches of rakes, answering for seats for the rest of the company. On the left of the justice sat the defendant, whose composed look, and occasional knowing smile, seemed to indicate his confidence in the strength of his defence, as well as a consciousness of possessing some secret advantage over his opponent. On the other hand sat Bunker, the plaintiff in the suit. Ascertaining from the remarks of the bystanders his identity with the committee-man he had become so curious to see, Locke fell to noting his appearance closely, and the result was, upon the whole, a highly favorable prepossession. He was a remarkably stout, hardy-looking man; and although his features were extremely rough and swarthy, they yet combined to give him an open, honest, and very intelligent countenance. Behind him, as backers, were standing in a group three or four of his sons, of ages varying from fifteen to twenty, and of bodily proportions promising any thing but disparagement to the Herculean stock from which they originated. The parties were now called and sworn; when Bunker, there being no attorneys employed to make two-hour speeches on preliminary questions, proceeded at once to the merits of his case. He produced and spread open his account-book, and then went on to show his manner of charging, which was wholly by hieroglyphics, generally designating the debtor by picturing him out at the top of the page with some peculiarity of his person or calling. In the present case, the debtor, who was a cooper, was designated by the rude picture of a man in the act of hooping a barrel; and the article charged, there being but one item in the account, was placed immediately beneath, and represented by a shaded, circular figure, which the plaintiff said was intended for a cheese, that had been sold to the defendant some years before.

"Now, Mr. Justice," said Bunker, after explaining, in a direct, off-hand manner, his peculiar method of book keeping, "now, the article here charged the man had—I will, and do swear

to it; for here it is in black and white. And I having demanded my pay, and he having not only refused it, but denied ever buying the article in question, I have brought this suit to recover my just due. And now I wish to see if he will get up here in court, and deny the charge under oath. If he will, let him; but may the Lord have mercy on his soul!

"Well, sir," replied the defendant, promptly rising, "you shall not be kept from having your wish a minute; for I here, under oath, do swear, that I never bought or had a cheese of you in my life."

"Under the oath of God you declare it, do you?" sharply asked Bunker.

"I do sir," firmly answered the other.

"Well, well!" exclaimed the former, with looks of utter astonishment, "I would not have believed that there was a man in all of the Horn of the Moon who would dare to do that."

After the parties had been indulged in the usual amount of sparring for such occasions, the justice interposed and suggested, that as the oaths of the parties were at complete issue, the evidence of the book itself, which he seemed to think was entitled to credit, would turn the scale in favor of the plaintiff, unless the defendant could produce some rebutting testimony. Upon this hint, the latter called up two of his neighbors, who testified in his behalf, that he himself always made a sufficient supply of cheese for his family; and they were further knowing, that, on the year of the alleged purchase, instead of buying, he actually sold a considerable quantity of the article.

This evidence seemed to settle the question in the mind of the justice; and he now soon announced, that he felt bound to give judgment to the defendant for his costs.

"Judged and sworn out of the whole of it, as I am a sinner!" cried the disconcerted Bunker, after sitting a moment working his rough features in indignant surprise; "yes, fairly sworn out of it, and saddled with a bill of cost to boot! But I can pay it; so reckon it up, Mr. Justice, and we will have it all squared on the spot. And, on the whole, I am not sure but a dollar or two is well spent, at any time, in finding out a fellow to be a scoundrel who has been passing himself off among people for an honest man," he added, pulling out his purse, and angrily dashing the required amount down upon the table.

"Now, Bill Bunker," said the defendant, after very coolly pocketing his costs, "you have flung out a good deal of your stuff here, and I have bore it without getting riled a hair; for I saw, all the time, that you—correct as folks generally think you—that you did n't know what you was about. But now it 's all fixed and settled, I am going jist to convince you that I am not quite the one that has sworn to a perjury in this 'ere business."

"Well, we will see," rejoined Bunker, eying his opponent with a look of mingled doubt and defiance.

"Yes, we *will* see," responded the other, determinedly; "we will see if we can't make you eat your own words. But I want first to tell you where you missed it. When you dunned me, Bunker, for the pay for a cheese, and I said I never had one of you, you went off a little too quick; you called me a liar, before giving me a chance to say another word. And then, I thought I would let you take that name back. If you had held on a minute, without breaking out so upon me, I should have told you all how it was, and you would have got your pay on the spot; but ——"

"Pay!" fiercely interrupted Bunker, "then you admit you had the cheese, do you?"

"No, sir, I admit no sich thing," quickly rejoined the former; "for I still say I never had a cheese of you in the world. But I *did* have a small grindstone of you at the time, and at jest the price you have charged for your supposed cheese; and here is your money for it, sir. Now, Bunker, what do you say to that?

"Grindstone—cheese—cheese—grindstone!" exclaimed the now evidently nonplussed and doubtful Bunker, taking a few rapid turns about the room, and occasionally stopping at the table to scrutinize anew his hieroglyphical charge; "I must think this matter over again. Grindstone—cheese—cheese—grindstone. Ah! I have it; but may God forgive me for what I have done! It *was* a grindstone, but I forgot to make a hole in the middle for the crank."

Upon this curious development, as will be readily imagined, the opposing parties were not long in effecting an amicable and satisfactory adjustment. And, in a short time, the company broke up and departed, all obviously as much gratified as amused at this singular but happy result of the lawsuit."

Whilst so much trash in the shape of novels, is in circulation, it is a luxury to meet a fictitious work possessing so much stamina as Locke Amsden, and replete with so many valuable hints on subjects of the utmost importance; and we sincerely hope the pen of so healthy and able a writer as Judge THOMPSON, will not lie idle.

For sale at Peck's Bookstore. EDITOR.

DANGER ATTENDING PRECOCIOUS DEVELOPMENT. —There can be no doubt that many a child has been sacrificed in early youth to the pride of parents, who, delighted with the intellectual activity of their children, have striven to make them prodigies of learning. But in these cases of early and undue employment of the brain, inflammation of the hemispherical ganglion, or of the lining membrane of the ventricles, with serious effusion, has usually been the cause of either a fatal issue or of subsequent mental imbecility. The late Mr. Deville related to me an interesting case of this kind.

An extremely interesting boy, of about twelve years of age, was brought to him for phrenological examination by a parent who was very proud of the intellectual endowments of his child. Mr. Deville gave his opinion of the boy's character, at the same time cautioning the father of the dangerous course he was pursuing. But the father's reply was, "All that other boys considered labor and hard study are mere child's play to him; that his studies could not be hurting him, he enjoyed them so much." Again Mr. Deville endeavored to save the child, but the father would not attend to the warning. Two years from that time the father again called on Mr. Deville, and in reply to his inquiries after his child, the father burst into tears: his child was an idiot.—*Solly on the Brain.*

A DEAD SHOT.—The man who a few days ago was bitten by a mad dog in Euclid, and who expects to be mad himself in a few days, is now in this City taking vengeance on the whole canine race. He has already shot about thirty dogs under the Mayor's Proclamation.—*Clev. P. Dealer.*

CHLOROFORM IN DYING.—The Boston Transcript has heard of a case where Chloroform was administered to relieve the sufferings of a dying person. The success of the application was complete, and the patient's last moments were tranquil and void of pain

J. CLEMENT, EDITOR.

Mexico and the Rocky Mountains.

ADVENTURES IN MEXICO AND THE ROCKY MOUNTAINS. By GEORGE F. RUXTON, Esq., member of the Royal Geographical Society. Complete in two parts. New-York: Harper and Brothers, 82 Cliff street. 1848.

In mentioning the reception of this work last week, we promised to refer to it again. This, after examining it more thoroughly, we do most cheerfully, for, unlike some sketches by English travellers on this continent, it is not only candid but sprightly and instructive. The author says in his preface, that "faults the Americans have—and who have not? But they are, I maintain, failings of the head and not of the heart, which nowhere beats warmer or in a more genuine spirit of kindness and affection, than in the bosom of a citizen of the United States."

Mr. Ruxton does not speak so well of the Mexicans. He traversed that Republic the whole distance from north to south, and did not, he says, referring to the males, "observe one commendable trait" in their character. Of the Mexican ladies he speaks as follows:

"The Mexican ladies are totally uneducated, and in the presence of foreigners, conscious of their inferiority, are usually shy and reserved. This, of course, refers only to general society. In their own houses, and among themselves, they are vivacious, and unaffectedly pleasing in their manners and conversation; and in all classes is evinced a warmth of heart and sympathy which wins for the women of Mexico the respect and esteem of all strangers. As for their personal attractions, I will say, that, although not distinguished for beauty, I never once remember to have seen a really ugly woman. Their brilliant eyes make up for any deficiency of feature, and their figures uninjured by frightful stays, are full and voluptuous. Now and then, moreover, one does meet with a perfectly beautiful creature; and when a Mexican woman does combine such perfection she is "some pumpkins," as the Missourians say when they wish to express something superlative in the female line."

Most of part second is devoted to a recital of adventures in the Rocky Mountains, many of which are of the liveliest interest. The author's account of trappers and trapping, of wolves, bears and mountain sheep, prairies on fire, buffalo hunting, etc., etc., is very graphic and often full of thrilling excitement. We have marked several passages to be transferred to our columns, but this week have room only for an account of *Rube Herring and the lost trap.*

"A trapper on Arkansas, named Valentine Herring, but better known as 'Old Rube,' told me that once, when visiting his traps one morning on a stream beyond the mountains, he found one missing, at the same time that he discovered fresh bear 'sign' about the banks. Proceeding down the river in search of the lost trap, he heard the noise of some large body breaking through the thicket of plum-bushes which belted the stream. Ensconcing himself behind a rock, he presently observed a huge grizzly bear emerge from the bush and limp on three legs to a flat rock which he mounted, and then, quietly seating himself, he raised one of his fore paws, on which Rube, to his amazement, discovered his trap tight and fast.

"The bear, lifting his iron-gloved foot close to his face, gravely examined it, turning his paw round and round, and quaintly bending his head from side to side, looking at the trap from the corners of his eyes, and with an air of mystery and puzzled curiosity, for he evidently could not make out what the novel and painful appendage could be; and every now and then smelled it and tapped it lightly on the rock. This, however, only paining the animal the more, he would lick the trap, as if deprecating its anger, and wishing to conciliate it.

"After watching these curious antics for some time, as the bear seemed inclined to resume his travels, Rube, to regain his trap, was necessitated to bring the bear's cogitations to a close, and, leveling his rifle, shot him dead, cutting of his paw and returning with it to camp, where the trappers were highly amused at the idea of trapping a b'ar."

The reader will certainly have one or two more extracts from this work, the whole of which, by the way, may be obtained in paper covers, for fifty cents—of Hawks.

THE POET-SEER.—Long before the annexation of Texas was talked of, BRYANT wrote that transcendently beautiful poem, "The Lapse of Years." In it, after praying that

> "The rapid flight
> That makes the changing seasons gay,"

might be left him, he also asks for length of days to behold

> "The years that o'er each sister land
> Shall lift the country of my birth,
> And nurse her strength till she shall stand
> The pride and pattern of the earth;
>
> *Till younger commonwealths, for aid,*
> *Shall cling about her ample robe,*
> And from her power shall shrink afraid,
> The crowned oppressors of the globe."

A HINT ON PLOUGHING.—A gentleman farmer in Ontario County married a very wealthy lady from the city of New-York, and moved her home to his country mansion. A short time afterwards, before the good lady had learned much about the science of agriculture, one of the hired-men, in the absence of her husband, broke a plough; and it being in the early part of the afternoon when the accident happened, he was at a loss to know what to do the remainder of the day. Repairing to the house and making known his trouble to the mistress, and asking her what he should do, she gravely proposed that he should plough the rest of the afternoon, *with the cart!*

THE GENESEE FARMER, which entered in its nineth volume in January, is a very useful work, and cheap at fifty cents a year. It is published monthly at Rochester.

HON. JOHN DAVIS, whom we reported as dead two weeks ago, is still alive and convalescent.

Young Men's Association.—A lecture was delivered before this society last week on Friday evening, by A. P. Nichols, Esq., on *The Golden Age*; another this week on Monday evening, by Dr. Lord, on *The Star Aldebaran*; and another on Wednesday evening, by James L. Barton, on *Reminiscencies of Western New York and the Lake Region*. We regret that we have not room to speak of these several productions more fully.

The Democratic Review for this month contains an engraved likeness of Henry M. Shreve of St. Louis, Missouri, and the following original papers:

The Elective Franchise; The origin, justice and consequences of the Texican War; Adventures of Christopher Columbus, a poem, canto I; Phaedon, or, the Immortality of the Soul; Daniel Webster—his political philosophy in 1830; Adventure at an Opera Ball; Heart Joys; Chalcahual, a Tale of Mexico; The Chesapeake, a poem; Sketch of Henry Miller Shreve; French Critics and Yankee Foibles; Financial and Commercial Review; Gossip of the Month, etc.,

For sale by Hawks.

The Knickerbocker for this month is spicy as ever. The late Geo. H. Colton, Hon. H. W. Ellsworth, R. S. Chilton, Esq., Francis Parkman, Jr., and F. S. Cozzens, Esq. are among the contributors. For sale by Hawks.

Gov. Briggs of Massachusetts is lecturing in different parts of that State on the subject of Temperance. At the close of a late address at Lawrence, upwards of two hundred signers were obtained to the total abstinence pledge. Good!

Peace.—According to late rumors, the prospects of immediate peace with Mexico, are somewhat dubious.

Georgia United States Senator.—Governor Towns has appointed Herschell B. Johnson, Esq., to fill the vacancy in the Senate of the U. States, in the place of Walter T. Colquitt, resigned.

New York, Feb. 15—3½ P. M.

There have been two or three arrivals in New Orleans, bringing accounts from Tampico to 31st, Vera Cruz to 29th, and the city of Mexico to 18th ultimo.

The courier who was sent to the capital by Mr. Peoples for the American *Star*, was on his return drawn into the bushes, stripped and shot by the guerillas.

Fifteen cases of small-pox had occurred at Vera Cruz. The *Free American* of the 26th ult., says that Capt. Whipple had arrived from the Capital, and reports the capture of Orizba, and is being in the quiet possession of a body of American troops.

A Dispatch from the Capital.—The train which left the Capital on the 18th, consisting of about 200 wagons arrived at Vera Cruz in safety on the 20th, and without molestation. This train met General Marshall and Col. Miller, with their respective commands, at Puebla.

Legislature of New York.

In Assembly—Feb. 8.

REPORTS.

Mr. Spaulding, favorably on the Senate bill for draining lands near Black Rock.

THIRD READING OF BILLS.

To incorporate the Clinton Monument Association.

MOTIONS, ETC.

Mr. Spaulding, a bill to amend the charter of the city of Buffalo.

Mr. Schermerhorn introduced bills—to provide for the incorporation of telegraph companies—to amend the act of '46 relative to the fees of county treasurers.

Senate—Feb. 9.

PETITIONS.

By Mr. Hawley, against draw on Buffalo Creek Bridge.

REPORTS.

Mr. S. H. P. Hall, by bill, making appropriation for Western House of Refuge.

Mr. Wilkin offered a resolution setting forth that whereas the Normal School was established in 1844, as an experiment, and as that experiment was about expiring, and as it was important that the operations of the school should be known, with a view to future legislation—therefore, resolved, that a committee of three be appointed to enquire into the constitution and operations of said school, to report at the present or ensuing session, as to the expediency of continuing the same, and if in favor of its continuance, to suggest some plan for the same. [Agreed to.

Bills were read a third time and passed.

Assembly—Feb. 9.

PETITIONS.

By Mr. Pray, for a railroad from Buffalo to Fredonia, and thence to the State line.

REPORTS

Mr. Raymond reported against the petition for a continuance of the offices of Chancellor and the old Supreme Court, to July, 1849.

Mr. Coe, against the petition to equalize representation in Boards of Supervisors. [Agreed to, and committee discharged.

Mr. Severance, a bill to amend the Charter of Springville.

MOTIONS &c.

Mr. Benedict reported a bill to consolidate the several acts in regard to the city of Buffalo.

Assembly—Feb. 12.

REPORTS.

Mr. Raymond, in favor of the bill appointing referees in Equity cases.

Mr. Schermerhorn, a general bill for the incorporation of Savings Banks, of which five hundred copies extra were directed to be printed.

Mr. Upham, by bill, to extend the time in which the Tonawanda Railroad shall lay down heavy rail.

The Secretary of State communicated his report relative to Surrogates who had not made their returns.

The Manufacturing Law came down from the Senate with amendments.

Mr. Butrick moved a concurrence, and the House did concur. *So the bill is before the Governor.*

Cotton Works in Georgia.—From a report laid before the Legislature of Georgia, we learn that there are thirty-two Cotton Factories in operation and in construction in that State. In the working and building of which, two millions of dollars are employed. From 18,000 to 20,000 bales of cotton were consumed last year, and the amount of manufactured goods produced was equal in value to a million and a half of dollars.

Foreign Items.

IRELAND.

DISARMING THE PEASANTRY.—In various directions government agents are actively engaged in disarming the peasantry. A large body of police, whose movements are kept secret, generally meet at a given place at midnight, spread themselves over a given district, and at early morn commence the search for fire arms in the huts and dwellings within the district. Tipperary, Kings County, parts of Clare and Limerick, the Barony of Clonlisk, Nenagh and other parts, have thus been pounced upon, sometimes with success, sometimes without. In Nenagh and its vicinity fifty stand of arms were seized. It is suggested in a London paper that by "subjecting some of the parties already in custody to the full penalty of two years' imprisonment by way of example, it may be relied upon that the people will soon acquire a distaste for the secret possession of fire arms."

Cases of death from starvation in the South and West continue to be reported. Tipperary is said to be greatly distressed.

It is said, by a Cork paper, that no lamentation or expression of sorrow has been heard in Court or elsewhere, from the relatives and friends of the prisoners convicted and condemned to death under the special commission.

The Tipperary Constitution says that the conviction of Frewen—sentenced to transportation for life for harboring the murderer Ryan (Puck)—has been already attended with most salutary results, causing the peasantry to close their doors against another murderer, named Cody, who had for some time been harbored by them, but who was now compelled to surrender himself, or starve.

A Meath paper says that numbers of small farmers, holders of 20 acres and under, both in Meath and in the adjoining county of Cavan, have already commenced to make preparations for the spring emigration, by disposing of whatever interest they may possess in their farms for ready money.

The late Mr. O'Connell's friends are very indignant that, at a late civic banquet at the Mansion House, Dublin, the "dead lion's" name and memory were passed over in "contumelious silence."

The Times says:

"From every side we hear that the proceedings of the special commission have been attended with a beneficial result. It is true, indeed, that outrages have been committed close to the very town where the special commission was for the time, during and after its sittings, but at least we find that the peasantry have given up the harboring of offenders. To the crew of dastardly assassins who have so long infested the country, this is the beginning of the end. It may be terror of the punishment which in the first instance may deter them, but all along they would have been willing enough to refuse them harborage had it not been for terror of an opposite kind. Fixed between the two they must make their election, and there is no doubt they will find it their wiser as well as their safer course to side with the law."

In England, all is tranquil. The only meeting of the week was one held in London on the window-tax. Abroad, there is a revival of apprehensions and of discontent. The state of the health of the sovereigns of France and Spain causes uneasiness, for there are various conjectures afloat as to the probable consequences of the deaths of Louis Philippe and Isabella. In one case, the accession of an infant sovereign might encourage reform agitations sufficiently serious to compromise a regency; in the other, the succession to the throne could hardly fail to embarrass alike the governments of England and France.

The bullion in the Bank of England continues to increase. From the 14th to the 17th £250,000 in gold arrived at London.

The Bank had not reduced the rate of interest, but in the street money could be had at 3½ per cent.

Consols were improving, and the bankers and bill brokers were full of money, which the commercial demand was not sufficient to employ.

Corn had slightly declined and Cotton was steady.

DEATH OF THE EARL OF POWIS.—This nobleman was shooting on the 7th of January, at his estate in Montgomeryshire, with his brother and two of his sons. A pheasant rose, at which one of the sons fired, but the contents of the gun struck the Earl in the thigh. The wound was not thought very dangerous and for some days recovery seemed to be almost certain, but an unfavorable turn came on and the Earl died, somewhat suddenly. The Earl was 63 years of age, a high Conservative in politics, and sat for 33 years in the House of Commons, as member for one of his father's boroughs. He was a grandson of the celebrated Lord Clive, the conqueror of India.

A letter, received from Italy, announces that a sanguinary collision had taken place at Pavia, between the students and the Austrians. A number of persons were wounded, and several killed.

The Paris papers publish the protest of the Pope's Nuncio to the Swiss Diet, read by Mons. Guizot, in his speech to the Chamber of Peers, on Saturday. It appears, from letters received from Berne, that the Diet will not answer or otherwise notice the despatch, on the ground that the subject, being a purely religious one, does not fall within the province of a political assembly like the Diet.

Letters from Rome say that the popular assemblages in that city and the general excitement have given much uneasiness to his holiness and to the government; in consequence of which an article was published in the official journal, the Diario di Roma, on the 8th, remonstrating against the noisy and turbulent demonstrations in which the people had indulged.

The Swiss Diet, in its meeting of the 14th of January, perseveres in its resolution not to notice the protest, of the Pope, charges the Papal Nuncio with having kindled the civil war by his intrigues with the Sonderbund, and flings back upon the Court of Rome the charge of sacrilege.

The Austrian troops in Italy number 70,000.

The fourteen Roman newspapers have quietly, since Jan. 1, submitted to the stamp-tax of half a bajocchi.

Public prayers have been ordered in all the churches of Belgium on account of the contagious disease which is now prevalent in Flanders.

According to the *Italia*, Pisa journal, of the 8th inst., a number of Piedmontese bishops have protested against certain reforms accomplished by King Charles Albert.

A large fire broke out on the 28th of Dec., in the city of Drontheim, and destroyed twenty-three houses.

DISCONTINUING THE FRENCH MAIL STEAM PACKETS TO NEW YORK.—The following notice was issued yesterday at the General Post Office, St. Martin's-le-Grand:—"Information has been received from the Director General of the French post office that it has been found necessary temporarily to suspend the packet service which has been recently established between Havre de Grace and New York. No letters, newspapers, &c.,

will therefore be transmitted from this country for despatch by this line of packets, until farther notice." This unexpected notice of the Government has caused general disappointment to the merchants on the other side of the channel, as it either proves that these steamers are defective for a long voyage across the Atlantic, or that the expense of a regular packet service is more than the Minister of Marine is willing to incur.

From Spain the accounts are favorable to the liberal party, the popular leader Espartero, having returned from his exile in England. Crowds of the people surrounded his residence in Madrid, waiting to catch a glance of their favorite. Espartero had a long interview with the Queen, and her reception of the Ex-Minister was not merely kind but affectionate. Her eyes filled with tears as she looked on the man who had saved her crown. She entreated Espartero to come often to see her.

Letters from Turin of the 15th say that the Piedmontese people have responded with enthusiasm to the demand of the government for the extension of the armed force of the country. Orders have been issued to the foundries of cannon and to all the arsenals, for the preparation and supply of munitions of war. A letter says that the despatch of artillery and supplies to Alexandria and Navara was incessant. A camp was to be formed between Navara and Vigerano. It was also intended to call under arms the contingents which had not yet been summoned, and to put the entire army on a war footing.

The students of the University of Turin had put on mourning for a fortnight for those who had fallen in the conflict with the Austrians at Pavia.

The Universal Gazette of Prussia publishes the following letter from Vienna, dated Jan. 12:—"The arming here continues, and creates a certain agitation in society, where these threatening symptoms are seriously discussed. The purchase of cavalry horses amounts, up to the present moment, to the enormous sum of 1,500,000 florins. The Government is anxious to have ten or twelve thousand horses at once.

The reign of terror, in the most literal sense of the word, has commenced in Lombardy. According to the most recent advices, the inhabitants of Milan were the objects of the most atrocious menaces on the part of the Austrian commander, Radetski, who, not limiting his threats to words, gave much more significant indications of his purposes. All military officers, whether in actual service or in retirement, were forbidden to appear, except in uniform and armed. The artillery were kept night and day, with the guns loaded, and horses harnessed to them, stationed on the boulevards of the city, in the square of the chateau, and other commanding posts. The unfortunate inhabitants were in terror from hour to hour that the soldiers, who had been confined to their barracks, except when on duty, since the massacre on the night of the 3d, would be again set loose upon them.

The owner of some spinning-mills at Berlin has lately brought into the market a new species of flaxen thread, which is extremely long and silky, white in color, and spun and died with extraordinary facility. This preliminary material, which possesses, even in a superior degree, all the qualities of silk, is likely to compete with it from its simple and rapid fabrication, and from its price being very low as compared with that of silk. The appearance of this new article of commerce has caused a general sensation among the dealers at the fair of Leipzic, and an Englishman has offered the inventor £20,000 for his secret, but this was refused, as the owner intends to reserve to himself all the benefits of his discovery.

Congressional.

On Tuesday, in the SENATE, the joint resolutions from the House, giving the thanks of Congress to Gens. Scott and Taylor, were referred to the Military Committee.

Mr. Baldwin offered a resolution, calling on the President for the first project of the Mexican Commissioners, prior to their counter project offered to Mr. Trist. It was adopted.

The Ten Regiment Bill was then taken up.

Mr. Miller addressed the Senate in opposition to the bill. He referred to the President's message and argued that the war was not prosecuted now for the accomplishment of the objects laid down in the acts of the 13th May, 1846, recognizing the existence of the war, and peviding means for carrying it on.

Mr. UNDERWOOD obtained the floor but yielded it to Mr. Niles, who addressed the Senate in support of the bill.

Mr. Cass intimated that he would tomorrow introduce a resolution providing for evening sessions until the bill shall be disposed of

Mr. Berrian was strongly opposed to the course suggested by Mr. Cass. The measure was too important, and involved so many questions connected with the welfare of this country and Mexico, that he must object to pressing it through without mature deliberation.

HOUSE.—Mr. J. R. Ingersoll reported a resolution to give the widows of deceased members of Congress, the sum usually allowed by the house for the burial expenses of a member. It was finally referred. Ayes 79, noes 64.

A bill was reported from the Senate to extend the existing pension laws to the ordnance department. It was referred.

The loan bill authorizing the government to borrow $18,500,000 to meet the expenses of the war was then taken up.

The question before the House was an amendment to substitute 16 for $18,500,000.

Mr. Vinton of Ohio, spoke at great length on the fiscal regulations of the government.

Mr. Ligon of Maryland, followed in support of the bill.

WASHINGTON, Feb. 9.

SENATE.—Mr. Dix presented resolutions passed by the Legislature of New York, instructing the Senators and Representatives from that State to vote in favor of the application of the Wilmot Proviso to all territory hereafter annexed to the United States. They were ordered to be printed.

The House bill confirming the boundary between Missouri and Arkansas, was passed.

The Ten Regiment bill was then taken up.

Mr. Niles addressed the Senate in reply to Mr. Bell's accusations against the Democratic party of being actuated by a reckless desire for the organization of territory by conquest. Mr. Niles blames both parties for their conduct in regard to the war. The country desired peace.—He would support the bill only to strengthen our military position for a short time, he was in favor of negotiation, and with that view he had no objection to vote for this bill, with the hope that it might hasten the termination of the war.

The Government of Mexico desired peace on terms not unreasonable. Now is the time to make peace; there is no justification for prolonging the war: hostilities ought to be brought to a close, which could be done on the basis of our original claim to the Rio Grande, as the boundary, and receiving as indemnity lands now in our possession. Adj.

HOUSE.—A bill appropriating $500,000 for discharged soldiers who disembark at new Orleans and other places, was passed.

A bill to provide additional quarters for troops of the regular and volunteer force going to Mexico was passed.

A bill to establish a suitable Government in Oregon was made the special order for Monday, the 15th of March.

A war loan bill was then taken up. Mr. Fisher of Ohio, addressed the House against the bill. He reviewed the history of the annexation of Texas and contended that annexation was the original cause of the war, while the immediate cause of hostilities was the marching of the United Stated army across the Neuces to the Rio Grande.

Mr. Johnson of Tennessee, followed. He alluded to the power of the President to use his discretion in giving or withholding correspondence in all cases, as well as in the case of Slidell. He ridiculed the idea of the Whigs voting men and money, on the 11th of May, 1846, and now calling the war unconstitutional and unjust.

The House then went into committee of the whole on the state of the Union—transacted some important business and then adjourned.

THURSDAY, Feb. 10.

HOUSE.—A discussion took place between Mr. King, of Mass., and Mr. Cobb, of Ga., Henley and Palfrey, on a motion to receive and print a memorial from the Society of Friends, praying the speedy termination of the war. Rejected, 87 to 83.

The War Loan Bill was then taken up. Mr. Marsh, of Vt., spoke at some length against it, and against the annexation of New Mexico and California.

Mr. Brown, of Miss., defended the bill and the Administration at some length. The committee then arose and the House adjourned.

WASHINGTON, Feb. 11.

The Ten Regiment Bill, was taken up.

Mr. Turney spoke in favor of the bill. He contended that the whigs had shifted their position in regard to the cause of the war. In 1847 the whigs held that the annexation of Texas had produced the war. Now, they allege that annexation was not the cause. The President, they said was chargeable with bringing on the war by his own act. He went on at great length to show that the annexation of Texas was the cause of the war. Mr. Breese obtained the floor, and the Senate adjourned to Monday.

HOUSE.—The House went into committee o the whole on private bills.

The bill for the relief of the heirs of Paul Jones coming up,

Mr. Starkweather, of New York, opposed it. He said that the vessels captured by Paul Jones were surrendered to Great Britain, having been taken into Denmark, and were, therefore, of no use or pecuniary benefit to the United States after ten months had passed.

Mr. Holmes, of South Carolina, spoke in support of the claim.

Mr. Rockwell, of Con., said that the whole amount was only a share of the prize money to which Commodore Jones was entitled—$24,000 and interest, and not the enormous sum represented by some gentlemen. Adjourned.

SAD CASUALTY.—On Friday evening last, the 21st inst., a sleigh, containing Messrs. John F. Lessey, Edward Oathwaite, and Michael O'Connor, was precipitated into the river, by the breaking of the ice, a short distance below the Fort.—After a severe struggle, the first two extricated themselves, and were found nearly insensible.—Mr. O'Connor perished before assistance could reach him. His body was recovered on the 24th and buried on the 25th. The deceased was a native of Tipperary county, Ireland. His age was 28 years. He had been in this country but a few months, having left Liverpool, last September, partially upon a tour of pleasure. Chance brought him to this place, some few weeks since. He was engaged in locating Land Warrants, and upon the day of his death had been examining lands. Mr. O'Connor had the manner and conversation of the well-bred and thoroughly educated gentleman. He came here a stranger, but has left many friends to mourn his premature death. He remains were interred in the Catholic burying-ground, of which church he appeared a consistent member.—*Green Bay Advocate.*

POSTAL ARRANGEMENT BETWEEN ENGLAND AND THE UNITED STATES!—Our Montreal Telegraph Report of last night contained the following important announcement:

"We learn that his Excellency the Governor General has received a despatch from the Home Government, announcing that a new and satisfactory postal arrangement has been effected with the United States of America, to come into operation in April next. The Colonial despatches forwarded to his Excellency by the last mail, were permitted to pass unobstructed through the United States."—*Toronto Globe.*

HORRIBLE DEATH.—Dr. Isaac Hamberlin, a worthy man and old citizen of this county, came to his death, a few days since, in a most shocking manner. One day last week, Dr. Hamberlin, with two other gentlemen, left Satartia for a bear hunt, and proceeded to Lake George, where it forms a junction with the Sunflower River. A short time after they landed from their boat, the dogs entered the cane and immediately struck a trail, and Dr. H. followed them but a short distance, when he came up with them and a very large bear in the thick forest.

Dr. H. fired at him, the ball entering his head at the upper part of the nose, without doing much injury, other than to infuriate him, and he turned and made at Dr. H. The doctor endeavored to get out of the animal's way, but the cane being very thick, he could run but slowly, and had proceeded but a short distance when the bear overtook him, seized him by the thigh, and jerked him to the ground, and completely stripped Dr. H.'s leg of flesh and muscles. By this time the dogs again seized the bear and got him off.

Dr. H. then began to rise, but could not, being so badly torn. He then got out his hunting knife; the bear left the dogs and attacked Dr. H. the second time, and tore him very much. This time Dr. H. succeeded in cutting one or two gashes in the throat of the bear, but not deep enough to do him any material injury. The dogs again diverted the attention of the bear from his victim, and he left Dr. H. and engaged with the dogs; but, in a few moments, the bear came at him the third time, when Dr. H. made a stroke at him, but the bear seized the knife by the blade, wrenched it from Dr. H. and threw it some distance from him, and seized Dr. H.'s arm and mashed it into jelly. By this time the cries of Dr. H. brought one of his companions to his rescue, and he, seeing the awful situation of his friend, fired and struck the bear in the neck, which caused the beast to leave his victim and take to flight; but another of the company coming up, in an opposite direction, encountered the bear and shot him.

Dr. H. had his wounds tied up, and was then carried to the boat, to be conveyed immediately to Satartia, but he expressed his unwillingness to

return without having his formidable antagonist with him. His desire was gratified, and he and the bear were taken to Satartia, where eminent medical aid was brought to his assistance, but he died on the fourth day after, suffering during the time most excruciating pain. The bear was very large, though poor, weighing 340 pounds with his entrails out.—*Yazoo Whig, Jan.* 21.

LAWYERS AT A DISCOUNT.—It appears that there are no lawyers in the British Colony of Honduras, except an Attorney General, and that none others are permitted to exercise that vocation. An effort is now making to introduce a "limited bar;" but there is so much opposition to the measure, that it will hardly succeed. A writer in the Honduras Observer asks:

"What is now proposed? Why, to introduce 'a limited bar,'—or to fasten upon us a set of hungry lawyers, who by their briefs, their pleas in bar, their pleas in abatement, their declarations, their disclaimers, their demurrers, and re-demurrers, their legal fictions, and their sophistry, will render that which was plain and simple complicated and obscure—prolong the decision, defeat the ends of justice, set neighbors who have lived in peace at open strife, entail ruin upon many, do good to none but themselves, and who, after having plucked us clean, will leave us to get re-fledged as we may, and laugh at us for our folly in having allowed them to obtain a footing among us."

THE TAGHKANIC INDIANS—IMPORTANT DISCLOSURES AND ARRESTS.—Truth will out, and justice sooner or later is sure to overtake the guilty. The truth of this is fully illustrated by the important disclosures which have been made in relation to the outrages which have taken place in the Anti-rent district in this county. Although we do not feel at liberty, at the present time, to give all the facts which have come to light in relation thereto, still we can say, that enough is known to reach all, or nearly all, who have been engaged, either as actors or abettors, in the shooting of cattle, and other acts of violence and outrage. Warrants have been issued against several of the principal actors, and undoubtedly they will soon be arrested.

On Wednesday morning last, Geo. I. Finkle and Joseph his brother, of Taghkanic, were both arrested and committed to jail. On Thursday, the Sheriff and some of his deputies proceeded to Taghkanic to make other arrests, but succeeded only in taking two, Van Tassel and Van Wagman, the rest succeeded in escaping. On Sunday Wm. Wheeler was arrested in Chatham, by deputy Sheriff Allen, and brought in and committed to jail.—*Hudson Gazette.*

ATTICA AND BUFFALO RAILROAD.—We are informed on the best authority that this company, with the enterprize that has characterized their operations from the first, have closed a contract for the heavy T rail for their road, and that the whole of it is to be delivered between the 1st of May and the 1st of September next. The company will commence relaying the track as soon as the iron arrives, and will have the whole road re-laid within the present year.

It is the intention of the Tonawanda Company to re-lay the road with heavy iron between this place and Attica the present season. From here to Rochester it is in excellent order—in better, perhaps, than any wooden road in the country.—*Batavia Times.*

KILLING HORSES BY POISONING RATS.—According to the Pennsylvania *Inquirer*, a Mr. CRAIGE, who kept a stable in Philadelphia, lost six fine horses in an unaccountable manner.—When the seventh died, the cause was discovered Poison, to kill the rats which had infested a stable adjoining, had been scattered about and the rats had brought it and scattered it among the feed of Mr. CRAIGE's horses, and caused their death.

VOL. X. BUFFALO, SATURDAY, FEBRUARY 26, 1848. NO. 4.

For the Western Literary Messenger.

The Star Aldebaran.

A LECTURE BY JOHN C. LORD, D. D.
Delivered before the Young Mens' Association Feb. 14, 1848.

This is a fixed star of the first magnitude situated in the eye of Taurus. It is the largest star of the groupe, and with four others in the face of Taurus composes the Hyades; it is commonly called the Bull's Eye. The Hyades is a cluster of stars situated about eleven degrees South-east from the Pleiades, consisting chiefly of small stars so arranged as to form a figure like the letter V. "At the left," says an astronomer, "on the top of the letter is a star of the first magnitude called Aldebaran, which is distinguished from most of the other stars by its ruddy appearance." Palilicium is another name of this star, and the usual cognomen of Aldebaran is supposed to be of Arabic origin. The parallax of this star is not known and of course its distance from us cannot be determined, that it is immense and almost beyond the power of numbers to compute is obvious from the ascertained distances of those fixed stars which are more within the range of our observation. The distance of sixty-one Cygni is found to be about 592,000 times that of the earth from the sun, and light travelling at the rate of 192,000 miles in a second is more than nine years in passing from this star to our planet. Vast as this distance is, there are observable stars, and Aldebaran is probably one of them who are perhaps a hundred times farther from us and from whom the passage of light to the earth may be reckoned by centuries. But it is no part of our design to enter upon the details of the vast subject of Astronomy. There are those here far more competent to such a task than the speaker, some of whom have won a degree of deserved celebrity in this department of science. The Star Aldebaran is simply our motto; we use it as some preachers improve passages of Holy Writ merely by way of accommodation. This is a convenient mode when one is desirous of having no very close connexion between his text and his sermon, of hanging a great variety of topics upon the thread of his discourse like beads of different sizes and material strung without form or order. But though we intend to be discursive we hope not to be tedious. The Star Aldebaran is not so comprehensive a topic as the one selected by an old author who wrote in Latin and who entitled his book "De Omnibus rebus et quibusdam aliis," "concerning all things and some others," which at least was giving his readers fair warning of the Herculean task they were about to enter upon. Some may condemn us as presumptive in selecting so *high* a theme. What can he tell us of this star, upon whom no man has laid the measure, or stretched a line upon it? Will the wings of his imagination carry him over that impassable solitude of space that separates the Earth from the Star Aldebaran, will not his pinions melt like those of Icarus before he has fairly taken his departure from this planet? With the writer of the aforesaid book upon "all things and some others," the speaker is likely to fall into the condemnation of unpardonable presumption. On the other hand it will be said that the topic is unworthy this enlightened age in which there is so much to admire and applaud, that a man is a fool to talk about any other stars than those which began to shine in the 19th century, and before whom Aldebaran and all the ancient lights must "pale their ineffectual fires." What presumption is this, says one, to bring before us an insignificant star whose twinkling is only noticed by a few visionaries who are behind the intelligence of the age, unmindful of those glories which have newly risen to drive away the darkness of antiquity. What utility is there, says another, in discussions about stars?—what money is there to be made out of such investigations?—what impetus can be given to that progress which is the glory of the modern generations and the shame by contrast of the past? How can any man have the face to leave the *beaten* track of glorification to go into the forbidden paths of ancient and forgotten things? How much better these themes whose popularity is as exhaustless as is the appetite of the vanity to which they minister, which are sure of success, which never fail of that applause which the law of reciprocity demands agreeably to the Scotch proverb "some thing for some thing," or "flatter me and I'll flatter you." But notwithstanding these anticipated criticisms we hope that our star will meet with favor, that Aldebaran being a fixed star may be allowed to shine without the aid of borrowed light. We hope the Press, if they condescend to notice our Star at all, will be favorable, and being native and "to the manor born" we may expect at least that stereotyped compliment with which most of our predecessors and all the lecturers from abroad have been gratified, to wit: "that the distinguished gentleman fully sustained his high reputation to the gratification of the numerous and intelligent audience," &c., &c. This saves all details and that particular criticism which we confess we fear Aldebaran could not safely encounter. We have no expectation of shining as a bright and particular star, and desire no greater encomium than the usage demands. We ask no brighter coloring for Palilicium pictures from the press than that which is used at every sitting and for the common portrait, which in the poetic and elegant phraseology of the West "is as large as life and twice as natural."*

We hope the antiquity of Aldebaran will be excused, for he has continued to shine while many lesser though apparently brighter lights have gone out. Many a Meteor has startled the nations and filled the horizon with light which has only left behind it darkness more intense; but Aldebaran began to shine when the "morning stars sang together and all the sons of God shouted for joy." From that day to this, with uniform and steady lustre he has looked out upon the mutations of human affairs. Upon Eden the garden of God

* The equanimity of a Sub-Editor of a Daily Paper in this city seems greatly disturbed by our remarks; he looks as solemn as an Owl upon our pleasantry, and shoots us Indian like from every bush and over the shoulder of every new Lecturer. A good hearty bark at us in the outset, instead of this stealthy snarling would perhaps have freed him from those *flatulent* points! which seem, notwithstanding their windiness, to have pricked him. Most humbly do we assure the learned gentleman that we did not mean *him* either in this place or in our general remarks upon Progress and Self-reliance.

shone the Eye of Taurus, whose light was shed upon the primitive and happy pair who sat by the tree of life, and saw its silver leaves glimmer in the rays of Palilicium. He looked pitifully out upon the ruins of the fall and saw those generations who filled the Earth with violence. The light of this star gleamed upon the waters that swept away the inhabitants of the old world and covered the earth as with a garment. Upon Aldebaran and his constellation Noah and his household gazed from the Ark with hope, seeing that God had not disturbed the heavenly bodies, the stars yet shone in their courses, though he had smitten the earth with a curse. His rays played scornfully upon the towers of Babel which sought to lift themselves among the stars and were thunder-smitten. He looked into the eyes of the star gazers who in the plains of Chaldea first sought to mark the laws of the heavenly bodies and to map their courses. Upon that night of fear when the Angel of the Lord smote the first born of Egypt in every house, looked out Aldebaran.—His beams fell upon that company who wandered through the wilderness and heard the voice of God from the precipices of Sinai. Upon the shepherds who watched by night in Galilee and heard the annunciation of a Saviour's birth, beamed Aldebaran—his eye rested upon the Sepulchre of the Lord of Life and upon the Roman guards that watched its portals. He saw the wolf nurtured founders of ancient Rome, and shone upon the Kingdom, the Republic and the Empire. His light was reflected from the Pagan altars and from the Christian temples of the Eternal City. Her Kings and Consuls, her Dictators and Tribunes, her Senators and Emperors passed in succession before Aldebaran. He saw her rise and fall and the broken fragments of her empire out of which the modern kingdoms of Europe came, and he shines on with the same calm and holy light which beamed from him at the beginning. Think not the less kindly of Aldebaran for his age, if he has made no *progress* he has at least lost none of his pristine glory. If he does not glow the more and shine the brighter in view of the amazing advances of the nineteenth century, think what an apology he has before whom so many generations, with the same bright hopes, the same fond anticipations, the same expectations of progress and the same certainty of success, have passed and been broken on the rock bound shores of time. Consider how he is bewildered in his conclusions by his experience of the past, not perceiving *as we do*, that our pride has any better foundation or our progress any more certain result than that of other ages whose expectations have perished and over the broken monuments of whose magnificence, Aldebaran now shines as he did in their day of promise and glory.

Perhaps the stars are offended because we have departed from the faith of their ancient votaries. We hold up to scorn the pursuits of the old Astrologer who saw, or fancied he saw, connexions infinite in the universe, who ignorant of the sublime discovery of modern times that men are born under *bumps*, believed that they were born under *stars*, and watched the conjunctions of the heavenly bodies and marked those which were predominant in the house of life. He cast a horoscope of the heavens (the *benighted* man) instead of drawing a chart of the head. If Mars was in the ascendant he predicted the characteristic of fiery carnage for the child born under the influence of the blood red planet, while with a wisdom which excites astonishment among the heavenly bodies the moderns predict combativeness from a particular protuberance of the brain. Nor should it be forgotten that our Aldebaran has a red and fiery appearance like Mars, and is possibly a vehement and passionate star and the more readily angered to see the Astrologer driven from his tower, his Astrolabe broken, his lofty conceptions ridiculed, his high imaginings of connexions between the immortal soul of man and the glorious orbs that preside over his birth cast down before the earthly and sensual speculations of modern philosophy. Possibly he has incited the other stars to join in a conspiracy not to honor this gifted and remarkable, this unsurpassed and unsurpassable age with any extraordinary degree of shining or unusual commotion, on account of this dishonor cast upon the ancient votaries of the heavenly host. The stars have the presumption to think that the old delusion was more pardonable than the new, more honorable to them and more agreeable to the analogies and connexions of the universe. They have the hardihood to believe that there are higher significances in them than magnitude, motion and distance, and that God created them and suspended them in space not only that they might be measured, their motions ascertained, their revolutions counted and their distances observed, but to teach great moral lessons of the Being and glory of Him who made them, and of the immutability and accountability of the creatures who are able to survey and comprehend them, and the foolish stars, think that even judicial astrology fanciful as it was and false in its application, was yet a nobler and more excusable error than some of the philosophies of this *enlightened* generation.

Possibly the stars blinded by ancient prejudices have an idea that the old exploded Alchemy, the parent of our modern Chemistry, is not without a counterpart in our times which we *know*, thanks to our freedom from all prejudices, are the days of progress and perfection. It is highly probable that Aldebaran, that old fashioned star, has a notion that the search after the philosopher's stone, the effort to transmute the metals to gold, based upon a true philosophy that all metals and all forms of matter having a common basis being resolved by fire into certain gases, and failing only because our chemistry is not as perfect as that of nature, was as respectable a pursuit as that which seeks to demonstrate a universal animal attraction which transmutes souls and passes them out of their own natural bodies to those of others. He might argue, if stars reason, that the partial success which has attended the efforts of the French chemists to form diamonds from carbon, proves that the attempt of the Alchemyst to manufacture metals was not really so absurd as this enlightened age imagines or at least is no more ridiculous than some things which characterize a generation which so easily discover the *mote* in the eye of the former generations without perceiving the *beam* in its own. If our star has such notions it certainly is an explanation of his extraordinary equanimity in view of our progress, and an apology for him and the other stars for not holding a jubilee over the 19th century.

Besides the stars are prejudiced in favor of that old gospel, the proclamation of which they heard in that hour of sorrow when condemnation, depravity and death became the sad inheritance of our race. They heard its annunciation in that day of doom, they saw its light break upon the darkness, they have watched its course and progress through successive dispensations for more than six thousand years, and they believe in it yet! They do not *see with us* that whatever is old is necessarily false, and whatever is novel is for that cause to be received as true. With the suspicion common to age, and they are old enough to be in their dotage, they regard the new gospels which *we discover* to be the forerunners of a grand political and philosophical millenium, with little favor,

they think the old is better and will finally work its divinely predicted end. They have seen a great many failures of similar inventions in their long watch as sentinels of the sky and they foolishly conclude that those of our projection are no better. Unhappy stars who because they have themselves made no advances, but shine with the same light and revolve in the same orbits as at the beginning, who for the reason that they see no law of progress in that vast mechanism of Almighty God in the natural universe which moves in the same grand order, obeys the same laws and fulfills the same end as in the day when GOD said "let there be light and light was;" who because the Creator has endowed the different orders of his creatures with powers which distinguish them as angels or men; as greater or lesser lights are known among the heavenly bodies, and as one star differeth from another star in glory, conclude that men are likely to continue men while in the body, characterized in every age by similar powers and wholly unable to usurp the thrones of the Cherubim. Because they have never seen a star leave the orbit for which it was made to pass into another, or a planet become a sun, they reject the doctrine of progress, and with an inconclusive reasoning marvellous in our eyes, they judge that the men of the 19th century are of like passions and of like intellectual endowments with those of former generations whose passage over the stage of life they have marked for so many centuries.

But while the *benighted* stars have watched, and the red eye of Aldebaran has been looking out upon the generations of men, what human eyes have marked the constellations and returned the gaze of Taurus? Who was it in Arabia that seeking the cool night to traverse the burning desert inflamed by the sun, and charmed with the aspect of the great star in the Hyades gave him the poetic and magnificent name of Aldebaran?—How many travellers in that cloudless and arid climate have watched for the appearance of this star and hailed him and his fellows with joy; as Southey makes his pilgrim in the desert exclaim

"How beautiful is night!
See what a balmy freshness fills the air—
How beautiful is night."

In the plains of Arabia in the days of the Patriarch Job, within a few centuries after the flood, men looking at the stars heard voices from the heavenly host—"Canst thou bind the sweet influences of Pleiades or loose the bands of Orion? Canst thou bring forth Mazzaroth in his season? or canst thou guide Arcturus and his sons? Knowest thou the ordinances of heaven? Canst thou set the dominion thereof in the earth?" Some of the Arabians saw God in the stars and said "He commandeth the sun and it riseth not and sealeth up the stars which alone spreadeth out the Heavens which maketh Arcturus, Orion and the Pleiades, and the chambers of the South." Others in that early and primitive age profanely worshipped the Host of Heaven, "kissing their hands" to the moon walking in her brightness, and adoring the stars shining in their courses. Our star is named in the ancient and sacred book of Job whose Chimah and Chesil are Taurus and Scorpio; and Dr. Hales reckons the time of Job by the allusion made to Aldebaran and his position. Distinguished among his fellows, the chief in his constellation, how many eyes in every generation have watched Aldebaran. Some in the ignorant yet beautiful simplicity of the child who fancied the stars were openings to let glimpses of the heavenly glory through. Others in the dawn of science perceiving something of the truth, observing the revolutions and motions of the heavenly bodies, and though ignorant of the true astronomy, yet conjecturing what is now demonstrated that all "are but parts of one stupendous whole," perverted the great and just idea of mutual influences and dependencies to the uses of judicial Astrology, which though false in its details was still a grand and poetic imagination which had its foundation in truth. How many eyes who have watched the stars have since, it may be, fathomed their mysteries, having been clothed upon with the spiritual body and permitted to inspect the universe as we now survey the planet we inhabit. As it is now demonstrated that thought may be communicated upon the lightnings wing, as messengers swifter than those creations of the great dramatist who at their master's bidding

"Trode the ooze of the salt deep,
And ran upon the sharp wind of the north,"

and "put a girdle round about the earth in forty minutes," are now performing the business of men and passing their messages without the perceptible passage of time—the doctrine of a spiritual state and a spiritual body ought no longer to appear incredible to the most skeptical philosophers. A glimpse of the powers of the world to come seems to be given us in this mysterious agency, which breaks over the barriers of time and space, and is not amenable to the laws which ordinarily regulate all material things. As in the gradations of creature existence there are links connecting the different orders of being, from an insect to an angel; so there may be between the various modes of existence; between the natural body and the spiritual body, between the life that now is and the life to come, an agency which, while belonging to the one manifests something of the powers of the other. Who can with any consistency impeach the doctrine that the soul in another life may be clothed upon with an organization, in which it shall pass with a rapidity exceeding that of light, seeing that it can employ an agent here whose motion is independent of time, whose speed is unlimited by space?

It would be no unfounded and visionary speculation, then, if there were no warrant from sacred scripture, which would transport in an other organization to this distant star, those who in time gazed into the eye of Taurus, in the watches of the night, desirious to know the secrets of that glorious galaxy.

"Forever singing as they shine,
The hand that made us is divine."

To them Aldebaran is now seen a glorious sun around whom revolves a vast planetary system—a world filled with life, to whose inhabitants our planet is invisible, and who behold the sun of our system a twinkling star adorning their night, as ours is illuminated by the Hyades, in that beautiful system of reciprocity and mutual dependence which characterises the material universe, and is analagous to that great law of love that binds all intelligences in the moral government of God.—Perhaps those to whose vision the secrets of Aldebaran have been exposed have found this law unbroken there, and discovered in that great world a race who have never been corrupted by the mad ambition to become as Gods knowing good and evil, who have never been bewildered by proclamations of a law of progress from that arch rebel who is 'King over all the children of pride,' that 'Covering Cherub' who once sat 'amid the stones of fire,' but fell from his high estate because he would be higher, and now

"Prince of the fallen, around him sweep
The billows of the burning deep."

Perhaps the temptation ye shall be as Gods, and 'ye shall not surely die' was resisted in Aldebaran,

whose *simple* inhabitants yet rejoice in their original holiness, content with their Eden, and knowing neither sin, sorrow or death. We may suppose that they who now with angel's flight pass round the mighty orb, which was once seen by them as a twinkling star, behold an unbroken law and a perpetuated paradise. They survey an innocent world, creatures uncontaminated by sin, happiness unmingled with the alloy of transgression. No curse has entered there, no cry of violence is heard, no voice of brother's blood ascending to the heavens, calling for vengeance. No warring elements contend for mastery, emblems of the unruly passions they are commissioned to chastise, no ministers of death, pale visaged and remorseless pursuing with hot haste the fallen and condemned, whose life for their sins is made as a vapor, and whose 'days are swifter than a weaver's shuttle.' The king of terrors has no dominion where sin has had no entrance, and the shadow of his fearful power has never fallen on Aldebaran. Those who dwell in that fortunate world know nothing of evil and have no more thought of becoming Gods than has Aldebaran himself of leaving his sphere to revole in the eccentric orbit of a comet. Pride, passion, envy and revenge are unknown; covetousness, ambition and cruelty are words not found in their language, and having fulfilled their day in peace and happiness they pass from that form of life which confines them to their particular world to become citizens of the universe, as Enoch was translated that he should not see death, and "was not for God took him," so in the unfallen worlds, the change from the first and inferior form of life to the second and superior, may be without pain, surprise or fear. In the entire frame-work of the universe there are two manifest designs, two distinct ends, the one is found in the isolated world intended for the first form of life and observation to the rational creatures, in which they are confined by the impassable barrier of an atmosphere, and from which they cannot escape, but by a radical change in their mode of life, by passing from an animal and natural into a spiritual body subject to different laws; the other is seen the entire system, designed for the second and higher order of life, in which released from its former and limited organization the soul enters upon the Universe and becomes a citizen of the commonwealth of the entire material creation and is at liberty, unless prevented for transgression, to range over the whole and to inspect it with the same freedom with which a single planet, or world, was surveyed in the first and inferior form of existence. We think that this is indicated in the *structure* of the Universe, and that knowing that our world, and all single and particular worlds were made for the inspection of rational creatures, we are bound to infer, that all suns and systems in the ascending series to the whole vast, and to us infinite creation, which is yet one in the correspondence and dependance of its parts and the unity of its plan, are designed to be seen and comprehended, surveyed and examined, in a higher form of life.—To doubt this is to disregard the obvious analogy which is presented by our own position and powers, in respect to our world and the present existence. Has God made planets to be inhabited by rational creatures, who are capable of surveying and mapping its parts, calculating its powers, of measuring its dimensions, of enjoying and admiring its beauties, and has he not made the entire system for the same purpose, to be seen and known in a higher form of life, as its parts are in an inferior? Is there really any thing incredible or even difficult, in this on philosophical principles? Are there not changes in the inferior forms of life and within our own inspection, as marked and marvellous? The water worm that in its dark and slimy bed, apprehends only the few inches of sand in which it makes its circuit, and the few shells which lie within its observation, having fulfilled its first mode of organic life rises to the surface, casts off its skin, which it leaves a dead thing floating on the water, and rises into the atmosphere and looks upon the sun, still an insect indeed, but an insect now with wings, beautifully apparalelled and capable of a flight and of a survey, which by contrast with its former condition is as remarkable, as a transfer from a planet to a Universe.

But it is time to forbear, for some of you may suspect me of a design to preach, rather than philosophise, a thing unpardonable before a literary association, and when dealing with so fanciful a subject as a star. Yet we must be allowed to magnify Aldebaran, that he may shine among the other stars which have attracted your attention this winter, and won so much deserved applause. Every man for himself, is the motto of our world, whatever is the maxim of the Aldebaranites, of course every man for his own star, to do the best he can to make it twinkle among its fellows.—Besides, have not progress, self reliance, self improvement, and other matters of glorification been the great themes of the winter ably urged, powerfully vindicated, so that those of the contrary opinion, hide their diminished heads, with the sole consolation that if the doctrine of progress be true, they belong to the movement, and if self reliance be the grand secret of success, they have only to put a good face on affairs, and make up by a commendable self esteem for the slights and neglects of the public. By the law of progress ought not the *new* invariably to surpass the *old*, and should not the *last* lecture be always reckoned the best? While upon the popular principle of self reliance is not a man justified in standing to his own opinions, right or wrong, if all the world were against him?

But as one popular fallacy sometimes destroys another we would respectfully suggest, that some future lecturer take up the subject of the omnipotence of public sentiment. It would be easy to show, in the first place, that majorities are always right; and secondly, that they should always rule; and thirdly, that he who refuses to follow their lead ought to be forthwith hung up, being worthy of death, as a terror to evil doers, unless, indeed, that long desired law abolishing the death penalty should be enacted, which is to constitute the crowning demonstration of our progress. The lecturer might show that all the responsibilities of individual opinion are avoided by adherence to majorities—all the trouble of thinking, and all the odium of singularity. He might add, that the age of heroes and prophets has passed, that in the progress of human affairs it had come to be seen that the only just dominion is that of public sentiment, and that the multiplication of cyphers whose product was formerly thought to be nothing, is now demonstrated to give a grand sum total in the new arithmetic; or in other words, while the individual (by the supposition) is a mere cypher, whose opinions are of no importance, the judgment of individuals in the *aggregate* are the perfection of wisdom and knowledge. But is self reliance compatible with a proper submission to popular opinion? Is it not swallowed up as were the little serpents of the Egyptian sorcerers by the serpent rod of the new prophet, whose name is LEGION?

But if there are Philosophers in Aldebaran, which is highly probable, if literary associations and lectures are established in that distant orb, it is possible that their views might differ altogether from ours on the subject of self-reliance. In their ignorance and simplicity, they might give utter-

ance to such sentiments as the following:—"We are happy in having escaped the fate of the apostate angels who fell from their high estate, as it has been revealed to us, by the sin of pride, forgetting their dependance upon God, in whom all creatures live and move and have their being, they set up for themselves and lost their thrones in heaven; it is intimated in our Scriptures also that in an obscure and distant world, a similar ruin resulted from a similar cause, beware then O ye dwellers of Aldebaran of a like presumption trust not in yourselves, but in Him who made you, rely not upon your own wisdom, but upon *His*, whose understanding is infinite, glory not in your own strength for there is no power but of God, in your most arduous efforts seek his aid, without whom we can do nothing, and who when we work in this necessary dependance of the creature upon the creator works in us to will and to do so that we can do all things through the divine assistance. The security of all the innocent and holy is in their *felt dependance*, the misery of all fallen beings is their self-reliance. In this ignorant and simple way, it may be the Philosophers of our star speak to their admiring, because unenlightened congregations. It is a remarkable fact that there is an old book in our world which contains similar antiquated sentiments, which says among other things that, "he that trusteth in his own heart is a fool," and it is upon record that a stalwart old fanatic by name Oliver Cromwell, who believed in this book, told his soldiers on the eve of a great battle, which he won, as he strangely enough did the most that he fought, "to put their trust in God and keep their powder dry," placing self-reliance in a secondary and inferior position, while our progressive philosophy has made it the first, if not the sole means of success. But no better light has beamed on Aldebaran, no new philosophies, no social systems of human invention, they go along the old beaten track of duty, and obedience and dependance and if ever our rare inventions enable us to communicate with this unfortunate world, and who can limit our progress, we ought at once to send missionaries to its benighted inhabitants that they like us may become as Gods knowing good and evil. We might transfer to them political apostles from the extremes of both our great parties without any irreparable loss to ourselves who should teach them the principles of progressive democracy.

We might also spare without great damage to our world, a few of those renowned discoverers who invent new gospels every year, to instruct the Aldebaranites in the mystery of a progressive religion and to inform their ignorance in regard to the causes of apostacy and transgression, resulting not from sin, as their musty old books declare, but from the defective social systems under which God placed angels and men, a remedy for which, thanks to our progress, has now been discovered. In fact we might colonize a portion of our political and religious reformers and of our progressive philosophers with high advantage to ourselves, whatever might be the result to Aldebaran, and as charity begins at home, their exodus as missionaries from us would wear a highly philanthropic and benevolent aspect.

Possibly this scheme might result in annexation, as did the early emigration of a band of Reformers to Texas, and if Aldebaran should prove refractory and our means of communication would enable us to transport the munitions of war, we might reform them as we have the Mexicans, by the eloquence of cannon, and convince them by the gentle persuasives of powder and ball, and enlighten their darkened understandings with bombs and burnings.

Unhappily it is not demonstrable that these desirable results can be immediately accomplished, or that our communications with Aldebaran will be speedily opened. One hates to question any thing in the line of progress, but candor compels us to say that there are difficulties of distance and atmosphere to be overcome, which lead us to conclude that this achievement will be reserved for a future and *of course* a more enlightened generation.

But unconscious of these machinations against the peace and prosperity of his inhabitants, Aldebaran shines on happy in his comparative ignorance of our remarkable world, esteeming us only as one of the lesser lights made to revolve around and depend upon those great luminaries, who, with himself are centres of systems, suns, in whose light and heat the inferior planets rejoice.

Perhaps Aldebaran and the other Stars if they were fully advised of our improvements, and advances, and could be made to appreciate them, would say to the earth as the Cedars of Lebanon are represented in the Scriptures to have said to the the bramble: "come thou and reign over us," to which, with the briar we might be supposed to make the like magnificent reply: "come and put your trust under my shadow."

But other than fanciful or satirical thoughts are suggested by the night watchers—those glorious sentinels who indicate the vast and yet undiscovered army who lie back of them in the profound depths of space.

How immeasurable is that Omnipotence which fashioned these vast bordies which communicates and continues their motions, which holds them in their courses, which works their grand and complicated mechanism without disruption, disorder, or confusion.

What contrasts of permanency and continuance with change and decay, arise in the mind from the contemplation of the fixed stars from this world of ours. The red eye of Taurus, that looked out upon the fresh wrought capstones of the greatest of the Egyptian Pyramids, raised to their lofty position amid the voices of shouting millions, which like the noise of many waters, celebrated the completion of a monument which was to perpetuate the fame of their king and the glory of his subjects—now shines upon its time worn summit with the same lustre, though the name of the monarch is forgotten, and the dust of the people by whose labor it was erected, has covered and conceaied its base.

The beams of Aldebaran rested upon the towers of Babylon in her day of pride, and gleamed on the gigantic image in the plain of Dura, to whom all nations and tongues were commanded to do homage by the proud Prince who filled the throne of the first Universal Monarchy:—the same star now glistens on the waters of the Euphrates which have long since buried beneath their marshes the last memorial of the golden city which sat a queen among the nations.

That race of giants who founded the hundred-gated Thebes, ages before the wing of the Roman Eagle was fledged for conquest, who built the temples which Homer celebrated, which mock the efforts of succeeding generations, who designed and elevated that wonderful statue of Memnon which the morning sun made vocal, who wrought the mysterious and massive features of the Sphinx —saw Aldebaran gild their yet unrivalled monuments of art, genius and mechanical power:—their pigmy successors, barbarous and hunger smitten, wander by the light of the same star among ruins, the grandeur of which has hardly been im-

paired by the flight of thirty centuries—for Memnon and the Sphinxes still keep watch and ward ever "Thebais Hecatonpylos."

The soldier who watched by night upon the Walls of Tyre, the ancient Mistress of the Sea, when Alexander was thundering at her gates, saw the beams of Aldebaran cast upon the fleets and armies, which girt in their deadly embrace the Emporium of the Commerce of the East, 'whose merchants were princes;'—no wall, no sentinel, no towers or ships, or hostile legions—sees Palilicium now, he shines on a bare rock where a few poor fishermen spread their nets to dry.

Upon a collection of rude huts on an island in the Seine, and still ruder fortifications of the wild Gauls, looked the Star Aldebaran two thousand years ago—now the same light rests upon a city of a million of souls, to which the civilization, the arts, the literature, and the *profligacy* of Athens and Corinth have been transferred, and flourish with something like their pristine vigor.

Upon Druidical rites and human sacrifices shone Palilicium once in a distant and petty isle of the Northern Atlantic, which the imperial Cæsars thought hardly worth their conquest—upon the same spot the modern Babylon now rears her Christian Temples, sending her fleets to every sea, her colonies to every continent, the Star of Dominion rests upon the ancient Brittannia—soon to dawn upon the dwelling place of her sons in the New World, for "Westward the Star of Empire takes its way."

Less than four centuries since upon the bleak inhospitable coasts of an unknown continent, roamed a few savage hunters and warriors in the wilderness, who thought the stars shone to light the brave and virtuous Indians to the happy hunting fields in the sky. That wilderness is now occupied by the teeming millions of a vast confederacy of States before whom the forests and their tenants have disappeared, who have leveled the mountains and filled up the vallyes—who have chosen their emblems from the heavenly host and spangled their banner with stars — That banner now visits every sea and floats triumphantly over conquered cities, continually adding new States to that Galaxy, which symbolizes a power that already casts the dawning light of its destined preeminence upon the startled monarchies of the Old World. And the flattered nightwatchers follow the star spangled banner with earnest gaze along its destined path of conquest, and Aldebaran gazes out on all those changes with the same calm and conscious smile.

And over the ruins of the new Dominions shall Palilicium shine; upon their broken power and departed glory, shall the eye of Aldebaran gaze and this young Empire, like its eagle emblem, spreading its wings for conquest, shall fall like its predecessors in the paths of progress and be broken forever and the pitiful stars shall look down upon the wreck of our glory, and say, alas, alas, how art thou fallen, O son of the morning, and made thy bed in the dust, and become like to those who have gone before thee into the sides of the pit.

Thy grave, O Hearer, shall Aldebaran watch, when the fire of thine eye is quenched, when the bloom on thy cheek has faded, and guard the portals of thy grave until the day when the Master of Life shall cast down the throne and break the dominion of death. Thy spirit will soon leave its house of clay, and pass out upon the universe, and perchance to this distant star, thou mayest wing thine uninterrupted way, and bethink thee, as thou surveyest its glories, that its light is resting upon the remote planet of thy birth, and glistening upon the marble that affection has reared to thy memory over the deserted and decaying tabernacle that once enshrined thy soul, and which is again to receive it when raised a spritual and incorruptible body by that word of power, that from emptiness and nothingness, from darkness and chaos, summoned at the beginning, matter and motion, light and life.

What an image of immutability and eternity is a fixed Star pointing us to a future and endless existence to another and a better life—*a lighthouse* of the skies directing the mariner on the Ocean of life to a haven of eternal rest—*a window* in the heavens revealing glimpses of a glory which eye hath not seen, which ear hath not heard,—*an orb*, the magnitude of which teaches that true and divinely appointed progress which consists in the expectation of, and the preparation for, another and higher organization when the walls of our earthly house shall be broken,—*an eye* beholding all things, penetrating the secrets of night apt emblem of that Omniscience with whom the darkness and the light are alike.

Happy will it be for us if we learn the lessons which are taught by the heavenly Host. Fortunate will the speaker to night esteem himself if Aldebaran meets with your favor, and is allowed to take a humble place behind those stars of the first magnitude which have shone upon this congregation from evening to evening in this place from whom if our star differs, it is with all respect. None will be offended who are lovers of truth which is always more readily elicited by discussion, and, if any are disturbed by our comparatively feeble and unequal advocacy of old fashioned opinions, they will only manifest their own want of confidence in the popular dogmas which they uphold.

Govs. Tompkins and Lewis and Camel-driving.

We copy the following from the Correspondence of the N. Y. *Home Journal*. If not true, it ought to be:

Very soon after the elevation of Tompkins to the chair of state, after his triumphant success over Governor Lewis, the latter was elected to the Senate from the middle district, and chosen a member of the Council of Appointment. At one of the sessions of this council, Governor Lewis introduced the subject of the recent election, and expressed his surprise at the result—more especially marvelling at the change of popular opinion in a particular town in Otsego, where, his friends had assured him, there was but one man in it, who would vote for the "Farmer's Boy." "Don't you know how that was brought about?" asked Tompkins. "Not I," replied the ex-Governor; "but should like to know the cause." "Well, then," said the other, "it was thus: The solitary voter you mention, did, for a long time, stand alone—the butt and ridicule of all his townsmen, for his staunch adherence to the "Farmer's Boy;" and one day, at a large meeting, they began, as usual, to roast him for his singular predilection. Says your particular friend, Judge S.: 'Is it possible that you mean to vote for Daniel D., the 'Farmer's Boy?' Why! he was sold, ten years ago, by his father, for twenty bushels of potatoes! Really! it is disgraceful to stick to a fellow who was held so cheap by his own relations.' 'Well, Judge,' was the reply, 'I don't know anything about the story, but, if you say it is, it must be, true; but, I've heard tell, that, since that time, he has been a member of the State Convention—a member of the Assembly—and a member of Congress; is that true?' 'Yes,' said the Judge, 'but what of that?' 'Why, just this: I know,

beside all these, he has been a Supreme Judge, for I saw him at Cooperstown, at the circuit; and, for a young man who was sold so cheap, he has got up the ladder pretty fast, and, to my notion, must be a confounded smart chap; but, before you spy motes in the eyes of our candidate, you had better take the beam from those of your own. I tell you, I'd rather go for the *Farmer's Boy*, than to vote for a fellow that went about the State with a camel for a show!'

This was like the explosion of a bomb-shell.—The whole room was in an uproar. 'What's that you say?' asked half a dozen at a time, and Judge S., with great solemnity, exclaimed: 'Do you dare to say that Governor Lewis ever kept a camel for a show? That's actionable!'—'Well, I said what I did say, and you may make the most of it,' was the rejoinder; 'and I ask you, Judge, and every man here, if, when he and Solomon Van Rensselaer came out here to review our brigade, if there was not a camel came along at the same time?' 'Well, what of that?' they all roared out, 'you have not the impudence to say that was Governor Lewis's camel?' 'I say what I say,' said my friend, 'and I ask you all, if, when we went over the next day to the muster of the other brigade, was not the camel there?' It was admitted. 'Well, was not it so in Chenango, when their troops were paraded?' he continued. This was also accorded. 'Well, now,' said my friend, triumphantly, 'here is a Utica paper, giving notice of a general review in Oneida, and here, just under it, the camel is advertised to be shown for a shilling!' 'But, Mr. ———, now you don't seriously think the money for the show went into Governor Lewis's pocket?' they asked. 'Well, I won't say all I think,' says my friend, 'but this I will say, I don't think he was much out of pocket by his journey; but, if anybody thinks differently, he may, and that's all I shall say about it, and so, good bye.' These were 'strange coincidences,' and my friend having infused the *leaven*, took his leave. 'I declare," said one, 'there is something in this.' 'I think so too,' said another. 'You don't catch me voting for a camel-driver!" said a third. 'Nor me, neither,' said a fourth. The whole mass was in a ferment; Judge S. was left alone in his glory, and I carried the town; his vote alone against me!"

The quondam Governor was rather fidgetty during this narration, and made frequent applications to his snuff-box, and, taxing a pinch extraordinary, he arose and walked across the room, exclaiming: "You did lie me out of that election, most infernally!"

Wages of Labor

The Report of the Commissioner of Patents contains an extended statement of the prices paid to farm laborers and to mechanics in the various counties of the different States of the Union.—The facts thus presented must be interesting to our readers generally, and we give the substance of them in condensed form:

Farm Laborers.—Maine, northern parts, $12 to $15 per month.

New Hampshire and Vermont, $12 per month.

Massachusetts, eastern, $12 to $14 per month.

Massachusetts, western, $11 per month.

New York, mostly $10 per month, often $12 per month, a very few $8 per month.

New Jersey, $15 per month, and not boarded.

Pennsylvania, mostly $10 to $12 per month.

Maryland, $8 to $10 per month; 37 to 50 cents per day.

Virginia, southern, $5 per month; north-western $10 per month.

North Carolina, northern and central, $7 to $8 per month; western, 50 to 75 cents per day.

South Carolina, western, $5 per month; north western, $6 to $10 per month, north-eastern, 28 cents per day; central, $8 to $10 per month; white laborers, $15 per month.

Georgia, north-western, $15 per month, or 75 cents per day.

Alabama, southern, 30 cents per day; northern, 25 cents a day; central, 50 cents a day.

Mississippi, colored, 50 cents a day; white $12 to $15 per month, and found; newer parts, 50c per day.

Tennessee, western, $8 to $13 per month; eastern, $10 to $12 per month.

Ohio, mostly $10 per month, rather higher in the southern parts.

Indiana, $9 to $10 per month.

Illinois, central and southern, $8 to $10 per month; northern, $15 to $20 per month.

Michigan, very variable, average about $11 per month.

Iowa, about $12 50 per month.

As a general average, wages are higher, in more newly settled regions, especially where emigration is rapid and enterprise considerable; in older country places the wages are lower, except near cities, where they are high. In the slave-holding States wages are generally considerably lower than elsewhere, with the exception of the sugar region in Louisiana, and the more southern, newer and cotton producing portions. To these general remarks there are of course exceptions.

Mechanics.—In the more northern and eastern States the daily wages are from one dollar to one dollar twenty-five cents, being higher in cities.—In the more northern slave States wages are not quite so high. In the newer slave States the wages of mechanics are higher, varying from one to two dollars. In the Western States the price is generally variable, being from 75 cents to two dollars per day; scarcity in a supply tending to advance the price; while the low price of provisions, and consequent higher rates of money, has a contrary tendency.

In England the average wages of a laborer are forty cents per day, but the standard varies greatly. The Nottingham stocking weavers, in an address to the public, stated that after toiling from fourteen to sixteen hours per day, they could earn only from one dollar to one dollar and twenty-five cents per week; and were obliged to subsist on bread and water, or potatoes and salt.

In Ireland, the average price of common labor is from ten to twelve cents per day. In France, the common wages of a hired laborer are thirty-seven dollars fifteen cents for a man, and eighteen dollars and seventy-five cents for a woman, annually; the taxes upon which are equal to one-fifth of the net product. In some parts of India, where the laborers want but a little rice and salt, the common wages are as low as five cents a day.

A strong shock of an earthquake was felt in various parts of Nova Scotia on the 1st inst.—The ice at Porter's Lake and Lawrencetown was shivered into fragments, and the doors of the houses in many places were shaken open.

Important to Batchelors and Widowers.—The House of Delegates of the Maryland Legislature, on Saturday, adopted an order imposing a tax on batchelors, between the ages of 26 and 50 years, and widowers of two years standing. A motion to include widows and old maids was rejected.

For the Western Literary Messenger.

Song.

BY C. S. PERCIVAL.

I stood on the bank of a fairy stream,
By the side of a fairy maiden,
While the stars sent down their placid beam
With a tremulous beauty laden.

And sweetly up from the mirrored skies
Those stars were smiling on me—
But I saw alone two star-like eyes
Whose ravishing light had won me.

The fairy stream went murmuring on
While the spell of beauty bound me,
And sweetly the while its melting tone
Was floating soft around me.

But I heard alone, in my witching dream,
Those tones with music laden,
That fell, as I stood by that fairy stream,
From the lips of that fairy maiden.

FRANKLIN COLLEGE, Tenn.

For the Western Literary Messenger

The Streamlet in the City.

BY GUY H. SALISBURY.

Many years ago, ere the ground on which this busy, populous city stands, had felt the foot of the white man, there flowed a small streamlet from what is now the northerly part of the city, and, meandering through the ravines that then diversified the ground, lost itself in the marsh where the terminating section of the Erie Canal has since been located. It gurgled out from the side of a quiet, secluded nook, on whose sunny banks the earliest wild-flowers used to bloom, and its crystal current seemed of most refreshing coolness, as it trickled among the semi-transparent pebbles, that huddled together in the little basin formed by its restless flow. Where it rambled musically along, there were clumps of bushes that bent gracefully beside it, and tall trees that waved their wide-spreading branches over it, in whose lofty tops the twittering birds sang, while many a modest floweret amid the turf that sloped quite down to the waters' edge, saw its own humble beauties in the glassy eddies, and seemed thus, in its loneliness, to have something of its kind to hold communion with.

And thus the Streamlet ran, as wild and free as such things love to be—of little use, in that solitary world, save that the savage Indian drank of it, when wearied with the chase, or panting in pursuit of his flying foe, and that the wild animals of fierce or harmless nature, alike paused to slake their thirst, as they ranged their trodden haunts through the solemn woods. The glorious sun lit up its line of sparkling light, as he glanced down upon it through the over-arching shades, and the gentle moon and the placid stars shone as brightly on it as on the broader, grander rivers, and lakes, and seas, and their imaged orbs were as faithfully reflected back to the bending heavens. And thus the merry Streamlet kept tripping on its murmuring way, amid the wild forest, for years.

At length came the white man, through the savage war paths—in the track long trodden alone by the panther and the deer. Through the thick woods—the wind-swayed leaves brushing his very cheeks—pushed onward the hardy Pioneer whose bold footstep disturbed the solitude. As he made his toilsome, difficult way, his quick glance caught the gleam of leaping waters, and he hasted to lave his brow, hot with fatigue of travel, in the running Streamlet. Then first it mirrored the strange features of our adventurous race, whose grasp is ever for empire—and it babbled noisily to itself, as it stole timidly away, for there are

"Tongues in the running brooks,"

or SHAKSPEARE's no authority. We know not what it babbled of, but it might have been of the wondrous changes so soon to come over those sylvan scenes—over the wide blue waters that rolled up to the very margent of that tangled wood—over the vast untrodden regions that lay beyond.

But onward pushed the determined intruder, and the wilderness-spell was broken. The time had come, when the great Prophet of Progress was to do his miracles, and the Apostles of Improvement were abroad. The first rude cabin—the first hearth-stone—the nucleus of civilization—were planted there.

The infant settlement enlarged its borders—the tall trees sank before the axe, and huts and dwellings rose, scatteringly in their stead. Then the upward curling smokes of the hamlet were shaddowed upon the surface of the Streamlet—another phase in its hitherto uneventful existence.

There was a fearful winter day, in December, 1813, when those graceful curling volumes were merged in one vast murky atmosphere of mingled smoke and flame! The barbarous enemy had given the young village to the torch, and its scattered roofs went down in common ruin. Then the glare of the fierce, red light shimmered over the shuddering Streamlet, whose thread-like current, stealing along through the melting snow, was faintly tinged, at intervals, with human gore. A sadder phase was this desolation, that it still faithfully reflected to the cold, gray, wintry skies.

A few years, and among the urchins of the rebuilded village, I used to play around the bright spring, and loved to bend my thirsty lips to its cool surface, when tired with sport, to drink of the delicious waters. Ah! when shall earthly fount yield half so sweet a draught as that nectar of Nature to the unpalled lip of Childhood! It was a lovely spot, that little sunny dell, shaped like a huge sea-shell, on whose warm, sheltered sides the flowers were thickly sprinkled—around which the clustering bushes wore a fresher green. It was in the fields then, with a narrow, winding path leading to it, through wild roses, over mossy banks and bosky knolls.

Time flew swiftly by—Boyhood had changed to Manhood—the cares of the world had crushed

many a dear recollection of those young days—and my roving feet had sought Fortune—as we too often seek for Happiness—away from Home. But, a few eventful seasons rolled along, and I had visited again the scenes of early years, led by the strong hand of "Circumstance, that unspiritual God."

Amid the ever-changing, growing city, the old landmarks are swept ruthlessly away, until a few years of absence seem to have obliterated almost the memory "that such things were." I had forgotten the Streamlet of my boyhood, and knew not whither it had gone, amid the crowding wilderness of brick and mortar that had usurped the green places of that which Nature planted. Indeed, I deemed that it must have been choked, or dried up, or drawn away by the drains and sewers that run through the many streets which have cut up the beautiful fields.

But, as I was sauntering musingly along, one lovely Autumn day, the recollection of the little Streamlet that used to meander thereabouts, flashed upon my mind, and I resolved to while an idle hour in seeking to trace the long forgotten fountain. I soon spied a clearer current than usually fills the city ditches, purling along the roadside, and, pursuing its course, as it methodically turned the square corners of the streets—flowing still in the straitened channel of the paved or unpaved gutters, I followed it to its source. It welled out from beneath a broad flagstone, in the crosswalk, of a recently paved street.

A few moments of busy reflection served to convince me, that *this* was the merry, gurgling Spring of the olden time! Yet, what a change! The flowery dell of those early days was gone—gone, too, the clustering bushes, the singing birds, the broad green fields of lovely verdure—the winding path that led through clumps of wild-roses. All had long since vanished, and before me was the paved street, and the paved side-walks, glaring in the sun. Before me still gushed out the bounteous waters, as freshly as of yore, but I could not stoop to quaff them, as I did thirty years ago! There were thronging passers-by, wondering at my simplicity in gazing at a simple spring, that ran but to fill the gutters, and whose overflowing current was only a nuisance, flooding the adjacent streets. Could it have been done, they would have had the Street Commissioner seal up the useless waters, and so have repressed them forever.

I turned away, in sadness—almost in tears. But, as I turned, I caught the reflected images of tall piles, and lofty spires, in the yet mirroring surface of the neglected Streamlet, as it ran along its unwonted, artificial course, and it presented another—the last—phase in its changeful history. A busy interval had been there, since its waters glanced back the waving forms of the primal wilderness!

So gush out, in our young life, the feelings, hopes, affections, of the soul—pure and unsophisticated, they flow along Youth's flower-strewn pathway. So, in after life, are they thwarted and turned aside, and choked by the cares and circumstances that environ us. So, too, they *will* flow on, as freshly from the fountains of feeling as ever, though to be alike diverted into strange, unnatural channels. Hope for the heart, whose human affections are as irrepressible as the still gushing waters of that neglected, uncared-for Spring!

From the Democratic Review.

Upward!

Cease your wild fluttering, Thoughts that fill the soul!
Silence awhile, 'tis but the hour of birth!
Spurn not impatiently the mind's control,
Nor seek the clouds ere ye have looked on earth!
Still your strong beating till the day has gone
And starry eve comes on!

Why would ye sweep so proudly through the sky,
With fearless wing the snow-crowned hills above,
Where the strong eagle scarcely dares to fly,
And the cloud-armies thunder as they rove—
Make in the solitude of storms your path
And tempt the lightning's wrath?

Will ye not linger in the earth's green fields
Till the first feebleness of youth is o'er,
Clasp the fresh joy that young existence yields
In the bright present, and desire no more?
Lulled among blossoms, down Life's morning stream
Glide, in Elysian dream!

Throb not so wildly, restless spirit, now!
Deep and undying though thy impulse be,
Would not the roses wither on thy brow,
When from thy weary chains at last made free?
In such hot glare, would not the proud crest stoop,
And the scorched pinion droop?

I pause. In might the thronging thoughts arise:
Hopes unfulfilled and glory yet afar,
Vague, restless longings, that would seek the skies,
And back in flame come like a falling star.
I hear ye in the heart's loud beating seek
A voice wherewith to speak.

"Say, can the children of a loftier sphere
Find on the earth the freedom they desire?
Can the strong spirit fold its pinions here
And give to joy the utterance of its lyre?
Can the fledged eaglet, born where sunbeams burn,
Back into darkness turn?

"Must not the wing that would aspire to sweep
Through realms undarkened by the breath of sin,
Dare in its earliest flight the trackless deep,
Nor faint and feebly on the earth begin—
Mount as a soaring lark, in Morning's glow,
And leave the mists below?

"We feel in heaven's own ether, calm and high,
A god-like strength, the storms of earth to stem;
The volleyed thunders from our pathway fly—
We twine the lightning for a diadem!
Far, far below, the clouds in darkness move—
The sun is bright above!

"No soul can soar too loftily, whose aim
Is God-given truth and brother-love of man;
Who builds in hearts the altars of his fame,
And ends in love what sympathy began.
Spirit, ascend! though far thy flight may be,
God then is nearer thee!

Rattlesnake on a Steamboat.

A LEAF FROM THE LIFE OF A LOUISIANA SWAMP DOCTOR.

From the New York Spirit of the Times.

Shortly before the usual time for wending my way North to the medical lectures, an opportunity was offered me by an ingenious negro, who had caught the reptile asleep, of exchauging a well worn blanket coat and two dimes, principally in cash, for as fine a specimen of the Rattlesnake as ever delighted the eye or ear of a naturalist; nine inches across the small of the back, six feet seven-eighths of an inch in length, eyes like globular lightning, colors as gaudy as an Arkansas gal's apron, twenty-three rattles and a great propensity to make them heard, were the strong points of my purchase.

Designing him as a propitiatory offering to one of the professors, my next care was to furnish him with a fitting habitation. Nothing better presenting itself, I made him one out of a pine box, originally designed for shoes, by nailing thin slats transversely, so as neither to exclude air nor vision, but sufficiently close, I thought, to prevent him from escaping. The day for my departure arrived, and I had his snakeship carried on board the boat destined to bear me to Vicksburgh, where I would take an Ohio steamer.

Unfortunately for the quietude of my pet, on the Yazoo boat was a young Cockney lady, who, hearing that there was a live rattlesnake on board, allowed her curiosity to overcome her maiden diffidence sufficiently to prefer a request, that the young doctor "would make his hanimal oller!" a process which the proverbial abstemiousness, when in confinement, of the "hanimal," was accomplishing rapidly without any intervention on my part. Politeness wouldn't allow me to refuse, and as it was considerable of a novelty to the passengers, his snakeship was kept constantly stirred up, and his rattles had very little rest that trip.

The steamboat at length swung alongside of the wharf-boat at V——, and transferring my baggage, I lounged about until the arrival of a boat would give me an opportunity of proceeding. The contents of the box were quickly discovered, and the snake had to undergo the same inflictions as the day previous, until thoroughly vexed, I made them desist, and resolved thenceforth I would conceal his presence, and allow him to travel as common baggage.

"The shades of night were falling fast" as the Steamer "Congress" came booming along, and after a stay of a few minutes for passengers, proceeded on her way, obtaining none however, but myself. The snake-box was placed with the other baggage, on the cabin deck in front of the "social hall," jam up, as luck would have it, against one of the chimneys, making the location unpleasantly warm.

It was one of those clear, luminous nights in autumn, when not a cloud dims the azure, and the heavens so 'beautifully blue,' (alas! poor Neal,) are gleaming with their myriad stars, and the laughing breeze lifts the hair off the brow and presses the cheek with as soft a touch as the pulpy lips of a maiden in her first essay at kissing. The clear croupy cough of the steamer was echoed back in prolonged asthmatic strains from the dark woods lining the river like an army of cowled gigantic monks, come from their cells to see a steamboat. Supper was over, and the beauty of the night had enticed the majority of the passengers from the cabin to the open decks.

A goodly number, myself among the rest, were seated in front of the social hall, smoking our cigars and swapping yarns of all climes, sizes, nations and colors.

Sitting a few yards from me, the most prominent personage of the group, smoking his regalia, and regaling the crowd with the manner which he choked a "cobra de Capella" to death, that crawled into his hammock in India, was an old English sailor, who, from his own account, had sailed over all the world, and through some parts of it.

Weighing the words down with a heavy ballast of oaths, he said he wasn't afraid of any thing in the snake line from the sea serpent down to the original snake that tempted Eve. I asked him if he had ever met the rattle-snake since he had been in America, thinking I would put his courage to the test on the morrow.

"Seen a rattlesnake! Yes, enough to sink a seventy-four! Went to Georgia on purpose to kill them! Pshew! To think a man that had killed a boa-constrictor, fair fight, should be afraid of a little noisy flirt of a snake that never grew bigger round than a marlin spike."

At this moment the boat was running a bend near in shore, and the glare of a huge fire at a wood-yard was thrown directly under the chair of the braggart, when, to my utter amazement, I saw there, snugly coiled up, the huge proportions of my *snake!*

I was so horrified and astonished I could neither speak nor move. I had left him securely fastened in his cage, and yet there he was at liberty in his deadly coil, his eyes gleaming like living coals. The light was intercepted, and the foot of the sailor moving closer to the reptile, it commenced its warning rattle, but slowly and irregularly, showing it was not fully roused.

"What is that?" exclaimed a dozen voices.

The foot being withdrawn, the rattling ceased before its nature or source could be clearly traced.

"'Twas the steam escaping" said one.

"A goose hissing," said another.

"The wind."

"A trick to scare the sailor," thought a good many; but *I knew it was a rattlesnake in his deadly coil!*

The horror of that moment I shall not attempt to describe, every second I expected to hear the shriek of the sailor as the deadly fangs would penetrate his flesh, and I knew if a vein were stricken no power on earth could avail him, and I was powerless to warn him of his danger.

"It sounded monstrous like a rattlesnake!" observed a passenger, "but there is no doctors or fool students on board, and no body but cusses like these would be taking snakes 'bout. I was gwine up the Mississippi wanst when a rattlesnake, belonging to a medical student on board, got out and bit one of the passengers; the poor critter didn't live ten minutes, and the sawbone's 'prentice not much longer I reckon."

My hair stood on end, for there was an earnestness about the man that told me he was not jesting.

"You didn't kill him, surely?" asked some one.

"Oh, no! we didn't zactly kill him, sich as cuttin' his throat, or puttin' lead in his holler cimblin, for that would have bin takin' the law inter our own hands; but we guv him five hundred lashes, treated him to a coat of tar and feathers, made a clean crop of one ear, and a swallow-fork-slit under-bit-and-half crop of the other, and put him out on a little island up to his mouth in water, and the river risin' a plump foot an hour!"

Not knowing but a similar fate might soon be mine, in agony, with the cold sweat streaming over me, I listened to this infernal recital, of an

instance of the summary punishment termed "Lynch Law," which the unavailibility of the proper law so often drove the early settlers to, and which unfortunately is not yet entirely abolished.

The sailor must again have moved his foot closer to the snake than agreeable, for his infernal rattling recommenced, and *this time* clear, loud, and continuous, to the tutored ear indicating great danger, the prelude to a fatal spring.

I shook off my lethargy, and shrieked out—"Don't move, for your life! A light! for God's sake bring a light! Quick! Quick!"

No one moved—thinking I was jesting. "Mister," spoke the sailor, "if it's a trick to scare me you'll miss the figure with your child's rattles: jest bring one of your real rattlesnakes along, and I'll show you whether he can frighten an English sailor or not."

Hearing me calling so loudly for a light, the mate, a stalwart Irishman, came running up with a large torch, but hardly had he reached the deck which he discovered the monster, his head drawn back ready for striking.

"Snake! Snake!" yelled he, punching at him with his glaring torch.

"Whereabouts you lubber?" still suspecting a trick, the light blinding us all.

"Under your feet!"

The sailor looked down and beheld the hideous reptile, right under his chair! With a loud yell, he made but one spring over the guards into the river.

"Rattlesnake!" "Man overboard!" "Stop her!" "Out with the yawl!" Fire! Snake! She's sinking! Shoot him! Snake! Whose is it! Lynch him! Kill the rascal!" swelled on the air, mingled with the crashing of broken doors and chairs, the oaths and rushing of terrified men and the screaming of still more terrified women, who knew not what to fear, while clear and distinct above the infernal melee arose the piercing rattle of the snake, who writhing his huge proportions about, and striking at every thing near him, seemed to glory in the confusion he had created.

A shot was heard and then the coil collapsed, and the rattling slowly ceased. The snake was dead.

"Who brought him on board?"

"Let's lynch the scoundrel!"

"Are there any more of them?"

"Here's the box he got out of."

My name was on it in large capitals!

"Throw it overboard!"

"Throw it overboard!" I yelled out, "it may have more in it! Throw it over!

No sooner said than done, and as the only evidence of my participation floated away over the wave, no one was louder in his denunciation, no one wanted to be shown (in order that he might whip him) the rascal that brought it on board more than I did, except, perhaps, it was the sailor who, now thoroughly humbled, stood shivering in his wet clothes by the furnace, ready to acknowledge that American snakes were "some snakes," certain. TEXAS.

MADISON, PARISH, La., Jan., 1848.

POSTAGE ARRANGEMENT WITH GREAT BRITAIN.—We learn from a source which admits of no question, that at the time of the *Hibernia's* sailing, the basis of a treaty between Great Britain and the United States had been agreed upon, which would place the Post Office arrangements between the two countries on terms of perfect reciprocity.

Mrs. Welby's Poetry.*

How beautiful are the creations of the pure and simple-hearted poet. Having no fellowship with the votaries of sordid passion—no congeniality with sophisticated natures, the Muse, prompted by an innate sympathy for the Beautiful and the Good, forms a world of her own, peopling it with beings radiant with virtues which exalt their possessor, and glowing with innocency which rivets the eye and ravishes the heart of the beholder. The reader, by introduction to such beings, is not only delighted, but his thoughts receive a purer tinge and the noblest emotions have full dominion over his soul.

Such is the character and such the influence of the poetry of AMELIA B. WELBY. Tutored by nature and with a heart instinct with moral beauty, she warbles like a wild mountain bird, with heaven in her eye and her "heart upon her lip." She says of herself in one of her early poems,

—"bright thoughts to me are given
As many as the clustering leaves of June,
And my young heart is like a harp of heaven,
For ever strung unto some pleasant tune."

The "thoughts" and the "heart" of her younger years are with her still. Her later poems possess the unaffected simplicity of childhood. How naturally, in one of them she writes to Lucy:

"Dear Lucy in your absence, where'er your wanderings tend,
You must keep within your pure heart a sweet thought for your friend
Till you sit once more in beauty within your father's hall,
With a soft smile on your lip and a pleasant word for all.

Alas! the breeze is balmy and the hushed waves deeply blue,
And flowers are in my pathway, but no light-hearted Lu!
O the summer months without you such a lonely time will be!
I am sighing for you, Lucy—do you ever sigh for me?"

No American poetess possesses so delicate a fancy as Mrs. WELBY, nor have any of her sister minstrels approached nearer rhythmical perfection.—Moore never wrote four sweeter or more melodious lines than these, from "The Rainbow:"

"There are moments, I think, when the spirit receives
Whole volumes of thought on its unwritten leaves,
When the folds of the heart in a moment unclose
Like the innermost leaves from the heart of a rose."

Let us not be understood to say that she has *reached* perfection in the *art* of poetry. Though scarce, there are blemishes in her versification. The line

"Her thin pale arms, nestling her young head,"

found on page 166 wants another syllable; and there is *something* wrong in these lines on page 196:

"When far below the waves outspread
Glide swiftly on with liquid hue;
When winds are low—and skies o'erhead
'Are beaming *bluely beautiful!*.

Probably the last line was written,

Are beaming *beautifully blue*,

for that would make better sense and "orthodox rhyme." Furthermore, *compositors* are sometimes uncourteous even to females.

Mrs. WELBY is somewhat careless in her rhymes. The pairing of such words as *brow* and *low*, *years* and *hers*, *glow* and *brow*, is hardly justifiable; and *stirring* and *appearing* is an intolerable match. But these are minor offences which one can easily forgive, when an author's effusions, like Mrs. WELBY's, are invariably replete with the most exquisite sentiment of poetry. Since

"Sweet thoughts, like honey bees, have made their hive
Of her soft bosom-cell, and cluster there;"

she cannot send too many of her beautiful creations abroad in the world. Wherever they go, they refine and exalt society, and tend to make mankind live

—"With heart and soul alive
To all that makes life beautiful and fair."

* Poems by Amelia. Second Edition, enlarged. New-York: D. Appleton & Co.

TO READERS AND CORRESPONDENTS.—We have been kindly furnished with the manuscript of Dr. LORD's late lecture before the Young Men's Association, and the production may be found entire in these columns. It will furnish a rich treat for the admirers of beautiful composition. To accommodate our city subscribers and other friends, a few hundred extra copies of the Messenger have been struck off and are for sale at the counting room in Peck's Bookstore.

Those of our local subscribers who are interested in the matter, may find the streamlet so beautifully written about by our friend and fellow townsman, Mr. SALISBURY, by going to the corner of Pearl and Chippewa streets.

"*The Valentine*," "*To Ellen*" and "*Tricklings*," are accepted; and probably the "*Lines on a Favorite Tree*" (unexamined) *will* be.

GODEY'S LADY'S BOOK for March is ahead of every thing else in promptness, and is truly a magnificent issue. The embellishments are most admirably done, and the literary contents are spicy. The Treasury is very choice. This magazine and the Lady's Dollar Newspaper are offered for three dollars a year. L. A, GODEY, Philadelphia, publisher.

YOUNG MEN'S ASSOCIATION.—HON. A. A. PORTER, of Niagara Falls lectured before this society on the 19th—subject, *English History*; and PHOCION HOFFMAN, Esq., of this city, on the 21st—subject, *Humbugs*.

THE COMPLETE FARRIER, by J. C. KNOWLSON, a well printed pamphlet, which may be found at the Literary Depot in the Post Office, is well worth twenty-five cents.

THE WORKINGMAN'S ORGAN, published in this city and edited by an association of practical mechanics, is not only devoted to a good cause, but contains original articles of a finished style of composition.

Later From Mexico.

NEW YORK, Feb. 18, 7—P. M.

Accounts from Mazatlan to Dec. 1st, give the particulars of the capture of the Guaymas, Mazatlan and San Jose, by the Congress and Portsmouth. They entered Guaymas on the 19th Oct., and a surrender was demanded and refused. The town had a fort and three water batteries erected for its defence, and was said to have 800 men with new arms from Chili. By daylight, on the morning of the 20th, the town was bombarded forty minutes, when a white flag was displayed.

The troops had retreated during the night with all their arms and ammunition, and after the town had been much injured by shot and shell, the people concluded to surrender. The Congress soon left Mazatlan, and the Portsmouth was relieved by the Dolt, the town having been deserted.

No garrison was kept on shore, and on the 17th of November, 400 of the enemy got into the town. Capt. Selbridge landed with only 65 men; he found the Mexicans in strong position, engaged and defeated them, killing 40 or 50, and driving them from the town. Capt. Selbridge was wounded in the foot which was the only casualty to our forces.

On the 18th of November the enemy from the mountain with 2 six pounders, and 200 or 300 men attacked Lieut. Haywood of the Navy, who was posted at San Jose, with 25 Americans and 30 Californians. The Mexicans made several charges up to Haywood's works which were nobly defended. The enemy finally retured with the Majores, their chief, and 20 to 30 men.

Haywood did not lose a man, and only 2 wounded. On the 20th and 22nd ult., the N. Y. volunteers were hotly attacked at La Ray by 300 men, under Penando, who was repulsed with 50 or 60 killed and wounded.

On the 25th, the attack was renewed with cannon and small arms; result not known.—The N. Y. boys will be likely to take care of themselves.

FROM CALIFORNIA.—All right in Upper California to the end of October; Gov. Mason at Monterey; Col. Stevenson commands the southern department at Los Angelos.

RUMOR OF PEACE.—The Tribune has also a telegraphic communication from its Washington correspondent with an important rumor of Peace, namely: a Senator has received a letter from N. Orleans, announcing the arrival, in that city, from Mexico, of Maj. Van Buren, with a Treaty of Peace.

INTERESTING DUTCH COLONY.—The Holland Immigrants recently settled in Iowa, have named their new settlement "PELLA," from Pella beyond Jordan, to which the early Christians fled upon the destruction of Jerusalem by the Romans. It is two or three months old, and numbers 800 inhabitants. Large numbers are to join them in the Spring, when their Pella will suddenly become a populous prairie town. It is a singular sight, says a correspondent of the Ch. Intelligencer, the velvet jackets and wooden shoes of these Puritans of the 19th Century, in the midst of the prairies of the New Purchase, that stretch from the Des Moines to the Gheesque, in Central Iowa. They are living in camps cov-

ered with tent-cloth, or grass and bushes—the sides barricaded with all sorts of odd-looking boxes and chests from the Netherlands.

These people are respectable and intelligent.—When they took the oath of allegiance to the United States, a few weeks since, but *two* made their *marks*. Many of the leading men possess unusual refinement and education.

Horrible Inhumanity.

A case of barbarity unprecedented, we would hope, in a Christian land, is revealed in the last Montreal papers—involving the worse than brutal treatment of a wife and mother—who was doomed to a pig-pen for an asylum in the midst of winter. The case is thus summarily stated:

On the 3d inst., James Goodwin, a resident on the Ottawa river, near Montreal, was tried in that city, before the Chief Justice, for the murder of his wife, to whom he had been twenty years married, who was the mother of his seven children, and against whose conduct or character nothing whatever appeared, except that her brutal partner had beaten and ill-treated her until she is supposed to have become partially insane.

The depravity of human nature, under bad example is made manifest in the facts that this poor sufferer was allowed by her sister and her children to remain three months in a pig-pen, never once cleaned, in the midst of a Canadian Winter, the neighbors and clergymen also knowing and allowing it. The evidence fills two columns of the Montreal Herald. Some graphic sentences in the evidence of the witnesses convey an idea of the truth, which must impress the coldest imagination. 'Did your mother walk or crawl to the hole where you put in her food,' asked the Queen's Counsel. 'She did not walk: when she was warm she did not like to be getting up,' replied the daughter. The poor wretch, with all her members drawn together to keep alive the poor remaining sparks of vital heat, wrapped up in the two old quilts which were her only clothing, did not dare to rise lest she should expose a large surface of her attenuated frame to the piercing air.

Day after day did her extremities become more dreadfully injured, till mortification, at length, left only the raw stumps. Then, even, death delayed to end her misery; and yet such was the indifference of her husband *and her children*, [and her husband's sister] that we do not even know the period when the loss of an entire foot took place, nor how long she existed after that horrid amputation.

Dr. Sturgeon swore that he found the body in the pen, a mass of ice; it was put on a door, for the purpose of being removed to the house, but Godwin objected, having resolved never to let her enter, dead or alive! "The night when she was said to have died was fearfully cold—the only way in which he could account for her living so long in such weather, was that she was insane. Insane people are less sensible to cold than others. He thought that in the state in which she must have been before death—frozen stiff up to the middle—it would have been impossible for to get out of the pig-pen. One foot was gone altogether; and half of the other was off. The stomach was empty and drawn up toward the backbone; and there was a vessel in her hands which had a hole as big as a pin and another as big as a pea."

Other witnesses were examined, but their testimony is of such a revolting character, as to render it unfit for publication. A tailor called to give evidence said that, while working at the prisoner's, he had once taken food to the deceased, *out of curiosity to see a woman in a pig pen.* The children of the deceased appear to have exhibited the same savage indifference as their father. The prisoner was convicted only of manslaughter, but we should say there never was a clearer case of murder than against him. The sister and children might have been convicted of manslaughter.

Foreign Items.

We give below some items of general intelligence brought by the *Hibernia*, as we find them summarized in the New York papers:

The influenza has been very busy with all on the other side of the Atlantic. It is said that the last week but one, 60,000 persons were afflicted with it at Madrid. Christian VIII, King of Denmark, after long suffering from this disorder, died on the 19th ult. at Copenhagen.

Letters from Vienna, of the 10th ult., state that Prince Metternich is dangerously ill.

The critical position of the West India Colonies still continues to engross the attention of all the influential London journals. Each successive day brings forth some striking statements, all tending to show that some effective measure of relief must be speedily resolved upon, in order to rescue those possessions, once deemed the brightest jewels in the British crown, from absolute ruin.

In addition to the late excesses at Milan, in Pavia there seems to have been considerable bloodshed, fifty persons having been killed or wounded in a collision with the Austrian soldiery. In the Sardinian States a wide spread conspiracy appears to have been detected; and letters from Leghorn state that large sums of money have been expended to promote the intrigues of a foreign power to advance the cause of the representative of a fallen dynasty. The Prince of Canino is reported to be deeply compromised. In Sicily affairs appear to be in a frightful state. At Palermo the people are in actual rebellion. The streets are barricaded, and 60 of the cavalry have been killed. Women are said to have poured hot oil on the heads of the soldiers as they passed. The insurgents seem to have been hitherto successful.

By the latest accounts it is reported that a serious revolt had broken out in Naples, and the King had become so much affected as to require to be twice bled. The two Sicilies are in a state of insurrection. In the meantime accounts from Vienna represent that vast military preparations are in progress for strengthening the Austrian forces in Italy; and the King of Sardinia is adopting similar measures to place his army on a war footing.

Constantinople dates to the 17th ult. have been received. The Sultan had evinced a most favorable disposition towards Reischild Pacha and Ali Effendi, granting to the former a pension for life of £6,000 a year, and has raised the latter to the dignity of a Pacha of three tails.

The Jesuits, driven out of Switzerland, have been ordered to quit Bavaria within two or three days. The Diet at Frankfort had not agreed what steps to take respecting Switzerland.

Accounts from St. Petersburgh of the 14th instant state that the Emperor and the Imperial Crown Prince were convalescent.

Letters from Greece to the 10th ult. refer to the late insurrection at Patras, which was completely put down.

The Madrid journals of the 22d are as uninteresting as those of preceding days. The ex-Minister D. Francisco Zavier de Burgos died on the 21st.

The editor of the Presse (Paris paper) states that he had seen a letter, written from on board an American ship of war, dated the 16th, off Messina, which states that a fire of artillery had been opened on that place.

It is mentioned in advices from Berlin, that a state of business approaching panic had been witnessed on the Bourse, in consequence of the nature of operations, arising from the general aspect of political and commercial affairs.

The King of Sweden has taken umbrage at the conduct of France, Austria and Prussia, neglecting to consult him on the proposed intervention in the affairs of Switzerland, his Majesty having been, as he alledges, a party to the treaty.

The state of the public health, not only thro'out the United Kingdom, but in almost all of the continent of Europe, is in an unsatisfactory state The prevailing diseases are fever, influenza, grippe, &c. Few have escaped an attack from some one of these unwelcome visitors. All classes, old and young, rich and poor, have suffered to a greater or less extent. At the present moment no less than five of the crowned heads of Europe are invalided. The King of Sardinia is at present used up; and the attack under which he is suffering requires great care. The Emperor of Russia labors under an attack of fever, though convalescent. A letter from Copenhagen, of the 12th, states that the amelioration which had taken place in the King of Sweden's health, did not continue. When the last accounts were issued, he was under the influence of a violent attack of fever. Two bulletins were issued each day. The Queen of Spain is said to be still suffering, and under the care of her medical advisers.

India and China.—The political intelligence from India and China is not of great interest.—Tranquility prevails throughout India. The Governor General had passed five days in the capital of Oude, and had parted with the King on friendly terms. No arrangement had been made to take the government under British management. In the northern provinces every thing remained quiet. At Canton and the suburbs a better feeling prevailed towards foreigners.

France.—The debates in the Chamber of Peers of France have closed by a signal majority of 121 in favor of M. Guizot's ministry. The French government have transferred their prisoner, Abd-el-Kader, to Fort Lamaigne, near Toulon, his future destination being yet undecided.

Italy.—Despatches confirm to the fullest extent, the report of the insurrection in Sicily, which has been most energetic. The French government has ordered one of their largest war steamers to sail immediately for Naples, where the position of the King seems not a little critical.

Letters from Turin announce that the King had ordered an entrenched camp to be formed on the heights of Velenza, upon the Po, in erder to defend the country against any attack of the Austrian troops, and to hold also the government of Milan on the *qui vive* against a possible invasion of the Milanese by the Piedmontese troops.—This camp is to consist of 30,000 men. The Count de Rochefoucald, Minister of France at Florence, has arrived at Marseilles, on his return to his government, to inform them of the exact state of Italy.

It was reported that the Austrian Ambassador, in compliance with instructions he had received from his Court, in case any serious disturbances took place in the kingdom of Naples, had demanded a passage through the Roman dominions for an army of 30,000 men, to assist King Ferdinand in putting down the revolt. His Holiness had peremptorily refused that permission, and declared that he would, in conjunction with all his allies, resist by force, all invasion of his States.

Accounts from the Cape of Good Hope, record three or four victories obtained over the Kaffirs, but without any conclusive effect. We have this week received intelligence of the murder of five British officers by the savages, who fell upon them while bathing, and cut the throat of every one.

A league is forming in England, to procure a reduction of the duty on tea. Several important meetings have been held in Liverpool, Manchester and elsewhere, and deputations have waited upon Lord John Russell. He promises no present acquiescence in their views.

The political news from Canada has not caused much excitement here. Probably it is in a great degree owing to our sense of alarm being fully absorbed by the subject of national defences. A large portion of the people of this country, believe not only in the possibility, but the eminent probability of an invasion by the French.

Considerably dissatisfaction prevails in France from the resistance of the legislature to the demands of the people for additional measures of reform. Great hopes are placed upon the anticipated demise of Louis Phillippe from his age, and the infirmity of his health. Whenever he *does* die, an immediate outbreak may be looked for.

The weather had become extremely cold in Paris, and particularly in the south-eastern department of France. The Rhine was partially frozen.

On the 11th, at Hamburg, there were sixteen degrees of Reamur of cold. The Elbe was frozen, even to its mouth, so thickly that laden wagons were able to pass over it.

Evidence of a great change in the level of the land has recently been discovered in the Island of St. Michaels, in the Azores. The old sea-beach has been traced from Achada to near Fayal, at a hight of 300 to 400 feet above the present level of the sea.

Col. Fremont.—A Washington correspondent of the Baltimore *Patriot*, after stating that the Court Martial had sentenced Col. Fremont to be cashiered, says: but for the weakness of Gen. Kearney in tacitly acknowledging for a season, the authority of Com. Stockton in California, which furnishes an excuse to a certain extent for the conduct of the accused, the Court, as I am informed, would have made the sentence "death by shooting."

Death by Hydrophobia.—About five weeks ago as a small girl was drawing water at a pump on the corner of Fulton and Clason Avenues, Brooklyn, she was attacked by a dog; when a lad about 11 years old, the eldest son of a man named Dowd, interfered to protect her. The dog immediately left the girl and flew at the boy, seized him by the nose, and held on till forcibly removed. The lad continued in his usual health till 12 o'clock last Friday noon, when the dread symptoms of hydrophobia set in, and continued with increasing violence till 12 o'clock on Saturday night, when they terminated in death.—He is spoken of as being a very superior child, being esteemed of all who knew him. The girl, before spoken of, received a slight scratch on her forehead, but whether inflicted by the tooth or claw of the dog, is not known. Of course much anxiety is felt concerning he..—*N. Y. Jour. of Com.*

DEATH OF THOMAS COLE.—With sincere grief we announce the death of Thomas Cole, Esq., the distinguished Painter. He expired at Catskill, his place of residence, on Saturday, of a pleurisy, after an illness of about a week.

Mr. Cole may be said to have stood at the head of his profession. In Landscape Painting he had no superior; if an equal, in America. In Moral or Epic Painting, if we may use the phrase, he was unrivalled; as he was preeminent in worth and all mental and social qualities.

The death of such a man, in the midst of his high career of Art, is a loss to the Country and the Age. Although the creations of his mind and pencil are numerous, and in many directions grace our public depositories, and the collections of the opulent or liberal lovers of art, he was scarcely in the meridian of a life which, though it had performed much, promised so much more.—He leaves several unfinished pictures. Alas, who will carry to the canvass the final touches upon works so well begun!

But if he was great as an artist, he was truly beloved as a man. In the village in which he lived, and which exhibits, in all directions, the touches of his refined taste, clear intellect, and classic mind; the church, of which he was a devoted member, and the interests of which he delighted to advance; and above all, the family and immediate friends, by whom he was a cherished object of regard and affection; his death is deplored, by all classes, (as a letter justly says,) as if they had lost a common friend and brother!

The memorials of his high mental culture, of his rare talent, and his admirable skill, will live after him, and will be sought for and cherished, not only for their intrinsic merit, but as a remembrance of him, who, having completed his "Voyage of Life," has gone to the enjoyment, we cannot but hope, of the fruition of Art and Truth.—*Albany Argus.*

A COURAGEOUS WOMAN.—On Tuesday, Feb. 1st, about four o'clock in the afternoon, as Mrs. Henry Outcalt was proceeding home in her carriage, about two miles from this city, on George's road, a man, with a blue coat and black pantaloons, and of a gentlemanly exterior, walked up to the horse's head, and after putting some questions demanded the lady's money, which she refusing, he thereupon pulled forth a pistol and threatened to shoot her, unless she complied with his modest and reasonable request. The pistol being a short one, the lady saw down the barrel, that it was not loaded; she therefore again refused him, with the additional information, that if he did not leave her she would blow HIS brains out. Why, said he, do women carry pistols nowadays? She replied, that it was high time, when they could not go along a public road without being molested. The man then asked her if she was married; to which question she replied affirmatively. He then said she was an honor to the man that married her. After which remark he left her, and ran as fast as his legs could carry him, in the opposite direction. He has not been arrested.—*New Bruns. Union.*

OLD RICE.—A gentleman who has resided for many years in India, fourteen hundred miles up the Ganges, says that the people there who are able to keep their rice, do not eat it until it is two years old and the soft part has been eat out by the worm. Then they winnow it clean, and eat it. Rice is the common food, and the poor people are obliged to eat new rice, as rich people do here. This gentleman says that during his residence in India, there have been famines in the districts around him, in which "millions of people perished." The famines result from the entire absence of rain for six months, and scorching winds, which destroy all vegetation. The British Government are building a canal of great capacity, from the mountains in which the Ganges rises, down into the country seven hundred miles, at an expense of fifty millions of dollars, for the purpose of irrigating the land. The cost of the canal is to be paid from the revenues of India.—*Jour. of Com.*

AN EXECUTION AT BUENA VISTA.—In a recent letters from La Encantada, Mexico, published in the New Orleans papers, there is the following description of a military execution:

Our battalion was ordered to the General's encampment, well known by the name of Buena Vista, where it was said all would undergo a general inspection. On arriving there we discovered all the troops arrayed and waiting as if to witness the enactment of some melancholy scene.—Nor were we deceived by their appearance, for no sooner had we been assigned our places in the ranks, than we heard the music of a drum and fife, and immediately discovered a small procession moving slowly and silently along—a few paces in advance of which were four men bearing a coffin, and in the rear of them, but following hard by, was a man by himself, whom we immediately recognized as the individual for whose sake the coffin had been prepared—having reached a place which all eyes could see, they called a halt, and the coffin being placed on the ground a few paces in advance, this lone man in question was brought forward and seated thereon; I was not sufficiently near to hear what was said, but I could plainly see what was going to be done. A file of some half dozen men who were armed for the occasion, formed a straight line in front of the aforesaid lone man seated on the coffin. They simultaneously brought their guns to bear—took aim and fired A little before I heard the report of the guns, I saw the man fall from his coffin. He was executed, I understand, for having threatened to take his captain's life, together with several other minor misdemenors of which I am not in possession. I never was called upon before, to witness such a solemn scene, and never wish to be again.

SUPPRESSION OF THE MONASTERY OF ST. BERNARD.—The Alpine Hospice, famous alike in history and romance for its benevolent monks, whose sagacious dogs have rescued so many hundreds of travellers from the whelming snows of Mount St. Bernard, has, to the shame of Protestant Switzerland, been violated by the authority of the Helvetic Confederation. It appears by the English papers, that on the 2d of December last the Landsgemeinde of the Valais deprived the monastery of its ecclesiastical patronage and inflicted upon its inmates a fine of £5000. On the 18th of the same month, officers were sent to the monastery, under whose *surveillance*, doors and strong boxes were broken open with crow bars, forty Vaudois soldiers were quartered in the building, and sentinels with loaded muskets were stationed at the windows for the purpose of firing at any one who should endeavor to escape with the consecrated vessels, or with any other valuables of the institution. In a dignified protest the Prior and thirteen monks of the monastery remonstrated against "this unjust and illegal seizure of an establishment wholly devoted to the objects of beneficence, constantly protected and supported by benefactors of all nations, by most of the Swiss cantons, by ancient and modern princes, who have all contributed to maintain the general hos-

pitality of this house—of an establishment which Napoleon himself respected, notwithstanding the laws of the Emperor."

At the last accounts the famous monastery of St. Bernard was deserted. The monks with their noble dogs, had disappeared. All was desolate in that region of perpetual snow.

☞ Mothers, will you read these lines, which were sent by a Lady to her Son, with a present of a Bible? They were first published in a book called "My Early Days,"—one of the most beautiful and simple stories that we have ever read; and the connection in which they were introduced added to their interest. The son left his home, never to return during the life-time of his mother, and to him as they might be to your own children, the verses gave through all his future years additional interest in the instructive volume which they accompanied. We know of nothing more suitable as an inscription for a Bible presented by a Christian mother to her son, and it would give us pleasure to learn that, through our means, they had been so used in even one additional instance.

Remember, love, who gave thee this,
When other days shall come;
When she who had thy earliest kiss
Sleeps in her narrow home.—
Remember, 'twas a mother gave
The gift to one she'd die to save.

That mother sought a pledge of love,
The holiest for her son;
And from the gifts of God above,
She chose a goodly one:
She chose for her beloved boy
The source of light, and life, and joy.

And bade him keep the gift, that when
The parting hour should come,
They might have hope to meet again
In an eternal home?
She said, his faith in that would be
Sweet incense to her memory.

And should the scoffer in his pride,
Laugh that fond faith to scorn;
And bid him cast the pledge aside
That he from youth had borne;
She bade him pause, and ask his breast,
If he, or she, had lov'd him best!

A parent's blessing on her son
Goes with this holy thing;
The love that would retain the one
Must to the other cling:
Remember! 'tis no idle toy,
A Mother's gift—Remember boy!

Beautiful use of Chloroform.—A correspondent says he met a hen-pecked friend late the other night, and on asking him how he expected to escape a *curtain lecture* when he got home, the little fellow's eyes sparkled luminously as he held up to view a little speck of *sponge* and a small *phial!* "Oh, ho! *Chloroform*, eh?" "Yes sir-*ee!*" replied the chuckling husband, "I become insensible in five minutes after lying down."—*Albany Express.*

The Horse Thieves.—There are still farther developements in relation to the gang of Horse thieves who have been *taking* horses from the Seneca Indians, near Buffalo. The persons who had been in pursuit of the horses that had been stolen from the Cattaraugus Reservation, have found one in Dansville, one in Rose, Wayne County, and one in Geneseo. They have heard of several more, which had been sold by one John Allen and Henry Hyslop. Hyslop was convicted at the Allegany General Sessions last week, of grand larceny, for stealing three other horses from the Indians, and sentenced to one year's imprisonment at Auburn. Allen is now under arrest at Hume, Allegany co, charged with stealing the horse which was found at Dansville, and officer Smith, of Lockville, Wayne County, is now in waiting for Allen, with a warrant, for grand larceny.

The Indians have lost thirty horses within the last two years, and it is supposed that they all, or nearly all passed through the hands of Allen and Hyslop.—*Rock. Amer.*

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

Western Literary Messenger.

VOL. X. BUFFALO, SATURDAY, MARCH 4, 1848. NO. 5.

For the Western Literary Messenger

To Ellen.

BY MARIANNA HENDEE.

Fair Child! along life's sunny way full many a flower is springing!
And bright-eyed Hope o'er future hours, her rainbow robe is flinging!
No dark foreboding cloud doth rise to dim *thy bright to-morrow*—
Nor do the radiant things of earth e'er breathe to thee of sorrow!

'Tis not for me to whisper aught those gentle dreams destroying,—
Nor will I mingle bitter dregs thy cup of bliss alloying!
Not mine to shade that beacon ray thy joyous pathway lighting—
Nor point thee to the opening bud that even now is blighting!

No, Ellen, no! yet happy live, thy summer heaven unclouded;
And may life's heritage of ills long, long from thee be shrouded!—
Upon that white and polished brow is seen no trace of sadness,
And thy blue eye but mirrors forth a heart of buoyant gladness!

Still be the guiding-star of Hope thine onward path directing,
While Heaven's pure azure, arching o'er, is thy pure heart reflecting!—
And, as thou keep'st that tablet free from aught of earth's dark staining,
So light shall beam around thy path e'en when *Hope's* star is waning!"

Glad Child! the world's vain pageantry doth cheat with false beguiling!
And siren tones, to Pleasure's bowers, thy thoughtless steps are wiling!
But haste thou to the *Tree of Life* to fill thy soul's deep yearning,
Ere Earth's fair fruitage on thy lips to bitter dust is turning!

Hope's cynosure may darkly set upon thy tear-dimmed vision,
But an holier ray shall gild thy way if *Bethlehem's* star be risen!
And when "the silver cord is loosed"—life's golden chalice broken—
No fear may blanch the radiant brow that bears Immanuel's token!

The Unequal Match.

She lived in a miserable court running out of Tottenham Court Road; and as I went up the dark and close-smelling staircase to her second floor, I trembled at finding myself in such a place. When I entered the room, I don't know which struck me most—the wretchedness or the cleanliness of the apartment. In one corner stood a bedstead, and from the thin fold of the sheet, which was turned down over the patchwork counterpane, I knew perfectly that there was not a blanket upon it. In another corner, her little invalid son lay stretched upon a mattress on the floor, with an old flannel petticoat wrapped round his limbs to keep him warm. Across the room on a string suspended from wall to wall, hung a few stockings, and other articles of wearing apparel, to dry. There were but two wooden chairs; one of them, with its broken back roughly mended with string, was by the sick boy's side, with a cup on it, while seated on the other, by a deal table, and close to the small shovelfull of fire in the grate was the sempstress herself. As she turned her head round to see who entered, I perceived that one of her eyes had been bruised since she was with me, and no sooner did she see me at the door, than starting up, she raised her handkerchief to her face; and observing that the disfigurement attracted my notice, she told me—with such hesitation, that I knew it was an untruth—that she had had an accident, and knocked her eye against the door.

"You have come for the work you gave me," she said; "yes, I know I have been very remiss. I ought to have brought it home before, but—the fact is—a—a—"

"You have had illness in the house," I added, endeavoring to help her.

"No—it was not that—but—" and she burst into tears.

"Come, come, my good lady," I continued, "do not vex yourself; I am not in a hurry for it, and next week, or even the week after that, will be time enough for me. Now, come, be candid with me—you are in distress. Tell me, can I be of any assistance to you?"

"No, thank you," she replied, with a quiver of the lip; I can assure you we are not in distress, however much appearances—a—a—, and we do not require assistance *yet*."

"Yes, but I know you *do*," I added; "though you cannot bring yourself to confess it."

"Madam, I did *not* require assistance," she replied, rising; "and surely I am not sunk so low that my word cannot be received."

My woman's curiosity was so piqued to learn who she could possibly have been, that I sat there talking about the illness of the child, and twisting the conversation into a hundred different channels, in the hope she would let drop something that would give me a clue to her history. At last, just as I was about to take my leave in despair, her husband staggered into the apartment. He was a man whose coarseness and grossness of feature contrasted wonderfully with hers; and yet, notwithstanding his high cheek bones and unshorn chin, and sodden complexion, there was something in the expression of his eyes and manly figure, that made me fancy that at one time he must have been almost handsome.

"Now, Georgiana," he said, in a husky thick voice, "have you got any tin? cos, if you has, hand it over."

"Don't you see there is a stranger present?" she answered, biting her lips at the idea of my being a witness to the scene.

"Strangers be hanged!" he replied, looking first at me, and then at his wife; "I want some money, I tell you; those cursed skittles has re-

gularly cleaned me out. So, come, hand us over a mob, and take that handkercher from that black eye I guv you for your stinginess last Tuesday. Where's the odds of her knowing on it? She's got a father and mother, I day say, and understands these matters. There, you need'nt look so plaguy proud—though yer are the *Honorable* Mrs. Duggan. Come, are you going to give me that money, or am I to make you?"

"I have none," she returned with a shudder.

"None of your lies!" he answered brutally; "but hand the money over this minute, or else, s'help me, I'll——" and he shook his burly fist in her trembling face, in continuation of the sentence.

"Here! here, my good man!" I almost shrieked out with fright, "here is some money; it is all I have got, but do go—oh! *do*."

"Well, now I've got all I come for, I don't mind if I does," he replied, looking at me. You see, miss, it's my turn at the Coach and Horses to have a quartern in; and I can't abear, when I been drinking all the morning at other genelmen's expense, not to do the thing what's right, and do my share towards keeping up the spree."

"Yes, of course—I know," I answered; "but do please leave us alone here together."

"That's enough, miss! I'm o-p-h," he said. "So good day to you, miss, and good day to you, the *Honarable* Mrs. Duggan"—and out he reeled again.

I couldn't help noticing the struggle that was going on in his poor wife's breast during all this frightful scene. And directly her husband left the room, despite all her exertions the tears flooded her eyes. I rose to console her; and on going up to her, she fell upon my bosom, and wept like a child.

Presently she raised her head, saying, "There, that has done me good; tell me *now*, can you guess who I am?"

"I know enough, my poor one," I replied, "to know that you are suffering from some imprudent alliance."

"Imprudent! it was a mad—downright mad one!" she exclaimed, with bitterness. "To think that I, the daughter of an earl, should have united myself to my father's gardener's son! But desperately—idolatrously I loved him; and for him I braved the fearful rage of father—mother—all. And what was my reward? Why, when my husband found every one of my many supplications for forgiveness spurned by my haughty parents, and even the door of my former home shut forever against me, then he—seeing how he had been foiled in the ambitious game he had played, and that instead of the rich heiress he had expected, he had only an expensive pauper for his wife—then he, I say, reeked his vengeance on me, and then began the long series of such sufferings and privations, as even I who have suffered them, cannot so much as shadow out to you."

"But wouldn't his father do something for you?" I asked.

"What could he do?" she replied. "Dismissed from his situation—ruined through my marriage with his son (for my father, of course, suspected he had connived at it), how could we expect support from him? And yet we might have been far beyond want had my husband only permitted me to exercise the accomplishments that had been heaped upon me at home. But to drown the vexation he felt at the fearful mistake he had made, he flew to drink, and soon lost in the bottle, all power of exertion. When he had drunk up all the trinkets I had carried with me in my flight, he began taking my dresses from me one by one, and converting them into more money for more liquor; until at last I was forced from the very want of proper clothing, to discontinue giving the lessons which were our only means of subsistence."

"But if he has treated you thus badly," I replied, "why not have left him!"

"I could not—he would not leave *me*," she answered; "*that* was all I wanted—all I asked of him. But no, he knew he was entitled to all I earned, and that I must work if it was only for my child; so as he was too idle to keep himself, he was but too glad to be kept by me. And yet, notwithstanding all this, I could have loved him—ay, and did love him like a dog, even though he beat me like a dog. But when, in the wantonness of his dissipation, he *dared* to bring his degraded companions to my home, my whole woman's nature rose up and rebelled against it, and I hated him as intensely—madly as I once had loved him. And now, you may fancy how gladly I would leave him if I could. But oh, heavens, I cannot! Often and often have I fled with my child in the night to save myself from further wrong, and my poor boy from the pollution of his father's example; but the hound has tracked me out so soon, that I now see how foolish it is to hope ever in this life to be rid of him."

"Poor, poor lady," I half said to myself.

"Oh, you know not how sweet it is to find one consoling voice," she continued calmly, as the tears flowed anew,—"friends all, have turned from me, and yours are the first kind tones I have heard for years. Indeed, indeed you cannot tell what I have suffered from that man! The very work you gave me, he took by force from my drawer, and pawned to get more gin. You may look little lady, but the worst is yet untold. The drink your work procured him only made him mad for more—ay, and he would have it—though I told him he had swallowed every rag that was of any value in the place. Suddenly the wedding-ring on my finger caught his eye, and even *that* he wanted to take from me—that, the only outward sign I had to distinguish me from his wretched female companions. I told him I would not let him have it. He threatened blows. Still I told him he should not have it. He sought to force it from me. I struggled with him, and the coward finding how tightly I grasped the sole remaining token of my honor, struck me in the face—with what force the bruise still remaining there will tell you—and as I lay senseless on the ground, he robbed me of my ring."

I was so moved by the wretched history I had heard, that I couldn't help weeping with her.—And I would not leave her, until I got her to promise that she would henceforth look upon any little sevice I might have it in my power to render her, not in the light of charity, but of friendship.

Early on the morrow I went again to see her to consult with her as to how I could best befriend her; but to my great sorrow I found that she had left shortly after daybreak; but whether to avoid her husband's illtreatment, or my assistance, always remained a mystery to me, though from that time forward, I never forget her fearful history of THE UNEQUAL MARRIAGE.

RELIGION AND POLITICS.—A christian has no right, any where under any circumstances, to be anything else than a christian. He must ask about a political, as well as about any other act, the question, is it right or wrong? and by the answer to that question must be guided. It is just as wicked to lie about politics as to lie about merchandise.

There is no shuffling.—*Francis Wayland.*

Consolations.

BY P. BENJAMIN.

In the weary passage through the world, which I till now have made,
I've seen more storm than sunshine, and less of light than shade;
Yet sometimes a new planet has sweetly shone for me,
And sometimes a green island has risen from the sea.

My childhood knew misfortune of a strange and weary kind,
And I have always worn a chain, though not upon my mind;
And I render thanks to thee, oh God, from my prison, that I live
Unshore of that best privilege which thou alone canst give.

I mean a soul to apprehend the beauty that is spread
Above me and around me, and beneath my feeble tread
And though I may not climb the mount, or thread the winding vale,
Yet mount and vale to me impart delights that never fail.

The dewy spring-time comes to me with melody of birds,
Familiar as my sister's song, and tender as her words:
I love the summer's scented blooms, and autumn's bright decay,
And winter's frozen jewels made, like hopes, to melt away.

My heart is like a river, in the leafy month of June,
With a never-ceasing gush of waves, that chime a merry tune;
Though its surface may be broken, when the gale of sorrow blows,
A living fount supplies it, and it always sings and flows.

Great cause have I for gratitude, to the Giver of my life,
For love is still my talisman in danger, toil and strife;
And, though bereft of freedom in the body, I can fly
As high as heaven on wings of thought, like an eagle to the sky!

Extracts from an Address,

Delivered before the Young Men's Association of Buffalo, on the 16th February, 1848, by

Col. James L. Barton,

On the early reminiscences of Western New York and the Lake region of country.

After the events of 1759, the English abandoned the old French military works, and constructed another where the present cluster of buildings stands at the end of the road leading to Lewiston. The large chimney around which a small building is erected, belonged to the old English messhouse, as it was called, it was a large inconvenient structure, very high between joints; the frame of this building was prepared at Fort Niagara while in possession of the French, for a Catholic church at that place, the English hauled it over to Schlosser and put it up there. This was the residence of Judge Porter for several years after he removed to the Niagara frontier, and was burned down by the British when they invaded the country in December, 1813.

The English built a saw mill at the falls, removed the place of landing used by the French to a short distance above their new fort at Schlosser, where the water was deeper and access to it easier. They then opened the present road from Schlosser to the forks, before spoken of, where it intersected the old French road. From that place to Lewiston, the course of the road has been very much altered and straightened since that time.

Some remains of the old French works can yet be seen in the old field near the bank of the river; but they have been ploughed over and leveled so much that but little remains of them. In this old field was a grave surrounded by pickets for many years, said to be the grave of old Captain Schlosser; all appearances of it are now gone.—About one mile from the river on the new road opened by the English, they erected a stockade, the remains of which can now be seen. Some remains of the pickets of the old French stockade, built many years before this English one, were discovered on digging into the ground for the construction of Fort Grey.

The French in building their railway from the ferry at Lewiston to the brow of the mountain, it did not appear that the ground was levelled where it was too high, or hollows filled up, as is now done in constructing similar works. Where the ground was level, hewn timber with a rabbet or shoulder projecting upwards from the outward edges, similar to log railways in saw mills, connected with cross pieces, were laid upon and rested firmly on stones laid under them; in passing over hollows, instead of filling them up, stone pediments were built up to the proper level and the timber ways laid on them, and in this manner was carried to its completion. The power made use of, for raising the cars was capstans or windlasses. When a boy, hunting squirrels and other game, I have often traced the line of this railway, where could be seen distinctly the timber lying, decayed to be sure, but for many rods in continuation, and the stone pediments were yet in many places quite perfect. Not having been over the ground for more than thirty years, I cannot say whether any vestiges of the line can now be seen or not.

Following up the bloody incidents which took place on this river, it is proper I should mention one which may be ranked amongst the most bloody, malicious and revengeful, it falls to the pen to record. This occurred in the year 1763, several years after the French power and possession in this country had been wrested from them. The same year that the Great Pontiac who was always friendly to the French, made his powerful effort to drive the English from their newly acquired possessions in the upper or western country.

It is well known that for several years after the French had been dispossessed by the English, the strong influence and sympathy which they had succeeded in fixing upon the minds of the Indians in their favor, remained in full force, and they felt nowise disposed to be very friendly with the English. Although the French power had been destroyed and their troops withdrawn from the country, many Frenchmen remained and mingled with the Indians and kept alive the strong feeling and sympathy which they had succeeded in securing to such an eminent degree. This hatred to the English and strong attachment to the French was soon destined to be exhibited for no other purpose it would appear, than the mere gratification of a desire for blood and plunder, and to manifest their hostile and revengeful spirit to the new comers.

The English, on taking possession of the French works on this frontier, kept soldiers in the fort at Niagara, at the landing at Lewiston, Schlosser, and in the several stockades which they built along the portage road. They seemed to be fully aware of the hatred which the Indians entertained for them; and doubtless took every conciliatory means in their power to win their friendship; as well as taking every military precaution to prevent any injury resulting to them from the ill will of the Indians.

In transporting their supplies from the lower Lake to their possessions in the upper country,

teams of wagons drawn by horses and oxen went in squads or caravans over the portage, accompanied with strong guards of soldiers. This practice was continued for several years, and from the extraordinary vigilance and precaution taken, and perhaps at the same time the mistaken idea entered into the minds of the English, that, by their vigilant as well as conciliatory course towards the Indians their strong feelings in favor of the French had began to give way and was turning in their favor, and that in future they were to apprehend no danger from them.—In this they were soon to be undeceived. They were yet to learn, alas too fatally, that the Indians and French bided their time for revenge.—Reposing in the false opinion the English had formed, they became less guarded and watchful, their teams and property continued to pass the portage guarded with less care.

The French who remained with the Indians, observing the careless and unsuspecting manner in which the English were conducting themselves, and the false security into which they had been lulled, awoke in the minds of the Indians a revival of the former good feeling between them, and suggested that the long wished for opportunity had now arrived, for taking revenge on their common enemies, the English. A scheme was soon planned, by which the Indians and French should waylay and destroy the teams and their guards when passing over the portage. Accordingly the Indians on the Buffalo Reservation, Genesee Flats, and other places, with the French amongst them, raised a force of several hundreds, and, unobserved by the English, passed through the woods to, and assembled at the place on the Niagara River, known as the Devil's Hole.

At this place they hid themselves amongst the trees and bushes and behind a ridge of land a little interior from the bank of the river, and lay in wait for the convoy of teams coming up from Lewiston. The morning of that fatal day, said to be the 24th of June, a large number of teams with their attendants, accompanied with a small guard of soldiers, the whole company numbering something less than one hundred persons, started from the landing at Lewiston for Schlosser, under the direction of William Stedman, who resided at Fort Schlosser, and was the superintendent or contractor for conducting the transportation business.

Approaching the Devil's Hole from Lewiston about half a mile before reaching it the road descends a smart hill and runs upon a flat piece of ground of no very great width. The widest part is near where you first come upon it; it continues to narrow as you follow on, until, opposite the Devil's Hole it narrows to that degree as to leave only room enough for a wagon road to pass over a small spur of the ridge which bounds the eastern side of the flat; passing this spur you again enter another and smaller flat spot of ground through which runs a small brook, which, running a few rods, falls into the Devil's Hole.—Such was the place selected for the accomplishment of the bloody tragedy which was so soon to take place.

The day was beautiful; the sun shone out in splendor—the birds were singing from the trees, —and all nature seemed reposing in serenity and peace—the lazy teams were plodding along carelessly—the guards were scattered, and a perfect unconsciousness of danger having seized upon all—the whole party had descended into the first piece of flat ground, many had passed the spur of the ridge into the second and crossed the small brook—when the sudden and appalling war whoop of the Indians pealed upon their ears from the woods around them, followed by a sudden rush of the Indians and French, and immediately an indiscriminate slaughter of men and animals and destruction of property took place.

It is said so fiendish was the desire for spilling of blood both of men and animals, that the water of the brook became discolored with it, and from this cause acquired, and yet retains the name of the "bloody run." The persons of the English party were sadly mutilated and then thrown down the steep banks into the hole, as were such of the horses and oxen as had been killed, and likewise the wagons and much of the property.

Many years subsequent, after I had come to Lewiston, and previous to the war of 1812 with England, a man whose name I now forget, passing over this flat either with or soon after a wagon had gone along, which in its progress had run against and overturned the remnants of an old stump, he discovered something that drew his attention; and on making an examination he found a quantity of leaden balls: he gathered up some forty or fifty pounds and brought them to my father's house who purchased them. Many is the squirrel and other game I have killed in my younger days, with these balls shot from an old German yager rifle; which a gentleman who was stopping a few days at Lewiston, and to whom I had done some boyish favor, such as going hunting with him, securing and carrying his game, and observing my fondness for shooting, gave to me.

Of the whole English party but two escaped. One was a drummer boy, who was either thrown or jumped down the bank into a tree top: his drum straps caught in the branches and arrested his fall; he extricated himself from his perilous position, descended the tree, traversed the bottom of the hole, chasm or dell to its open side on the river, from whence and under cover of the river bank, he crept back to the landing at Lewiston. This man, Matthews was his name, was alive when I came to Lewiston, and resided near Capt. Isaac Swazy's an old New Jersey tory, on the bank of the river about two miles from the present village of Niagara in Canada: and followed the business of making split bottom chairs. Mr. Joshua Fairbanks now living at Lewiston, established himself at Chippawa in Canada in 1793, and was well acquainted with Matthews for many years.

If I had not the positive evidence I have, that this man Matthews, who escaped from the massacre in 1763, was alive in 1807, the fact is not all improbable nor anywise likely to be untrue.—I well remember an old gentleman, Major Maxwell (the brother of Col. Hugh Maxwell who served through the Revolutionary war, who came into western New York in '88 or '89 as a surveyor in the employ of Mr. Phelps) about seventy years of age, a very intimate friend of Gen. James Miller who distinguished himself by his charge on the British cannon at Lundy's Lane near the Falls, on the 25th of July 1814.

This Major Maxwell when quite a young man, was in the battle of Bloody Bridge near Detroit in July 1763, the time Pontiac was besieging that place. This old gentleman at the time I knew him was hale and hearty, and was employed in our army as an assistant wagon or forage master in 1814; and while the army was in Canada that summer, he went into the country to procure forage, and was captured by the British. After the war, I understood he returned to Michigan and has been dead many years.

The other person, William Stedman who was fortunate in making his escape, and the manner in which he effected it, is thus related: Being mounted on a very fleet mare, the bridle reins were seized by one or two Indians and forced out

of his hands, they intending to push him and his horse over the bank into the hole. One story says he took out his knife and cut the reins, another that he cut the throatlatch and slipped the bridle from the animal's head, immediately clapped his spurs into his mare's sides, and under a shower of rifle balls from the Indians, struck off directly into the woods an easterly course at right angles with the river, and continued on until he came to a small stream called Gill creek. He then followed the course of this creek to where it discharges into the Niagara river about a mile above fort Schlosser, and soon reached that place in safety.

Stedman afterwards went to England and died. Some time after his death, persons in this country, pretending to be his agents, laid claim to the whole district of country, from the Devil's Hole at the spot where he began his retreat from the massacre, taking his route through the woods to Gill creek, down the creek to the river, then following the course of the river to the place of starting, embracing the Falls and all the water power on the American side. It was pretended the Indians gave him this property, and that the gift was ratified by the British Government before the Revolution.

The reason assigned for this extraordinary gift was, his miraculous escape from a slaughter, in which it was supposed all his companions had become victims. That the Indians struck with such a remarkable intervention of the Great Spirit in his behalf, it was a clear indication to them that he was a highly favored being. That the Great Spirit in thus saving his life and the extraordinary route he took in making his escape, made it manifest to their minds that the land thus encompassed by him was to be his, and accordingly gave it to him. For many years, and even down to quite a recent period this claim has been asserted, and great efforts have been made to have it established.

The appearance of the devil's hole has altered very much within the last forty years. Then it was a very deep chasm near the bottom of which a fine cool spring issued. I have several times descended to that spring. There was a tall cedar tree which grew out of the loose stones towards the bottom, it was very straight and close along side, and nearly reached the top of the bank.—We used to creep down the bank and get into the top of this tree and using the limbs descend it like a ladder to its roots, then clamber still farther down over the loose rocks to the spring.—keeping a sharp watch all the time against rattlesnakes, as there were a great many then in and about the rocks and loose stones. Pieces of old iron and parts of wagon hubs were often found near the bottom. In later days a saw mill has been built on "bloody run" near the hole, and in constructing the heavy stone wall around fort Niagara since the last war, the large stones of which were taken from a quarry opened on the highest part of the bank around the hole. From this quarry large quantities of small stones, dirt, and other rubbish have been thrown down, the spring has been covered up, and the depth of the hole or chasm much reduced.

I have endeavored to trace the age of the large stone building called the mess house in fort Niagara. I remember hearing it said soon after I came to Lewiston, that it was not far from a hundred years old; and also recollecting there was a stone in the front part with the year in which it was built cut into it. I wrote a letter to Sergeant Leffman, who has charge of the post, to copy the date on the stone and send it to me. He writes that he has examined every part of the building and cannot find it, he says some old people about there tell him the date was 1725, which tallies well with the earliest accounts I had of its age. The building has been frequently whitewashed, and was much battered by shot during the last war, and the stone has probably been covered up or destroyed.

* * * * *

No American troops ever appeared in this part of the State again, until the time of the surrender of the American frontier fortresses in 1796.

It is a singular fact, and the more striking because of its singularity, and one which speaks volumes in favor of the high character and honorable conduct of the early settlers of Western New York, that, inasmuch as at the close of the Revolutionary War there were no good feelings existing between the Americans and the Indians in this part of the State, and although the fort at Niagara was retained by the British in violation of the treaty of 1783, for thirteen years, not one drop of blood has been shed in battle between the whites and Indians from the time of the Revolution to the present.

* * * * *

It is well known, that in violation of the treaty of 1783, when the English Government was compelled to acknowledge the Independence of her revolted colonies, the United States of America, it retained and kept military possession of all the fortresses on the American side of the great Lakes. Oswego, Niagara, Miami opposite Perrysburgh, Detroit and Michilimackinac were amongst the forts wrongfully withheld. The possession of these fortresses gave them the entire control of the numerous Indian tribes inhabiting this extensive district of country, and kept them almost continually in a state of war against the American settlements on and near the Ohio river. They instilled into the minds of the Indians that the Americans had no right to the country north of that river, and that by a combined action of all the Indian powers they could restrain the Americans to the South side. Great efforts were made by the Indians to accomplish this, in a continual struggle to break up and destroy all settlements and to prevent their extending.

For the purpose of giving security to these frontier settlements, and to break up this powerful Indian confederacy, the United States sent several armies or large bodies of men against them. Three of which, under Col. Crawford, Generals Harmer and St. Clair, were defeated and some of them nearly destroyed by the Indians. It was not until the great and decisive victory of Gen. Wayne over the combined Indian forces, aided by Englishmen painted like savages, on the banks of the Maumee in August, 1794, that any thing like peace and safety was secured to the setlers in the country then called the North Western Territory.

This battle was fought in sight of a British fort, from which the Indians had been armed and supplied with the means of fighting; and most probably a promise had been given of assistance in the coming fight, or protection within its walls in case of defeat. But when the conflict roged too strong for them, and when Wayne, with his victorious legion pressed on and overthrew them, the Indians fled from the field of their defeat to, and sought admission into the fort. But the danger of personal safety to themselves, of their false friends the English if they openly interfered, caused the gates to be shut against them, and the Indians were left to the mercy of the conquerer.

From this moment the illusion which had obscured the minds of the Indians gave way, and it appeared plain to them, they were engaged against a power over which they could not tri-

umph; and that their friends and advisers, the English, when the times of adversity arrived, had not the power to aid them. This victory was followed by the treaty of Greenville in 1795, the dismemberment of the great confederacy forever, and secured peace and safety to the inhabitants of that country.

A long time previous to, and during the war of 1812, between Egland and the United States, Tecumseh, one of the greatest of Indian warriors and statesmen, made great efforts to revive this confederacy, but the lesson taught the Indians in 1794, had not been forgotten; and Tecumseh could only succeed partially in his darling project. In later years when, the fierce warrior Black Hawk undertook the same thing, but on a much more limited scale in Northern Illinois, he could not succeed even in securing the aid of the whole of his own tribe or nation. But he was only a warrior—bloody and fierce to be sure—and had none of the statesman-like qualities of the Pontiacs and Tecumsehs of former days, and is not entitled to notice on the same page of history with them.

* * * * *

To show you how averse the English were to allowing the free range of this frontier or the use of the Lakes to our people, I will relate some of their acts. In 1787, the year my father first came to the Niagara frontier, at which time all the white settlements were on the Canada side of the river, he said it was the practise of the commanding officer of Fort Niagara, to furnish the Indians with cards having on them sealing wax bearing a particular impression; and directed them if they found any white men rambling about the country who had not such a pass or card, they were British soldiers desorting, and they must take them up and bring them to the Fort. That he was once or twice thus arrested himself, and at other times had to dodge and run away from drunken and troublesome Indians.

In 1789, John Fellows of Sheffield, Massachusets, started from Schenectady with a boat, its cargo mostly tea and tobacco, with the design of going to Canada to trade. On reaching Oswego, the commanding officer refused him permission to pass that place. Fellows returned with his boat and cargo up the Oswego river to Seneca river, up that into the Canandaigua outlet as far as where Clyde is. Here he built a small log building (long known as the block-house) to secure his goods in, while he was engaged in bushing out a sled road to Sodus bay on Lake Ontario. He then went to Geneva and got a yoke or two of cattle, hauled his boat and property across, and in this frail conveyance embarked with his goods, and pushed across the lake. He met with a ready sale for his tea and tobacco and did well.—He re-crossed in the same boat and landed at Irondequoit. This boat was afterwards purchased and used by Judge Porter in traversing the shore of Lake Ontario, when making the survey of the Phelps and Gorham purchase.

This was the *first* American craft, that ever floated on the waters of the great lakes, now filled with magnificent steamboats and sail vessels, fully employed in carrying on the immense commerce which passes over them.

In 1793, Judge Porter informs me, that he was employed by two men in New York, who owned a large tract of land lying between Ithaca and Owego on the Susquehanna river, and also a ten thousand acre tract on the St. Lawrence; to explore it for them. That he crossed from Salisbury in Connecticut to Catskill, and with a pack on his back pushed through the country to where Ithaca now is. He explored the large tract of land, when he with a man named Hull came down the shore of Cayuga lake three or four miles, where they bought a canoe from a Dutchman.—In this canoe they passed down the lake and through the different rivers to Oswego, for the purpose of going into the St. Lawrence to visit the other tract of land. He was refused permission to pass the fort at Oswego, and, as there was no other route to get to the land but by the lake, he had to relinquish that part of his job, and he and his companion voyaged to Schenectady in that canoe, where he sold it.

And when as late as 1796, and only a few days before they gave up forever, the Fort at Oswego, did the English refuse permission to the boats with the surveyors and others in the employ of the Connecticut land Company, who were going to survey the Western Reserve in Ohio, to pass that place. The boats were under the charge of Joshua Stow, uncle of Judge Stow of this city.—Determined not to be delayed, he took the boats during the day a mile or two up the river, and at night silently ran them past the fort into the lake and pursued his way to Fort Niagara, where he found the Fort in our possession. The boats and their loading were conveyed across the portage at Queenstown on the Canada side of the river and came on to Buffalo.

The first American troops who took possession of Fort Niagara that summer was under the command of Major Revardy, a French officer in our service.

My father's first visit to the Niagara frontier was in the summer of 1787. He was employed to aid in driving a drove of cattle and sheep from the Western part of New Jersey, which had been sold to the English to supply their troops and Indian department; this being the best market the country then afforded. At that time there was a small cluster of Mohawk Indians residing a little over a mile east of the present village of Lewiston; the first night of his arrival he slept in that Indian town, and, at the period of his death, was the owner of the farm where formerly stood this Indian settlement. The farm is now known as the "Mohawk Farm."

The late father of Colonel Silas Hopkins, nearly seventy-five years of age, now living in Cambria, Niagara County, was one of the party. They came by way of Wyoming up the Susquehanna, between the Lakes Cayuga and Seneca, and through to Niagara by the Tonawanda Reservation. On reaching the Genesee River at Avon, near the spot where Mrs. Berry, the mother of Mrs. E. C. Hickox, of this city, subsequently kept a ferry across the river, the party stopped some time for the purpose of feeding and recuperating the animals; and for their own comfort and convenience, put up a small log building which was amongst the first, if not the very first, building erected by white men between Fort Schuyler (now Utica) and Lake Erie, on the line of the old state or stage road between the two points. On his return to New Jersey he came up the river from Niagara on the Canada side, and remained a few days at Buffalo; which then only contained two or three log huts in the vicinity where the Mansion House stands. For the services rendered his employer on this occasion he received eight dollars, and thought himself well compensated.

He returned the next year as far as Genaya, and from that period was a resident of Western New York until the time of his death; which occurred at Lewiston in June, 1842, to which place he removed with his family in June, 1807. The family of James Latta, my grandfather on my mother's side, came to Geneva on the 14th of September, 1789,—my mother, now living, was nearly 16 years of age. The family removed

from New Windsor on the Hudson River. They came to Albany in a sloop, crossed over to Schenectady in wagons, ascended the Mohawk River as far as Fort Stanwix, (now Rome,) hauled their small boats over the portage into Wood Creek, down that into the Oneida Lake. They reached that on the evening of a clear, moonlight night, and my grandfather paid his men extra wages to pass over the Lake to Fort Brewerton during the night; fearing a storm would arise in the morning and detain them several days, as was frequently the case. The route was then down the Oneida River to Three River Point, then up the Seneca River to the outlet of Seneca Lake, then up that to Geneva. The voyage from Schenectady consumed seventeen days, during the greater part of which time it rained.

At this time there was no mill in the country nearer than Newtown, (now Elmira,) fifty miles distant, and this one had no bolt; the flour ground there required to be sifted before using it; provisions were brought into the country by water up the Mohawk in small boats, and from the Susquehanna River on pack horses. It was some time before mills were erected in many places.—The first one she remembers was Waggoner's, on the outlet of the Crooked Lake, near where Pen Yan now is. This place was originally settled by emigrants frrm Pennsylvania and the Eastern States in nearly equal numbers, and my father has the credit of giving it a name. Being at that place on a certain time when the people were talking much about giving their place a name, and as there was much difficulty in finding one to suit all parties, he proposed Pen Yan or Yank, as most descriptive of the people and where they came from; being half Yankees and half Pennymites, as they were called:—the oddity of the name and its expressive meaning took with the people, and hence the name of Penn Yan.

Before mills were built, almost every family kept one or two mortars or hominy blocks for pounding corn in. These blocks were frequently amongst the people in the country, made in the stump of a tree near the house. They would cut the stump square and then burn or dig a cavity in the top, deep enough to receive the corn; and torelieve the labor the pounder was frequenly used by means of a swing. Provisions of course were scarce and dear, there was no money in those times; and the people lived mostly on corn, pumpkins and beans, and killed deer and bears for meat. They were kind and friendly to each other, and bore their sufferings patiently, rendering to each other all the assistance they could.—The early settlers were a superior class of men, of great physical strength and superior intellects, capable of doing and enduring every thing—and their powers were frequently taxed to the utmost.

I will relate a story, which will show the simplicity of manners which characterised the people for many years, as well as the manner in which parties of recreation were sometimes formed in those days.

My father was a long time employed by the Surveyor General the late Simion DeWitt, in surveying the military tract lying east of Ontario County to, and including Onondaga. From his great industry, and availing himself of every honorable manner to better his condition, and by the practice of rigid economy in his expenditures, he had become comparatively forehanded. He determined to build a better house than the log cabin in which I was born. He commenced in 1796 or 1797, the erection of a large square two story frame house, and from its peculiar and favorable locality and beautiful site, on the travelled road from Geneva to Bath in Steuben county, supposed it might be wanted in time for a tavern, and had a large ball room made in it. Owing to adverse circumstances, one of which was the failure of the contractor, he lost three hundred dollars, a large sum at that time. Another was, that his lumber after being well dried and fit for use, caught fire in the kiln and was destroyed.—These retarded its completion for several years. At length it was finished. And being the only house for several miles around of a suitable size for the purpose, the master workman and his joiners, together with some other young men in the neighborhood, were desirous of having a house warming and spinning bee. That year he had grown an extraordinary crop of flax, and the young men said if he would let them have the frolic, they would hackle and dress the flax, get the fiddlers, collect the girls, and do all they could to lighten the burthen on him. He gave his permission—they turned in, dressed the flax, and then making up some seventy six half pound bunches, put them in bags and scattered them round the country for several miles, amongst the girls as cards of invitation.

In those days there were no pianos and guitars in the country, and the girls made music on spinning wheels, and the notes they practised upon were flax and wool. The flax was to be spun into threads of a certain number, and on the evening of the party each girl was to bring her skein of thread. Those who lived on roads leading direct came in wagons. Others, who lived in the woods, where some of the prettiest girls were found, mounted a horse behind a young man, with a blanket to sit upon, dressed in their every day apparel, with woolen stockings and strong shoes on. They would dash through the woods on some trail, through brooks and over every obstacle in their way, carrying their ball dress and skein of thread in a bundle, in their hand. A few minutes at the toilet put them in a condition for the ball-room. Others, living only a mile or two away, thought it no great task to come on foot. In the ball-room, their rosy cheeks, their sparkling eyes and blooming health, gave pleasure to all who beheld them; and their vigorous systems, strengthened by hard daily labor, enabled them to dance and enjoy it, and with life and spirit would skip through the dance, like the young fawns of their own woods. The supper was prepared by my mother, and well, too, from the products of the farm, and with the addition of coffee, tea, sugar and some light wine, was all that was necessary or desired. Information reaching Geneva of the party, about thirty of the elite of that place came down and joined heartily in the pleasures going on. As no barn could hold the horses, they were picketed around the wagons and fences, and plenty of hay spread before them. As daylight began to appear the girls would doff their ball dresses, and having again donned the homespun, disappear for their homes in the woods.

READING THE BIBLE.—The venerable *John Quincy Adams* recently stated to a friend, that ever since he was thirty years old, he had been accustomed, among the first things, to read the Bible every morning. He has read seven different versions, in the German, French, Greek, and Latin languages, besides various English translations.

☞ A New York correspondent of the New Orleans *Delta* communicates the following:

It is true that Mr. Astor has laid aside nearly half a million for the establishment of a free library in the city of New York. He has wisely limited the cost of the building to $60,000; so that his beneficence shall not, like Mr. Girard's, be thrown away on marble and mortar.

For the Western Literary Messenger.

To the Unknown Valentine.

Oh, Fame, is not for woman; she must yield
The very essence of her being up;—
Bare her full heart, throw off its golden shield,
And drain its very life to fill the cup;—
Which, like a brimming goblet, red with wine,
She poureth out upon the world's broad shrine.
And on its golden rim they grave her name,—
Fling back the empty bowl,—and this is Fame!

[*The Missive.*

Thy picture, Lady, is too darkly drawn;
O, is there not upon the scroll of Fame,
A *thousand* names, all radiant as the dawn,
Of woman's glory, that would put to shame
Mans brightest deeds, o'er which the crowds rejoice
And nations praise with an united voice?

There is! her fame survives in every clime,
And will, so long as Virtue shall endure;
Above the wrecks of all-destroying Time,
Her faith shall rest, her glory shine secure.
While ages, gazing on her brow divine,
Shall bow them down and worship at her shrine.

Her eye has power to charm, her voice to melt;
And, by her tears have marble hearts been wrung;
Earth's proudest conquerors at her feet have knelt,—
Her sages have admired, her poets sung
Her praise; and all acknowledge that her right
Transcends the power of stronger-handed might.

Hers is the empire of the home and heart:
Beneath her hand 'tis pleasure to be ruled;
And, from her throne how many laws depart,
By which mankind in wisdom's ways are schooled;
Hers is the power to rule by measures mild,
And to her rule has man been reconcil'd.

O, Lady, say not then that Woman's fame,
Is holow as the empty incense bowl;
What brighter glory may she hope to claim?
Creation's lords acknowledge her control;
And kings, rejoicing in her peaceful sway,
Kneel at her feet and all her laws obey.

BUFFALO, Feb. 16, 1848. D. W.

Tricklings.

FROM THE PEN OF AN IDLER.

WILLIS, in one of his peculiar sketches, gives an instance of what he calls "natural poetry" from the mouth of an aged Arab woman whom he encountered in the desert; and begging pardon for mentioning myself in the same connexion, I crave leave to record here a gem I think equally worthy of the setting.

At an obscure tavern in Ohio, where I chanced to find myself some years since, there stopped a pale, ill-clad female, on foot, apparently about sixty years of age, who requested a meal of victuals and a few hours rest. While the benevolent landlady was attending to her wants, she stated in reply to some inquiries, that she was a widow, friendless and poor, and that she was going from Connecticut to L———, Indiana, to join an only daughter, married and there settled. Her means had failed after a few weeks' travel, and she was reduced to the necessity of imploring charity in order to continue her journey.

"Why," asked the landlady, kindly, "did not your daughter send you money to enable you to reach L———?"

"Ah!" said the poor woman, and I shall never forget the almost despairing look and gesture which accompanied the words, "*my daughter has her heart and hands full!*"

Could there be said any thing more natural and touching?

The wholesale laudation of Mr. LOWELL, as a poet, appearing in the February number of Holden's Magazine, is as pretty a specimen of "unmitigated nonsense," as I have lately met. Such criticism is as unfair in respect to other authors, as it is disagreeable to every man of true and noble feeling. Without denying that Mr. L. has written many things that give evidence of much poetic ability and even genius in the author, I cannot subscribe to the assertion that he is to be placed in the front rank of American poets, still less to the belief that his star is destined to eclipse and throw into the shade the suns of our own elder literature, and that of other countries. Our reviewers are gradually falling into the grievous error of over-praising particular authors and systems, thus inflicting all the injury they are able on our literature. Mr. E. A. Poe, and Mr. Lowell himself, are two prominent and honorable exceptions, and the author of the review in Holden's Magazine should know better than to bedaub with his fulsome and offensive flattery, a man who, in all he has written, has uniformly shown himself averse to it.

Correspondence of the N. Y. Express.

WASHINGTON, Feb. 24, 1848.

In connection with the death of Mr. Adams, I have another interesting incident to record. On the day of his attack Miss C. L. Edwards, of Massachusetts, through her brother-in-law, Hon. Mr. Johnson, of New Hampshire, solicited the signature of Mr. Adams for her Album, and in reply to her request he wrote the following:

"JOHN QUINCY ADAMS—
QUINCY, MASSACHUSETTS.

"In days of yore, the Poet's pen
From wing of bird was plundered,
Perhaps a goose, but now and then
From Jove's own Eagle sundered;
But now metallic pens disclose,
Alone, the Poet's numbers
In Iron Inspiration flows,
Or with the Minstrel slumbers.

"Fair damsell could *my* pen impart,
In prose or lofty rhyme,
The pure emotions of my heart
To speed the flight of time,
What metal from the womb of earth
Could worth intrinsic bear,
To stamp with corresponding worth
The blessings thou shouldst share!"

The original copy of this really beautiful lyric was written on the 18th of February, in the Album of Mrs. Caleb Lyon—and the two copies are cherished by the above named ladies, as mementoes of rare value. The "womb of earth" to which the "Old Man Eloquent" alluded, is now about to become his final resting place. With regard to the pen which Mr. Adams employed in the above poem, I may state that it is now in the possession of Mr. Poore, of the Boston Atlas.

Iron.

BY MRS. SARAH J. HALE.

"Truth shall spring out of the earth."—Psalms lxxv. 11.

As, in lonely thought, I pondered
On the marv'lous things of earth,
And, in fancy's dreaming, wondered
At their beauty, power and worth,
Came, like words of prayer, the feeling—
Oh! that God would make me know,
Through the spirit's clear revealing—
What, of all his works below,
Is to man a boon the greatest,
Brightening on from age to age,
Serving truest, earliest, latest,
Through the world's long pilgrimage.

Soon vast mountains rose before me,
Shaggy, desolate, and lone,
Their scarred heads were threat'ning o'er me,
Their dark shadows round me thrown;
Then a voice, from out the mountains,
As an earthquake shook the ground,
And like frightened fawns the fountains,
Leaping, fled before the sound;
And the Anak oaks bowed lowly,
Quivering, aspen-like, with fear—
While the deep response came slowly,
Or it must have crushed mine ear!

"Iron! Iron! Iron!"—crashing,
Like the battle-axe and shield;
Or the sword on helmet clashing,
Through a bloody battle-field:
"Iron! Iron! Iron!"—rolling,
Like the far-off cannon's boom;
Or the death-knell, slowly tolling,
Through a dungeon's charnel gloom!
"Iron! Iron! Iron!"—swinging,
Like the summer winds at play;
Or as the bells of Time were ringing
In the blest Millennial Day!

Then the clouds of ancient fable
Cleared away before mine eyes;
Truth could tread a footing stable
O'er the gulf of mysteries!
Words, the prophet bards had uttered,
Signs, the oracle foretold,
Spells, the weird-like Sibyl muttered,
Through the twilight days of old,
Rightly read, beneath the splendor,
Shining now on history's page,
All their faithful witness render—
All portend a better age.

Sisyphus, for ever toiling,
Was the type of toiling men,
While the stone of power, recoiling,
Crushed them back to earth again!
Stern Prometheus, bound and bleeding,
Imaged man in mental chain,
While the vultures, on him feeding,
Were the passions' vengeful reign;
Still a ray of mercy tarried
On the cloud, a white winged dove,
For this mystic faith had married
Vulcan to the Queen of Love.

Rugged strength and radiant beauty—
These were one in nature's plan;
Humble toil and heavenward duty—
These will form the perfect man!
Darkly was this doctrine taught us
By the gods of heathendom;
But the living light was brought us,
When the gospel morn had come!
How the glorious change, expected,
Could be wrought, was then made free;
Of the earthly, when perfected,
Rugged Iron forms the key!

"Truth from out the earth shall flourish,"
This the Word of God makes known—
Thence are harvest men to nourish—
There let Iron's power be shown.
Of the swords, from slaughter gory
Ploughshares forge to break the soil;—
Then will Mind attain its glory,
Then will Labor reap the spoil,—
Error cease the soul to wilder,
Crime be checked by simple good,
As the little coral builder
Forces back the furious flood.

While our faith in good grows stronger,
Means of greater good increase;
Iron, slave of war no longer,
Leads the onward march of peace;
Still new modes of service finding,
Ocean, earth, and air it moves,
And the distant nations binding,
Like the kindred tie it proves;
With its Atlas-shoulder sharing
Loads of human toil and care;
On its wing of lightning bearing
Thought's swift mission through the air!

As the rivers, furthest flowing,
In the highest hills have birth;
As the banyan, broadest growing,
Oftenest bows its head to earth,—
So the noblest minds press onward,
Channels far of good to trace;
So the largest hearts bend downward,
Circling all the human race;
Thus, by Iron's aid, pursuing
Through the earth their plans of love,
Men our Father's will are doing,
Here, as angels do above!

THE FIRST CONQUEST OF MEXICO.—Hernan Cortez left the shores of Cuba with a force of five hundred and fifty-three soldiers, to conquer the powerful Empire of Mexico; and he did conquer it, with all its treasures and millions of inhabitants. He only knew that somewhere in that direction lay a rich country, abounding in gold and believing in idols, but the very mystery which hung over these enchanted realms, only seemed to stimulate his romantic daring. Yucatan had before been startled by the apparition of the white-winged brigantines of Spain in her waters, and thither Cortez steered to make the starting point in his plan of discovery and conquest. The thunder of artillery, and the tramp of his war-horses, clothed him with almost supernatural power over the natives, but his contests and his treaties with them produced but one result of immediate importance—the presentation of Marina, the Indian Maiden, who followed his steps through the whole of his perilous career with such faithful, unshrinking devotion, and who understood the language of the "country of gold" of which he was in search.

On Good Friday, 1619, Cortez landed on the present site of the City of Vera Cruz, and declared to the astonished natives that he was the Ambassador of a king as mighty as their own potent and magnificent sovereign. An old tradition was among them of a Prophet-Prince, with hair and complexion like these strangers, who had ruled over their ancestors for a long time and then departed from their coast. And this tradition seemed realized by the advent of these wonderfully endowed white men, so that superstition did its work while Cortez studied his position, and learned the state of the empire. He found it rich, prosperous and extensive, but not firmly knit

in the bonds of a just government. One of these discontented tribes, the Totonacs, instantly sought the alliance of the Spaniards, and the quick and powerful mind of Cortez had secured the command of an extensive coast territory, guides, soldiers and provisions wherewith to penetrate the country, and a refuge in case of disaster in the first attempt, when his messengers returned with Montezuma's positive refusal of the Spaniard's demand to visit the capitol. Nothing daunted, Cortez prepared to climb the mountains that guarded the imperial city of the Aztecs, and surprise the monarch in his palace. To guard against desertion he burned his fleet, and compelled his people to put in himself, their arms and the possession of the country their undivided trust.

This done, at the head of four hundred bold Spaniards, and twenty-three hundred of his allies, he took his way to the country of the unconquerable, and to that day unconquered, people of Tlascala, whose home lay between the friendly Totonacs and the rich valley of Mexico. To win Tlascala became an important object with Cortez, and an embassy, chosen from the Totonac chiefs, preceded his army, to invite that brave nation to unite with him in taming the pride of their common enemy; but they proposed to receive these mysterious strangers, who seemed to have risen from the depths of the sea, as enemies. The profound tact and warlike skill of Cortez triumphed over all things, and after convincing them of Spanish prowess in several hard-fought battles, he entered their Capital as a friend and ally. He left it as the chief of its military array, which he now united to his own, and after chastising with terrific severity, the suspected treachery of the neighboring city of Cholula, he resumed his march to Mexico. Montezuma saw, with dismay and surprise, the strangers at the gates of his island city, but he had not the courage to oppose their entrance. Thus the brilliant and resolute conqueror had fought and negotiated his way through every peril to the heart of the great empire, of which he did not even know the name when he set forth for its conquest. Then, as now, the eagle standard was the flag of a great American Confederacy, but then it represented a bond of ill-fitting, oppressed and discontented tribes; now it symbols a family of equal, prosperous and United States, that have found Mexico as facile of conquest as she was three centuries ago, and for the same reason—the masses are in bonds, and have no heart to fight the quarrels of their bondmasters.

Cortez, once established in the imperial capital, was not long in conceiving and executing the daring plan of seizing upon the person of the Emperor, and through him bringing his subjects to submission. Their emperor was their country; in his person centered the self-sacrificing and patriotic affection which an American only pays to his republican institutions, and with his imprisonment Mexico lost its life and independence.

It is true the intrigues of his enemies, the insubordination of his followers, the unhappy death of Montezuma, and the obstinate resistance of his gallant but unfortunate successor, Guatamozin, checked the unparalleled career of Cortez, with many dark clouds and bitter trials, but his conquering spirit surmounted them all, and he gave to Spain a new realm richer than herself. In all these trials and triumphs Marina was ever the same true, tender, unfaltering woman. She had no life, no hope, no world, but in the success of her hero lord, and when his conquests were over and he a suppliant for justice at the Spanish Court, she sank quietly to rest in her native plains.—Their son Don Martin Cortez became the victim of the same jealous policy that rewarded the achievments of his noble father, and sank under the torture—the horrid torture of the rack—by the order of Spain, in the very city of Mexico which his parents had laid at her feet.

Burning of Forty-seven Women at the Funeral of an Indian Prince.

The infernal rites at the death of an Indian Prince are thus described in an extract of a letter from Tranquebar in the East Indies, written by a Danish Missionary. They dug without the walls of the city, where that Prince who died at the age of eighty, made his residence, a large pit, which they filled with wood, ranged and piled up as for a bonfire. The corpse of the deceased, richly habited and adorned, was brought forth in great pomp, and laid on the pile; after which the Bramins (heathen priests,) kindled the fire, with abundance of superstitious ceremonies. The wives and concubines of the deceased, who, according to the law or custom of the country, ought to die with him, appeared there at the same time, and walked several times round the funeral pile. They were in number forty-seven, all finely decked with jewels, and adorned with flowers.—The favored wife or concubine carried the poniard of the defunct prince, which she delivered up to his successor, and made a short speech exorting him to use it with moderation, so as never to let it light on any but the guilty. Then she boldly turned her face towards the pile, and, after invoking her gods, leaped into the midst of the flames. The second was the sister of a prince named Tandaman, who was present at these horrid rites. She gave him the jewels she were, and the prince, in receiving them, embraced her most tenderly, and poured out a flood of tears; but the princess without betraying the least concern, looked alternately, with a steady countenance on the pile and on the spectators, and crying with a loud voice, "*Chiva! Chiva!*" which is the name of one of their gods, she jumped as cheerfully into the flames as the first did.

The others followed her close: some of them appeared resolute enough, but others looked wild and dejected. There was one in particular, who, being more dismayed than her companions, ran to embrace one of the spectators, who was a Christian, praying him to save her; but this was not in his power to do, and the poor wretch was immediately tumbled headlong into the fire.

However intrepid most of those unhappy victims appeared before jumping into the pit, the note was vastly altered when in the midst of the flames. There they shrieked hideously, tumbled one over another, striving to reach the edge of the pit, and get out of it; but they were kept in by throwing heaps of billets and faggots upon them, as well to knock them on the head as to increase the fire. When they were consumed, the Bramins drew near the yet smoking pile, and performed abundance of ridiculous ceremonies over the ashes of the poor wretches. The next day they gathered up the bones, and having wrapped them up in fine linen, carried them to a place near the Isle of Ramesuren, where they cast them into the sea. After which, the pit was filled up, and a temple since erected on the spot, where sacrifices are offered up in honor of the prince and his wives, who from thenceforth are numbered among the saints or goddesses.

WASHINGTON, Feb. 27.

The Treaty, with its accompanying documents and corresrondence has been printed, and will doubtless be considered in executive session tomorrow.

Editorial Department.

J. CLEMENT, EDITOR.

New Poetry by Tupper.

HACTENUS: Sundry of my Lyrics Hitherto. By M. F. TUPPER. New-York: Wiley and Putnam. 1848.

Martin F. Tupper is one of those happy, cheerful spirits whose poetry gladdens the earth like the songs of forest minstrels. He is not forever whining about the sad lot of mortals—the dearth of friendship and the scantiness of earthly comforts. He seems to be duly sensible that God is more highly blessing his revolted subjects than they deserve; and although man has a burden to bear through life, the poet thinks it is best not to murmur, but to keep up courage and press on.

Mr. Tupper is evidently on good terms with the American public. We believe the sentiments below really and truly come from his heart:

TO AMERICA.

I.

Columbia, child of Britain,—noblest child!
I praise the growing lustre of thy worth,
And fain would see thy great heart reconcil'd
To love the mother of so blest a birth;
For we are one. Columbia! still the same
In lineage, language, laws and ancient fame,
The natural Nobility of earth;
Yes, we are one; the glorious days of yore
When dear old England earn'd her storied name
Are thine, as well as ours, for evermore:
And thou hast rights in Milton, e'en as we,—
Thou too can'st claim "sweet Shakspeare's wood-notes wild,"
And chiefest, brother, we are both made free,
Of one religion, pure and undefil'd!

II.

I blame thee not, as other some have blamed,—
The highborn heir had grown to man's estate;
I mock thee not, as some who should be shamed,
Nor ferret out thy faults with envious hate;
Far otherwise, by generous love inflamed,
Patriot, I praise thy country's foreign son,
Rejoicing in the blaze of good and great
That diadems thy head;—go on, go on!
Young Hercules, thus travelling in might,
Boy-Plato, filling all the West with light,
Thou new Themistocles of enterprise,
Go on, and prosper,—Acolyte of Fate!
And,—precious child, dear Ephraim,—turn those eyes,—
For thee thy mother's yearning heart doth wait.

III.

Let aged Britain claim the classic Past,
A shining track of bright and mighty deeds,
For Thee I prophesy the Future vast,
Whereof the Present sows its giant seeds:
Corruption and decay come thick and fast
O'er poor old England; yet a few dark years
And we must die, as nations died of yore!
But, in the millions of thy teeming shore,
Thy patriots, sages, warriors, saints, and seers,
We live again, Columbia! yea, once more
Unto a thousand generations live,
The mother in the child: to all the West
Through Thee shall We earth's choicest blessings give,
Ev'n as our Orient world in Us is blest.

IV.

Yea! noble scion of an ancient root,
Born of the forest-king! spread forth, spread forth,—
High to the stars thy tender leaflets shoot,
Deep dig thy fibres round the ribs of earth!
From sea to sea, from south to icy north
It must ere long be thine, through good or ill,
To stretch thy sinewy boughs: go,—wondrous child!
The glories of thy destiny fulfil;
Remember then thy mother in her age,
Shelter her in the tempest, warring wild;
Stand thou with us, when all the nations rage
So furiously together: we are one:
And, through all time, the calm historic page
Shall tell of Britain blest in thee her son!

But little fault can be found with Hactenus except its occasional exhibitions of vanity and pedantry. When the author says of himself that

"—— the magic music of my pen
Hath won such wealth of love in every clime,
And still shall win such treasure for all time," etc.

we feel to pity him for the betrayal of such weakness. The interspersion of lines and half lines from foreign tongues in his verse, is sheer pedantry, and reminds us so forcibly of

"—— a zebra in a parson's chaise,"

as to provoke a smile. If Mr. Tupper has passed through the period of classic teething, as we suppose is the case, it is a marvel that he can lower himself to such mental littleness.

But as we have before hinted, Hactenus—notwithstanding the pedantry of its name and of some of the contents, possesses much of the right spirit, and is a very readable little book. True a similarity of thought is sometimes traceable between Mr. Tupper and older poets, yet we do not accuse him of intentional plagiarism. The following very beautiful verse from a Hymn for Thanksgiving,

"Gaze round in deep emotion:
The rich and ripened grain
Is like a golden ocean
Becalmed upon the plain,"

was probably suggested by these lines of Bryant, referring to the Prairies:

"Lo! thy strength
In airy undulations, far away,
As if the ocean, in his gentlest swell,
Stood still, with all his rounded billows fixed,
And motionless for ever."

But we have no desire to continue remarks that may look like fault finding with Mr. Tupper.—His writings have much more to admire than to blame, and Hactenus should and *will* have an extended reading.

For sale by Hawks.

THE HISTORY OF THE BOTTLE, an interesting story lately published in the New-York Organ, has been issued in a pamphlet of thirty-two pages and is for sale at the several Literary Depots in this city.

HISTORY OF THE HOLLAND PURCHASE.—Mr. O. TURNER, of Lockport, senior editor of the *Democrat*, is preparing a History of the Holland Purchase. Any information furnished him touching the subject, would be thankfully received.—He will no doubt make a very interesting work.

Death of John Quincy Adams!

Just after our paper had gone to press last week on Thursday, P. M., the painful intelligence reached this city by Telegraph of the demise of "the old man eloquent!" His death was occasioned by a stroke of paralysis, which occurred while in his seat in the House of Representatives on the Monday previous. Mr. A. attained his eightieth year in July last. He has been in active service—diplomatic and legislative– almost incessantly, for nearly sixty years. In early life he went to Europe, where he spent several years in the best schools, acquiring continental languages and laying the foundation of an education which he perfected at Cambridge, Mass., between the years 1785 and 1787, and which he has since rendered most servicable to his country. He was appointed by Washington minister to the Netherlands in 1794, whence he was soon after transferred to Portugal; was elected to the Senate of Massachusetts in 1802, and the next year to the United States Senate, where he continued until 1808—went as minister to Russia the next year and remained there until 1814, when he was sent as one of the commissioners to negotiate the treaty of Ghent. In 1817 he became the Secretary of State under Mr. Monroe; and in 1825 was chosen President of the United States. This last office he held four years. Since 1831 he has been a member of the House of Representatives, where he has shone as the Nestor of that body for seventeen years. As a literary writer, a diplomatist, a statesman and an orator, Mr. A. has long stood in the front rank of the living; and now that he has gone, a nation, without any respect to party, will deeply lament his loss.

The Columbian Magazine for this month surpasses in interest of matter and beauty and splendor of illustration any of the late preceding issues. The two engravings, "Christ teaching Humility" and "Smyrna—from the Harbor," are elegant specimens of art, worth twice the price of the number. Amongst the prose articles is a review of Headly's Napoleon and his Marshals, which will attract much attention. It is accompanied by a wood cut which, in the language of the *True Sun*, "both for design and execution, is one of the best illustrations that has ever been produced in this country." It is a droll and facetious hit-off on Headley's overwrought characters, and will take first rate.

The Working Men of this city talk of running Mr. Theodore Coburn (whig) for Mayor, and Mr. Stephen Albro (democrat) for Justice of the Peace.

Washington's Birth Day was celebrated pretty generally, we believe, throughout the country. This is as it should be. Several of the Sons of Temperance of this city met others from Rochester at Batavia, where an address was delivered by Professor Seager of Rochester.

Death.—The following brief composition was amongst the latest mental efforts of Mary A. Bettis, daughter of Mr. William Bettis of this city. She died on the 29th of last January at the early age of sixteen. The cause of her death was an ulcerated sore-throat and croup, which brought her to the grave after a severe illness of about one week. She was remarkable for purity and sedateness of mind, gentleness of disposition and amiability of heart. Though she naturally possessed a delicate constitution, her parents little thought, a few months ago, that Death would so soon aim his unerring dart at their "shining mark." But she is gone! and this solemn truth, as well as her own words below, should serve as a warning to the young reader to be "also ready:"

Death is the voice of warning from the spirit land. It whispers to the hearts and consciences of men, "Be ye also ready, for in such an hour as ye think not the Son of man cometh." It severs the last link that binds us to this world, stills the pulsations of the heart, and closes the eyes on all but eternal things.

Youthful reader, have you ever stood by the dying bed of friends, ever listened to the admonitory warning from their lips, or followed them to the grave? Yes I know you have, and the tear of filial affection and regret has often coursed your cheek. Methinks I hear some tiny voice asking in accents of affectionate sorrow,

> "Can those we have loved, forget!
> We call, and they answer not again:
> Oh! say, do they love us yet?"

Permit me to inquire if you have treasured up those admonitions? have you written those precepts upon the tablets of your heart? or have you despised them, and banished their recollection from your memory? Oh! no; it cannot be. They will die only with your body. Trust in God and when the last sand has fallen from the hourglass of life, may you have strength given you to say,

> Oh Death! where is thy sting,
> And, boasting grave, thy victory?"

Songs for the People, No. 3, has been received. It is richly illustrated, and contains Auld Robin Gray, Perry's Victory, Am I not fondly Thine Own, On Buena Vista's Bloody Field, Come, come Away, Clar de Kitchen, etc., etc. For sale by Hawks.

New Theatre.—We regret to hear there is some likelihood that a Theatre and Museum will be erected ere long on the ground now partly covered by the Farmers' Hotel. One Theatre in a city of the size of Buffalo, is more than we wish could be sustained.

Flood at Massillon.—There has lately been a great flood at Massillon, O., caused by the flowing of the waters of an artificial Lake into the village. The *Telegraph* of that place estimates the loss at $150,000.

Mr. Bridges, democrat, has been chosen to Congress in the 6th district of Pa., filling the vacancy occasioned by the death of Mr. Hornbeck, whig.

THE TREATY OF PEACE.—The National Intelligencer gives the following as the substance of the Treaty:

First.—Peace between the United States and Mexico, and an Armistice between the Military Commanders of the two countries during such time as the Treaty shall be in suspense.

Secondly.—Mexico agrees, in consideration, &c., that the boundary between the United States and Mexico shall hereafter be from the Sea up the middle of the Rio Grande to the boundary of New Mexico, and thence in a line which (with some digression) is to run west (or nearly west) to the Pacific Ocean, and strike a point south of the port of San Diego.

Thirdly.—In consideration of this large cession of territory the United States are to pay to Mexico the sum of fifteen millions of dollars, and to satisfy all the just claims of citizens of the United States against the Government of Mexico.

The Treaty is understood to contain many provisions of detail; but does not, as we hear, include any provision, as has been reported, for the maintenance of a Military force by the United States for a certain time in Mexico.

PICTORIAL HISTORY OF ENGLAND.—Nos. 40, 41 and 42 have been received by Hawks. About two numbers more will complete this great work.

YOUNG MEN'S ASSOCIATION.—The Rev. Mr. RICH of this city lectured Monday evening on the subject of War—its Reality and Poetry.

PUBLISHERS, who send us books will always be sure to have them noticed, and as the Messenger has the largest circulation of any paper in this city, and as it is not only read but preserved, a notice in its columns will be of superior advantage.

PEACE.—The Mexican government, according to late telegraphic reports, has ratified, so far as it could, the Treaty of Peace: and we look forward with joy to the speedy adjustment of the matter.

Congressional.

On Monday, in the Senate, the Committee on Revolutionary Pensions reported the House bill for the relief of the heirs of John Paul Jones, with an amendment.

The Senate proceeded to the consideration of the amendment, and a discussion arose in which several Senators participated.

On motion of Mr. John Davis, the subject was referred to the Committee on Claims.

Mr. Benton here announced the sudden illness of Mr. Adams of the House, and on motion, the Senate immediately adjourned.

In the House, the Speaker announced as the first business the reception of petitions, &c.

Mr. Chase, of Tenn., offered a joint resolution of thanks to Gen. Twiggs and other under generals in our Army.

He moved the suspension of the rules, in order to get immediate action on the resolution, and called for the previous question. The call was sustained by a close vote, Ayes 100, Nays 99.

It was here announced that John Quincy Adams was struck with paralysis, and

The House immediately adjourned.

WASHINGTON, Feb. 23.

House met and immediately adjourned.

SENATE.—A message was read from the President, communicating the Treaty received from Mexico.

Mr. ALLEN submitted a resolution calling upon the President for information whether active operations by the army in Mexico had been suspended by an armistice being agreed upon, and if so by whose agency and under what authority.

Mr. ALLEN submitted a resolution instructing the judiciary committee to inquire whether the act of 1799 required an amendment more effectually to punish persons holding correspondence with the enemy in time of war.

The Senate went into executive session and after some time spent therein, the doors were again opened, the Committee on military affairs made a report of the testimony taken respecting affairs in California, arriving out of the claim against the government by Col. Fremont.

Mr. Cass gave notice that he would call up the Ten Regiment bill tomorrow, and said that the circumstances which had just transpired seemed to render farther debate unnecessary. He would yield his right to the floor, if the Senators on the other side would cease the discussion, and let the question be put to its passage.

Mr. Cass said that it was the unanimous opinion of the majority in the chamber, that a halt in our military operations now would be fatal, and it was their wish that the vote should be taken before the adjournment tomorrow.

Mr. Berrien said he would submit to the will of the majority, but he hoped that oportunity would be given for farther discussion.

Mr. MASON thought it evident that the gentleman on the other side considered the passage of the bill to be now unnecessary, and he would therefore occupy the floor tomorrow in proving that the necessity for its passage was greater than ever.

WASHINGTON, Feb. 24.

SENATE.—Mr. Allen's resolutions calling on the President for information relative to armistice &c. in Mexico, passed.

Mr. Allen's 2d resolution, instructing judiciary committee to report whether the law of '99 relative to unauthorized correspondence with the enemy in time of war, needs amendment to give effect, was also adopted without discussion.

Mr. Baldwins resolution applying the Wilmot proviso to any territory we may acquire in Mexico, was then taken up—quite lively debate followed, in which several Senators participated.

Mr. Foote moved to lay the resolution on the table which was carried by a vote of 35 to 11.

A message was received from the House announcing the death of JOHN QUINCY ADAMS. Mr. Davis, of Mass., pronounced a feeling and appropriate Eulogy, when the usual resolutions were adopted and the Senate adjourned to Monday.

The House of Representatives was much crowded when it opened. Mr. Winthrop spoke briefly on the death of Mr. ADAMS, and was followed by Mr. Hudson, who spoke eloquently of the virtues of the great departed. Mr. Holmes, of South Carolina, Mr. Vinton and Mr. McDowell also spoke, when after the passage of the usual resolutions the House adjourned to Monday.

FIRE.—The Cupalo Furnace and Machine shop, owned and occupied by John A Allis, about a mile west of the village, was destroyed by fire on Monday night last. The fire is supposed to have originated near the cupalo, and when discovered had made such progress as to render unavailing the efforts of the citizens living near to extinguish the flames. The loss is se-

verely felt by Mr. Ellis, who is a very industrious and upright man. Nearly all his means were invested in his shop and and furnace. Besides the loss of the building and machinery, a good amount of castings and patterns, which had cost him much money and labor, were also destroyed. His loss is estimated at about $2,000 —no insurance. We cannot doubt but that this community will render him liberal assistance in the effort to rebuild his shop and resume his business.—*Connecaut Reporter.*

Grand Mass Celebration of Washington's Birth Day in Central New York.

Correspondence of the Buffalo Commercial Advertiser.

The name of GEORGE WASHINGTON is embalmed in every American heart, and will continue to be cherished while one such heart remains. And yet, with humble deference, we call upon our countrymen to ponder the inquiry, whether we have not, as a people, hitherto failed to give those *formal public expressions* of the grateful veneration we feel for this great and good man which are due to his memory, if they are not indeed essential to a vivid perpetuation of his name and its powerful and virtuous attractions? In almost every other nation, ancient or modern, heroes and benefactors who have conferred distinguishing honors and lasting benefits upon their country, have been annually brought before the recollections of the people amid all the vivid and impressive formalities of a *personal* and *general celebration* of their characters and deeds. And yet, the great Father of our country, though the purest conqueror and noblest patriot in the annals of War, who achieved our Independence under the most crushing embarrassments, and retired from the contest without drawing from the splendid result a single advantage peculiar to himself, has been honored by no such public periodical occasion, set apart by national custom for the formal commemoration of his exalted virtues and wonderful achievements.

It was in view of these facts, and for the purpose of contributing to the establishment, in this State, of a popular custom which they hoped would eventually rise into a great national festival of annual occurrence, that the people of central New York, pursuant to previous arrangement, assembled on the 22d in the village of Leroy for a grand mass celebration of WASHINGTON'S Birth Day. The occasion was ushered in with all the formalities befitting its design. For three hours the immense multitude hung with rapture on the thrilling and overpowering delineations of WASHINGTON'S character, given by the distinguished orator of the day, J. W. FOWLER, Esq., of Otsego, and went away with impressions the most salutary and permanent. And we cannot doubt that an occasion like this, occurring annually and simultaneously as a great national custom in every section of the land, and devoted to a full and impressive exhibition of the rare virtues of our great political saviour and his extraordinary compatriots, would exert an influence upon the popular mind, and be followed by lasting results of the highest moment to the welfare of the country. It is a powerful principle in the human economy that leads us instinctively to be controlled by the opinions and conduct of those whose wisdom and goodness to us have elicited our high and affectionate esteem. And nothing could be better calculated to subdue the passions and exalt the patriotic sentiments of a grateful and admiring people than the beautiful and touching comments of General FOWLER, for example, on the *religious* cast of WASHINGTON'S mind, in which, as an illustration of of his power of exemplary virtue, he stated that Gen. TAYLOR, (as he was informed by the letter of an eye witness,) just before the engagement at Palo Alto, hemmed in by a vastly superior Mexican force, called his staff around him, and adverting to WASHINGTON'S habit of invoking the blessing of Heaven on the verge of every battle, requested his Chaplain to read prayers and commit his little army to the Divine protection. And in this solemn exercise the old war-worn hero engaged with the most apparent and fervent devotion.— We cannot but think, in conclusion, that the character and deeds of WASHINGTON, fraught as they are with such power to move and mould the popular mind, exert by no means the influence they would if everywhere and annually exhibited, with all the charms of eloquence, and all the attractions of a great national festival.

A. LIVINGSTON, Ch'n of Com.

OBITUARY HONORS TO MR. ADAMS.—Every where the news of the death of Mr. ADAMS has produced a profound sensation, and all seem to vie in their efforts to do justice to the memory of the illustrious deceased. These tributes that are paid to his worth appear, also, to be prompted by a sincere hearty appreciation of the purity and grandeur of his exalted character, and the greatness of his services. Of the many tributes of his character contained in the published reports of proceedings in Congress, State Legislatures, and Courts of Law, all are replete with the eloquence of true feeling; but none seems to us more graceful and appropriate than the following remarks made in the Senate of the United States by Mr. BENTON, immediately after the announcement by Mr. DAVIS of the death of Mr. ADAMS, and the moving of the customary resolutions.

The resolutions having been read, Mr. BENTON addressed the Senate as follows:

Mr. President: The voice of his native State has been heard, through one of the Senators of Massachusetts, announcing the death of her aged and most distinguished son. The voice of the other Senator from Massachusetts is not heard, nor is his presence seen. A domestic calamity, known to us all, and felt by us all, confines him to the chamber of private grief while the Senate is occupied with the public manifestations of a respect and sorrow which a national loss inspires — In the absence of that Senator, and as the member of this body longest here, it is not unfitting or unbecoming in me to second the motion which has been made for extending the last honors of the Senate to him who, forty-five years ago, was a member of this body, who, at the time of his death, was among the oldest members of the House of Representatives, and who, putting the

years of his service together, was the oldest of all the members of the American Government.

The eulogium of Mr. Adams is made in the facts of his life, which the Senator from Massachusetts (Mr. Davis) has so strikingly stated, that, from early manhood to octogenarian age, he has been constantly and most honorably employed in the public service. For a period of more than fifty years, from the time of his first appointment as minister abroad under Washington to his last election to the House of Representatives by the people of his native district, he has been constantly retained in the public service, and that, not by the favor of a Sovereign, or by hereditary title, but by the elections and appointments of republican government. This fact makes the eulogy of the illustrious deceased. For what, except a union of all the qualities which command the esteem and confidence of man, could have ensured a public service so long, by appointments free and popular, and from sources so various and exalted? Minister many times abroad; member of this body; member of the House of Representatives; Cabinet minister: President of the United States; such has been the galaxy of his splendid appointments. And what but moral excellence the most perfect; intellectual ability the most eminent; fidelity the most unwavering; service the most useful, would have commanded such a succession of appointments so exalted, and from sources so various and so eminent? Nothing less could have commanded such a series of appointments; and accordingly we see the union of all these great qualities in him who has received them.

In this long career of public service Mr. Adams was distinguished not only by faithful attention to all the great duties of his stations, but to all their less and minor duties. He was not the Salaminian galley, to be launched only on extraordinary occasions, but he was the ready vessel, always launched when the duties of his station required it, be the occasion great or small. As President, as cabinet minister, as minister abroad, he examined all questions that came before him, and examined all, in all their parts, in all the minutia of their detail, as well as in all the vastness of their comprehension. As Senator, and as a member of the House of Representatives, the obscure committee room was as much the witness of his laborious application to the drudgery of legislation as the halls of the two Houses were to the ever-ready speech, replete with knowledge, which instructed all hearers, enlightened all subjects, and gave dignity and ornament to debate.

In the observance of all the proprieties of life Mr. Adams was a most noble and impressive example. He cultivated the minor as well as the greater virtues. Wherever his presence could give aid and countenance to what was useful and honorable to man, there he was. In the exercises of the school and of the college—in the meritorious meetings of the agricultural, mechanical, and commercial societies—in attendance upon Divine worship—he gave the punctual attendance rarely seen but in those who are free from the weight of public cares.

Punctual to every duty, death found him at the post of duty; and where else could it have found him, at any stage of his career, for the fifty years of his illustrious public life? From the time of his first appointment by Washington to his last election by the people of his native town, where could death have found him but at the post of duty? At that post, in the fullness of age, in the ripeness of renown, crowned with honors, surrounded by his family, his friends, and admirers, and in the very presence of the national representation, he has been gathered to his fathers, leaving behind him the memory of public services which are the history of his country for half a century, and the example of a life, public and private, which should be the study and the model of the generations of his countrymen.

NEW YORK, Feb 28—3 P. M.

The Pony Express announces the arrival of the English steamer, with dates from Vera Cruz to the 16th inst. The courier from the English legation arrived at Vera Cruz before the steamer sailed, with dates from the city of Mexico to the 13th.

The American Star of the 11th inst. contains the official announcement, that the treaty of peace was ratified on the part of the Mexican Congress by receiving the signature of Signor Rosa, Minister of Foreign Affairs, on the 10th inst. which date it bears. A meeting of the Deputies and Senators who were in the city, was held, but only 24 were present, and a majority of them were in favor of peace and the treaty, so reads the dispatch.

The *Star*, 12th, says he had asked for a passport to leave the Republic, and that he recommends to his friends to yield up the contest with the United States, sue for peace and establish a good government.

Pena y Pena publishes a letter in which he states that the Government of Queretaro in conjunction with Gen. SCOTT had resolved upon the imprisonment of SANTA ANNA, thus removing the last obstacle to a peace.

The Mexican papers confirm the articles of the Treaty in the matter of the cession of all New Mexico, Texas and Upper California, on their part, and the payment of $15,000,000 to Mexico and $5,000,000 for claims of our own citizens against Mexican accounts.

Accounts from Equador to Oct. 19th report that a conspiracy of the friends of FLORES had been detected, many arrests had been made and among them, WRIGHT aid of FLORES, and several leading men are involved.

Flores had given out that he had authority to draw on Europe for $40,000.

A revolution in Bolivia broke out Oct. 19th in favor of Valesco Iri. Goyen headed the movement, and several provinces had declared in his favor. The government troops were infected.—A treaty between Bolivia and Peru was concluded Nov. 2d, thus averting a war between the two countries.

An arrival from Venezuela brings the account of the massacre of several Members of Congress.

The Carracas Congress assembled on the 24th January, when an altercation took place between two members. This was the signal for the soldiers of the President, who marched in front of the state house, and fired into the windows, killing several members, and wounding others.

Those who were not killed were taken prisoners, and the following day they were compelled by force to pass several resolutions—one of which exonerates the President from all censure, and grants a general amnesty. The President was under impeachment before disturbances occurred. A general uprising of the people was expected.

The Changeling.

BY JAMES RUSSELL LOWELL.

I had a little daughter,
And she was given to me
To lead me gently backward
To the Heavenly Father's knee,
That I, by the force of nature,
Might in some dim wise divine
The depth of his infinite patience,
To this wayward soul of mine.

I know not how others saw her,
But to me she was wholly fair,
And the light of the Heaven she came from
Still lingered and gleamed in her hair;
For it was as wavy and golden,
And as many changes took,
As the shadows of sun-gilt ripples
On the yellow bed of a brook.

To what can I liken her smiling,
Upon me, her kneeling lover,
How it leaped from her lips to her eyelids,
And dimpled her wholly over,
Till her outstretched hands smiled also,
And I almost seemed to see
The very heart of her mother
Sending sun through her veins to me.

She had been with us scarce a twelve month,
And it hardly seemed a day,
When a troop of wandering angels
Stole my little daughter away;
Or perhaps these Heavenly Zincali
But loosed the hampering strings,
And when they had opened her cage-door,
My little bird used her wings.

But they left in her stead a changeling,
A little angel child,
That seems like her bud in full blossom,
And smiles as she never smiled.
When I wake in the morning, I see it
Where she always used to lie,
And I feel as weak as a violet
Alone 'neath the awful sky;

As weak, yet as trustful also,
For the whole year long I see
All the wonders of faithful Nature,
Still worked for the love of me;
Winds wander, and dews drip earthward,
Rain falls, suns rise and set,
Earth whirls, and all but to prosper
A poor little violet.

This child is not mine as she first was,
I cannot sing it to rest,
I cannot lift it up fatherly
And bless it upon my breast;
Yet it lies in my little one's cradle
And sits in my little one's chair,
And the light of the Heaven she's gone to
Transfigures her golden hair.

LEGISLATIVE—DEATH OF MR. ADAMS.—No Legislative business was transacted on Friday.—In the Senate, Mr. JOHNSON announced the death of Mr. ADAMS, and on motion of Mr. LAWRENCE, who paid an appropriate tribute, in eloquent terms, to the memory of the deceased, a select committee was appointed to meet a committee of the Assembly, and report resolutions suitable to the occasion. The President appointed Messrs. LAWRENCE, FINE and COLE as such committee.

In the House the announcement was made by Mr. RAYMOND, and similar action was taken.—The Speaker appointed Messrs. RAYMOND, COE, STEWART, HOLMES and WAGER as the committee. Both Houses then took a recess. On re-assembling the following joint resolutions were reported and unanimously adopted:

Resolved, That the Legislature of the State of New York have heard with deep sorrow of the death of *John Quincy Adams*, formerly President of the United States. Yet while we deplore the great and irreparable loss which the Union has thus sustained, the sentiment is mingled with an elevated pride, in the important, long continued, and varied services he has rendered to his country; in the intelligence and ardor with which he has, on all occasions sustained our national rights, interests and honor; and in the fearless integrity that has marked his conduct in private and public life.

Resolved, That the death of this great man within the walls of the capitol of the United States, and while in the performance of his duties as a Representative of the people, was an appropriate close of his active, patriotic, and distinguished career.

Resolved, That the condolance of the Legislature of the State of New York be presented to the widow and children of the deceased, upon the sad bereavement which has removed from their domestic circle its venerable and illustrious head.

Resolved, That the joint committee be authorised, and are hereby requested to make such arrangements as they may deem proper for the commemoration of this solemn event by the delivery of an oration before the two Houses, by some distinguished citizen.

Resolved, As a testimony of respect, that the two Houses of the Legislature do now adjourn.

The Baptism.

Suggested by a late Scene in the Cottage Baptist Church of Buffalo.

INSCRIBED TO H. B. AND S. E. S.

'Twas a winter eve, yet calm and mild,
And the streets were gilt with a silver light,
For the moon, on high that sweetly smiled,
Poured all her wealth in the bosom of Night.

And while with a mellow, melting chime
The Sabbath bells on the listener stole,
Inviting him on truths sublime
To feed his faint and famishing soul;

The feet that went to the house of God,
With a soft low tread on the pavement fell,
For the glories of Evening, all abroad,
The spirit wrapt in a holy spell.

The lamps that burn in the place of prayer
Seem suddenly fraught with a glow divine,
And gleam on the visages gathered there,
As the smiles of Heaven on the penitent shine.

The Spirit is present, filling the place,
And when the hymns to his praise are sung,
The off'rings made at a throne of grace,
And the manna of Truth to the crowd is flung;

Two maidens young, in beauty clad,
Stand forth to take their pastor's hand;
And with steps that tell the heart how glad
To obey the Savior's sweet command,—

In a modest guise and a meek array,—
Their faces bright as a glowing gem,—
They separate take their silent way
Where the yielding waters welcome them.

And when they rise, on the breath of song
Each new-born thought is borne to heaven,
And rapture reigns in the voiceful throng
Like the joy above o'er a soul forgiven.

'Twas a scene to gladden the angel-train,
And He who once in the Jordan bowed,
Must have bent with joy o'er the lovely twain,
That shone twin stars 'mid the sea-like crowd.

J. CLEMENT.

EDUCATION.—It is objected of many of our "finishing schools" that their *finishing* is totally irrespective of any *beginning*. Young ladies revel in the ologies before they can write a decent letter, and learn the polka before they can spell poker. How many dainty crow-quill notes are dated "Tuesday," and if any sad occurrence is to be communicated, call it "melancholy news." But people have very different views of education.—The other day, in a steamboat, we heard a lady, who was coaxing a refractory varlet, whisper, "If you'll be a good boy, you shall *kill a chicken* when we get home."—*Mrs. Kirkland.*

The saying that "there is nothing to be got by cheating" came from the fact that a man once passed away a bad cent for a handful of chestnuts which proved to be all rotten.

For the Western Literary Messenger.

An Address,

Delivered before the Erie County Teachers' Institute, at Lancaster, Sep. 24, 1847,

BY GEORGE W. CLINTON, ESQUIRE.

I never experienced so much difficulty in attempting the performance of a promise to address an audience, or institution, as upon this occasion. Heretofore, I have been called upon to speak of subjects with which I had some acquaintance, or in which my auditors were not better versed than I, or was at liberty to choose a theme. But the nature of your Institute would seem to preclude all topics of discourse, save those which have a bearing upon your profession:—and I must discuss and pronounce upon high matters, of which I am comparatively ignorant, before those whose lives have been devoted to their investigation. I come too, before you, necessarily, without due preparation, to read a few desultory thoughts, such as I could conjure up in a brief space of time, and in the intervals of a laborious profession. Why then do I appear before you, with such faint hopes of usefulness? There are two reasons. I promised that I would; and a promise, however ineffective a performance may ensue, ought to be held sacred. You invited me, and having accepted the invitation, my not coming might be deemed disrespectful to gentlemen whom I esteem sincerely—it might be construed into indifference to your Institution, an under-estimation of your most responsible employment; and I am not willing to incur any such evil imputations. I am here then, mainly to testify my regard for you and your Institute, and signalize the deep interest I take in the progress of education, though it should be to my own discomfiture.—Bsides, it is possible, that to you, or some of you, there may turn out to be, in my discourse, some thought that may be put to use; some truth, however trite, in a new form; something suggestive of reflection that may lead to good. If perchance I utter anything which shall in the least, benefit, or cheer, or invigorate you, or any of you, in the performance of your arduous and most delicate duties, I will be abundantly repaid for the risk I run, and the labor I must submit to, in fulfilling my thoughtlessly incurred engagement.

"'Tis Education forms the common mind,
Just as the twig is bent the tree's inclined."

So sings Pope, and, like all songs, this couplet has some slight alloy of falsity mixed with its gold. Poetry in its very nature, is vague and misty, intended rather to please the fancy and exalt the feelings, or to embalm general truth, than to train the reason and inform the mind, by the enunciation of precise, particular truths. Its assertions must usually be taken with some grains of allowance. These lines are fallacious, so far as they seem to hint a precise correspondence and similitude in the effects of early training upon the human mind and upon vegetable forms. It is not universally true that the mind retains the direction it received in youth, as does the tender twig, which soon becomes fixed and rigid, and will not be bent back again without breaking. Our intellectual essence is degraded by the comparison. The soul and intellect are not rendered utterly

unyielding by maturity of years, but are ever plastic and subject to impression. Our notions, our feelings, our affections, are continually acted upon by things external; and our mental and moral constitutions, like our physical organizations, are ever changing, and ever susceptible of change. As we advance in life old prejudices are worn away, and new ones perhaps engendered. The notions of life and duty, with which we enter upon the stage of action, evanish with the expansion of our minds, and the attainment of experience, or change as our hearts are hardened or softened, by the cruelty or kindness of our fellows. Nor can any one safely predict that he will be what he now is, a year, a month, a day hence. Even old age, in its gradual decay, may exhibit transformation. The hoary-headed miser has become a prodigal,—the prodigal, a miser,—the christian, an infidel,—the infidel, a christian.

But I do not mean to cavil at the general truth, of which these oft-quoted lines are the popular vehicle. The whole tenor of one's life is frequently determined, the direction of the intellect given, the tone and temper of the soul fixed for all time, by early education. And hence the vast responsibilities which rest on you.

The word "educate" is derived from the Latin language, and means to lead, or draw out, and so is expressive of the proper limits and objects of instruction. We do not, and we cannot add to, or augment the faculties God has bestowed upon his creatures. They are implanted by the divine hand, and will grow with opportunity and exercise. They will languish with disuse, and dwindle for lack of nutriment. We can destroy, or repress, or pervert—we can direct, and strengthen, and nourish them,—and these are the true objects of education. The oculist gives sight to the blind—the aurist, hearing to the deaf. But how? Has either imparted a new faculty—created an eye, or an ear? Not at all! They have only removed material obstacles to the exercise of existent faculties. So it is with the instructor. He may remove a moral film distorting the vision of the soul, he may cure an obliquity of the mind, he may call into energetic action an encumbered mental power, he may draw out what Nature has implanted, but he cannot do any the least thing more

The question is frequently put, whether there be not born degrees or differences of intellect? and if so, whether these diversities of faculty can be equalized by education? I care little or nothing what answer such questions receive; for I regard them as purely speculative, and destitute of practical consequence. Facts innumerable seem to demonstrate, that there are vast differences in the mental energy and characteristics of men, and that strong propensities and powers have been manifested at a very tender age. I think it was Pope, of whom it is written: "He leaped in numbers, for the numbers came," while many men of capacious minds, notwithstanding strenuous and untiring efforts, were never able to achieve a respectable distich. Individuals have appeared from time to time, who, though uneducated, and, in all things else quite stupid, have exhibited an almost miraculous faculty of solving complex arithmetical problems. Mankind have always been inclined to admit the innate, mental superiority of distinguished men, and seem in general, inclined to attribute great grasp of intellect to the direct, congenital gift of God. Hence they speak as though they recognize a larger share of the divine afflatus in such men as Shakspeare, Milton, Bacon, Newton, Leibnitz, Franklin and Washington, than in ordinary mortals. In these, or any instances of illustrious persons, it must be very difficult to ascertain beyond a peradventure, that there was aught of moral or intellectual developement which cannot be traced to, or accounted for, by education, opportunity, accident, or continued strenuous effort. But we do know that usefulness and distinction are, in the main, the fruits of the exertion of the individual who attains them, that they are rarely achieved by the unaided efforts of an isolated person, and are usually won by the aid and judicious co-operation of parents, instructors, and friends. Though the extraordinary interposition of the Divinity may be necessary to the production of exalted sages, the measure of intellectual capacity He has meted out to the race in general, if properly cultivated, is amply sufficient to insure to all but a very few, the acquisition of a knowledge and power that will render life happy and useful. And those few, lamentable exceptions, the born idiots, impressing us with the awful spectacle of men without minds, filling us with a strange mixture of pity and disgust, they are given to us, not only as incentives to humility, and a tremendous warning of the consequences of sin, but perhaps also, that they may ultimately yield to education and philanthropy their noblest triumph. True, there seems to be an utter destitution of mind; and it is hard to believe that there are, within those misshapen trunks, spirits that may be fitted for angelic being, and beam with glory when separated from them. But the deaf and dumb, and blind, they too were once regarded as hopelessly imbecile; and their uninformed intellects did in fact lose all power of manifestation. But intellect existed in them, and persevering Benevolence has drawn them forth and shown them to the world. It may be that the driveling idiot has a soul as precious, an intellect as capacious as that of Bacon, but hidden and borne down by malformations of the body, not utterly beyond the reach of mortal medicaments. The time may come when education will purge away these fatal obstructions, and give light and enjoyment to the clogged spirit of the idiot. This may be but a phantasy of exuberant hope. Be it as it may, a world of duty still remains to be discharged towards those who are not so benighted. It is for us, especially for your profession, to draw out and cherish the mental powers of the rising generation, who will soon fill our places, and be hustling and busy as we now are. They must be led on until they, in their prime, are by our sides, so that when we retire, having passed the space we have toilfully traversed with them, they may march onward in the path of wisdom, accumulating new knowledge to be added to forever by succeeding generations.

When we look through Nature, we are struck with the vast variety of God's works, and impressed by the immensity of His love, and the ineffable extent of His wisdom. Viewed aright, the misery and suffering that everywhere exist but minister to enjoyment. The greatest good of the greatest number is apparently the rule which pervades the animated world, and by it is evolved a wondrous felicity. Man only, in his perversity, does evil of choice; but even his willulness and wickedness, we may confidently hope, will but redound to the glory of his Maker, and the augmentation of the sum of spiritual, if not of terrestial happiness.

Reason informs only the more noble animals; and the others are consigned to the guidance of Instinct. Instinct is, as it were, an unreasoning Reason, implanted by the Almighty, irreflective, but sufficient, ignoble, but perfect in its sphere. In the vast assemblage of God's creatures, it is difficult to draw the line of demarcation, and say here Instinct ends, and here divine Reason com-

mences. Indeed the two are frequently co-existent. Man, it is supposed, is measurably governed especially in infancy, by instinct. The dog, the horse, the elephant, and many other inferior animals, demean themselves in a manner that cannot be accounted for, without attributing to them the faculties of memory, comparison, reflection, and decision, or, in other words, without admitting that, to some extent, they reason. The lowest classes of animated beings act as with the very perfection of reason adapted to their circumstances, from the very dawn of their existence; but their acts and motions, though voluntary, seem not to spring from previous reflection, and to be incompatible with reason, and are mere results of pure, unraised instinct.

An insect deposits its egg, and dies. After its death, the egg is hatched and evolves a little, unsightly worm. The worm finds its appropriate food, and thrives for a while, and then, inducing itself with a covering it fabricates, sleeps for a season. Then it bursts its cerements, and comes forth a joyous, winged insect, and seeks the pleasures of love, and prepares nutriment for offspring it can never know. It bores into a tree, places in each cavity a little egg, collects and deposits with each a supply of food which itself never tasted in its insect state, closes each orifice ingeniously, so as to bar the entrance of murderous insect enemies, and having thus fully played its varied part in nature, and provided for the propagation of its species, it dies. All this preparation is for a posterity it can never know and love, to facilitate results it can never witness, and is performed with a marvellous care and skill it never learned. This is instinct, self-perfect and untaught, it is sanctioned throughout by reason. Wisdom cannot add to its devices, nor improve its operations.

The superior brute animals reflect, and act upon reflection. They are capable of being taught, and their feeble and enforced imitations of our most trivial acts seem marvellous to the vulgar. Their intelligence, however, is as far below that of man, as is the light of a taper inferior to that of the noonday sun. Their motions and habits are usually controlled by internal impulses connected with their organization.

Man himself is not entirely guided by reason. His passions are perchance but instincts; and his actions are frequently prescribed by unintelligent impulses, which, if they are not instinctive, cannot easily be distinguished from instinct. But he possesses a vast mind, the prompter of his high ambitions. Boundless and insatiable, it grasps at all things, and would contain all things, and marks him as the fit inheritor of that eternity of being, to which it prompts him to aspire. I care not whence you derive this essence, this distinctive characteristic of our race, whether it is "the breath of life," which, according to Scripture, God "breathed into his nostrils" when he had fashioned Adam from the dust; or whether, as some would have it, it is but the action of the peculiar organization of the brain; it is "of the heavens, heavenly," and cannot be destroyed by death beyond the hope of a living resurrection. The very capacity to anticipate eternal life is inconsistent with the possibility of suffering utter, perpetual destruction. We are destined to survive death; and, while all agree that our moral state, such as it may be at death, will be continued into the second life, why should we doubt, that, upon our corporeal dissolution, our minds will also continue unchanged, that their highest exaltation here, will be their starting point, in the immeasurable career opened to them by eternity!

Men of leisure and philosophy have amused themselves by proposing definitions of man, endeavoring to distinguish him from all the inferior tribes by the introduction of some single habit, or the possession or absence of some organ or appendage. You remember how Diogenes plucked a cock, and so refuted the philosopher who asserted that man was "a featherless biped." He has been styled an animal with hands. The hand is a most wondrous implement, but the monkey has four. He is said to be the only reasoning being—but beasts reason too. He is claimed to be the only cooking animal; but it is said that some brutes, at least occasionally cook their food. And finally he has been termed an educating animal. But this is perhaps as weak as any of the other definitions. All brute beasts and fowls teach their offspring. The hound instructs her puppies to hunt; the doe trains her fawn to caution and concealment; the sparrow teaches its new-fledged brood to fly and chirp their little song; the eagle directs the eyes of its eaglets sunward, and familiarizes them with carnage. Indeed, everywhere in animated nature, we find the parents imparting to their young their knowledge, and training their powers for their contests and trials in the world; and, though brute infancy and youth are very brief, brute parental education is most thoroughly, energetically, and efficiently bestowed.

The wants of brutes are few, their pleasures simple, their dangers not numerous, their existence short-and terminated by dark death; man's wants and yearnings are numerous as the leaves of Autumn, his pleasures complex, his dangers multiform and insidious, striking at soul and mind, as well as at the body, his life a passage to an endless state of being. If then irrational animals, as we term them, are so tender of their young, so assiduous in their education, how much more devoted ought we to be to our children, the gifts and inheritors of heaven! How can we omit aught within our power, to inform, to guard, and guide them in their career through life!

These general reflections tend to show the importance of education, and may furnish some incentives to pursue it. Let me add a few more particular remarks, bearing upon the same conclusions. Every man ought to have knowledge enough at least to guide him in his path of life, to enable him fully to perform his duty in the sphere in which he moves. An ignorant person seldom attains much usefulness, or a high position in society. The mere force of intellect, the lustre of inbred virtue, may elevate one; but how much would that elevation, in every case, be heightened by the possession of more accurate and extended knowledge. Ignorance is mental or moral darkness, and no one, in the great battle of life, can strike firmly and confidently, unless he sees clearly. Fortune may favor him; but the successful ignorant man resembles rather a rude, victorious rebel, than a polished, christian conqueror. Knowledge is power. It raises men above their fellows, not in innate dignity, for that in all is equal, but in capacity for usefulness. It cheers the soul, forms some protection against the calamities of life, is often a solace in affliction, and arms us for achievement in the contests of the world.

Some statesman, so called, have dreaded the influx of light among the people. They did so, because their deeds were evil; because they sustained false institutions, derogatory to the dignity of man, oppressive to the masses, and unjustly partial to the few. They may believe that a community ought to be divided into privileged and common classes; and that knowledge, while scarcely necessary to the majority of the former, can only breed discontent and rebellion in the people, and lead them to ruinous attempts to rise above a condition, in which a very little knowledge will suffice to make them happy. "Every poor man ought to understand his business. He

ought to be taught enough to make him a good hewer of wood, and drawer of water. A very little mechanical, or rural training will teach him this; and then it may be well enough to gift him with the knowledge of reading and writing, with perhaps some arithmetic, so that he may go to church, read the bible, and learn contentment with his lot, obedience to his superiors, and veneration for God, the higher orders, the king and constitution. More than this might lead to revolution, and an anarchical subversion of the glorious perfection of the State machinery. To what other than evil purposes can learning be applied by an operative, a tinker, a ditcher, or a cobbler?" The poor might well answer—"To what use can you put it? If it be good, why may not we participate in it, so far as we can without interfering with the discharge of our humble duties? Those institutions cannot be just which require for their continuance, our benightment."

But, in our country, no such sophistical reasoning can be urged. On the contrary, the perpetuity and improvement of our political institutions require the free diffusion of knowledge. There are here no factitious distinctions. All classes are noble, save wrong-doers. Every man is a sovereign, and every woman is a queen, in the recognized dignity of our common nature. They should have knowledge, that they may maintain in life a royal bearing.

In our land there are no castes, no one is excluded from any employment he has ability to fulfil Any one may aspire to any position, and perchance may win it too, in the perfect freedom of competition here permitted. A tinker can tinker well, and so far he is respectable. He knows more, however, than mere tinkering requires, and this additional knowledge, while it is ineffective in his lowly occupation, gives him power to turn to other occupations, higher in the world's judgment. A farmer understands the management of his flocks, the culture of his fields,—the merchant, the course of the trade he is engaged in,—and they are consequently successful in their respective pursuits, and have none of that perilous stuff, which we term ambition. 'Tis well! But let them know more, and they are not injured. Indeed every accession of information ennobles them. By every increment of knowledge their minds are fed, their souls informed, their views expanded, and they better qualified to discharge to their own satisfaction their duties apart from their employment, to fulfil their obligations to their neighbor, their country, their Maker, and I may add, to train aright their children, and supply their ever-craving, opening intellects. It is an error to suppose that knowledge of any kind, in any man, is ever a superfluity, a mere useless ornament. Some people, it would seem, forget our threefold nature—that man has body, mind, and soul—that all these three require education—that all have cravings, appetites, which, if they be not satisfied with wholesome food, will drive them to feed on garbage, or leave them stinted and deformed.

It is true, that, in the abstract, knowledge is merely power, not virtue—power to be exercised for good, or evil, according to the volition of its possessor. Very learned men may be very wicked. But then very ignorant men are not of course virtuous. Ignorance is not sin, but often leads to it. Kowledge is not, but tends to virtue. There can be no virtue without some degree of knowledge. There is, perchance, a degree of knowledge, all beyond which is unessential to an upright life; but, what is beyond strengthens us, and adds efficiency to noble aspirations. The ignorant man may approach the angelic nature in purity and yet be powerless for extended good, or even work infinite mischief in attempting it; but, give him knowledge, and his beneficence may bless the world.

I know indeed that nothing is more dangerous than a little knowledge; and so too is what we consider much learning. But neither has ever any malignant influence, unless the possessor regards it as a wonderful deal, and so is puffed up into false notions of his superiority, and a sense of self-sufficiency. We sometimes meet such people. Their infidelity and wickedness however, are the fruit, not of too much, but of too little knowledge; or to speak more accurately, they result not from the knowledge they do possess, but from ignorance of the deeper, sublimer things beyond their ken; or, more accurately still, not so much from mental darkness, as from moral perversion. These sad instances ought to teach us the primary importance of moral and religious light; and ought also to impress us with the truth, that men should be taught by the humility of the truly learned, and by being led to reflect upon what is hidden from, as well as upon what is disclosed to them, to realize habitually how insignificant is the sum of the known, compared with the infinity of the unknown, how petty the whole mass of human knowledge, when contrasted with what is yet before us, not only here on earth but in the regions of eternity. Strange as it may seem to sciolists and smatterers, yet, it is true as that the sun shines, and is proven by the lives of men of vast acquirements of knowledge, especially of nature, that profound learning is essentially humble. The greatest minds may penetrate the arcana of Science, and search the depths of nature, but, go where they will, they find beyond the deep they 've passed, a greater deep; a wall that will not be overleaped, is interposed and bars their passage.

I do not know, my friends, that I can say aught of use to you in the practice of your profession. That profession has taken prodigious strides since my boyhood; and it seems strange to me, when I look back upon the modes of teaching when I was young, that your better modes were not long before adopted in our schools. Honored be they who first devised and brought them into use. The teacher's standing too, in the public estimation, has been greatly, justly elevated. The importance of your avocation has been recognized by the people. It has acquired the style and dignity of a liberal profession. I congratulate my country on this change, for I see in it the most certain augury of the increase of virtue and intelligence in our midst, and the most infallible promise that our glorious political institutions will remain secure, and be stable as the mountains.

If I, in my ignorance, were to venture to admonish you as to your duties, I would say, that with reference to the triplicity of our nature, it behooves you, upon all proper occasions, to impress upon the youths under your charge, these general truths:—That our bodies are to be kept pure and vigorous, by temperance and exercise; that God, our Maker, is the author of all good, and the proper object of our reverential love; that to love him, and to do right, are the sum of human duty; that knowledge is the great means of ascertaining what is right, and the principal instrument by which we are enabled to perform it; that the first and chief duty of a citizen, is to obey and uphold the execution of the laws; that he is bound to inform himself upon political questions, and to exercise his franchise independently and honestly; and above all, never to do ill, in the hope that good may come of it. We are responsible for, and only for the quality of our acts. Let us do right always, and leave consequences to God! He who "brings good out of evil," will most as-

surely bring good out of good, in His own way, and in His own time.

Yours is indeed a most toilsome and trying occupation, and especially is it trying to the temper. No person who has not patience, and cannot control the passions, should dare assume your office. The teacher stands in the place, and, for the time, is invested with the authority and the duties, and should imbue himself with the feelings and anxieties of the parent. He is utterly unfit for the employment, if he do not recognize in the children committed to his charge, an inherent sublimity of nature, the germs of expansive minds, the rudiments of immortal beings, dependent in a great measure, upon the direction they shall receive from him, for the character of their interminable career, and if he bear not within himself, at all times, the spirit of love. This it is that must impel, sustain, and bear him onward in the discharge of his high functions. Without it, he will be but as "the sounding brass, and as the tinkling cymbal," an unprofitable servant. I speak not of the weakness, sometimes confounded with love, that shrinks from the infliction of pain; but, of that great quality which inflicts pain, when necessary, not like a devil rejoicing in torment, but, like an angel sorrowing over the necessity for it, or, even as God afflicts the children of men. Children are most easily led by love. They are awed far more by calm determination, than by passionate fury. And when they love, they dread reproof, or coolness, rather than chastisement. Their studies must be rendered pleasant to them, either in themselves, or from some agreeable consequence of proficiency in view, or your instructions will be at best, but as the seed that falls by the wayside, and upon the stony ground. I say these things with the more confidence, because I am blessed with children.

But I am aware that the best efforts of an instructor may be fruitless. Heaven, in its wisdom, sometimes denies its blessing upon what seem the most skilful and judicious labors; and we ought always to remember, that, though we may sow, and water faithfully, it is God alone who giveth the increase. But the most copious source of disappointment to the teacher, I am sorry to say it—wells up in the scholar's home. Every parent wishes good things for his offspring, but all do not well towards them. It is difficult to say where the chief foundations of instruction must be laid, whether in the school-house, or under the paternal roof. But it is plain, that the parents' smile is balm to the oft-wounded teacher's heart, and sends him on his way rejoicing and re-invigorated; and that the thwarting interference of parents, their injudicious indulgence of their children, and the lack of their cordial corporation, cannot but paralyze the instructor's efforts and endanger his success. But, if the father and mother will but uphold the teacher, by their own respect teach their offspring to respect him, and encourage them in study and obedience, they will quadruple the instructor's powers of doing good in his most difficult vocation.

But I fear I am exceeding the limits of your patience, and so will close these desultory remarks. I cannot do so however, without again expressing my deep respect for your most honorable profession. Go on in its prosecution, with the fullest assurance that the best interests of humanity are involved in the progress of education. Your schools are the nurseries of immortals. All the occupations of life look to you to replenish their ranks, as death thins them, with worthy soldiers. The Arts, and Sciences, and Professions, expect from you new votaries: our country asks from you good citizens; and Heaven will demand of you an account of the souls intrusted to you. Your responsibility is tremendous. May God enable you to sustain it with honor!

Mirabeau.

There have been men in particular ages, who might be considered as concentrating within themselves all their country's character,—who represented at the same time, both the good and evil traits. Themistocles was the very impersonation of all the virtues and vices of Athens in his day. That moral *antithesis*,, Alcibiades, was a still more remarkable compound of the manifold virtues, vices, foibles, etc., of this same Athens, at a later and more degenerate period. In looking over France during the session of the national assembly, we shall find the celebrated Mirabeau, without doubt, to be the *type-Frenchman* of that epoch; and if Louis XIV. could say, in his day, *I am the State*, Mirabeau could say, in his latter days, with more truth, *I am the national assembly*.

This extraordinary man had been born among the nobility, and been maltreated. He had experienced every kind of tyranny from his very birth,—that of his own father, of the government and of the tribunals. He was thus trained to despise the government and the upper class of French society. His travels, observations and immense reading, had taught him much, and his memory retained it all. He had seen all manner of men, from drill sergeants to prime ministers, from his inmates of the jails of Pontarlier to princes and kings. He had made himself notorious by the dissolute manners and his quarrels.—Thiers speaks of him as frightful with ugliness and genius; yet no man had more *amours*, or was so successful in them. His character was so low at the meeting of the States General, that there was a murmur in the assembly when he first entered to take his seat. But no sooner did this eccentric man appear in the tribune, than his power became manifest.

He was immeasurably superior to every mind with which he came into contact in the assembly. He had, in fact, no second,—it was *Eclipse first, and the rest no where*. From the member that was hardly tolerated, he soon became the member that was gazed on by every eye, and courted by every order. Proud of his high qualities, jesting over his vices, by turns haughty and supple, he won some by his flattery, awed others by his sarcasms, and led all in his train by the extraordinary influence of his oratory. Of the Abbe Maury, the leader of the *cote droit*, he used to say, "when he is on the right side, we debate; when he is on the wrong, I crush him." His sarcasm, irony, originality, were so great, that every body was afraid of him in the tribune.—The aristocracy at last, not being able to meet him in debate, made an effort to get rid of him by duel. Many sent him challenges, but he always refused, merely noting down their names in his pocket-book. It is not fair, said he, in regard to one of his opponents, to expose a man of talent like me, against a blockhead like him. What is very extraordinary in such a country as France, this conduct did not bring him into contempt, or even cause his courage to be doubted. There was something so martial in his mind, so bold in his manner, that no one could impute cowardice to him. He made partisans everywhere,—among the people, in the very court,—and to crown the measure of his greatness, as soon as he learned the secret of his power, and saw the career that was opened to him, he suddenly became one of the hardest working men who have ever appeared on the stage of action. If I had not lived with him, says Dumont, I should never have known

what a man can make of one day. A day for this man was more than a week or a month is for others. The mass of things he guided on together, was prodigious; from the scheming to the executing not a moment was lost. The fact is, that he at last, tough as was his physical frame, overworked himself, and died from fever generated by his excessive labors.—*Southern Quarterly Review.*

A Love of a Singing-Master.

BY MRS. C. M. KIRKLAND.

From the Union Magazine.

The prettiest girl that attended our singing-meetings was Jane Gordon, the only daughter of a Scotchman who had lately bought a farm in the neighborhood. She was a fair and gentle damsel, soft-spoken, and down-looking, but not without a stout will of her own, such as, they do say, your very soft-spoken people are apt to have. Indeed, we may argue that to be able at all times to command one's voice down to a given level, requires a pretty strong good will, and more self-possession than impetuous people ever can have; and it is well known that blusterers are easier governed than anybody else. Jane Gordon had light hair, too, which hasty observers are apt to consider a sign of a mild and complying temper; but our dear Jane, though a good girl, and a dutiful daughter, had had a good deal of trouble with old Adam, and given her sober parents a good deal too.

So that, by and by, when it was whispered that Jane Gordon was certainly in love with Mr. Fasole, and that Mr. Fasole was at least very attentive to Jane Gordon, the old people felt a good deal troubled. They were prudent, however, and only watched and waited, though quite determined that an itinerant singing-master should not carry off their treasure, to be a mere foot-ball of Fortune, and have

nor house nor ha',
Nor fire, nor candle-light.

And at every singing-meeting the intimacy between Mr. Fasole and his fair pupil became more and more apparent, and the faces of the unappropriated damsels longer and longer. The district schoolmaster, that winter, was a frightful old man, with a face like a death's-head, set off by a pair of huge round-eyed spectacles, so *his* was out of the question, even if he had not had a wife and family to share his sixteen dollars a month. The store-keeper, Squire Hooper's partner, had impudently gone off to the next town for a wife, but a few weeks before; and a young lawyer who talked of settling among us as soon as there was anything to do—(he had an eye on the setting-back of the mill-pond, we suspect)—did nothing but smoke cigars and play checkers on the store-counter, and tell stories of the great doings at the place he had been haunting before he came among us. So the dearth of beaux was stringent, mere farmer-boys being generally too shy to make anything of, until they have bought land and stock, when they begin to look round, with a business eye, for somebody to make butter and cheese.—Mr. Fasole, with his knowing air, and a plentiful stock of modest assurance, reigned paramount, "the cynosure of neighboring eyes." He "cut a wide swath," the young men said, and it may be supposed they owed him no good will.

How matters can remain for any length of time in such an explosive state without an eruption, let philosophers tell. Twice a week, for a whole, long, Western winter, did the singing-school meet regularly at the school-house, and practice the tunes which were to be sung on Sunday; and every Sunday did one or two break-downs attest that improvement in music could not have been the sole object of such persevering industry. Sometimes a bold bass would be found finishing off, for a bar or two, in happy unconsciousness that its harmonious compeers had ceased to vibrate. Then again, owing to the failure, through timidity or obliviousness, of some main stay, the whole volume of sound would quaver away, trembling into silence or worse, while the minister would shut his eyes, with a look of meek endurance, and wait until Mr. Fasole, frowning, and patting on something of the air with which we jerk up the head of a stumbling horse, could get his unbroken team in order again. Jane Gordon was not very bright at singing, perhaps because she was suffering under that sort of fascination which is apt to make people stupid; and she was often the "broken teeth and foot out of joint" at whose door these unlucky accidents were laid by the choir. Mr. Fasole always took her part, however, and told the accuser to "look at home," or hinted at some by-gone blunder of the whole class, or declared that Miss Jane evidently had a bad cold—not the first time that a bad cold has served as an apology for singing out of tune.

The period for a spring quarterly meeting of one of the leading denominations now drew nigh, and a great gathering was expected. Ministers from far and near, and a numerous baptism in the pond, were looked for. Preparations of all sorts were set on foot, and among the rest, music for the "occasion." The choice of "set pieces" and anthems, and new tunes, gave quite a new direction and spur to the musical interest; but Mr. Fasole and Jane Gordon were not forgotten. There was time to watch them, and sing too. Through the whole winter the singing master, though his way lay in quite an opposite direction, had thought proper to see Miss Gordon home, except when it was very cold or stormy, when he modestly withdrew, with an air which said he did not wish his attentions to seem particular. It had become quite a trick with the young men to listen by the road-side, in order to ascertain whether he did not pop the question somewhere between the school-house and Mr. Gordon's; but the conclusion was, that either he was too discreet to do it, or too cunning to let it be heard, for nothing could ever be distinguished but the most ordinary talk. Nothing could be more obvious, however, than that, whatever were Mr. Fasole's intentions, poor Jane was very much in earnest. She lost all her interest in the village circle, and, too honest and sincere for concealment, only found her spirits when the fascinating school-master appeared.—He had the magnetizer's power over the whole being of his pupil.

The parents observed all this with the greatest uneasiness, and remonstrated with her on the imprudence of her conduct, but in vain. They reminded her that no one knew anything about the singing-master, and that he very probably had at least one wife elsewhere, although it was past the art of man to betray him into any acknowledgment of such incumbrance; but Jane was deaf to all caution, and evidently only waited for the votary of music to make up his mind to ask, before she should courtesy and say yes.

The quarterly meeting came on, and Squire Hooper's big barn was filled to overflowing. A long platform had been erected for the ministers, and rough seats in abundance for the congregation; but every beam, bin, "coin of vantage," was hung with human life, in some shape or other. Such a gathering had not been seen in a long while. In front was placed Mr. Fasole, with Jane Gordon on his left hand, and his forces ranged in due order on each hand. White was

his beaver, (outside,) and fiery red his hair and face, as he wrought vehemently in beating time, while he sent out volumes, not to say whole editions, of sound. One could not but conclude that every emotion of he soul must find utterance in the course of the morning's performance, if Jane Gordon only listened aright, which she seemed very well disposed to do. But the concluding hymn was to be the crowning effort. It abounded in fugues—those fatal favorites of country choirs, and had also several solos, which Mr. Fascle had assigned to Jane Gordon, in spite of the angry insendoes of other pretenders. He had drilled her most perseveringly, and, though not without some misgivings, had succeeded in persuading himself, as well as his pupil, that she would get through these "tight places" very well with a little help from him.

When the whole immense assembly rose to listen while the choir performed this "set piece," it was with a sound like the rushing of many waters, and poor Jane, notwithstanding the whispered assurance of the master, began to feel her courage oozing out, as woman's courage is apt to do just when it is most wanted. She got through her portion of the harmony with tolerable credit: but when it came to the first solo, it was as if one did take her by the throat, and the sounds died away upon her lips. Dread silence ensued, but in a moment, from the other side of the barn, seemingly from a far distant loft, a female voice, clear, distinct, and well trained, took up the recreant strain, and carried it through triumphantly. Then the chorus rose, and, encouraged by the opportune aid, performed their part to admiration—so well, indeed, and with so much enthusiasm, that they did not at first miss the leading of Mr. Fascle.

When the next solo's turn came, they had time to look round: and while the distant voice once more sent its clear tones meandering among the rafters and through the mows and out of the wide doors, all the class turned to look at the master. There he stood—agape—astare—pale—spiritless—astonished—petrified; his jaw fallen, his nose pinched in, his eyes sunken and hollow, and fixed in wild gaze on the dim distance whence issued the potent sound, while poor Jane's fascinated optics gazed nowhere but on him. But before note could be taken of their condition, the chorus must once more join in the last triumphant burst, for the new auxiliary had inspired them like a heavenly visitant, and they could not attend to sublunary things. They finished in a perfect blaze of glory, the unknown voice sounding far above all others, and carrying its part as independently as Mr. Fascle himself could have done.

"What is the matter with the singing-master?" "Has he got a fit?" "Is he dying?" was whispered through the crowd as soon as the meeting was dismissed. "Bring water—whiskey—a fan—oh goodness! what is to be done?"

"Let me come to him," said a powerful voice just at hand; and, as the crowd opened, a tall, masculine woman, of no very prepossessing exterior, made her way to the fainting Orpheus.

"Jedediah!" she exclaimed, giving a stout lift to the drooping head; "Jedediah! don't you know your own Polly Ann?"

It was Mrs. Fascle—a very promising scholar whom the unhappy teacher had married at the scene of former labors, somewhere in the interior of Illinois, hoping to find her a true help-meet in the professional line. But, discovering to his cost that she understood only one kind of harmony, and that not of the description most valuable in private, he had run away from her and her big brothers, and hoped, in the deep seclusion of still newer regions, to escape her for ever, and pass for that popular person, an agreeable bachelor. Whether he was really villain enough to have intended to marry poor Jane too, we cannot know, but we will cheerfully hope not; though we are not sure that wantonly to trifle with an innocent girl's affections for the gratification of his vanity, was many shades less culpable. The world judges differently, we know, since it makes one offence punishable by law, while the other is considered, in certain circles, rather a good joke than otherwise. But the singing-master and his fearful spouse disappeared, and those who had not joined the class exulted; while, as far as public demonstration went, we could not see but the singing at meeting fell back to very nearly the old mark, under the auspices of old deacon Ingalls, who has for many years been troubled with a polypus in his nose.

Jane Gordon is a much more sensible girl than she was two years ago, and looks with no little complacency upon Jacob Still, a neighbor's son, who boasts than he can turn a furrow much better than he can a tune.

The Treaty.

Correspondence of the North American & U. S. Gazette

WASHINGTON, March 1, 1848.

Mr. Senator Downs received a letter today from Col. Persifer F. Smith, the Governor of Mexico, of the 9th of February, who recommends the adoption of the Treaty in very urgent terms. He believes it was made in good faith by the existing government, which, he says, without the assistance of ratification on the part of the U. States, and the *prestige* it would afford to political affairs in Mexico, cannot stand six weeks. He says an army of 80,000 men would be necessary to continue operations, and that it cannot be maintained by contribution on the enemy, as the resources of supply are necessarily diminished by the increase of our force. If we should retire, he contemplates an army of 20,000 men, in four different divisions, as necessary to hold the country adopted. The present government is liable to *pronunciamentos*, and all the other paraphernalia so readily employed by Mexicans, to overthrow authority. For this reason he advocates the treaty, and further, because he thinks no other government can be established that will be sufficiently strong to treat. The letter was read to the Senate.

This intelligence only adds to the difficulty. If it be true, will Mr. Pana y Pena's government be able to hold on until the action of our Senate is communicated?

The President has despatched a messenger to Mexico, with information of his recommendation to the Senate to reject the tenth article, and also the secret article providing for the extension of the time of exchanging ratifications to eighteen months; with the request that the Mexican Congress may adopt these amendments, if they proceed to ratify.

General Butler was apprized by the same messenger that the President had directed that the three million appropriation should not be drawn upon until official notice of the ratification of the treaty on the part of the United States, was served upon him. This precaution, if it reaches its destination, will relieve all apprehensions as to the three millions—if it fails to do so, and the *form* of ratification has been adopted by the Mexican Congress, which is now understood is to be composed almost exclusively of members favorable to peace, then the three millions are still subject to the tender mercies of Mr. Trist and the high contracting parties.

For the Western Literary Messenger.

Christabel.

There's a sweet rural cot by the side of a stream
Where the bright waters flash in the sun's golden gleam,
Half hidden by roses—embowered by trees
Their bows gently waving in Summer's soft breeze.

And these are the dwellers—a proud noble dame
That from warm sunny France, o'er the wide waters came,
And her sweet Christabel, in whose radiant eyes
A world of deep feeling all tranquilly lies.

From morning till evening our dear Christabel,
Free as thought, lightly bounds through the dingle and dell,
Seeks the spot where the first early flowerets peep
From the ground, just awaking from Winter's long sleep.

Go watch where the roar of the waters you hear,
Where the spray rises high—there's a fairy boat near,
Lightly dancing in joy on each foam crested swell,
Seeming proudly its burden, the fair Christabel.

There is grace in thy footsteps, scarce pressing the ground;
Thou art here but a moment—away with a bound;
My heart too is with thee—and ah I must tell,
I love thee! I love thee! most fair Christabel!

There's a proud one beside thee; his eye speaks of joy,
And thy love burning brightly no time can destroy;
Though a sigh of regret must my bosom oft swell,
Yet I'm glad thus to see thee so blest, Christabel.

ROYALTON, Niagara Co. IDA.

The Holy Land—Nazareth and Mount Carmel.

BY HARRIET MARTINEAU.

From the (London) People's Journal.

We passed the night of the 14th of April in our tents, just outside the town of Jenin. Our dragoman had warned us of the thievish character of the people of this neighborhood, so that we had an eye to such of our property as was lying about while the tents were preparing. The Governor called, had coffee, and appointed four guards; so that we supposed ourselves free from robbery. But in the morning the best mule was gone: and the four guards declared themselves wholly unable to say when, how, and by whom the animal was set loose from its fastenings and carried off. Our departure was delayed; the Governor was sent for; and a pretended inquiry was made: and this gave me opportunity to walk about for an hour after breakfast—through the little town, through an orange grove where every tree was white with blossoms; and up a neighboring hill, whence I saw, to my surprise, a snowy mountain peak to the Northeast. This was the summit of Gebel Sheikh—the mountain which closes the north end of the valley of the Jordan, and then joins on to the range of Antilibanus. From my point of view, I could see, too, the beautiful plain of Esdraelon which we were to traverse this day; and the hills to the north which enclosed Nazareth, where we hoped to sleep this night: and to the west, some tokens of the rise of a line of hills which we should soon see swelling into Mount Carmel, where we were to go tomorrow. What a prospect lay before both eye and mind!

Our dragoman told us we might make ourselves easy about our mule. He had no doubt it was in some stable in the town. We should be asked to leave a muleteer behind, and in a day or two the animal would be delivered to him, with the demand of a few piasters for the trouble of finding the mule on the mountains. It is probable that the matter stood exactly so, for the muleteer followed in two days with the beast, having paid fourteen piasters for the trouble of finding it!

Thus far, we have traveled only among hills and among valleys: and today we heartily enjoy our ride over the rich plain of Esdraelon. It was fertile and flowery from end to end; and the young partridges ran under the very feet of my horse. Small birds flitted in multitudes on every side; and the tall cranes stood among the high grass. The Carmel range grew upon the sight, as we had expected; and the blue hills of Galilee closed in the view northward. Little Mount Hermon rose on our sight; and on his north acclivity lay the village of Nain. A round hill, dropped over with old oaks, was Mount Tabor. Villages were well placed on such rising grounds as there were amid the plains; and our track lay, broad, level, and green, among rows of tall artichokes and patches of rich cultivation.

When about two-thirds of the way over, we crossed the great caravan track from Egypt to Damascus. We had been to Egypt; and we were going to Damascus; but we did not follow this track. We held on northward, to the Galilean hills.

We entered upon these hills about an hour before we reached Nazareth, winding up and down, and around the base of one, and the shoulder of another, sometimes amongscattered wood, sometimes over stony tracts, and always in sight of many goats. After mounting a very steep pass, and coming to a well, and winding round a hill once more, we came suddenly in sight of pretty Nazareth. Its basin of fertility is charming—its little plain, full of gardens and groves and fields, surrounded, as it seems, completely by hills.—The town is in fact a poor one; but, built of stone, and covering a good deal of ground, and extending a little way up the western slope, it looks well from above.

Here, then, we had before our eyes the scenery amid which Jesus grew up. Its character cannot have changed very much since his day. A fertile basin among the everlasting hills, and the primitive little town which they protect, must bear the same aspect from age to age. The great addition is the convent and church of the Latin monks; but these buildings do not stand out offensively to the eye; but mingle well with the flat-roofed stone houses of the town. In this convent we had to take up our abode. We longed to pitch our tents on the green below the town: but there was apprehension of rain, and it was thought better to go under the convent roof, which is truly a hospitable one.

I do not know what it is about the service of this church which is so affecting to strangers: but I observe that all travelers speak of the strong emotions excited here. Few believe that the places under the church are what they are said to be. Few believe that the little caves shown by the monks are the kitchen and sitting room of the parent of Jesus; and that the spots marked out by two granite pillars are those where Mary and the Angel stood at the time of the annunciation. I do not at all believe that these places were thus consecrated; yet I have seldom been so moved as I was this afternoon in the Church of the Annunciation at Nazareth. We were at least in the place of residence of Jesus, and saw what he saw every day;—the hollows of the valleys, the outlines of the hills, the streams in their courses, and the wild flowers which every where on the slopes spread under foot. We were in the place which he called home. Entering the church with these impressions on our minds, we were saluted with a chaunt from a full choir;—a chaunt sonorous, swelling, and exact;—the best music, incomparably, that I heard abroad. It told upon our very

hearts. Of course we visited the rocky recesses below the church, which are called the abode of Joseph and Mary; and saw no reason to suppose that, while citizens of Nazareth, they lived in a grotto, rather than a house.

We were shown, too, a portrait of Jesus, which the monks believe to have been copied from an original taken in his lifetime!—as if there had been portrait painting of that kind in those days! and as if the Jews would have considered it lawful if there had! Such ignorance on the part of the monks prevents our relying on any traditions given by them: and I will, therefore, say nothing of the other places pointed out as sacred by them. Nazareth itself is sacred enough; and it is merely offensive to one's feelings to speak of some of the strange stories the monks tell, and really believe, about Jesus and his family, in exhibiting what they declare to be the scenes of his life and daily actions.

The next day, the uppermost feeling throughout was of delight at the thought of the natural beauty amid which Jesus was reared. From the heights above the town we looked down into dells full of verdure; and abroad over the rich plain we had crossed the day before, and over toward Carmel, where we were going today. We rode among the hills for two hours, observing that clumps of forest trees became more frequent, and that the scenery was changing its character; and then we entered upon a tract which was so like the outskirts of an English nobleman's park that I could hardly believe we were in the Holy Land. Rich grasses covered up the slopes and levels, and clumps of ilex wooded every recess. We wound along under these clumps, and along the glades of the scattered forest, and upon broken banks, and then again through reaches of chequered shade. And how could we help thinking at every step who had once been here before us?

We were almost sorry to leave these park-like hills, though we were descending into the plain of Zebulon, and Carmel was before us, and we were about to cross the old river Kishon which Elijah knew so well when he lived in this region; and the blue sea was in sight; that sea from which Elijah's servant saw the cloud arise which was no bigger than a man's head.

We rode at the foot of Carmel, keeping the river Kishon for the most part on the right hand. There could not be a finer place of assemblage than this plain for the children of Israel and the worshippers of the Sun (Baal) when Elijah summoned them to meet. From the foot of Mount Carmel which stands out boldly into the sea, the beach stretches northward in a fine sweep of fifteen miles to Acre, and the old Tyre. The plain of Zebulon, thus inclosed between the Galilean hills, Carmel, and the sea, held the assembled multitude on that great day. The worship of the Sun was very imposing in all the countries where it subsisted. We have all heard of it as the worship of Apollo in Greece. I saw mighty temples to the same god, under the name of Ra, in Egypt and Nubia; and under the name of Baal at Baalbec—a few days journey from this place at the foot of Carmel, where his host of priests was defied by Elijah. (1 Kings, xviii.) Here stood his four hundred and fifty prophets, in all their pomp.

Next we ascended the mountain itself; and we spent two nights in the convent on its heights; so that the whole scene is well impressed on my memory. We went down the mountain-side that afternoon, to see the caves where the schools of the prophets used to be; where the young men were gathered together to learn what was known of religion, and to prepare themselves for its administration. Whether the principal cave was really thus occupied or not, some use was certainly made of it in ancient times. We found it a large square grotto; a spacious apartment in the mountain side, cool, shadowy, and solemn.—All about its entrance, and over all that side of the mountain, from the beach below to the convent on the height, was a perfect jungle of hollyhocks, ilex, odoriferous shrubs, herbs of many savors, and wild flowers as gay as the rainbow.—Dry and drooping was all this vegetation when Elijah came hither at the end of the long drouth and cast himself down upon the earth while his servant watched on the ridge above. But oh! what an expanse of sky and of blue sea was there for the man's eye to range over while looking for a token of approaching rain! To-day there was not in all the sky a cloud so big as a man's hand; but instead of a cloud, there was, at evening, the everlasting sign of the silver bow. When the sun had sunk beneath the waters, and left a golden glow on both sea and sky, the younger moon hung in the west yet a little while before "the excellency of Carmel."

The Character of Danton.

Ambition was his whole line of politics. Devoid of honor, principles, or morality, he only loved democracy because it was exciting. It was his element, and he plunged into it. He sought there not so much command as that voluptuous sensuality which man finds in the rapid movement which bears him away with it. He was intoxicated with the revolutionary vertigo as a man becomes drunken with wine; yet he bore his intoxication well. He had that superiority of calmness in the confusion he created, which enabled him to control it: preserving *sang froid* in his excitement and his temper, even in a moment of passion, he jested with his clubs in their stormiest moods. A burst of laughter interrupted bitterest imprecations; and he amused the people even whilst he impelled them to the uttermost pitch of fury. Satisfied with his two-fold ascendency, he did not care to respect it himself, and neither spoke to it of principles nor of virtue, but solely of force. Himself, he adored force, and force only. His sole genius was contempt for honesty; and he esteemed himself above all the world, because he had trampled under foot all scruples. Everything was to him a means. He was a statesman of materialism, playing the popular game, with no end but the terrible game itself, with no stake but his life, and with no responsibility beyond nonentity. Such a man must be profoundly indifferent either to despotism or to liberty. His contempt of the people must incline him rather to the side of tyranny. When we can detect nothing divine in men, the better part to play is to make use of them. We can only serve well that which we respect. He was only with the people because he was of the people, and thus the people ought to triumph. He would have betrayed it, as he served it, unscrupulously. The court well knew the tarif of his conscience. He threatened it in order to make it desirous of buying him; he only opened his mouth in order to have it stuffed with gold. His most revolutionary movements were but the marked prices at which he was purchasable. His hand was in every intrigue, and his honesty was not checked by any offer of corruption. He was bought daily, and next morning was again for sale. Mirabeau, La Fayette, Montmorin, M. de Laporte, the intendant of the civil list, the Duc d'Orleans, the king himself, all knew his price. Money had flowed with him from all sources, even the most impure, without remaining with him. Any other individual would have felt shame before men and parties who had the secret

of his dishonor; but he only was not ashamed, and looked them in the face without a blush. His was the quiet of vice.* [* "Infamous and contented."—*Junius.*] He was the focus of all those men who seek in events nothing but fortune and impunity. But others had only the baseness of crime—Danton's vices partook of the heroic—his intellect was all but genius. He had upon him the bright flash of circumstances, but it was as sinister as his face. Immorality, which was the infirmity of his mind, was in his eyes the essence of his ambition; he cultivated it in himself as the element of future greatness. He pitied anybody who respected anything. Such a man had of necessity a vast ascendency over the bad passions of the multitude. He kept them in continual agitation, and always boiling on the surface ready to flow into any torrent, even if were of blood.

Those who will not read the volumes of history may gain from the following sentence a correct idea of

THE FRENCH REVOLUTION ITSELF.

The virtue of the Revolution was in the idea which forced men on to accomplish it, and not in those who actually did accomplish it; all its instruments were vitiated, corrupt, or personal; but the idea was pure, incorruptible, divine. The vices, passions, selfishness of men were inevitably doomed to produce in the coming crises those shocks, those violences, those perversities, and those crimes which are to human passions what consequences are to principles.

If each of the parties or men, mixed up from the first day with these events, had taken their virtue, instead of their impulses, as the rule of their actions, all these disasters which eventually crushed them, would have been saved to them and their country. If the king had been firm and sagacious, if the clergy had been free from a longing for things temporal, and if the aristocracy had been good, if the people had been moderate, if Mirabeau had been honest, if La Fayette had been decided, if Robespierre had been humane, the Revolution would have progressed, majestic and calm as a heavenly thought, through France, and thence through Europe; it would have been installed like a philosopher in facts, in laws, and in creeds. But it was otherwise decreed. The holiest, most just and virtuous thought, when it passes through the medium of imperfect humanity, comes out in rags and in blood. Those very persons who conceived it, no longer recognize, disavow it. Yet it is not permitted, even to crime, to degrade the truth, that survives all, even its victims. The blood which sullies men does not stain its idea; and despite the selfishness which debases it, the infamies which trammel it, the crimes which pollute it, the blood-stained Revolution purifies itself, feels its own worth, triumphs, and will triumph.—*La Martine.*

The Letter of Mrs. Adams.

It was mentioned in the telegraphic Congressional report last week, that a letter of thanks had been received from Mrs. Adams, in answer to the resolutions adopted by the House adverting to the death of Mr. Adams. The following is a copy of the letter;

WASHINGTON, February 22, 1848.

SIR: The resolutions in honor of my dear deceased husband, passed by the illustrious assembly over which you preside, and of which he at the moment of his death was a member, have been duly communicated to me.

Penetrated with grief at this distressing event of my life; mourning the loss of one who has been at once my example and my support through the trials of half a century, permit me nevertheless to express through you my deepest gratitude for the signal manner in which the public regard has been voluntarily manifested by your honorable body, and the consolation derived to me and mine from the reflection that the unwearied efforts of an old public servant have not, even in this world, proved without their reward in the generous appreciation of them by his country.

With great respect, I remain, sir,
your obedient servant,
LOUISA CATHERINE ADAMS.

To the Hon. ROBERT C. WINTHROP,
Speaker of the House of Representatives, U. S.

THINGS BY THEIR RIGHT NAMES.—Avarice has often been mentioned as a characteristic quality of the people of New England and the Free States. The charge was eloquently repelled by WILLIAM DWIGHT of Springfield, in the following extract from a speech recently delivered in the Legislature of Massachusetts, in reply to Mr. BRYANT of Barre:

I suppose he means to change ignoble avarice as the leading passion of New England. I deny it. I have heard the taunt from other quarters. It often comes to us from the South. But I deny it, coming from what ever quarter it may.—Avarice is not New England's vice. New England, great and widely extended as she is in her commerce, vexing with it every sea and every coast; great in her manufactures, nestling by the side of every waterfall; great in her enterprise, spanning the whole land with her railroads; great in all the elements of material prosperity, in the luxuries and comforts of her cities, and the beauty and culture of her villages—is greater in her charities, greater in her beneficence, greater in her moral, her religious, her missionary efforts, greater in her endowments of common schools, of all good learning. No, hers is not hoarded wealth. Avarice is not New England's leading passion. Her wealth is hardly won and wisely spent. But I can tell the gentleman where he will find avarice, and something more—where it is not often sought—among the allies of the Northern democracy, the slaveholders, in the sunny, indolent, unenterprising South. A New England laborer brings home his day's earnings, wrung from his own muscles, and it is avarice.—The Southern slaveholder brings home another man's earnings, and it is—what? The New Englander sells the product of his day's labor, and it is avarice. The Southerner sells human flesh raised in his own house, and it is—what?—The New Englander pursues the whale in the Pacific, and hunts the beaver in Oregon—it is avarice. The Southerner gets up the Seminole war that he may, at government expense, hunt slaves in the everglades of Florida, and annexes Texas that he may sell his negroes at a better price, and it is extending the area of freedom.—We, at the North, speculate in stocks, in lands, and in houses—the South strikes for half a kingdom at once, to be won by our armies and ratified by treaties. The one case is avarice, the other glory. We pay millions for labor, and are aristocrats; the slaveholders have the labor of millions without pay, and are democrats. We at the North get our gold by the distillation of water, from the vapor of the steam engine; the South wring their gold, drop by drop, from the heart's blood of the slave. Our act is avarice—theirs is chivalry. Oh! the beauty of calling things by their right names. The gentleman from Barre says the pursuit of glory is more honorable than the pursuits of gold, which, being interpreted, means, that to spill blood is more honorable than honest industry.

HENRY W. STRONG, former Recorder of Troy, State Senator, and one of the Secretaries of the Constitutional Convention, died a few days since. Mr. STRONG was taken from a career which had thus far been marked by deserved honors.

Editorial Department.

J. CLEMENT, EDITOR.

Charter Election.

The election of city officers in this city, which took place on Tuesday, resulted in the choice of ORLANDO ALLEN, the whig candidate for Mayor; HENRY B. BURT, whig, Justice of the Peace; six whig Aldermen and four democratic; and three whig Supervisors and two democrats. The votes for Mayor in the several wards stands as follows:

	ALLEN—Maj.	HAYDEN—Maj.
1st Ward,		233
2d Ward,	272	
3d Ward,	74	
4th Ward,		19
5th Ward,	107	
	453	252
	352	
Whig maj.	101	

The following are the Aldermen elected:

First Ward—Walter W. Stannard and John M. Smith—democrats.

Second Ward—Daniel Bowen and Daniel M. Vanderpool—whigs.

Third Ward—Levi Allen, Whig, and Paul Roberts, democrat.

Fourth Ward—H. H. Matteson, Whig, and A. S. Merrill, democrat.

Fifth Ward—Luman K. Plimpton and Watkins Williams—whigs.

HISTORICAL VIEW OF THE LITERATURE OF THE SOUTH OF EUROPE. By J. C. L. SIMONDE DE SISMONDI; with Notes, and a Life of the Author, by Thomas Roscoe. New-York: Harper and Brothers. 1848.

M. DE SISMONDI was a voluminous, clear, rapid, spirited and correct writer. A republican in heart and a giant in intellect, he was prepared to render good service to humanity, and he labored not in vain. His literary remains are an invaluable contribution to modern letters. His History of the Italian Republics, his Studies on the Constitutions of Free People; his History of the Fall of the Roman Empire; his *abstract* of the History of the French (in 29 volumes!) etc., all compose a monument to his genius which towers in grandeur above the ashes of fallen Republics, and will be as imperishable as literature itself, to which his life was assiduously and successfully devoted. But his most popular, most interesting and perhaps most valuable work, is his Literature of the South of Europe. Probably no work has appeared during the present century which has contributed more to the study of the national literature of the continent, or added more to the popularity of the author, especially in France and Italy. Such is the opinion of Mr. Roscoe. A new edition of this work has appeared at an opportune moment. It was called for, in these parts at least. Only a few weeks since we searched in vain through the bookstores of this city for a copy. The publishers have issued it in a style worthy of the contents—in two neat and stable volumes: and it is a work which should be in every collection of books deserving the name of a library.

For sale by Hawks.

MARCH has come in with any number of lions—and more too. They are roaring on every hill, and Old Erie is one great den of them. While most of the month of February was as mild as April and much less fickle, the first week in this month was several degrees colder than Jehu. Who *can* speak in praise of such a "wild stormy month?"

MARCH.

BY WILLIAM C. BRYANT.

The stormy March is come at last,
With wind and cloud and changing skies;
I hear the rushing of the blast
That through the snowy valley flies.

Ah, passing few are they who speak,
Wild, stormy month! in praise of thee;
Yet, though thy winds are loud and bleak,
Thou art a welcome month to me.

For thou to northern lands again
The glad and glorious sun dost bring;
And thou hast joined the gentle train,
And wear'st the gentle name of spring

And in thy reign of blast and storm,
Smiles many a long, bright, sunny day,
When the changed winds are soft and warm,
And Heaven puts on the blue of May.

Then sing aloud the gushing rills,
And the full springs from frost set free,
That brightly leaping down the hills,
Are just set out to meet the sea.

The year's departing beauty hides
Of wintry storms the sullen threat;
But in thy sternest frown abides
A look of kindly promise yet,

Thou bring'st the hope of those calm skies,
And that soft time of sunny showers,
When the wide bloom on earth that lies
Seems of a brighter world than ours.

TO READERS AND CORRESPONDENTS.—The friends of education—including *all* our readers—will be interested in the excellent Address to Teachers, in this number of the Messenger. It would have been handed us for publication—agreeably to the solicitations of the members of the Institute—long ago, had the author found leisure to copy the original and hastily written manuscript. The Address ought to be put into the hands of every teacher and of every family in the County. A hundred extra numbers of the paper containing it have been struck off, and can be had at the Counting Room in the rear of Peck's Bookstore.

Accepted articles are on hand from Mrs. CHAMBERLAIN, "H. E. G.," J. H. BIXBY and "Adelia."

Religious Views of Mr. Adams.—The Washington correspondent of the Boston *Christian Register*, speaking of Ex-President Adams, says:

"On the last Lord's day morning, I saw Mr. Adams in his seat in the house, listening to the Rev. Dr. Matthew's second lecture, in which he recounted the testimonies of the great men of this world to the inspiration of the Bible and the doctrines of Christ. And in the afternoon, I saw him in his seat in St. John's church; where he attended public worship every Sunday afternoon. Mr. Adams has always been thus attentive on the worship of God. He was no Unitarian, and of late years, has attended the Presbyterian, and more recently, the Episcopal, church. His exact views will no doubt be revealed in his *Diary*, to which I have alluded; and I trust nothing will there stand recorded, which will cast a tinge of doubt on the confident hopes now entertained that Mr. Adams, to all his greatness, has added the crowning grace of being a disciple of the Lord Jesus Christ."

A System of English Versification; containing Rules for the Structure of different kinds of Verse: illustrated by numerous examples from the best Poets. By Erastus Everett, A. M. New-York: D. Appleton & Co., 200 Broadway.

This book supplies a long-felt desideratum. Heretofore we have had no *full* and *thorough* treatise on the versification of the English language. Lord Kames' is, we believe, the most elaborate which is adapted to the use of high schools and colleges, and, so far as it goes, is worthy of attention; but it is not complete. Mr. Everett's is: and since it makes only a medium sized volume, and is enriched with copious specimens of the best poetry in our language, it will find its way not only into the hands of the student in English literature, but into those of miscellaneous readers in general.

For sale at Peck's Bookstore.

Wilson Collegiate Institute.—It gives us pleasure to hear of the continued prosperity of this youthful institution. During the Winter term, which closed this week on Wednesday, there were about 140 students in attendance. Professor Wilcox, the principal, is one of the most popular teachers in Western New-York. The next term of this school begins about the middle of this month, we believe—though having mislaid a Prospectus which was sent to us, we are unable to state definitely the day.

Mayors.—The democrats have elected their candidate for Mayor in Cleveland; the whigs in Detroit, and the democrats in Rochester.

Mr. Warren, the celebrated temperance lecturer, gave an Address here on Tuesday evening, at the Lafayette Street Church. We hope his efforts will give a new impulse in this place to the cause which he ably advocates.

The Phrenological Journal for March, is for sale by Hawks.

Chloroform.—We copied a few days ago, from a Cincinnati paper, a paragraph announcing the death of a lady in that city, in consequence of taking Chloroform. In the *Atlas* of the 29th we find a statement of a post mortem examination of the deceased, signed by Drs. Lawson, Mussey, Baker and Mulford, widely known as highly respectable physicians, from which we copy the following conclusions:

1st. Mrs. Simmons, as shown by the condition of the various organs of the body, was in good health when the Chloroform was administered. It is true she had labored under a slight catarrh a few days previous to her death; but we are of opinion that the very slight diseased action which existed, was in no way instrumental in causing the fatal result.

2d. We have no hesitation in expressing the opinion, that death was caused by the action of Chloroform.

3d. Death resulted from a rapid and complete exhaustion of the nervous system.

We would again caution our readers not to resort to the use of Chloroform or Letheon, to allay or prevent the pain caused by slight surgical operations, and never to use it in any case except under the advice and by the administration of a well-instructed physician or surgeon.

Death of W. F. P. Taylor.—We are again admonished of the fearful uncertainty of life.—Col. W. F. P. Taylor, for many years an active and enterprising business man of this city, died this morning. He rose from his bed in apparent usual health, but soon complained of feeling numb, and uttering the words, "I believe I am dying," fell back and expired before any assistance could be rendered. For two or three years past, his health had not been very firm, but his sudden death has carried a shock scarcely less than if he had been in the full vigor of life. He was about forty years of age.—*Com. Adv.*

☞ Mr. Asa Ellis, an old resident of the town of Arkwright, Chautauque County, which has been long, though unjustly, proverbial for its barrenness, raised a hog which was killed when 21 months old and weighed *seven hundred and twenty-eight pounds*. It was sold in this city for Eastern consumption at the rate of $6 per cwt., being $43 67 for the whole. The Fredonia *Censor* infers that "the fat of the land" is sometimes to be found on the hills."

New York, March 5—7 P. M.

Dispatches from Washington state that the ratification of the Treaty, with some modification, is almost certain, and that the vote will probably be taken on Tuesday. The Treaty is gaining ground every day.

Mr. Webster, it is reported, will introduce the Wilmot Proviso as a clause in the Treaty.

In the House, yesterday, Mr. Cabell spoke against the Administration, on the Loan bill.—Mr. Vinton moved a substitute, authorizing an issue of Treasury notes, which was adopted.

Agents.—On our last page is a list of Agents. In appointing new ones we wish none to apply who are not interested enough to exert themselves manfully in our behalf.

The Horticulturist for this month—a good issue—is for sale at the Literary Depot in the Post Office Buildings.

Arrival of the Britannia.

New York, March 4—11½ A. M.

The steam ship *Britannia* arrived at the dock at Boston this morning at 9 o'clock.

The British Parliament re-assembled, and the first debate arose upon motion for a select committee to enquire into the condition and prospect of the West India Colonies—Jewish disabilities, by enabling them to sit in parliament—read a second time. The refusal of the American Postmaster General to accept the terms offered by Great Britain for a better system of international postage, has caused the utmost dissatisfaction—a proposal reciprocally made by the latter country, universally regarded as liberal.

The Archbishop of Canterbury, Primate of all England, died yesterday morning in the 82d year of his age.

Lord Palmerston has given notice to Austria that any farther armed intervention in papal affairs will be considered a declaration of war by Great Britain.

The Inquiry into the State National Defences was ended in the determination to double her artillery force, embodying 15,000 militia. The country at large is opposed to the measure.

The inhabitants of the two Sicilies triumphed over the King, and a Constitution has been agreed to—founding liberal Legislative representation.

France is more tranquil, but angry discussions continue in Chamber of Deputies.

The overland mail brings intelligence more satisfactory. In India no additional failures.

Affairs in Ireland bad. Starvation in several parts.

Trade in England.—Partial indications of improvement in trade in England were manifested. Toward the close of last month, this view has been remarkably confirmed. Trade has taken an earnest step toward the recovery of its long lost strength, and the re-establishment of ease and confidence.

The money market continues to improve.—Messrs. J. Evans, Sons, & Co. of this town, connected largely in the Iron trade, has suspended payments. With this exception no failure of importanae has occured in Great Britain. Liabilities are estimated at £200,000.

English funds quite quiet.

On the 13th March it is expected that the duties will be about six shillings per. quarter on wheat, and three shillings and sevenpence one farthing, per. barrel on flour.

Liverpool—Feb. 12.

Markets.—Best Western Canal Flour, 27*a* 27s 6d. Richmond and Alexandria, 27*a*27s 6d. Philadelphia and Baltimore, 26s 6d. New Orleans & Ohio, 26a26s 6d. Canadian, 27*a*27s 6d. U. S. and Canadian sour, 22a23s 6d. Indian Corn, 28a32s 6d per quarter. Indian Meal, 12s 6d *a* 13s per barrel.

Wheat.—United States or Canadian, white and mixed, 7s 6d *a* 8s 6d per 70lbs. Red, 6s 6d.

The decline in bread stuffs has been gradual. Supplies good.

Cotton has improved in demand one farthing per pound. Larger business and gradually mending.

Trade.—All branches reviving. Money market easier. Discounts free. Only one important failure. Consols 89¼.

Liverpool Provision Market—Feb. 12.—Beef prime mess from tierce 87a90s; ordinary, 67a75s; old 68s to 82s; mess per bbl 40s to 56s; ordinary 36s to 40s; prime 30s to 32s; Pork—prime mess, new, per bbl not quoted; old 48s to 60s; mess 48s to 55s; prime 35s to 40s.

Bacon—dried and smoked old per cwt. 15s to 30s. Long middles 27s to 40s. Short ribbed in new 45s to 54s. Butter—U. S. fine not quoted. Canada 58s to 67s. Hams smoked ordinary in canvas per cwt. 20s to 50s. In casks 20s to 33s. Lard, fine leaf and kegs, 57a59s. Do in bbls 55a48s. Ordinary to middling, 58s to 54s. Inferior and Grease, 30s to 35s.

Cheese, fine, per cwt., 46s to 49s. Middling, 38s to 45s. Ordinary, 30s to 39s.

Congressional.

Washington, Feb. 24th.

Senate.—Mr. Benton submitted a resolution requesting the President to communicate the details of the Court Martial which tried Fremont.—Also gave notice that he would ask leave to introduce a joint resolution, directing the purchase of American Hemp, for the use of the U. S. Navy.

Some personal explanations passed between Foote of Miss., and Yulee of Fla. The latter called the attention of the Senate to the report in the N. Y. Herald, respecting the debate on slavery, in which Mr. Foote is charged with misquoting the authorities which he cited on the occasion. Foote replied, exonerating the reporter. He did not charge the Senator with misquoting but intended to have said misconstruction of the facts, referred to. A sharp discussion followed. The Senate then went into Executive business.

House.—A bill was presented granting the franking privilege to Mrs. Adams. 29,000 copies of the Eulogy in the House, and the same of Mr. Gurley's Sermon were ordered printed.

After the reception of petitions a resolution was adopted requesting the Committee on Expenditures to report the expenses of the war, and as far as practicable give items of the same.

Mr. Putnam offered a resolution in favor of excluding slavery from all territory to be acquired from Mexico. Laid on the table—yeas 105, nays 92.

The House resolved itself into committee of the whole on the state of the Union on the bill for supplying deficiencies in the appropriations for the present fiscal year. Mr. Schenck, of Ohio, moved to strike out $5,000 to pay the expenses of negotiating the loan, and in relation to substituting treasury notes. He went into a lengthy argument to show the soundness of his views and the inexpediency of adopting the bill as reported to the House, and descanted on the bad operation of the sub-treasury law.

February, 29.

Senate.—A message was received from the President in answer to a resolution of the Senate of the 24th inst., requesting to be informed

whether the active operations of the army of the United States in Mexico have been and now are suspended, and if so, by whose agency, and in virtue of what authority such armistice has been effected.

The President states that he has received no information relating to the subject other than that communicated to the Senate with his executive message on the 22d inst.

Mr. Clark presented a Resolution of the General Assembly of Rhode Island, in favor of bringing the war to a close, and asking that the officers of the Texan Navy may be incorporated into the navy of the U. S.

Mr. Hale presented numerous petitions from Maine, Mass., Ohio and N. Y and praying for the withdrawal of the U. S. troops from Mexico, and the speedy termination of the war. Mr. Hale also presented a number of Anti-Slavery petitions.

A Resolution was submitted yesterday by Mr. Benton requesting of the President to communicate a copy of the proceedings of the late Court Martial, on the trial of Lieut. Col. Fremont was agreed to.

The bill conveying the Franking privilege to Mrs. Louisa Catharine Adams was received from the House.

Several memorials and petitions were presented. Among them was one presented by the Vice President for a grant of land for the construction of a Rail road in Iowa, which was duly received and ordered to be printed.

Mr. Breese presented resolutions adopted by the Legislature of Ill., in favor of a rail road from lake Michigan to the Pacific, which were received and ordered to be printed.

The Speaker laid before the House an elegantly written letter, by Mrs. Adams, relict of the late John Quincy Adams, acknowledging the receipt of the resolutions of the House, and rendering the sincere thanks for the distinguished and signal manner in which the feelings of the House, and the regard of the Public had been manifested. Adjourned.

THURSDAY, March 2.

SENATE.—Mr. Webster presented a petition, numerously signed by citizens of Massachusetts, praying for a specific duty on fish from foreign countries.

Mr. Dix submitted a resolution instructing the Library committee to enquire into the expediency of directing the Secretary of the Treasury to transmit to the French government our standard of weights and measures, by Mons. Vattemare.

Mr. Mason, from committee on claims, reported in favor of a committe of conference in regard to House amendments to the bill for the relief of the heirs of John Paul Jones. The bill was passed over.

On motion of Mr. Sevier of Arkansas the Senate went into executive session.

HOUSE.—Mr. Palfrey fills vacancy in library committee occasioned by the death of Mr. Adams.

The bill in reference to examiners in the Patent Office was taken up, and the amendment in respect to the salaries was passed. The bill also passed.

Mr. Vinton presented a resolution, which was adopted, to terminate the debate on the deficiency of appropriations for the fiscal year, to-morrow—which was adopted.

The Speaker laid before the House a letter from Mr. Smith in regard to his ingenious and time saving invention for taking yeas and nays on legislative bodies. Referred to the committee on public buildings.

NEW YORK, March 6—7 P. M.

The Rev. Dr. Lyell died at his residence in Anthony street yesterday morning.

On the 9th Dec. the brig Louisa arrived at St. Helena, a prize to the British steamer Heroine, with 640 slaves on board. Between 70 and 80 had died on the passage. Seven other vessels had been taken prizes within two months for being engaged in the slave trade, and had arrived at St. Helena.

THE TREATY.—The Washington Union says the general impression at Washington on Saturday, was, that the treaty would be ratified. The question will be taken early this week, perhaps to-morrow.

A letter from Porto Cabello, dated Feb. 10th, says Monagas the President of Venezuela has caused himself to be nominated to the command of the Government troops. Gen. Paez has pronounced against the Government, declaring that he will not respect the acts of Congress as long as it is under intimidation and not a free agent. Both parties are taking the field. Monagas has raised the country to aid him, and has proclaimed Paez a traitor.

Gen. Paez is represented as being at the head of a large force of cavalry, and infantry of 2,000. Government troops were marched from Caracoas to the plains, and it is reported that engagements have taken place between detached parties of the government forces and Paez's adherents, in which the latter was triumphant. Gen. Sotillo on the Government side has been wounded, and Gregorio Monagas also. The Government is said to have been defeated and 200 of its men killed and taken prisoners. El Paz and El Paula have both been captured by Paez. Business is completely prostrated.

WASHINGTON, March 4.

Despatches have been received from Mr. Shields, Charge to Venezuela, dated Feb. 1st. 1st, containing intelligence of such serious importance, that instructions were forwarded to Com. Perry on Friday, to send one or more vessels of war to Venezuela for the protection of American citizens and their property.

The escort of Mr. Adams's remains have decided to remain at Baltimore till Thursday.

The Whig caucus on Thursday came to no conclusion about the Treaty. Two articles of the Treaty were stricken out yesterday. One of them was confirming Mexican land grants, &c. The indications were this evening favorable to the ratification of the Treaty. Great efforts will be made to take the final question today.

The Kingston British Whig mentions that twelve men deserted from the 20th Regiment, now in garrison in Kingston on Sunday night. Owing to the gale of wind, which broke up the ice, they failed to get across the river, and four were drowned; the other eight were captured and brought back to barracks in company with a Yankee, said to be a sergeant in the U. S. Army, who is accused of enticing them to desert.

☞ The Legislature of Kentucky, on the 23d ultimo being the anniversary of the battle of Buena Vista, appropriated $5000 for the erection of a monument in the State's portion of the burying ground at Frankfort, in honor of her brave sons who have fallen during the war with Mexico. All other business was suspended to make room for this, and the resolution was passed almost by acclamation.

SUDDEN DEATH.—DANGER OF CHLOROFORM.—The Coroner yesterday held an inquest on the body of Patrick Murphy, a native of Ireland, who resided temporarily at No. 50 Cherry st. The deceased was by occupation a laborer, and worked on the New Haven Railroad, and has a wife living at Mamaroneck, West Chester County, N. Y., to whom he had been married about four months. The deceased had on the lower part of his body, a fistula, with which he had been afflicted about two months and a half. But his wife testified that his general health was good, although he was in the habit of indulging in the use of spirituous liquors. About four weeks since, he came to this city for the purpose of being operated on, and applied to the College of Physicians and Surgeons in Crosby street, where an operation was performed upon him. Previous to performing the operation, a quantity of chloroform was administered to him, so that he exhibited no signs of sensibility during the whole of the operation, which lasted some minutes.—He soon rallied, however, from the effects of the chloroform, and got up and walked. The wound was dressed after the effects of the chloroform had passed off, and then he retured to his home. He was visited every day by Dr. Beers, and about four or five days ago it was considered necessary to perform another operation on him. The deceased said that he was willing, but that he must have the chloroform or he would not consent. The chloroform was accordingly put on a cloth and given him to inhale, after which Doctor Rattan performed the second operation, the first having been performed by Dr. Parker. Immediately after the operation was concluded his pulse ceased to beat, and stimulants were applied outwardly and inwardly, but without any effect, and it was soon ascertained that he was dead. Between the time of performing the first and second operation, he exhibited no signs of any internal disease, &c.

In order to ascertain the cause of his death a post mortem examination was made by Doctor Wood, in the presence of several eminent physicians. This examination left it doubtful whether the death of deceased had been caused by chloroform or occurred from disease of the lungs, which the deceased was then laboring under. But Dr. Wood states that where there exists in the lungs any undue excitement, it will cause death, and that at all times chloroform should be used with great caution, although he had never known of persons being injured by it. But in cases where the brain, lungs or heart are diseased, or a predisposition to disease exists, it should not be used.—He also says that disease of the lungs sometimes exists when there are no outward signs, and that fistula tends to conceal the existence of such diseases.—*Journ. of Com.*

Congressional.

WASHINGTON, March 3.

SENATE.—A message was received from the President, communicating the correspondence between the Government and Mr. Wise, called for by a previous resolution of the Senate. It was ordered printed.

Mr. Cass proposed to introduce a bill for the purpose of ascertaining and paying California claims.

Mr. Dix presented a memorial from physicians and surgeons of New York, regarding the adulteration of drugs, which was referred.

Mr. Dickinson, of N. Y., presented the proceedings of a large and respectable meeting held at Saratoga, against the war, and in favor of peace.

Mr. D. then moved to resume the consideration of the special order, but gave way to take up a joint resolution of the House, to purchase maps, charts, &c., for the use of the Congressional Library, which was disposed of.

Mr. Dayton, of N. J., presented resolutions passed by the Legislature of said State, instructing their Senators and Representatives to support Whitney's plan of a railroad to the Pacific. In introducing the resolutions the Senator took occasion to say that they were contrary to his pre-conceived opinions, and that he did not feel the necessity of being guided by them. They were ordered printed.

Mr. Westcott submitted a resolution that 1000 additional copies of Cooke's report be printed.

On motion of Mr. Sevier, the Senate went into Executive session.

HOUSE.—Mr. Rockwell, of Ct., moved to suspend the rules to introduce resolutions that all debate in committee of the whole upon the bill making appropriations to supply deficiences in the appropriations for contingent expenses for the last fiscal year should cease tomorrow at 2 o'clock—and that the House should then proceedto a direct vote upon any pending amendments. The rules were suspended, and the resolution adopted without a count.

A motion was made that the House resolve itself into committee of the whole on the private calendar, this being the day specially set apart for the consideration of such bills. The motion prevailed. The House then went into committee, Mr. Ashmau of Mass. in the chair. After some time spent on private bills, the committee rose.

The Speaker then laid before the house sundry communications from the Executive department, including the report of Commissioner of the Patent Office; a statistical report in relation to the number of emigrants that have arrived in this country during the past year.

The usual number of these documents were ordered printed, and a motion to print an extra number of copies, was referred to the committee on printing. The House then adjourned.

Funeral of Mr. Adams.

Correspondence of the N. Y. Tribune.

WASHINGTON, Feb. 26, 1848.

The obsequies of Ex-President Adams have been performed to-day with great ceremony, and great solemnity. It was a heartfelt occasion.—No one who took part in the ceremonies but felt, or seemed to have felt, sadness at the great deprivation.

All the public houses of the City have been shrouded and closed. From the President's House to the Capitol was one unbroken vesture of mourning.

The Capitol on the outside and within was covered with crape. The Hall of the House of Representatives was appropriately prepared for the occasion.

It was densely crowded at an early hour, galeries and floor. All the distinguished of the land were present. On the right of the Speaker sat Mr. President Polk, on the left Mr. Vice-President Dallas. Mr. Polk looked well, but sorrowful; his hair was combed straight to the back of his head, leaving his whole ear exposed—an indication that it was always open to the faintest demand for justice.

The Cabinet sat on the floor of the House, on the right hand of the Speaker—in their rear was placed the somewhat multitudinous Senate. In close juxtaposition sat Col. Benton and Mr. Calhoun, as pall-bearers, with the coffin in front.—Their countenances seemed to wear an expression suitable to the impressive scene. It would

be too curious to speculate, whether the thought occupied their minds that they had united in fierce determined hostility to Mr. Adams's administration, and had been in as fierce hostility to each other ever since. Near them was Mr. Webster, who had been the chief supporter of Mr. Adams's administration, and who was now one of the chief mourners. He seemed temporarily to forget his own grief in his sympathy with others.

The Youth of the Heart.

BY MRS. C. M. SAWYER.

"Shall I never grow old?" said a fair little girl
As she stood by a fond mother's knee,
And to s'd from her forehead the clustering curls
And turned up her bonny blue e'e.

"Shall I never grow old, as the beggar has done
Who yesterday came to our door?
And ne'er again look on the light of the sun,
And see the sweet flowers no more!

"Will my face be all wrinkled with sorrow and care,
And my pretty brown tresses turn white?
Oh, mother, I'm sure that I never could bear,
To become such a sad looking sight!"

On her fair little daughter the mother looked down,
And her face wore a sorrowful smile,
As she smoothed back the beautiful tresses of brown
And gazed in her blue eyes the while!

"Oh yes, my dear child!" and the tears gathered fast,
As she spoke, in the mother's dark eye,
"The charms we so prize in our youth cannot last,
And wrinkles and age will draw nigh!

"This beautiful forehead, so placid and white,
This cheek of the carnation bloom,
Must yield up the delicate tints to the blight—
The precursor that points to the tomb!

"To wrinkles these dimples at length will give way,
These locks will be sprinkled with gray,
And who is there, then, could discover a trace
Of the beauty my child wears to-day!

"But the youth of the heart"—and the mother's dark eye
Grew soft as the eye of a fawn—
"May live in its greenness when age has come nigh,
And the rose and the lily are gone!

"That youth! 'tis an evergreen—nourish it well
With the dews of affection and love,
And still in thy bosom unfading 'twill dwell,
When thy spirit ascendeth above!

"Oh, the youth of the heart! 'tis more precious than gold,
For it cheers e'en decrepitude's way,
And makes the world bright to us when we are old,
As it was in life's earliest day!

"Then grieve not, my child, though thy cheeks should grow pale,
And thy beautiful tresses turn gray—
But guard well the youth of thy heart, that it fail
Nor die with thy beauty away!"

MARRIED.

At Black Rock, on the 2nd inst., by J. Frick, Esq., Mr. JACOB MANGOLT, and Miss LOVINA COLE.

DIED.

On the 29th ult., Dr. HENRY RUTGERS STAGG, aged 46 years.

On the 29th ult., WILLIAM HENRY, only son of W. H. and Lydia Wing, aged 11 months and 29 days.

At Black Rock, near Cold Spring, on the 23th ultimo, JANE, wife of Henry Streeter, aged 42 years.

At Clarence, on the 25th ult., MARY ELLA, daughter of Benjamin T. and Jane E. Adams, aged 6 months and 19 days.

At Batavia, on the 15th ult., NAPOLEON B. BUEL, aged 46 years.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

*** All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

Western Literary Messenger.

VOL. X. BUFFALO, SATURDAY, MARCH 18, 1848. NO. 7.

For the Western Literary Messenger

Extract,

FROM AN UNFINISHED DRAMA.

I would I claimed a face as fair
As those the sinless angels wear
To watch thy blissful dreams above,
And cheer thy waking hours, my love;
So bright that every thought of me,
Might prove a dream of heaven to thee.

I would my voice were soft and low,
As those from seraph harps that flow,
To pour, with wild'ring notes and clear,
My heart's love-burthens on thine ear,
And in the silvery silence float
Around thee, like some charmed note.

I would my foot life's path might trace
Beside thee with a fairy's grace;
While chased my hand, with touch of air,
From off thy brow the wand of care,
And skilled to turn, with magic art,
The breath of sorrow from thy heart.

I would I were a charm,—a spell,—
A light within thy breast to dwell;
A thing of heavenly radiance fair
For thy proud hand to cull and wear;
The brightest flower of tropic clime,
That blossoms in the summer's prime.

And like that flower of Southern skies,
That of its own rich fragrance dies,
I still were blest, though one brief day
Should wear life's golden chains away,
If so the life I yield to thee,
Might but a worthy offering be.

CLEVELAND, O., Feb. 1848. H. E. G.

The Skipper's Jack-at-a-Pinch.

"This is a fact, and no poetic fable."—*Byron.*

About two o'clock of the afternoon of the —— day of May, 1807, four persons were assembled in the parlor of a house on the stage road, ten or fifteen miles below Tarrytown. A gentleman of middle age, the master of the house, with his wife, and a beautiful daughter, were in colloquy with an individual of a dignified air, and singularly handsome countenance, about thirty years of age, who, with his valise in his hand, and his cloak on his arm, appeared accoutred for travelling.

"I am truly sorry, Judge," said the host, "that we cannot detain you any longer."

"We certainly expected you to remain another night with us," said the wife.

"At least," said the daughter, with an engaging smile, "you will wait until the stage passes to-morrow noon?"

"It is difficult, my kind friends," replied the stranger, "to resist invitations so pressingly offered; and," said he, turning to the daughter, "if anything could induce me to forego my resolution, my dear young lady, it would be your solicitation; but I have been long absent from home. The circuit has been prolonged far beyond my expectations; and indispensable engagements hurry me away. If I recollect right," continued he, turning to the host, "there is a fishing hut on the river side, somewhere opposite us; and there was once a path which led down the mountain to the spot: be good enough to put me in the way to find it, and I will make for the station."

"It is passable only on foot, or on horseback," said the host, "or I would take you down in the carriage; but there is an opening in the wood, just yonder, which leads to the path, and, that once gained, you cannot go astray."

After many friendly greetings on all sides, the stranger made his bow and departed. The path was found; and, trudging onward, he soon emerged from the ravine above the beach, where a group of fishermen were waiting the proper time of tide, to resume their labors. A couple of skiffs were drawn up on the shore, near which the congregation was assembled.

"Whose skiffs are these?" asked the new comer. "I want to be put on board one of those vessels in sight."

There was a light wind blowing from the northwest; and the white sails of the river craft were seen far above and below—some nearly opposite, and some far distant.

"This one," responded a fisherman, "is mine; but we can't spare time to put you on board, for it will soon be time for a haul. The other belongs to the person now coming up."

The stranger inquired, as the other came near enough, whether he would accommodate him with a passage on board.

"I can let you have the skiff," he answered; "but I am obliged to go up the road. Here, however, are a couple of idlers, who will undoubtedly row you off, and bring back the boat."

The suggestion was adopted; the wherry was chartered, and the oarsmen engaged for the voyage.

While the men were getting the boat in proper order, a woman made her appearance, dressed in a linsey-woolsey gown—not of the finest texture, or of the newest fashion, and none of the cleanest, withal. The face of this person was cast in the true Xantippian mould, with eyes so horribly askew, that an operator for strabismus would have coveted her as a subject for his skill; and, to crown the picture, the visage of the lady was of such a "vinegar aspect," as to warrant the belief that she had fed on crab-apples for a fortnight. Approaching the men, who were nearly ready to shove off, she accosted one of them thus:

"You're going off to them sloops, aren't you, Jake? I don't care if I go along."

"I do, Mrs. Nox!" said the oarsman. "There will be two words to that bargain. That man," pointing to the stranger, who was coming down, "has hired the skiff; and, if he don't like your ugly mug better than I do, you won't get a passage this time."

The woman scowled in a fearful manner, but made no reply.

"You're going," said she, addressing the stranger, "aboard of them vessels. I want to go to York; and I can go aboard with you, just as well as not?"

"Exactly so, madam," said the stranger; "step in."

The skiff had but three seats—two for the oarsmen, and the stearn-sheets, built sufficiently broad to take two persons abreast. The stranger, with his valise on his knee, took one side, and the woman, with a very unsightly bundle in her lap, the other; and off shot the wherry into the stream, towards the nearest vessel. The stranger waved a pocket-handkerchief as a signal; and the skipper, putting his helm down, and hauling aft his main-sheet, bore up for the skiff. But as soon as they got near enough for a fair scrutiny, he exclaimed:

"Up helm, Joe! Square away! Them's no customers for me!"

"By Jolly, I thought so!" said the oarsman who had rebuffed Mrs. Nox—Mrs. Erebus, she might have been better named—as she cast a midnight-glance at the offender. A second vessel was tried with no better effect—a third with like success: at length a Tarrytowner answered the signal, and took them on board.

By this time it was near sun down; and, as they got upon the deck, the skipper addressed the stranger thus:

"I don't know how I'm to accommodate you and your woman with berths and bedding; and I'm afraid you won't fare very well for supper, for my cook got on a spree ashore, and we were obliged to leave him. However, the mate and I, who are all hands now, will cook up something or other."

The stranger had walked aft, and the woman was sitting near the hatchway, when the captain addressed her in an undertone, which yet was heard on quarter-deck:

"That 'ere's your man, I take it?" said he, pointing over his shoulder.

"He aint no such thing!" said the woman, bridling up: "my man is a rather guess sort of fellow from him. I only got that 'ere chap to put me on board,"

The captain now accosted his other passenger:

"This ain't your woman, I find?"

"O, no!" was the reply; "only a chance passenger."

"I thought you *was* queerly *yoked*, when I first saw you," said the captain. "I'm thinking I shall give *you* the old sail, which is the only thing to sleep on on board, and let her have the soft side of the plank I was going to give you."

"By no means! Give the poor woman the best accommodations you can. As for me, I shall do well enough."

The wind was failing, the tide turned, and the sloop was brought to an anchor—the jib hauled down, and the main-sail left standing, skipper fashion—when the captain and his adjunct began preparations for refection.

"I say, ma'am," said the captain, "I've a notion that you could lend us a lift with this 'ere supper?"

"I shan't do no such thing," was the reply. I expect to pay for my passage; and if you've got any supper to get, you may get it yourself."

The captain did not outdo the Niblos and Delmonicos of the time; and his beef-steaks, fried in—the Lord knows what—fell far short of those of old Baker, of the City Tavern in Wall-street, in tenderness: Nor was the hyson of the first quality, or the sugar of the whitest; and although the lady grumbled, the stranger took everything kindly.

When it was time to retire, the lady took possession of the best berth, and the old sail; while the stranger, wrapped in his cloak, turned in, in the *gite, pis-aller* that remained.

It was past midnight, when, from a horrid dream that he was undergoing the *peine forte et dure*, (so indurate was even the soft side of the plank the captain spoke of,) that functionary shook him rudely enough by the shoulder, and awoke him from his slumber.

"I say, Mister, aint you a doctor?"

A negative was returned.

"I'm sorry for it," continued he. "Here's my mate has got the awfulest stomach ache ever man had. I was in hopes you had something in them saddle-bags which might do him good. Do see if you can't help him."

The passenger arose; and, assuring the captain that there was nothing medicinal in his portmanteau, went over to the mate, who was writhing in great agony, and groaning heavily.

"Have you gin and peppermint on board?" he asked.

"Yes," responded the captain. "I've tried that, and it don't help him."

"Have you any pearl-ashes, then?" he inquired.

"O, yes!" answered the captain; "I always keep that. With hard-cider, in a morning, it is a capital drink."

"Well then," said the stranger, "bring it; and get some hot water, as quick as you can."

"The kettle must have boiled by this time," said the captain; "for I put it on some time ago;" and, going forward to the caboose, he returned with the necessary ingredients for a drench. Putting the proper quantity of alkali into a pint mug, and pouring the water upon it—leaving sufficient "*sky-light*" for the infusion of due measure of right *schiedam*, sweetening the dose, and qualifying it with peppermint—the stranger administered the portion to his patient, which, in a short time, essentially relieved him; and dose number *two*, half an hour afterwards, having been imbibed, the sufferer, who was entirely prostrate by the pain, fell into a quiet slumber.

The stranger now again turned in; but had scarcely gotten into a dream, as uneasy as the first, before the captain was again at his side.

"Mister," said he, "the tide is now high-flood, and there is a smart breeze getting up. I want to get under weigh; and Higgins, here, is too sick to help. Now, do just get up, and haul in the slack, while I rouse up the anchor—do, that's a good fellow!"

The passanger was not obdurate; and, after proper application, and the usual "Yo! heave ho!" at the windlass, the ring of the anchor was hove chock to the hause-holes, the jib was hoisted, and the sloop was tearing down before it.

The passenger again resumed his berth, where he remained until day had broken, when the captain once more made his appearance.

"I say, Mister," said he, "the wind has chopped about: I want a hand to tend jib-sheets—Higgins can't do it; so, just you bear a hand and help me, and a few stretches will bring us up with the dock."

Up got the passenger, and took the station assigned him, performing his duty with great alacrity; receiving the orders, "haul aft!"—"be spry!"—"pull away!"—"another pull and belay!"—at every tack; and, by dint of hard labor, on his part, and good steerage on the part of the captain, they got into the slip, and let run the halyards.

"Now heave 'em a rope!" shouted the captain. "Bear a hand!—bear a hand!—now haul in—haul in!"

These orders were promptly obeyed; and the sloop was safe at the dock. While the captain was stowing the sails, the stranger went below, and soon returned in his cloak—valise in hand.

"Well captain," he asked, "what's to pay?"

"Pay!" said the skipper; "if there's anything to pay, I'm the chap that's got to do it—so, Mis-

ter, just tell us what's the damage, and I'll shell out directly—and thank you into the bargain. I never want a better Jack-at-a-pinch, than you are. Just say how much, and here it is;"

"Poh! poh!" said the passenger, "you are welcome to all I have done; but I must pay for my passage. Is this enough?" handing him a bank-note.

"Why, this here," said the captain, looking at the note, "is five times as much as I should have charged you, if nothing had happened; but if you say take it, I will, and thank you kindly.—And now, Mister, I should like to know where you live, and what your trade is, if it ain't asking too much?"

"I have been a lawyer, and live hereabouts," said the stranger.

"Well, one thing more, and I hope you won't think me too sassy: do tell me your name?"

"Tompkins," was the reply.

"Where from?"

"Westchester."

"No relation to 'Squire Caleb Tompkins, up here?"

"Yes" was the answer.

"Not very near, I take it," said the captain.

"Only his brother," was the response.

"His brother!—Caleb Thompkins' brother!" said the captain, aghast. "Why, you can't be Daniel D.?"

"The very same," said the stranger, smiling.

"Pheww!" here the captain gave an interjectional whistle. "Here's a pretty business! By the pipers! you're the new Governor?"

"So they tell me," said the Governor.

"Why, what an infernal impudent fellow you will think me! Here I've been getting you to physic my mate, and set you to working my old sloop; and I've been ordering you about, just as if I'd hired you at eight dollars a month! You'll forgive me, I know, for this; and all I can do, is to ask your pardon!"

"Nonsense!" said the Governor; "come, shake hands, for I must be off," and he held out his hand.

The captain, somewhat hesitatingly, seized the proffered hand in both his, and squeezed it quite hard enough for the comfort of the owner.

"Well," said he, "I've got one consolation, anyhow. I've always voted for you, whenever you have been up; and, last April, I, and five brothers, gave you a plumper for Governor; and if any of my kith or kin ever votes for anybody else, as long as you are going to stand, call me a flunkey! that's all."

There is no doubt that the skipper kept his word, and voted ever after for "The Farmer's Boy;" and there are few who ever held such close communion with Daniel D. Tompkins, that ever bolted at an election when he was a candidate.—*Home Journal.*

FREDERICK DOUGLAS' NORTH STAR.—FREDERICK DOUGLAS, the Editor of the *North Star*, an anti-slavery paper recently started at Rochester, alludes in the following elegant strain to the considerations which guided him in the selecting a title for his sheet:

Of all the stars in this "brave, old, overhanging sky," the NORTH STAR is our choice. To thousands now free in the British dominions it has been the STAR OF FREEDOM. To millions, now in our boasted land of liberty, it is the STAR OF HOPE. Dark clouds may conceal, but cannot destroy it. Tempests may toss the sea—earthquakes convulse the globe—and storm-bolts shake the sky—it stands as firm as Heaven. Within its meek and twinkling rays, are Faith, Hope and Freedom—cherishing the one, indulging the other, and endeavoring to gain the last for our slavery smitten countrymen.

We have ventured to call our humble sheet by our favorite Star. We have been requested to change it, but as yet see no good reason for doing so. The Morning Star was suggested; the Evening Star has been named—but the one is too early and the other is too late. The Midnight Star is our selection. We are over-shadowed by gloomy clouds, and on a dark and perilous sea.—We need the Polar Light to guide us into port.

Funeral Honors to Mr. Adams in Boston.

The mortal remains of JOHN QUINCY ADAMS were received in Boston with becoming honors. When the funeral train reached the depot of the Boston and Worcester Railroad, the Congressional Committee delivered their charge to the State authorities there assembled. In so doing, Mr. TALLMADGE of New York, Chairman of the Committee, after alluding to the manifestations of the profoundest respect and admiration of the character of the deceased, every where displayed on the line of the long journey from Washington, said:

It now becomes my duty, as the organ of the committee, to surrender into your hands, as the representatives of Massachusetts, the illustrious dead. In performing this duty, I must be allowed to say, we have long known this venerable man in the hall of the House of Representatives. There we have listened to his words of wisdom, and caught from his lips the fire of patriotism, and while speaking to us, as it were, we have seen him stricken down in our midst. But I shall not attempt here to describe the emotions that we experienced, or the bereavement that we have felt. Our personal bereavement is merged in the bereavement of the nation. The nation is clothed in the habiliments of woe. The nation is bereaved in his loss, and the nation mourns.—It is now more than half a century since Massachusetts gave to the nation his pre-eminent talents, his patriotism and his virtues. You gave him to his country, and all the remains of that illustrious gift we now return to you.

To this, according to the report in the Boston Daily Advertiser, Hon. Mr. Buckingham, of the Massachusetts Senate, made an appropriate reply, accepting the trust of the body until it should be transferred to the custody of the City Authorities.

The procession, as previously agreed upon,—except that the civic portion thereof was dispensed with on account of the storm—then moved through the streets mentioned in the programme.

Throughout the whole line, the houses and shops were generally dressed in deep mourning, and an air of sadness seemed to pervade the whole public.

Faneuil Hall was dressed, throughout, in very deep mourning—black streamers being carried from the support of the chandelier to every column and corner of the hall—and each pillar being wreathed in black.

At one o'clock the gallery doors were opened for the admission of ladies, and every seat was soon filled. The ladies in attendance were almost uniformly clad in deep mourning, and their sable drapery contributed not a little to the sombre hue appropriate to the occasion.

When the procession arrived at the Hall, ushed in by the performance of the Dead March, er

the Mayor assumed the chief post of honor.—Then, after all the appropriate ceremonies had been concluded—the Chairman of the Legislative Committee—Hon. Joseph T. Buckingham—Senator from Middlesex, spoke as follows:

The solemn dirge whose sounds still vibrate in our ears—the funeral drapery that surrounds us, veiling the light of day—are significant of the Chamber of Death.

To-day the all-subduing King of Torrors rides forth in the majesty of his strength. To-day the inexorable tyrant holds his Court in this our boasted temple of Liberty, and here exhibits the trophy of his power.

The sickening, lurid gloom that pervades the atmosphere of this hall—sending its oppressive and subduing chill to every heart—tells us too truely of his awful, mysterious, invisible presence.

Conscious of that presence, I feel my inability to perform the service to which I have been appointed. The mournful message with which I am charged lingers on my lips.

In the name and in behalf of the Government and People of the Commonwealth of Massachusetts, whose honored, but humble servant I this day am, I consign to your faithful keeping, Mr. Mayor, the mortal remains of JOHN QUINCY ADAMS—all that was mortal of that venerable man, whose age and whose virtues had rendered him an object of intense interest and admiration to his country and to the world. We place these sacred remains in your possession, to be conveyed to their appointed home—to sleep in the sepulchre, and with the dust, of his father.

His undying name and his imperishable virtues are inscribed on living tablets, that can never be lost. Let buoyant youth and vigorous manhood, white-haired age study the inscription—imitate his example—emulate the graces of his character—and, like him, with unreluctant cheerfulness, obey the voice that calls from the labor of duty on earth, to the reward of that labor in heaven.

The voice of sorrow, which sends its echoes round the land, denotes the emphasis of a nation's grief for a nation's loss. From the depths of the soul the cry has gone forth, and deep answereth unto deep. Help, Lord! for the godly man ceaseth—the faithful fail from among the children of men.

Science, literature, philosophy, patriotism, religion—mourn the absence of a devoted disciple Humanity, clad in sackcloth and sitting in ashes, refuses to be comforted because her advocate is not.

But we grieve not for HIM. It is for ourselves that we weep. The calamities that afflict our nature touch not HIM. HE is no subject for lamentation and tears. HE needs none of our sympathy.

> "——— Oh! 't is well
> With him; but who knows what the coming hour,
> Veiled in thick darkness, brings for us!"

Mr. Mayor, my errand is done. My mission to you is ended.

And now, once loved, and still venerable, but lifeless DUST, farewell! If adventurous imagination may follow the disencumbered spirit, we behold it still pursuing its career of honor and glory! The splendid volumes of immortality are opened before it! Other worlds, lighted by other suns, adapted for the abodes of other modes and forms of being, court his fellowship and attract his admiration. Stars and constellations, and systems, glowing with undiminished effulgence, though ages on ages have rolled over them, invite him to explore their mysterious movements, and to trace their harmonious relations. Press onward, Emancipated SPIRIT!—press onward in the path that leads to the everlasting Fountain of Life, Intelligence and Truth! God Almighty speed thee on thy march o! eternity!

Mr. Quincy replied as follows:

Mr. Chairman—In behalf of the citizens of Boston, of every sect and every party, I accept the guardianship of the mortal part of our distinguished fellow-citizen, The citizens of Boston, who seventy years ago thronged this hall and listened to the words that resulted in our revolution, have, we trust, welcomed what was immortal to the liberty of the sons of God.

There is something sublime in the scene that surrounds us. An honored son of Massachusetts—one who was educated by a signer of the Declaration of Independence—one who heard the thunders of the great struggle for liberty on yonder hill, has, after a life of unparalleled usefulness and fidelity, fallen in the Capitol of the country he served.

The inscriptions that adorn these walls, remind us of the offices he held. Yonder testimony of the father of his country, shews what was his youthful promise. The spontaneous feeling at this moment of a whole people, prove how that promise was redeemed.

His remains have been escorted here by delegates from every State in our Union. They have passed over spots ever memorable in history. They have everywhere been received with funeral honors They have reposed in the Hall of Independence. They now lie in the Cradle of Liberty. It were presumption in me to anticipate what will here be said on the character and virtues of the departed,—on the high offices he held and the great scenes in which he participated. But as a citizen of Massachusetts, I cannot but acknowledge our sense of the honors paid to her distinguished son. Mourned by a Nation at its Capital, attended by the representatives of millions to the grave, he has received a tribute to his memory unequalled among men.

And this is no mere pageant. The spots on which his bier rests on its journey to the grave, will not be marked by visible tokens—by the way side cross inviting all to pray for the soul of the departed—but associations and recollections shall cluster there, inspiring the living with the spirit of the dead; and should the time ever come when distance and difference of interests shall seem for a moment to weaken the bonds of the union, we will remember that our sister States sympathized with us in our grief as readily as their fathers rushed to our assistance in peril.

These remains now rest in the Cradle of Liberty. It is their last resting place on their journey home. As a statesman's, "this is to them the last earth"—tomorrow they will be deposited in the peaceful church-yard of the village of his birth, there to be mourned not as statesmen mourn for statesmen, but as friend mourns for friend.

He will be "gathered to his fathers," and how great in this case is the significance of the expression! It is possible that other men may be attended as he will be to the grave, but when again shall the tomb of a President of the United States open its doors to receive a son that has filled the same office?

Happily for us, in this country, there are no hereditary honors. But as we shall stand before the simple monument erected by the filial piety of him who sleeps before us, and read that below slumber the remains of the second President of the United States, of one who, on the Fourth of July, 1776, pledged his life, his fortune, and his sacred honor, to the independence of his country,—who, in 1783, by signing the definitive treaty

of peace, redeemed that pledge, and who, after having witnessed the liberty of his country for fifty years, was summoned on the birth day of the nation, to the "Independence of Immortality and the judgment of God," will not the sternest Republican allow that, in his case, hereditary worth gave a title to hereditary honors? The conclusion of that epitaph is the fittest inscription for his own grave:

From lives thus spent thy earthly duties learn;
From fancy's dreams to active virtue turn;
Let freedom, friendship, faith thy soul engage,
And serve like these, thy country and thy age.

Next it was announced that citizens generally could have an opportunity to view the remains of Mr. ADAMS, until 10 o'clock on Saturday.

And the ceremonies having been thus concluded, the assembly dispersed.

Minute guns were fired from half-past 1 to 3 o'clock yesterday: the bells of the various Churches were tolled during that time, and flags were displayed half-mast from all the State and city public buildings, the shipping in the harbor, the Custom House, and the other United States offices.

George Gray, the Hermit of Lynn.

Correspondence of the Salem (Mass.) Chronicle.

LYNN, March 1, 1848.

Died on Monday last, George Gray, the hermit, aged about 76. He was by birth a Scotchman, and came to Lynn about half a century ago, locating himself in a lonely spot, where he made his home till the time of his death. His early history is probably known to no one living—at least to no one in this country, for he always avoided giving information on the subject. He was a reflecting man, of considerable literary and scientific attainment, and capable of imparting knowledge in almost any of the higher branches of human learning.

He took great pleasure in attending lectures and scientific meetings, and collected a considerable library. But his fondness for the mechanic arts was perhaps the most conspicuous trait, and he became very skilful in some branches connected with machinery. Strangers would sometimes vex him with untimely visits, and by obtrusive remarks induce sudden exhibitions of asperity of temper. But if any one assumed to be a scientific mechanic, he was sure of a courteous reception, though not of admission to his dwelling.—And this was not unfrequently taken advantage of, to obtain their end, by those who were merely prompted by curiosity.

He claimed to be the inventor of the most useful part of the ship's steering apparatus, but some one was before him in securing a patent, and he was subjected to much expense and vexation in unsuccessful efforts to establish his claim. In religion he was probably a materialist, most of his life. The writer recollects his remarking, some dozen years ago, that it was "ridiculous for any one to say that intelligence was not the result of physical organization," but within a few years he appeared to have changed his views; and he probably died in the full light of the Christian faith. He was eccentric in his habits, and had quite as little regard for his personal appearance as was agreeable to those with whom he came in contact.

As to physical exertion and endurance even in his old age, he was remarkable; sometimes he would walk into Boston in a winter evening, attend a lecture and walk home afterward—making a distance of not less than twenty miles.—And many of the Salem people remember him as appearing at their Lyceum lectures, on winter evenings, with his dilapidated straw hat in hand, and perhaps with torn shoes and no stockings.—But he was an estimable man, and few go down to the grave leaving a character so free from blemishes. He probably left property to the amount of some three or four thousand dollars, which the municipal authorities will of course take care of till it is ascertained whether he left any relatives.

Congressional.

WASHINGTON, March 7, 1848.

SENATE—After transacting very little business, the Senate, on motion of Mr. Sevier, went into Executive Session.

HOUSE—Mr. Washington Hunt reported a bill in favor of remitting the duties on goods destroyed in the city of New York during the great fire of 1834.

Mr. Evans reported a joint resolution providing for a bounty of land to soldiers who have continued in active service during the war, notwithstanding they may have been promoted out of the ranks, and thus as officers may not be entitled to such a bounty.

Mr. Giddings thought that while they were talking of justice to those who had been engaged in the present war, they might properly take into consideration the case of those who were engaged in the last one, a war he would venture to say, quite as honorable to the country, and commenced and carried on with quite as high, patriotic and noble purposes as the present.

Finally, on motion, the subject was informally laid aside.

On motion, the House went into Committee of the Whole on the bill for supplying the deficiencies in the appropriations for the current year.

The first thing in order was the amendment of Mr. Thibodeaux proposed to strike out the five thousand dollars to pay the salary of a Minister to the Court of Rome—which was amended by proposing also to strike out appropriations for similar outfits to Bolivia, Guatemala, Equador, &c.

Mr. Vinton moved an amendment, for inserting an appropriation of twenty thousand dollars for the relief and protection of American seamen in foreign ports, which was carried.

Mr. Dickey, of Pa., moved to strike out all appropriations for new missions.

The question on this motion was taken by tellers, and decided in the affirmative—yeas 61, nays 56.

Several other amendments of minor importance having been adopted, the committee rose, when the various amendments were adopted, except that striking out all appropriations for new missions. The vote on it being taken by yeas and nays, and decided in the negative. Yeas 63, nays 95.

The bill was then ordered to be engrossed.

Mr. C. J. Ingersoll then moved to reconsider the vote, as he wished to make a speech upon the merits of the question. He then moved an adjournment, which was carried, and the House adjourned.

SENATE—March 8.

Mr. Webster presented a petition from certain citizens of Virginia, praying Congress to pass a law, setting apart the proceeds of the public lands to be employed in the abolition of slavery. The plan proposed by the petitioners was that the money should be devoted to the purchase and manumission of infant female slaves.

The motion that the petition be received was laid on the table.

Mr. Sevier presented a memoir—geographical and commercial—on the present state of commerce of Liberia, Manchuria, and of the Asiatic

islands in the northern Pacific, showing that an important opening existed for extending the commercial intercourse of the United States in that quarter of the world. The memoir was prepared by Aaron Palmer, a gentleman well known to the commercial world, and distinguished for his travels and observations in distant countries. It was duly received, referred, and ordered to be printed.

On motion of Mr. Sevier, the Senate went into Executive session.

House—The Speaker announced the order of the day, which was Mr. C. J. Ingersoll's motion to reconsider the vote of yesterday, on the amendment to the Deficiency bill, striking out the appropriations for new missions, which was lost yesterday, and which Mr. I. wished to have reconsidered, in order to obtain the opportunity of speaking upon the question.

Mr. Ingersoll then proceeded to speak upon the subject, and defined his own position with a great deal of earnestness. The principal point in his speech was a reply to the argument of Mr. Levin of Pa. upon the same subject. Mr. I held opinions totally contrary to those advocated with so much zeal by that gentleman, and could not allow the occasion to pass without an expression of them. He believed that the views of Mr. L. were narrow, both in relation to the policy which we ought to pursue at home toward the subjects of foreign Governments seeking an asylum and a home among us, as well as abroad, toward those Governments themselves. America must not be limited by any such unworthy notions, but must extend her arms in the spirit of true democracy to embrace the children of all the families of man. Mr. I. was throughout thoroughly forcible, and often eloquent, and held the House in close attention.

The question was then taken on reconsidering the motion, when it was lost.

The bill then came up for final action, as amended, and passed by a vote of 137 yeas to 15 nays.

The House then adjourned.

Thursday, March 9

Senate—Mr. Foote presented a petition from the Baptist Convention, that territory be set apart for the exclusive use of missionaries among the Indian tribes on the Western borders of the United States.

The deficiency bill from the House was referred.

House—Mr. Murphy presented a memorial respecting the taking of the next census in 1850.

Mr. Vinton reported a bill providing for the civi and diplomatic expenses of the government.

Mr. Bates presented a communication asking that Congress would make provision for the interment of the remains of officers brought home from Mexico in public vessels and not interred.

Mr. Robert Smith offered a joint resolution of thanks to the whole Army, officers and men, that have served in the war with Mexico.

Several members rose and offered objections to such a resolution, the principal point of which were that it was too wholesale and indiscriminate a method of doing the thing. The resolution was accordingly laid over.

The House then took up the joint resolution for continuing the grant of bounty lands to soldiers promoted out of the ranks, who thus remain in the service as officers beyond the period of their first enlistment.

The bill was referred to the committee of the whole.

Mr. J. R. Ingersoll reported a bill for changing the time for holding Circuit Courts in the Southern District of New York, and to abolish the May term at Albany, which passed.

He also reported a bill to abolish certain Custom House oaths.

The Speaker then announced the question of the reference of the late message of the President vetoing appropriations for River and Harbor improvement, to the committee on commerce.

Mr. Hampton of Pa., attacked the policy of the Administration in strong terms.

Mr. Sawyer obtained the floor, when the committee rose and House adjourned.

March 10.

Senate.—A petition was presented by Mr. Dallas, praying for the purchase of the estate of Mount Vernon by the Government and its preservation and improvement as national property.

On motion it was referred to the Committee on the District of Columbia, and ordered to be printed.

Mr. Berrien of Ga., moved to take up the bill relieving the Justices of the Supreme Court from doing duty as circuit Judges until the present accumulation of business before the Court shall be disposed of.

Mr. Ashley of Ark., opposed the motion of Mr. Berrien. The subject was one that required mature consideration. It was an important change in the procedure of the Court which was proposed by the bill and ought not to be made without due deliberation. In the present circumstances of the Senate such deliberation was impossible, and he trusted that the Bill might be allowed to rest until the more pressing business now before them had been disposed of.

In consequence of these suggestions, Mr. Berrien withdrew his motion.

Then on motion of Mr. Sevier the Senate went into Executive Session.

House.—After some time spent without action the Committee rose, there being no quorum present.

It was then moved to adjourn, and the House divided upon the motion.

While the tellers were engaged in the taking of the question, a quarrel between Mr. Harralson, of Ga., and Mr. Jones, of Tenn. broke out in the shape of a fight, in which the parties employed the weapons with which Nature had endowed them, with much industry and effect.

The difficulty sprang up in the following manner: when they came to vote, Jones charged Haralson with inconsistency. Some hasty words followed, until Jones gave the lie.

Enraged at this, Haralson returned the lie with a blow: after which they clinched each other with great fury.

The confusion at this moment was indescribable. The speaker in vain endeavoring to restore order, members overturning their desks as they started from their seats, those in the immediate vicinity of the belligerents crowding around and attempting to stop them, added to the noise of the contest, combined to render the whole supremely disgraceful; only the fear lest serious harm might be done to one or both of the combatants, saved it from being disgusting.

At last, by the exertions of the other members, the brawling Legislators were separated. When the heat of the quarrel was somewhat cooled off, they returned to their senses and manifested a degree of shame for the outrage they had committed. Each of them then proceeded to make an apology to the House; they affirmed that up to the moment of the quarrel a perfect friendship had existed between them; but of course such a shameful affair could not be suffered to end in that manner.

Mr. Palfrey moved that when the House adjourned it should adjourn to Monday, in order

that perfect calmness of feeling might be restored before business should be resumed. The motion was agreed to.

Mr. Jacob Thompson of Miss., submitted a resolution for the appointment of a select committee of five to inquire into the nature, causes and circumstances of the recontre, and to report to the House thereon.

Mr. Stephens of Ga., opposed the appointment of such a committee.

Mr. Hunt, of New York, supported it.

Mr. McLane of Md., announced to the House that the gentlemen involved in this unfortunate difficulty had already apologised to each other, and that as far as they were mutually concerned the affair was at an end.

Messrs. Haralson and Jones, the recent belligerents, then shook hands in the presence of the House.

A good deal of discussion of the subject followed, in which several members participated.—They contended that the dignity of the House required an investigation, with a view to censure or expulsion of the offending parties.

Finally, Mr. Stephens of Ga., proposed a substitute for the resolution of Mr. Thompson, dispensing with the committee. This having been adopted, the apology of the parties was entered upon the Journal of the House, and so the matter ended—Then, on motion, the House adjourned.

Matchmaking.—But if an unreasonable opposition to a daughter's choice be not to prevail, I think that, on the other hand, the parents, if their views of marriage be pure from worldliness, are justified in using a good deal of management—not more than they are wont to avow, or than society is wont to countenance—with a view to putting their daughters in the way of such marriages as they can approve. It is the way of the world to give such management an ill name—probably because it is most used by those who abuse it to worldly purposes; and I have heard a mother pique herself on never having taken a single step to get her daughters married—which appeared to me to have been a dereliction of the most essential duties of a parent. If the mother be wholly passive, either the daughters must take steps and use management for themselves (which is not desirable), or the happiness and most important interests of their lives, moral and spiritual, must be the sport of chance, and take a course purely fortuitous; and in many situations, where unsought opportunities of choice do not abound, the result may not be improbably such a love and marriage as the mother and every one else contemplates with astonishment. Some such astonishment I recollect to have expressed on an occasion of the kind to an illustrious poet and philosopher, whose reply I have always borne in mind, when other such cases came under my observation: "We have no reason to be surprised, unless we knew what may have been the young lady's opportunities; If Miranda had not fallen in with Ferdinand, she would have been in love with Caliban."—*Taylor's Notes from Life.*

Town Swallowed by an Earthquake.—Malta.—The Neapolitan steamer Capri has brought intelligence from Syracuse that the earthquake which was felt here on the 11th had laid the city of Augusta in ruins. The first shock was felt at 1 P. M., and was so violent that all the people fled from their houses. The following one, a few minutes afterwards, destroyed the whole place except twenty-seven houses; the mole sank, and where it formerly stood there was no bottom at fifty fathoms. The last accounts received at Syracuse state that thirty-five dead bodies had been found, and fifty-nine wounded recovered from the ruins. The earthquake was also felt at Noto, Syracuse and Catania, with partial damage, and at Messina, without damage.

A Match for Tom Thumb.—Amongst the wild heathy mountains west from Huntly, in the parish of Glass, not far from the Craigs of Succouth, and close at the foot of the Gormack-hill, there is a little cottage inhabited by a young woman who lately gave birth to twin-girls, one of which is nearly of common dimensions, but the other is so extremely small as to excite the curiosity of the whole district. As soon as born this dwarfish infant was placed in the scales, and weighed only 12 ounces; and it will give some idea of the smallness of its waist, when it is stated that a woman's fingers and thumb met each other with ease round the body while holding out the child in the hollow of one hand. It refused to suck for the first sixteen days, and was supported during that time by a spoonful of wine and water daily. Its legs are about the size of a man's finger, but the hand and fingers are so small that they can hardly be described, only every part is naturally formed down to the nails of the fingers. Its eyes are full and look intelligent, but the face is a little monkey-like. The writer of this, with a companion, went to see this prodigy a few days ago. It is now two months old and is thriving well. The nurse told us that when this child came to the world she thought "Surely this canna be a human creature, but a rat of futerate, or something o' that kind." We exhorted the mother to be kind to the child lest it should die, when she replied that "it had lived too long already;" and on asking if she would make a present of it to us she readily offered to give us them both if we chose to accept them. On asking her what the father was like, she said he was a pretty strapping fellow, but refused to recognise his children. The little creature looked very lively at us, and on presenting her with a piece of silver she held it firmly between fingers and thumb. The mother now begins to hope that she may yet make a fortune by showing her little daughter to the world. —*Glasgow Examiner.*

A Cute One.—A raw looking chap, rather green in the routine of banking operations, says the Baltimore Sun, called in at one of our city banks, a few days since, and after making due inquiry as to the name of the bank, observed to the teller, while he displayed his proportions to the best advantage, "Do you see me, sir?" and immediately walked out, leaving the officer somewhat puzzled as to the why and wherefore of the question. Upon the next day he again presented himself at the counter, and after asking the same question walked quietly off. Astonished at the repetition of so odd an affair, and expecting a hoax of some kind, the teller determined that if the singular customer should return again, he would put a mark on him the better to know him in future. Accordingly upon the individual presenting himself on the next day, for the third time, he was met with the ink sponge direct between the eyes. "Ha, ha, mister, you're rather too late to come that gammon now; rather guess you had *three days sight*," says the queer one, "so down with your dust;" at the same time producing a draft for $100 at three days sight. "I'm blow'd if I didn't *guess* you didn't know I had this leetle bit of paper in my pocket when you looked at me the other two days; you cannot find anything *green* in this chap, I rather guess."—Our informant left the teller explaining the nature of "three days sight" to the cute customer.

Lines,

ON THE REMOVAL OF A FAVORITE TREE.

Farewell, old Tree! mine eyes have seen
Their last of all thy strength and pride;
Gone are thy leaves and foliage green,
And all thy branches scattered wide.
Yet ere the spoiler's ruthless hand,
Had dared thy beauty to efface,
Thou wert the noblest of the land,
The loveliest, dearest of thy race.

How oft beneath thy spreading shade,
In childhood's merry, thoughtless hours,
With kindred spirits have I played,
And deemed thee coolest, best of bowers;—
Within thy sheltering boughs the bird
Was wont to build her tiny nest,
The soft south breezes, too, have stirred
Thy leaves, and lull'd my heart to rest.

Long years may pass, and still thy fate,
For ever shall remember'd be,
For linked with thee in social state,
Are recollections dear to me.
May I, old Tree! when life has fled,
And earth receives its kindred clay,
Have one to drop upon my bed
The tears that Memory loves to pay

BUFFALO, Feb. 21, 1848. ADELIA.

Tricklings.

FROM THE PEN OF AN IDLER.

In the American Review for September, 1847, is one of the finest poems ever published as original in this country, if our poor judgment do not deceive us. It is called "THE VISION OF THE MARTYRS," and though given anonymously, those familiar with Longfellow's sublime "OCCULTATIONS OF ORION" will have no doubt as to the author.

We can, of course, do no more here than merely call attention to the "Vision," but we will favor the reader who has not been so fortunate as to have seen it, with the quotation of a few lines:—

"And all the clouds went swiftly round
Their white pavilions of the spheres,
As desert kings around their midnight tents
When struck by sudden fears!"

This is worthy Longfellow's fame and genius, and that is saying enough. One more line, compact and massive as a rock of granite, and we have done—

"The calm-faced Titan, with his brow of pain."

stands out before you in this description, palpable and proud, and unyielding as that destiny of which he is the type. We may say more of this poem hereafter.

The "career" of Geo. Lippard, is an illustration of what well-directed and energetic *puffing* can do for an author. Without pretensions (or at least, nothing save *pretensions*) to either style or matter; laughed at by one half the world and pitied by the other; he contrives, by the aid of a few such publications as the Saturday Courier, Flag of Our Union, etc., to foist annually upon the public, some half-dozen volumes of the merest trash and twaddle that ever lumbered the shelves of "the Trade."

Rural Department.

Pomological Meeting in Buffalo.

In response to invitations previously given, a select party, about twenty in number, of Pomologists, assembled on Wednesday afternoon the first instant, at the hospitable residence of Professor William R. Coppock, President of the Buffalo Horticultural Society, for the discussion of a quiet dinner, and the examination of sundry fruits of the season and consideration of Pomological subjects generally. Among the guests present were ex-Gov. Throop, of Owasco, and Col. Arnold, of Toronto, Canada West. After partaking of the bountiful repast of their host the company adjourned to business.

Letters of apology for absence were read from Col. Marshall P. Wilder, of Boston, President of the Massachusetts Horticultural Society, David Thomas, of Aurora, the veteran Pomologist of Western New-York; John J. Thomas, of Macedon, Wayne Co. N. Y.; Messrs. Ellwanger and Barry, of the Mount Hope Nurseries and Gardens, Rochester, accompanied by collections of apples; James H. Watts, Esq., of Rochester, with numerous collections of apples; N. Goodsell, Esq. of Greece, Monroe Co. N. Y.; Professor J. P. Kirtland, of Cleveland, Ohio; F. R. Elliott, of Lake Erie Nursery and Gardens, Cleveland; Col. Henry H. Coit, of Euclid, Ohio; Dr. Herman Wendell, of Albany; Rev. N. S. Smith, of Buffalo, accompanied by choice specimens of his Buffalo Seedling Pink-Eye Potatoes, which were served up at dinner and found to be unsurpassed in quality; and Messrs. R. H. Heywood, G. B. Webster, Orlando Allen, Elijah Ford, Wm. W. Mann, and O. H. Marshall, of Buffalo.

As the objects of the meeting were principally of a scientific nature, the company proceeded to business by the appointment of LEWIS F. ALLEN, ESQ., late President of the Buffalo Horticultural Society, and now President of the New-York State Agricultural Society, as Chairman, and C. F. S. THOMAS, late Secretary, and WILLIAM COLEMAN, present Secretary of the Buffalo Horticultural Society, as Secretaries.

The several contributions for the occasion were then opened, their merits discussed, and the opinions of the company registered concerning their merits—and it is perhaps as well to observe in the outset that the specimens produced were in almost all instances *remarkably* fine, many of them unsurpassed—but as the judgment of the company was solely confined to the *merits* of the different fruits for *economical* purposes, which they considered to include not only flavor in their proper seasons, but the several qualities of vigor, hardiness,

full bearing, adaptedness to climate, &c., &c.—The unbiassed conclusions at which they arrived were given in the best temper, though at times with abundant spirit, and occasionally arrived at by taking the "yeas and nays" for deciding the question; Downing's "Fruit and Fruit Trees of America" being their standard of authority for description, &c.

At the commencement of the examination and discussion Professor Coppock made a short practical address abounding with sound suggestions upon Fruits, their uses, and cultivation, the rules which should be adopted in governing their nomenclature and examination at the Horticultural and Agricultural exhibitions, and congratulating the assemblage on the rapid progress made for the last few years in their propagation throughout the country. Added to these were read various remarks from the Messrs. Thomas, Mr. Goodsell, Col. Coit, Dr. Wendell, Mr. Watts and others on the same subject. The fruits in order were then examined, and the results stated as follows.

It is well to remark, however, that by a preliminary vote the Esopus Spitzenbergh Apple was *unanimously* decided, taking into consideration *all its qualities*, as the *ne plus ultra* of Apples, and as the specimens approximated in excellency to that standard should they stand in the judgment of the company.

Messrs. Ellwanger and Barry, of the Mount Hope Nurseries, Rochester, N. Y., presented the following apples:

No. 1. Esopus Spitzenburgh, fine specimens, and in fine preservation.

No. 2. Northern Spy, good, not equal to those of some previous years growth in appearance; but well preserved:—quality A. No. 1.

No. 3. Swaar, superior specimens, well preserved. No. 1.

No. 4. Peck's Pleasant, good specimens, well preserved. No 2.

No. 5. Newtown Pippin, good specimens, well preserved. No. 1.

(*Mem.*—This apple has not the characteristic high flavor of its class, produced on Long Island, and on the Hudson river.)

No 6. Vandevere, beautiful samples, but past its season. No. 1.

No. 7. Nonsuch (Canada red), beautiful samples, in full season. No. 2.

No. 8. Bake Apple, handsome specimens, but past its season, (Messrs. E. and B. remark that this fruit is new and rare?) No. 2.

No. 9. Seedling from Naples, Ontario County, handsome specimens. No. 2.

No. 10. Bacon Apple (?) from Brockport, Monroe County; handsome specimens. No. 2.

No. 11. Domine; fine specimens, well preserved. Good. No. 2.

No. 12. Rambo (of many orchards—resembles it, but keeps long.—*Mem. by E. and B.*) The Rambo is an October and November fruit, and the Domine (No. 11) is so like it in appearance and flavor, that although a distinct apple, it appears like a *continuation* through the winter of the same variety. This No. 12 is probably, therefore, the Domine, its characteristics much resembling the other.

No. 13. Holland Pippin, (Messrs. E. and B. suppose it to be White Spanish Reinnette of Downing,) fine specimens and well preserved, but flavor gone. No. 2.

No. 14. Yellow Bellflower, beautiful specimens, well preserved. No. 1.

No. 15. Canada Reinnette, good specimens, well preserved. No. 2.

No. 16, White Winter Calville, ordinary specimens, well preserved. No. 2.

No. 17. Patterson Sweet (*Note by E. and B.*—New to us—a superb apple, past its prime, long.) This is a large, longish, deep red apple, of remarkable *rich*, *sweet*, flavor:—recommended for cultivation. A. No. 1.

No, 18. Wiley Apple (*Note by E. and B.*—A seedling—past its prime,) this was a good-looking apple, and well preserved. No. 2.

No. 19. White Spitzenbergh (of Kenrick;) fine specimen, in good preservation. No. 1.

No. 20. Green Sweet, fair specimen, well preserved, ordinary looking. No. 2.

No. 21. Pomme Gris, fine specimen, in excellent keeping. A. No. 1.

No. 22. Lady Apple (Pomme D'appi), ordinary samples, well kept. As this fruit is chiefly for ornament, and of inferior flavor, the meeting do not classify it.

No. 23. Perennio (French), same remarks apply as to No. 22.

No. 24. Cabashea (doubtful), showy fruit, well preserved; said to cook well. No. 3.

No. 25. Sweet Swaar (why call any thing a Swaar but a *Swaar?*). Looks somewhat like a Swaar, well preserved. No. 3.

No. 26. ——— (*Mem. by E. and B.*—Sold in our streets as a Spitzenbergh). This is a good looking red apple, somewhat Spitzenbergh shaped, but vastly inferior to it; well preserved. No. 2.

No. 27. ———, a seedling from New Haven, Oswego Co.; a fair looking apple in good preservation. No. 2.

A delicate, fine flavored, long keeping, and beautiful winter Scarlet Apple, slightly dashed with white waxy spots, was introduced by Lewis F. Allen, which he has cultivated for some years, without a name. He had the fruit grafted into his own trees, but has no recollection of where the grafts were obtained. He discovered during the past winter that the same apple has grown for many years on the farm lately owned by Chief Justice Spencer, near Albany, but no name was there known for the fruit. At the suggestion of Mr. A. the name of "Spencer" was unanimously bestowed upon it, and recommended for cultivation, being of good flavor, a great and constant

bearer, and a fruit of uncommon beauty. Good, No. 2.

Messrs. Abner Bryant and Sons, of the Erie County Nursery, near Buffalo, introduced the following varieties of apples:

No. 1. Poughkeepsie Russett, fine specimen, good keeper, medium size. No. 2.

No. 2. Westfield Seek-no-further, fine specimen, well kept. No. 1.

No. 3. Yellow Bellflower, good specimens, in good preservation. No. 1.

N. 4. Esopus Spitzenbergh, good specimen, in good preservation. A. No. 1.

No. 5. Pomme Gris, good specimen, in good preservation. A. No. 1.

No. 6. Red Spitzenbergh, good specimen, in good preservation. Good No. 2.

No. 7. Pennock's Red Winter, large and fine, well kept. No. 3.

No. 8. Beauty of Kent, an October and November apple, but well preserved: very large and showy, with surpassing qualities of growth in wood, hardy, and abundant bearer. No. 2.

No. 9. Brabant Bellflower, good specimens, in good preservation. No. 2.

No 10. Herefordshire Pearmain, ordinary specimen, well kept. No. 1

No. 11. Pomme D'appi, exquisitely beautiful specimen of a *poor* fruit.

Col. Benjamin Hodge, of the Buffalo Nursery, near Buffalo, presented the following apples:

No. 1. Beauty of Kent; fine specimens, well preserved. No. 2.

No. 2. Roxbury Russet; fine specimens, well preserved. No. 1,

No. 3. English or Winter Russet; fine specimens, well preserved. No. 1,

No. 4. Stannard Seedling, a fine new fruit, fine specimens, well preserved. No. 1.

No. 5. Esopus Spitzenbergh; excellent specimens, in good keeping. A. No. 1.

No. 6. Favorite (Sweet); fine specimens, well kept. No. 2.

No. 7. Westfield Seek-no-further; fine specimens, well kept. No. 1.

Mr. Charles Taintor, near Buffalo, produced the following apples:

No. 1. Pownal Spitzenbergh, bright red, beautiful specimens, well kept. A. No. 1.

No. 3. Fall Pippin; fine specimens, in remarkable preservation. No. 2.

No. 3. Rhode Island Greening: of three different characters—one of them was an almost golden color with a red cheek; another was green with a russetty red blush; another still was a dark dull green faintly tinged on the sunny side with red; but all nevertheless *true* Rhode Island greenings in flavor, as decided by those who knew the fruit as grown in New England. It may be here remarked, that the Rhode Island Greening of Western N. Y. although distinctly propagated from the *genuine* fruit of that name in N. England, does not *generally* hold the rich color it shows in the soil and climate of its origin, nor in all cases its high flavor. Still it is a highly popular apple both for the table and for cooking, a prodigious bearer, and a most profitable market fruit. The qualities of this apple were warmly discussed, and its degree of excellence decided by yeas and nays. It passed by a bare majority as No. 1.

Following these were introduced the parcel forwarded by J. H. Watts, Esq., of Rochester:

No. 1. Northern Spy, grown by Mr. Hand, of Mendon, Monroe County; is a superb specimen, in excellent keeping and of superior flavor. Quality, A. No. 1.

No. 2. Golden Russet, grown by J. Onderdonk, of Greece, Monroe County; fine specimens, in perfect keeping and admirable flavor. A. No. 1.

No. 3. English Russet, grown by the same; fine specimen, and in good keeping. No. 1. *Mem.* A doubt was entertained by some of the most experienced Pomologists present, as to the correctness of the name, they believing it to be the *Roxbury* Russet.

No. . Canada Red (Nonsuch) grown by the same; beautiful specimens, and in fine preservation. No. 2.

No. 5. Vandeveef, grown by the same, fine specimens and keeping. No. 1.

No. 6. Esopus Spitzenbergh, grown by J. Onderdonk, of Greece; in capital preservation and of exquisite flavor. A. No. 1.

No. 7. Baldwin, grown by Mr. Chase, of Brighton, same preservation and flavor as the last. No. 1.

No. 8. Pomme Gris, grown by the same; superb specimens. A. No. 1.

No. 9. Domine grown by the same, superb specimens. Good, No. 2.

No. 10. Swaar, grown by R. H. Brown, of Greece; fair specimens and in good preservation. No. 1.

No. 11. Newtown Pippin, grown by Mr. Brown; remarkably fine specimens, and in the best keeping, with choice flavor. A. No. 1.

No. 12. Westfield Seek no-further, grown by Mr. Brown; fine specimens, well kept, and excellent flavor. No. 1.

No. 13. Green Sweeting (?) by Mr. Brown; good specimens. No. 2.

No. 14. Swaar; grown by J. Onderdonk, of Greece; judged by the company to be in the specimens presented as the *ne plus ultra* of their kind, both as to size, preservation and flavor. A. No. 1.

No. 15. Newtown Pippin, grown by Mr. Onderdonk; very fine, but hardly equal to those grown by Mr. Brown. A. No. 1.

Mr Watts closes his letter accompanying the specimens with the sentiment: "The name of him who, in grafting that unsurpassed apple into other trees called it the 'Northern Spy,' Jared P. Frisbee, of Bushnell's Basin."

A discussion arose as to the best winter *sweet* apple to be recommended for family use and for

baking, in Western New-York, and after mature deliberation it was resolved that the "Talman Sweeting" was eminently entitled to preference for such purpose, and that its extended cultivation be recommended.

After the Examination closed, a resolution was passed expressing the hearty thanks of the company to the generous donors of the fruits which had so bountifully graced the occasion, and and bidding them God speed in the delightful and praiseworthy occupation in which they were engaged.

It should not be omitted that at dinner, Mr. L. F. Allen present a piece of "Stilton" cheese, made in the family of Mr. Henry Parsons, of Guelph, Canada West, which was presented by him to Mr. A. at Hamilton, last October. This cheese was found to be of choice flavor, well matured, and superior of its kind; and they commend the skill of Mr. P. as a successful dairyman to the notice of the public.

During the examination, a superior, large, red, subacid apple, of strong growing, constant bearing, long-keeping qualities, was presented by Lewis Eaton, Esq., which was cultivated in his ground, of which he had never seen a ke speliciмen; and as none of those present knew anything of its origin, and its quality being approved, it was called the "Eaton" apple, and classed as No. 1,

On motion of H. W. Rogers, Esq., it was resolved, that the N. York State Agricultural Society be requested to recommend, and call a Pomological Convention to be held at Buffalo, on Friday the 8th day of September next, at 10 o'clock, A. M., for consultation on the subject of Fruits generally, together with such action as the Convention when assembled shall see fit to adopt, and the invitation be given to all who feel interested in the subject, from any part of the country to attend, and that said convention be continued through the days of the annual show and fair of the society.

During the sitting, several superb specimens of fruit and flower paintings (true portraits from life) from the German "Ebenezer Society" near Buffalo, were exhibited by Mr. Coleman. Some of them were drawn for the Massachusetts Horticultural Society at Boston for their "Transactions." The Buffalo Society congratulate themselves that they possess, in their near neighbors, the skill and ingenuity which is so eminently displayed on this occasion of perpetuating true representations of their valuable fruits and flowers, and they recommend them (unsolicited) to the attention of the Horticulturists of our Country. And it was

Resolved, That the President of this Society address an official communication to the "Ebenezer Society" near Buffalo, requesting them to co-operate with us in the exhibitions of the Society the coming season, and also at the annual show of the State Agricultural Society at Buffalo, in September next.

Observations and remarks were also interchanged by the company on the cultivation of many choice fruits and particularly as to the policy of extending the culture of choice Pears on the Quince tork, which was favorable decided on by the experience of several gentlemen present.

During the sitting, the company were gratified with an inspection of the choice conservatory and grapery of Mr. Coppock, finding his plants in fine keeping and good growth under several different treatments of experimental cultivation.

After a most interesting and very late discussion, and with many thanks to the hospitality of their excellent host for his entertainment, and the opportunity thus offered them for an interchange of sentiment the meeting adjourned.

C. F. S. THOMAS, } *Secretaries.*
WM. COLEMAN, }

ORIGIN OF THE ELECTRIC TELEGRAPH.—Professer Steinheil, of the University at Munich, in an interesting article published in 1838, thus concisely presents the history of the application of *frictional* electricity, in efforts of telegraphic communication, anterior to the discovery of the galvanic current:—"The velocity with which frictional electricity is transmitted along metallic conductors, called forth, as long ago as in the last century, the idea of employing it for telegraphic communications. Winkler, at Leipsic, in 1746, discharged several Leyden jars through a wire of considerable length, and on that occasion the river Pleise formed a part of his circuit. La Lounier, in Paris, produced shocks through a length of wire amounting to 12,789 feet. Watson, in 1747, extended the experiment over a space of four miles near Shooters' Hill, composing his circuit of two miles of wire and an equal distance of dry ground. Lomond transmitted telegraphic signals to a neighboring room by means of a ball electrometer, acted upon by frictional electricity, [1784, Young's Travels.]—Reisen illuminated, by an electric spark, letters formed upon plates of glass with strips of tin foil. Gauss makes mention of a communication from Humboldt, according to which Betancourt, in 1798, established a communication between Madrid and Aranjier, a distance of twenty-six miles; by means of a *wire*, through which a Leyden jar used to be discharged, which was intended to be used as a telegraphic signal."—*The American Almanac for* 1848.

COAL ON THE PACIFIC COAST.—The Valparaiso *Neighbor* of October, 1847, says:

The prospects of obtaining coal from the neighborhood of Conception have lately become very fine. By the last accounts the promise was excellent; both as to the amount to be had, and as to the quality of the coal. A gentleman writing from Talcahuana states that one mine has been opened on land lying at the right hand of the road leading to Conception, in which a seam of coal has been found one and a half yards thick. In the tide way of Phuco they are working another, some 200 yards from the beach, and have cut in vertically to the distance of ten feet. And have not passed through the coal even at that. Then a third has been opened at the Perales; also on the side of the road to Conception. The coal obtained from this is of most excellent quality. In all there are now five mines, and the main question at present is to find a purchasing demand equal to the supply.

Editorial Department.

J. CLEMENT, EDITOR.

A New Feature in our Paper.

During the last four years the contributors to the Messenger have composed a list of which we might feel proud. But while we have had, from time to time, the aid and countenance of such writers as W. H. C. Hosmer, Alfred B. Street, Mrs. Sigourney, Mrs. Eames, Lt. Patten, A. C. Kendrick, H. H. Clements, and many others, *from abroad*, it has long been a source of regret to us that more literary aid could not be enlisted, in *our midst*. While Buffalo could exultingly point to numbers of able and elegant writers in each of the professional departments, but few of them have heretofore lent us a helping hand. At length, after nearly five years, unavailing effort to bring to our aid the mass of *home talent*, we have, measurably and very encouragingly, succeeded. Several of the most prominent and certainly the most talented gentlemen of Buffalo will hereafter be numbered amongst our correspondents. Most of those who have delivered lectures before the Young Men's Association the past winter have consented to let us use their productions in these columns. by which means we shall materially enrich the paper and place in the hands of the reader, in a suitable form for preservation, abundance of very valuable matter, both for present use and future reference. These lectures—the ablest, efforts of the strongest minds—will embody the spirit and genius of the place, and render our sheet an exponent of home feeling and home talent. We shall also publish from time to time lectures and addresses before other literary societies, nor shall we be limited to such as are delivered by gentlemen of our own city. These productions will embrace a wide range of subjects and a wide range of talent.

Two lectures have already been published, the first by the Rev. J. C. LORD, D. D., and the second by G. W. CLINTON, Esq. These will be followed next week by the lecture on Self-Reliance, delivered before the Young Men's Association, in the month of December, by Professor HICKOK, of Auburn. Two or three weeks after that one has appeared, Mr. Clinton's lecture on Progress will be published. In short, we hope to be able to give a production of this character as often as once in three or four weeks the year round. This arrangement must not only meet the appropation of city, but of country subscribers. Many of the latter have often remarked to us that they would esteem it a great privilege could they enjoy the opportunity of hearing the able lectures that are given here in the course of the winter season. This they will hereafter *virtually* do. They will get many of them to read and preserve, which is better than merely hearing them. In one word, they will have, in less than one fifth of the pages in a volume of the Messenger, an amount of valuable matter which could not be obtained in separate pamphlets for the subscription price of the paper.

It is confidently hoped that this new array of talent, combined with that heretofore enlisted, will render these columns doubly interesting, and that our citizens who are friendly to our cause but have not as yet given us encouragement, will feel disposed to patronize a literary paper *at home*.

THE KNICKERBOCKER for this month, which is for sale by Hawks, contains articles by the Hon. W. H. Ellsworth, W. H. C. Hosmer, Francis Parkman. Jr., W. R. Hopkins, etc. The Egyptian Letters, No. 14, uses up transcendentalism very handsomely. The Editor thus speaks of the death of COLE:

"Cole, the great artist, is no more. A kind and pure-hearted man, a poet, alike with pen and pencil, a man of true genius, has gone down to the grave. His 'course of empire' over art and his 'voyage of life' are ended together; and the 'Christian' with his 'cross' has reached the New-Jerusalem. We knew Mr. Cole well. He was always a welcome correspondent in these pages, and we have long had the pleasure of his personal friendship. We are glad to learn that his pictures are to be exhibited for the benefit of his bereaved family, and that his life-long friend, WILLIAM CULLEN BRYANT, Esq., is to deliver an eulogy in honor of his memory at an early day."

The communication by our Avon correspondent is in his happiest vein, and we shall copy it soon.

MR. HOSMER'S DISCOURSE ON THE DEATH OF MR. ADAMS.—The discourse delivered by the Rev. G. W. HOSMER, of this city on the death of EX-President ADAMS, has been issued in a beautiful pamphlet from the press of Jewett, Thomas & Co., and is for sale at Steele's Bookstore. In reading it we have marked several elegant passages for quotation, but must content ourself with one, and that a brief one. Speaking of the deceased, Mr. Hosmer says:

"It is difficult to say at what point of his noble services he has been most distinguished and useful. Indeed, in his public life there are no lonely mountain-peaks shooting up by sharp and ragged ascent from the plain around, fearfully and unprofitably covered with smoke and flame: his life was a grand mountain-chain, ranging through the whole landscape of his times, with its high tables and successive elevations, and all covered with verdure and harvest fruits up to the very summits."

THE DEMOCRATIC REVIEW for this month contains a likeness of J. F. BRENT of Louisiana, engraved by T. DONEY, and fifteen literary and political papers. The second of these is on "Elective Judiciary;" is ably argued, and will be likely to call out a discussion. Another on the "Rhode Island Question" will also excite interest. The same may be said of the "Follies of the Faculty and English and American Literature." On the whole this is a very clever issue.

For sale by Hawks.

STEAMBOAT LAUNCH.—A new steamboat was launched on Saturday, at the ship yard of Messrs. Bidwell and Banta. She is called the "Queen City;" is to run in Reed's line; will be out in may, and be commanded by Capt. J. TITUS. The best boats on these lakes were built at this ship yard, and the Queen City, it is thought by good judges, will equal in speed and elegance any of them. Time will determine.

MEDICAL STUDENTS.—We understand that there are already eighty-five registered medical students in our College; and yet the session has but recently commenced. This is a handsome increase since last year, and speaks well for the youthful Institution.

PRINTERS' RECEIPTS.—An exchange paper says that a receipt for a printer's bill in one's pocket, is a certain cure for restlessness o' nights. If such is the case—and it looks reasonable—how many poor mortals are indebted to us annually for

"Tired nature's sweet restorer, balmy sleep."

ST. PAUL'S CHURCH.—We learn from the *Commercial Advertiser*, that Mr. UPJOHN of New-York, has sketched a beautiful plan for a new church on the ground where the present one stands, and will probably furnish the same in detail some time during next month.

REV. MONTGOMERY SCHUYLER, pastor of St. John's church, lectured on Monday evening before the Young Men's Association on the Genuineness and Authenticity of the New Testament Scriptures.

DOMESTIC ANIMALS. — History and Description of the Horse, Mule, Cattle, Sheep, Swine, Poultry, and farm Dogs. By R. L. ALLEN. New-York: C. M. Saxton, 205 Broadway. 1848.

This is just *the* book for the farmer and for everybody who owns domestic animals. It treats largely of their management, breeding, crossing, feeding, etc.; their diseases and remedies; and also of the management of the dairy. Mr. Allen is the author of American Agriculture; knows the wants of the stock breeder and grazier, and is well qualified to prepare a book for this class of the community. The work before us is richly embellished with beautiful wood cuts and is printed on good paper. For sale by Hawks.

JUDGE SPENCER died at Lyons on the 13th inst. He was formerly Chief Justice of this State.

IMMIGRANTS.—The total number of immigrants arriving in this county during the year ending September 30, 1847, was 239,480, or almost exactly six times the present population of this city. It should also be remembered that the immigrants are chiefly people in the prime of life, and their number includes only a small proportion of children.

Legislature of New York.

ASSEMBLY—March 6.

PETITIONS PRESENTED AND REFERRED.

By MR. IRISH, to reduce railroad fare to two cents a mile.

MOTIONS, RESOLUTIONS AND NOTICES.

Mr. Ransom brought in a bill to authorize the formation of the Niagara Falls House Company.

Mr. Irish brought in a bill to prevent the abatement of suits in certain cases. Also, a bill to amend the Charter of the Farmers' Mutual Insurance Company of Erie County.

UNFINISHED BUSINESS.

The House, in committee of the whole, passed the bill relative to the Cayuga creek road, in the county of Erie.

The House went into committee of the whole, Mr. J. V. Peck in the chair, on the bill making an appropriation to erect the Buffalo City Hospital.

The committee of the whole, Mr. Wheeler in the chair, passed the bill to amend the charter of the city of Buffalo.

ASSEMBLY—March 6.

THIRD READING OF BILLS.

To amend the charter of the city of Buffalo.—Passed.

To improve the Cayuga Creek road in the county of Erie. Passed.

SENATE, Wednesday, March 8.

REPORTS.

By Mr. Geddes, favorably on the bill to improve a road in Erie co.

ASSEMBLY, Wednesday, March 8.

REPORTS.

By Mr. Pruyn, a substitute for the bill in relation to the removal of the Madison University. [A compromise bill, that the University shall not be removed, if the citizens of Madison raise $50,000 for its endowment by the 1st of June.]

Mr. P. remarked that the substitute was a compromise bill, assented to by all parties, and wished it placed forward on the general orders. Agreed to.

ASSEMBLY—March 11.

TREATY OF PEACE.

The Speaker announced that important intelligence had just been received by Telegraph, which, if there was no objection, would be read by the Clerk.

Consent was given, and the Clerk read the following despatch:

NEW YORK, March 11—10 A. M.

To the Editors of the Evening Journal:

The Treaty of Peace was ratified last night—only 9 votes against it. Yours, &c.

This intelligence was received with applause in the House and galleries.

MIKE WALSH.—A correspondent of the Syracuse Journal states that, while the recent fire in Albany was at its height, and while spectators and firemen were appalled with the terrible fury of the flames rising up to the clouds, a voice was heard from the top of the remaining buildings giving advice and encouragement to the firemen in the working of their engines. On looking up, the cry went round in every direction—"It is Mike!" Mike, truly, with his coat off and has shirt sleeves rolled up to his elbows, moving around as calm and unconcerned as if he were in the Assembly room of the Capitol.

It is no new trick of Mike's. He is known in his own city by every fireman there as one of the most fearless and faithful firemen among them, and by this "turn-out from the sweet repose of sleep," shows that he is not indifferent to the welfare of the property and the interests of his fellow men.

WASHINGTON, March 10—9½ P. M.

The Senate adjourned at a quarter past nine this evening.

The Treaty has been ratified by a vote of 38 to 15.

The injunction of secrecy has not been removed.

From the Journal of Commerce.

WASHINGTON, March 2,—10 P. M.

Our second despatch says that the Treaty was ratified by the Senate, but it does not intimate what objectionable portions have been rescinded. The Senate has adjourned over to Tuesday.

[Another dispatch is promised, probably to give the particulars of the Treaty.]

From the Evening Journal of Saturday.

The Telegraph line between this city and New York was in operation for a short time this morning, but about noon the wires parted 12 miles below Poughkeepsie, which prevents us from receiving our usual afternoon report. The line West is in good order to Buffalo.

The following important news was received by dispatch at 10 o'clock:

NEW YORK, March 11—10 A. M.

The Treaty was ratified last night—only eight votes against it. Yours, &c.

From the Buffalo Commercial Advertiser.

☞ SCHOOLS, SCHOOLS, SCHOOLS.—All the world is a school. It has many departments, wherein all kinds of vice and virtue, folly and wisdom, are taught. It is a school always open for the instruction of every man; but the time in which we can attend it is very short, for it is like one of those evening schools in the country, where every pupil brings his own candle, and can be taught no longer than his candle lasts. The 'lamp of life' is extinguished at an early hour, and the school is soon closed for us. And what are the lessons we learn? From the pulpit and the press voices continually address us, asserting that like children, we pursue fame and money, the mere painted butterflies of full-grown man. But these butterflies which man pursues, not only lose their gaudy colors when the hand grasps them, but have the stings of hornets, ay, even of scorpions. Yet education is not to be blamed for man's follies or crimes. It is by the want of proper education, that his chief miseries are caused. And so important is this subject, that we would say with Michelet, in the words we have already placed before our readers—"How long must education last?—For life. What is the first part of politics? Education. The second? Education. And the third? Education."

Laws are of no use, unless men are prepared by education to receive them—unless they are brought up to appreciate and obey law. And those who are now children, will not only be subject to laws, but will be lawmakers. And as the imperfections of society are seen to be manifest and grievous, by him who studies it in the light of reason, or by the more sure guide of Christian religion, it must be desired by every good man that the education of children should become more and more effectual.

The following table has been kindly furnished us by Mr. E. S. HAWLEY, the Superintendent of the Common Schools in this city. It shows an increased average attendance (computed by time) at the schools, in proportion to the number of registered pupils, throughout the whole of last year—when, in comparison with 1844, it was as 65 to 56. This is a feature worthy of notice. In the observations which our public schools have drawn from European statesmen, the less number of hours during which American pupils generally attend, has been spoken of in marked terms, by those who otherwise approve of our school systems, and their diffusion of education, and are anxious to introduce similar arrangements into their own countries. It should also be well understood that the teachers in this city possess scarcely any power to compel regularity of attendance. In Boston, where the school system is probably as perfect as in any city in the world, a pupil voluntarily absent for more than a certain number of days, without sufficient cause, is deprived of tuition for the remainder of the term. Absence of this kind detains the other scholars, and is truly a serious grievance to all teachers. Some means of enforcing attendance should be adopted. Another injurious fact is, that one fourth part of the pupils do not come in until near the end of the first week in each term.

Table showing the condition of the Public Schools, &c., for several years.

Year.	1838	1839	1840	1841	1842	1843	1844	1845	1846	1847	1848
No. public rt registered during first month.	179	431	1435	1415	1811	1831	9605	3133	3207	4699	5094
No. teachers employ'd.			35				40	53	57	73	
Gross cost for teachers' wages.			$8,678 00	$8,635 63			$10,497 10	$11,771 50	$13,650 69	$15,732 07	
White population between 5 and 16 years.							4794	5523	5836	6496	
Colored do.							100	96	104	136	
Total population between 5 and 16 years							5672	5581	6018	6632	
Difference between the No. bet'n 5 and 16, and the No. registered in January of each year.							3668	3231	3207	4586	
Total No. of children taught each year.							3005	2307	3004	3315	
Average attendance in all the Schools.							2257	2007	2587	3708	
Cost per head on average attendance each year.			$5 00	$4 31	$4 74	$5 05	$4 65	$5 86	$5 27		
No. volumes in Library Jan. 1st, 1847.							9,972	10,490	13,000	11,165	
No. volumes drawn from Central Library during the year.							13,531	26,000	30,000	30,005	30,119
Total drawings.							36,453	36,400	38,953	41,260	
No. volumes drawn from District Libraries.							8,936				10,104
No. text books in all studies in actual use in month of March.											

Average increase in the number registered in January of each year, 493.

It will be observed that in January 1838, the number of registered pupils was 179, and in January 1848, 5094.—Greater uniformity is necessary in the use of school books. The variety is found a source of continual expense and delay to parents and pupils, and of vexation to the teachers. In 1844, 12 different kinds of reading books were used, and in 1847 the variety had increased to . The School Commissioners have recommended a set of text books in various studies, greatly reducing the entire number.

Before concluding we must mention one fact which may surprise our readers. It is that in German and English Schools, unconnected with the public, the vast number of *eight hundred and fifty-one* children receive instruction. The subject involves many questions which it is difficult to solve to the satisfaction of all parties, but is a fact of great magnitude. The expense varies in these schools, but is from 5 to 10 cents per week.

We may hereafter refer to other parts of Mr. HAWLEY's report.

ACCIDENT.—On Wednesday afternoon, as Captain Abbott, who was sailing master of the propeller Ireland last summer, was assisting at

the Marine Railway here, to hoist a mast on board the steamer Queen Victoria, now being repaired, the rope he was pulling slipped, and he was precipitated from the deck of the vessel into the hold, falling on his head. Up to Thursday morning he remained in a state of insensibility, the effect of concussion of the brain; and this morning, (Friday,) we learn from the medical gentlemen in attendance, that there is no hope of his recovery.—*Kingtон (Canada) Argus.*

ENGLISH PREPARATIONS FOR WAR.—The Duke of Wellington and his political associates have lately urged upon their country the propriety of making large preparations for war. Mr. COBDEN may be considered as the representative in that country, of the party most opposed to war. He says, in a letter to Mr. STURGE, "It is utterly unintelligible *why* we should now be suddenly stunned with this outcry for additional armaments to protect us against an attack by the French. An invasion from France! Why, what statesman, or party, or newspaper, in that great constitutional and civilized nation has latterly been advocating a war with England, or threatening a descent upon our shores? No; the whole affair must have been the work of some gossipping idlers at our clubs in London, or of military men impatient at the neglect into which their profession had fallen, after thirty years of peace. If these parties and our diplomatists and foreign ministers would be quiet, there never was a time when, from the inevitable tendencies of the age, the English and French nations were in so fair a way as they are at present to forget their ancient animosities. It is more than the lifetime of an entire generation since the last sanguinary and irrational conflict between England and France was brought to a close. Upwards of sixty millions of human beings have in that interval passed to their graves in the two countries; and is it taking too favorable a view of human nature to believe that much of our old national hatred lies buried with them?" —*Com. Adv.*

Progress of the Northwest.

The census of Iowa has just been completed, and the whole population is 116,204. Lee county has the largest population, being 13,231. It is somewhat significant, (says the Milwaukee Wisconsin) that though Iowa had a larger population than Wisconsin in 1840, we not only come up with Iowa, but have nearly one hundred thousand more—our census footing up 212,000.

In 1840, Iowa had	43,112
" Wisconsin had	30,645

The soil of Iowa is fully equal, if not superior, to ours, but the commercial position of Wisconsin is so much more favored to receive the current of emigration, that our Territory must continue to increase in a still more rapid ratio. In 1850, the population of Wisconsin will be but little short of 500,000. This will be a growth without a parallel even in America. The capacity of our country to sustain a dense population, we believe to be beyond that of any State in the Union. With literally boundless mineral wealth—vast manufacturing power—timber of every variety in abundance, and well distributed—watered on the one side by a magnificent Lake, on the other by the Mississippi—intersected with small rivers in all directions, and with springs affording such water as, we must say, must promote the cause of Temperance;—when we superadd to all this, a climate not only beautiful, but healthy, and a soil whose strength and varied powers affords that diversity to the pursuits of Agriculture so necessary to fill a country with productive wealth. Such are the natural advantages which Wisconsin presents; but when we farther add, that though we have but 213,000 people, they are equal to an ordinary 500,000, in intelligence, character, enterprise, industry and frugality, we show an impregnable base for a future growth.

We may also observe that we have a Constitution, (for no one doubts that it will be adopted by the people) liberal, wise, and sufficiently broad to shelter the interests of a mighty State, and a superior people. Education, Religion, and Justice will be alike promoted under its catholic provisions. Such is a brief view for our reasons for an advance in the next three years, far beyond anything we have yet seen in the history of America.

Though we are a citizen of Wisconsin, and proud of our new State, we have equal pleasure in recording that Ohio, Indiana, Illinois, Michigan and Iowa are alike advancing on the highway of progress. They are a part of that North West Territory, established by the Ordinance of '87, drawn by the pen of Him who will be immortal, so long as liberty is a word in the English language.

That Ordinance—said by one of the greatest of orators, to be worthy of the wisdom of *Numa* and *Solon*—dedicate to *free* labor, States whose growth and power will be such as clearly to manifest that they are destined to be empires, if not in name, at least in the reality.

RAIL ROAD ACCIDENT.—At about 4 o'clock this morning the train of cars from the west on the Schenectady & Utica road, ran off the track about 1½ miles east of Fonda. The train was running at a rapid rate when the accident occurred. It is supposed that one of the wheels of the baggage car, next to the locomotive, broke, throwing it off and tearing up the track for a considerable distance. There were two passenger cars attached, which were occupied by about sixty persons, and which were precipitated into the ditch and dashed into a heap of ruins. Ten or twelve persons were more or less injured, among the number Hon. B. Bailey of Putnam, and Mr. Lewis Doane, but no one very seriously. From all accounts it was a most fortunate escape. The shock was sudden and severe, and our informant found himself, in an instant, thrown to the bottom of the car, while pieces of broken pannels and seats, and piles of men, women and children were heaped upon and about him.

The engineer and other parties in immediate charge of the train, were evidently not to blame for an accident of this kind. But we understand that if the company, instead of the spoke wheel, had used the solid wheel, in the construction of cars, as is done on some other roads, this accident would not have occurred —*Alb Atlas.*

LAWYERS IN TROUBLE.—All the Lawyers of York Co. Pennsylvania, having been called to Harrisburgh the other day, the relieved and delighted inhabitants met and drew up the following petition:

"We, the undersigned, citizens of York Co. being convinced, from the present peace and quietness of our town, of the uselessness of all lawyers as a body, do pray for the passage of a law to keep our lawyers in Harrisburgh, where they now are, and we will ever pray," &c.

The World for Sale.

BY REV. RALPH HOYT.

The WORLD FOR SALE!—hang out the sign;
Call every traveller here to me;—
Who'll buy this brave estate of mine,
An I set me from earth's bon'age free?
'Tis going!—yes, I mean to fling
The bauble from my soul away,—
I'll sell it, whatsoe'er it bring:—
The world at auction here today:

It is a glorious thing to see,—
Ah! it has cheated me so sore!
It is not what it seems to be:—
For sale!—It shall be mine no more,
Come, turn it o'er and view it well.—
I would not have you purchase dear;—
'Tis going! going! I must sell:—
Who bids? Who'll buy the SPLENDID TEAR?

Here's WEALTH in glittering heaps of gold,
Who bids?—But let me tell you fair,
A baser lot was never sold;—
Who'll buy the heavy heaps of care?
And here spread out is broad domain,
A goodly landscape all may trace,
Hall—cottage—tree—field—hill and plain:
Who'll buy himself a burial place!—

Here LOVE, the dreamy potent spell,
That beauty flings around the heart;—
I know its power, alas! too well;—
'Tis going. Love and I must part:
Must part!—What can I more with Love?
All over the enchanter's reign:
Who'll buy the plumeless dying dove—
An hour of bliss—an age of pain?

And FRIENDSHIP, rare-t gem of earth,—
(Whoe'er hath found the jewel hie?)
Frail, fickle, false and little worth;—
Who bids for FRIENDSHIP—as it is?
'Tis going! going!—Hear the call:—
Once, twice and thrice!—'Tis very low:—
'Twas once my hope, my stay, my all,—
But now the broken staff must go:—

FAME! Hold the brilliant meteor high;—
How dazzling every gilded name!—
Ye millions now's the time to buy!
How much for FAME? How much for FAME?
Hear how it thunders!—Would you stand
On high Olympus, far renown'd,
Now purchase, and a world command,
And be—with a world's curses crown'd!

Sweet star of HOPE! with ray to shine
In every sad foreboding breast
Save this desponding one of mine,—
Who bids for man's last friend and best?—
Ah! were not mine a bankrupt life,
This treasure should my soul sustain;
But Hope and I are now at strife,
Nor ever may unite again.

And SONG!—For sale my tuneless lute!
Sweet solace, mine no more to hold;
The chords that charmed my soul are mute,
I cannot wake the notes of old!
Or e'er were mine a wizard shell,
Could chain a world in raptures high;
Yet now a sad farewell! farewell!—
Must on its last faint echoes die.

Ambition, fashion, show and pride,
I part from all forever now;
Grief, in an overwhelming tide,
Has taught my haughty heart to bow,
Poor heart!—distracted, ah, so long,—
And still is aching, threbs to bear;—
How broken, that was once so strong;
How heavy, once so free from care!

No more for me life's fitful dream;—
Bright vision vanishing away!
My bark requires a deeper stream—
My sinking soul a surer stay.
By DEATH, stern sheriff! all bereft,
I weep, yet humbly kiss the rod;—
The best of all I still have left—
My FAITH, my BIBLE, and my GOD.

MARRIED.

On the 8th inst., by the Rev. A. Wright, Mr. GEORGE HYATT, and Miss JOANNA ALLEN, both of Franklinville, Catt. Co.

On the 11th instant, by Rev. A. Wright, Mr. RUFUS WESTCOTT, and Miss CATHARINE LINTON, all of this city.

At Alexander, on the 9th inst., by Rev. J. S. Barris, HIRAM A. TUCKER, Esq., of Buffalo, and ELLEN M., daughter of the late V. R. Hawkins, Esq.

At Town Line, Erie co., N. Y., on the 7th instant, by Robert Neel, Esq., Mr. CYRUS HURD, and Miss CORDELIA HILL, both of Lancaster.

DIED.

In the town of Boston, on the 24th of Jan., MARY M. COOPER, daughter of William and Ann Cooper, aged 20 years and 4 months.

BOARD OF TRADE.—At a meeting of the Board of Trade, held at their rooms yesterday, the following gentlemen were elected officers for the ensuing year:

President—PHILO DURFEE.
First Vice-President—GEO. B. WALBRIDGE.
Second do—SAMUEL F. PRATT.

DIRECTORS.

Rufus C. Palmer,	S. H. Fish,
James DeLong,	Elias Weed,
Geo. Davis,	S. W. Howell,
G. S. Hazard,	Wm. O. Brown,
D. N. Barney,	John Fleeharty.

Committee of Reference—Dean Richmond, H. E. Howard, A. P. Yaw.

Price Current—March 15, 1848.

Flour, bbl	$3 25	Turkeys, lb	8@9

T. S. HAWKS,

LITERARY DEPOT, Post Office Buildings, Buffalo, N. Y. All the Cheap Publications, Magazines, &c., kept constantly on hand, at New York prices. Orders by mail attended to when accompanied with the cash.

AMBROSE S. CARNER,

DRAPER AND TAILOR, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n3

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected; comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main-Street, Buffalo.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 166 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.

PUBLISHERS,

COMMERCIAL ADVERTISER BUILDINGS

MAIN STREET, BUFFALO.

TERMS.—To mail subscribers, $1,50 per annum in advance, four copies for $5,00, ten copies for $10,00. To city subscribers who receive their papers from the carrier, $2,00. Mail subscribers will also be charged $2,00 if payment is not made in advance.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

* * All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

The Beauty of Dying.

Ah! I often think it would be so beautiful to die.—Miss Bremer.

When visions of the heavenly land are floating in the soul,
And every feeling of the heart is given to joy's control,
How easily the eye must close to the scenes that sadden here,
And the spirit cleave the realms of light, afar from all that's drear.

More beautiful it then must be to seek the land of rest,
Where dreams are full of bliss and all the sleepers are the blest,
Than, when the limbs have weary grown, and darkness spreads her wings,
To woo the brief forgetfulness which grateful slumber brings.

O musical, most musical must be the voice of Death,
To charm the tireless pulse of life and lure away the breath!
And beautiful, when hopes are bright, the summons to obey,
And the gloomy night of earth exchange for heaven's unclouded day.

J. Clement.

For the Western Literary Messenger.

A wise Self-reliance secures Success.

AN ADDRESS BY LAURENS P. HICKOK, D. D.
Delivered before the Young Men's Association of Buffalo, Dec. 27, '47.

When Eneas celebrated the funeral rites of his father Anchises, Virgil, in his most graphic description of the boat race, says of the oarsmen, who had passed successively all their competitors but one, "*Hos successus alit: possunt quia posse videntur.*"—success cheers them: they can because they think they can.

The eighteen centuries which have since elapsed, have, in this respect, made no change in human nature. A broad examination of the different pursuits of men in this age will show that success has been very uniformly proportioned to a wise self-reliance. The man who calmly felt that he *could* succeed is the man who *has* succeeded. Success is the end in any enterprise; and when this becomes hopeless, all effort is paralized. The conclusion of common sense is —better not work if the work gains nothing.— Confidence that we can succeed is the spring of that tireless energy which is to secure it.

I have supposed, that a consideration of this fact in human experience might be both appropriate and profitable for the present occasion. Your association embraces among its members persons of different professions and pursuits, and who must be engaged from day to day in different ways and places. Your habits of thinking, and feeling, and entering into the sympathies of the busy world about you, are various; and yet for each there is his own object, and his own plan more or less mature and complicated to attain his object; and diverse as these ends and plans may be, the process to their execution must in all cases be subjected to the great facts and principles which are found in our common humanity. You come up to this Hall, as the common ground for investigating and applying these facts and principles in which all are interested, that you may stimulate and strengthen and discipline your faculties thereby—and then go forth again, with renewed vigor and a more intelligent confidence to the consummation of your respective purposes.

And now, the topic to which I am about to invite your attention is in reference to this very point—the security for success in any of the respective enterprises in which you may be engaged. The proposition has its application to human nature generally—viz: *that he succeeds, who wisely deems himself able to succeed.*

Before proceeding in the discussion, it may be desirable that the remark should be made, that we do not by any means intend to exclude an over ruling providence in the affairs of men. We hold, however, that Divine providence is a wise, and not a blind and capricious arrangement of events; and under the laws of this providence we assume, that he who has ground for wise self-reliance both *should*, and *does* succeed. We take man as he is, in his intelligence and his freedom, and thrown as he is by his Maker amid the moving elements of Nature around him, and endowed with a capacity to seize upon favoring incidents and propitious occasions and turn them to his own purposes, and force a broad train of passing occurrences to minister as willing auxiliaries to his designs; and then affirm it to be the order of Heaven's providential arrangements, that the man, who may wisely trust the possession of such a power over circumstances, is the man in whose hands the circumstances become the pliant and prosperous instruments for his advantage. Divine providence helps the man who intelligently confides in his capacity to help himself.

We will restrict the discussion to *two* main enquiries:—1st. *What is a wise self-reliance?* 2d. *How shall this be attained?*

That we may clearly apprehend what it is wisely to rely upon ourselves, it is obvious to remark:—

1st. *That there must be an exclusion of all dependence upon adventitious circumstances.*—Many things favorable to success may come to a man, without any care or agency of his own. He may have great wealth, or high ancestral reputation, by inheritance. Official patronage, governmental favor, or party influence, may come as auxiliaries to his own resources. They may very much enhance the facility with which a young man shall commence a prosperous business, or aid the man of experience in his more mature and extended arrangements. But to what degree so ever given these adventitious helps are not to be a ground of confidence. They can benefit the man if he wisely use them, they will be worse than nothing if he depends upon them. They are mere instruments, good if the man knows how to handle them, good for nothing if he has not skill to manage them. Confidence in them is not safe-reliance, nor can it at all consist with self-reliance. It is trusting to something other than the man's own efficiency. He needs rather this spirit—I can use them wisely and successfully if I have them; and if I have them not, I can do very well with-

out them. I can make some thing else take their place and answer all my purposes. He should ever feel—these are not myself; and if I depend upon them, they may fail me at the very crisis when this false dependence shall be the most disastrous. Their tendency always is to transfer the man's dependence upon *himself* to a vain confidence in *them*, and induce to the neglect of his own resources, and when thus used, the man had by far, been better off without them.

It is exceedingly cheering to look abroad upon the community, and read a lesson in the incontrovertible facts of human society. The voice comes up from all the walks of busy life, the shops of the mechanic, the marts of trade, the offices of professional study; yea, from the Council Board, the Senate Hall, and the Cabinet Chamber, loudly affirming that neither patrimony, nor parentage, nor patronage, have had very much to do in the elevation of our truly great men. They have gone up to their high places of public respect and veneration, mainly, from very humble stations, and not a few from the very depths of early neglect and want. It is as instructive as it is cheering, to learn here how brave and resolute minds may push their way onward and upward, not only without adventitious helps but in the face of the most discouraging hindrances. Even to day, beneath the coarse and tattered garb of some half-starved child in your streets, there may be lodged a mind yet in its rudiments, which shall soon wake in its might, and put forth its kindling energies, and force its way in the strength of its own manly resolution, to that very station of power and usefulness, which the son of wealth and rank anticipated, but will never reach.

Past a doubt, in the coming, as in the present and former generations, wealth and power and influence will change from the families who had them, to the children of such as had them not; nor is there any other rational expectation, but that the most prompt, persevering, and resolute spirits will have the highest success, and take to themselves the brightest distinctions. The event will still disclose that, not in proportion to the adventitious aids received, but in proportion to the cultivation and discipline of the man's own faculties, and the confidence with which he rested, under God, upon his own capability, is the success to which he has attained. We may say of each great man now, as in the days of Rome, "*est faber suæ fortunæ.*"

2d. *Self-reliance is inconsistent with a dependance upon the capriciousness of Fortune.*—The great English dramatist had discovered that in the wide ocean of human experience:—

"There is a tide in the affairs of men,
Which, taken at the flood, shall bear them on to fortune."

Favoring occasions and conspiring influences occur in every enterprise propitious for its undertaking and successful prosecution, and which are promptly to be seized and skilfully used for the accomplishment of the design in hand. It is a tide which has its turn, and which must be taken at the right time, and the man must throw himself upon it in the right direction, or instead of bearing on to fortune it will float him out to sea and engulf him.

But this is quite another thing than that which I am now contemplating. I have reference to that fond credulity and flattering presumption, not very uncommon, which trusts to good luck, and happy turns, and favorable fits of fortune. In all the departments of life we find not a few persons of easy and dreaming indolence, who never put forth any strenuous and long continued efforts for any end, and who indeed seem never to have a definite object and a direct aim towards it; but who are ever flattering themselves with the delusive anticipation that some lucky chance shall throw into their lap just what they shall need, and at just the time when it shall be wanted. The wheel of Fortune in its blind whirl is ever about to throw some splendid prize into their possession, and they cherish the fond dreams of golden treasures which are coming. For many an idle mind, this sort of castle building in the air becomes a most seductive employment, and ripens at length into a most incorrigible habit. Fair scenes are spread out before them, filled with bright and beautiful objects; gilded images on all sides appear; and while nothing is undertaken to secure their possession, still the delusion is, that some favoring freak of fortune will somehow make it to be all theirs in the happy days which are coming. They sit down upon the bank, waiting until the river shall run by, and then nothing shall hinder that they may rove at will within the green fields and over the flowery plains beyond it.

How unwelcome, but nevertheless how necessary, to arouse such stupid slumberers from their dreams! How kind, though thankless, is the attempt to force sharply upon their convictions, the stern truths of practical life! If you neglect the seed-time, you may beg in harvest and have nothing. "In the sweat of thy brow shalt thou eat thy bread." What is to happen at hazard will not probably happen very propitiously.—Bountiful harvests will not happen to the husbandman without toil; the profits of commercial and mercantile business will not happen without the watchful sagacity and care of the merchant; nor will lawyers happen to have clients, and clients happen to pay their fees, nor patients happen to get well and pay the doctor, without professional study and skill. We live and act in a matter-of-fact world, and the world is pretty sure to teach us that its facts are stubborn things; and if any one is doing nothing but dreaming, he must be content to have nothing but his dreams to live on. Fortune is but a blind goddess, and very often will not know her most devoted worshipers.

3d. *Self-reliance is equally incompatible with all presumption upon Destiny.*—This is the converse of the last. Instead of resting upon what is to come capriciously and fortuitously, it presumes that the good is his inevitably, and that it is his fixed destiny to succeed. This, doubtless demands for itself a much higher order of mind than the former, and he who can rise to the presumption of being the hero of destiny will not pass his days in indolent dreaming. The very presumption, while it lasts, will wake to plans the most audacious, and excite to deeds of reckless daring, and may even seem to often force success from the headstrong hardihood which it inspires. But it is not a safe ground of reliance for success, nor that on which real greatness of character can be built, nor is it that with which true magnanimity can be satisfied. It often prompts to rash undertakings, and when the frantic schemes are about to crush him under their own ruins, the man learns that destiny is turned against him, and at once he sinks in his weakness, and falls without any resources.

The nations of the earth are scarcely yet quiet from the commotions which the frenzy of one assumed hero of destiny occasioned. Through policy, or as himself a prey to his own presumption, Buonaparte assumed it to be his destiny to carry out his plans in triumph over the nations. He was born to empire, and it was given to him to sport with crowns and sceptres, and to tread his way resistless to his objects, as if through him there was some deep fatality mysteriously working out its changeless issues. Under the impulse

of this high thought. what prodigies of valorous achievements! what great plans! what mighty armies! what military resources! This man of iron will, so dauntless, so long victorious, seemed almost to make this mad presumption reasonable.

But let us dwell a moment upon this eminent example, and make it illustrative of our position.* This confidence in his destiny, we will admit, did much for and made very much of Napoleon Buonaparte. After a long series of almost unexampled successes, it stimulated to that vaulting ambition which determined to subjugate one of the mightiest and most inaccessible empires of Europe. At the head of his legions he penetrated at once to the heart of Russia. Moscow is his, and his soldiers are to winter in her palaces, and in the opening spring to seize upon Petersburg and the throne of Alexander. Destiny sustains *him*, and dooms his enemies. But, behold! a fire kindles in the towers of the Kremlin. The Russians sacrifice their city to their patriotism, and spread the flames through every street; dwelling, court and castle are all in conflagration, and Buonaparte and his army are instantly thrown with no shelter but the heavens, amid the snows and tempests of a polar winter. And here, that very rock of his destiny on which he was so proudly standing has now in a moment turned, and is about to fall upon him and grind him to powder. His confidence is gone, he has no independant magnanimity, and not another act of greatness and heroism appears. In his selfish anxiety and desperation he leaves his army and his confiding Generals to their fate, wraps his mantle of furs about him, and with a solitary companion in his winter sledge he flies across the wide spread plains of Poland, hurries on in disguise to France and seeks the shelter of his own exhausted capital. A few short months of feverish energy and perplexity and the enemy presses in upon him, he surrenders at discretion and becomes the exile of Elba.

Once, again, from the same man we have an example of the same infatuation, strong in early operation but ending in despairing feebleness. A few months of solitary brooding over fallen fortunes, and as if his locks had again grown, and his confidence in his destiny returned, by one bold leap he is again on the throne of France, and her embattled hosts surround him. He stands up on the field of Waterloo, and by one brave stroke he trusts to cleave the combined force of all Europe in the dust, and reign sole master. What but strong confidence in his destiny could so excite him? How high his hope! how bright his star! when he takes his stand on the watch tower that overlooked that plain, populous with his own legions and the confederate armies of his enemies, and promptly orders on the battle. His brave troops fiercely charge upon the solid ranks; but how stubborn proves that file of British bayonets! Fresh bands of French cavalry impale themselves upon them, but not a man gives way. An impression there is essential to victory, and his veteran battalions are poured upon that critical point of the raging conflict that they may sweep away all opposition. But they met those serried ranks as the foaming surge meets the rock bound shore. They dash, but resisted and reeling, they soon retreat, broken and scattered, from the shock, and in full view of their troubled master. Then comes, in the closing of this day of carnage, a long wished for reinforcement to the allies in Blucher's troops emerging from the forest, and their armor gleaming in the setting sun, and which excites the hero of destiny to desperation. His last hope, his reserved legions under their veteran Marshal are sent to the charge, but brave and daring and desperate though they are, they fail and are routed. The day is lost, and all hope is over, Destiny is again turned against him and he can do no more. Nothing of the hero appears beyond this. The allied armies press in upon France; some of his old friends and soldiers desert his cause; he would flee to America but is hedged in; he hastens to Rochefort and is rowed in a British barge to a ship of war, and accepts protection of the nation who had done the most to dethrone him. They send him to his lone prison in the distant ocean Isle; his confidence in his destiny no more returns, and the proud bearing the high resolve, the dauntless plan and purpose, the iron will, are seen no more. Great as Buonaparte was, yet never had he the magnanimity and the dignity of a mind which could sustain itself from its own resources, and stand self-balanced amid all fortunes. His rash confidence in his destiny, though awhile successful, yet necessarily in the end wrought his downfall.

And now, in lower spheres, and in less splendid projects, the same presumption may partially prevail, but ultimately to prove alike disastrous. It is never the truly great man who yields to the fond presumption that he is the favorite of a supernatural destiny. The fanaticism may put on either a heathen or a christian aspect, but it will in each case lead to ruin. The sources of hope and confidence, in the very crisis of the man's extremity, become the signals for fear and despair. The omens will not come propitious at his bidding; the birds will sometimes in their flight give an evil augury; the thunder will sometimes be heard on the left-hand; and these ill omens may come in the most critical exigencies, when cool self-possession is the most important, and they will inevitably change the presumptuous confidence to cowardly dismay and weakness. Man may use to purpose his own disciplined powers in times of need, but he cannot make supernatural destinies obey him.

4th. *A wise self-reliance will not admit a trust in future efforts, while yielding to present indolence.* —Many trust in what they are about to do, even when they have not as yet begun any effort. This is a sort of self-reliance, in as much as it is confiding in what it is presumed the future self will do; but it is a most unwise source of expectation. The man who indulges in indolence and sloth to-day, in spite of the goadings which prompt him to resolve on something better for the future will be still more likely to be found idle to-morrow. The habit grows space, and soon becomes confined beyond the power of even extraordinary stimulants to arouse to action.

There are tendencies in this direction, from the circumstances which often accompany the first beginning of a young man in his business. The amount of pressure and stimulant is proportioned to the patronage, and quite early it can hardly be expected that he should compete with older establishments. His vacant time may thus be squandered in some frivolous employment, without seeming to encroach upon the claims of his business. But even then his character is fast becoming formed, both in reality and in the estimation of the public, and a few months of careless-

* This example is illustrative of the position, no farther than it is admitted that Buonaparte was stimulated by the rash confidence that he was the hero of destiny. Some may judge differently of the spring of all his enterprises, and deem his greatness to be the result of self-reliance, and only failing because he put himself against the rights and interests of humanity and the claims of truth; and yet to such I doubt not there will be the full conviction that there was an inherent magnanimity in such a man as Paul, or as Washington, which would have evinced a greatness under reverses such as Bonaparte never had. To those, however, who would doubt the appropriateness of the given illustration, there may perhaps be no necessity for any example—they will grant the position without its being instanced by a fact.

ness destroys his own energy, and other men's confidence in him, perhaps irrecoverably. He who means to attain a proper self-reliance will never permit himself to have such leisure hours. The activity of his own mind will create for itself some object, and give the inner impulse to effort, and the very joy of well directed action will ever apply a sufficient stimulant to enterprise. But the idle man, notwithstanding his expressed intentions, may be safely set down to the future for what he is at present. To afford the least ground for hope, he needs to begin to act, and not merely to promise.

I have a case for illustration in point. A good natured, but incorrigibly indolent young man, in college, was frequently reproved for his abuse of talents and neglect of opportunities to improve them; but his ready answer, on all occasions was, —"*never mind; I'll show you what I can do in after life.*" Some fifteen years passed on, with no knowledge of his fortune or his fame, when I caught a transient sight of my old friend. At a rail road depot, in a laborer's attire and with the same old, slow and easy movement, he was pushing the car upon the circular platform to turn it round for the backward track; and with his propensity to take all things comfortably still unwakened, he would ride upon the platform while others were wheeling it, apparently quite as well satisfied with his future prospects as ever. "Ah yes! thought I, you *are* showing us what you will do in after life."

This man is, I suppose, a pretty fair type of many who are not now and have not yet been doing any thing to the purpose, but they mean to show the world what they can do by and by. But all this indolent expectation from future energy is a miserable delusion. Idleness this year is a poor preparative for activity the next year. If a man will not act now, it is not to be anticipated that he will act successfully, until he sleeps in his grave.

"Once, having seen a bough of Laurel wave,
He said, hereafter he would climb and reach it.
Himself and friends talked of his coming greatness,
And prophecying, drew his future life.
Vain prophecy! his fancy, taught by sloth,
Saw, at the very threshold of pursuit
A thousand obstacles; he halted first.
His purpose, daily made, he daily broke.
As plants uprooted oft, and set again
More sickly grow, so waned his resolutions;
Till at the last, decision quite worn out,
Resigned his blasted faculties to sleep.
He died, and rotted nameless where he fell."

5th. *A wise self-reliance is to be found in the calm conviction that the mind possesses within itself the requisite resources.*—Nothing external can give safe confidence, since, whatever it may be even when possessed, it must still be used by the man himself, and he needs to confide in his capacity to use it to the best advantage. Acquisitions attained by another, and made over to a man's possession, are not his acquirements; he lives simply upon the favor of a patron. To rely upon one's self is to feel that inward energy, and force of faculties, by which the man calmly and entrepidly may meet the demands of the entire enterprize. A mind self-possessed is a foundation, on which, what is properly called self-reliance reposes. This equal balancing of the mind, and the power to hold it steady by its own purposes, is a condition in the attainment of an end, for which nothing else can be a substitute; and where this is, that mind can make the means for the fulfillment of its own plans.

Mind, thus disciplined, ever must be the main spring in the success of any important undertaking. This fixes on the end to be attained, selects the means and combines them, and then guides through all the process to the consummation. Where its own hands are incompetent to gain the end, it will summon other instruments to its work; if artificial helps are needed, it will create them; if other minds are necessary, it will throw an influence over a sufficient number and enlist them in the enterprize. Such a mind subsidises everything, and puts the powers of nature under contribution to its purposes. All the elements for success may abound, but they will be as useless as the fragments which the ocean throws ashore, until some master mind lays its hand upon them, and moves and manages them; and if such elements are not at hand, this master mind will put forth an agency that shall get them and work out its issues by its own energies. The winds of heaven and the waves of the ocean become tributary to it; the farthest Isle and the broadest continent are taxed; and all the products of the globe, either lying upon its surface or hidden deep within its bowels, are made to minister to its wants. To such a mind, where there is a will there is a way, for the energy of such a will cuts its own way through all difficulties. It has all its resources within its own control, and feels no perturbation nor misgiving amid the collissions and jostelling of the movements it is guiding.

—"The truly great
Have all one age, and from one visible space
Shall influence! They, both in power and act,
Are permanent, and Time is not with *them*,
Save as it worketh *for* them, they *in* it."

And now another, and quite as important point for investigation is—

II. *How shall this wise self-reliance be attained?*—It is essential, that at the outset, there should be the conviction that it must be an acquirement and not an *inheritance*. It is the product of rigid self-discipline, and never a random gift of nature. The hidden power lies deep within the mind, as the treasures of nature lie in the dark chambers of the unwrought ore-bed. The patient process of digging out, and melting, and moulding into shape must be passed, before it can be used to any purpose. And some of the most important directions for this are as follows—

1st. *Through thorough Self discipline attain complete Self-possession.*—The auxiliaries of Nature and the association of other minds are to be made subservient to our success, and this can be secured only through the control which we acquire over our own faculties. This is very manifest in all the departments of manual labor. The husbandman and the mechanic have learned to trust their physical strength, their acquired skill, and their endurance of prolonged application, from repeated and habitual exercise. They know just what the training of the muscles has given to them the capacity to effect, and hence they feel full confidence in relation to both *what* they can do, and *how soon* they can do it. They go to their work in full self-possession, and thus with calm assurance of success.

A like control over the mental faculties is necessary to their successful operation, but the attainment of this is a much more difficult task.—Many a man has so attained the control of his muscles and limbs, that he uses them with confidence as it were spontaneously, but when thrown upon his mental resources, he finds that faculties are needed which he has never learned to manage, and which will not come, and go, and work, at his bidding.

Take an illustration of the necessity of self-possession in both *bodily* and *mental* action. We have so learned from our very infancy, to control

the use of our limbs in walking, that we move them unconsciously for our purpose without fear of a failure. Remove the complete self-possession in this particular and we could not walk the room in safety. If you had it yet thoughtfully to settle which foot you should first put forward, and when you made the effort you was not yet quite sure that it would move, or that if it did it would move forwards and not backwards; and, moreo ver, if you had not a confidence in the muscles of your frame to keep your body balanced in the act of locomotion, you could no better walk than the drunken man, and your steps would totter like the infant's. Take away your self-possession, and the erect position and the firm and graceful step are impossible. Make a man walk the edge of a precipice; put him on a single plank over a frightful abyss; his brain reels, his knees smite together, he is going to fall for he has lost all self-possession.

Take another illustration relatively to the mental faculties. Lord Brougham gives a most graphic sketch of the capacity for extemporaneous speaking, himself an eminent example of the art he describes.—"A practised orator will declaim in various and measured periods; weave his discourse into one texture; form parentheses within parentheses; excite the passions or move to laughter; take a turn in his discourse from an accidental interruption, making it a new topic of his rhetoric, and pursuing the new illustrations it introduces; mould his diction with a view to accommodate some epigrammatic point, or alliteration, or avoid a discord: and all this, *with so much assured reliance upon his own powers*, and such perfect ease to himself, that he shall plan the next sentence while he is pronouncing, off-hand, the one with which he is engaged, adapting each to the other, and shall look forward also to the topic which is to follow, and fit in the close of the one he is handling to be its introducer; nor shall one of his audience be able to discover the least difference between all this and any portion of his speech which he may speak *memoriter* nor tell where is the transition from one to the other." Now all this can be attained only in the attainment of complete self-possession, without which there is invariably painful hesitation, incoherent stammering, and a most awkward embarrassment.

The above illustrations apply to all professions and employments; until the man has secured such a control of all the faculties requisite to be employed, that he can calmly confide in his power to use them as he pleases, it is unreasonable to hope for his success. Like a harp untuned—an engine without a balance wheel—such a mind cannot be used to any good purpose. A rigid discipline must subject all that belongs to the man to his own ready control, so that he may call up at will any faculty and hold it to its work till its end is accomplished, and which alone is self-possession, before it can be safe to intrust any important business to his charge.

To this self-possession there must also be added —2d.—*Such an object proposed as will admit the whole mind to go out unhindered for its attainment.* —Much depends upon the object whether the man may safely rely upon himself or not to attain it. Some ends will demand more mental effort, and call into requisition more varied faculties than others, and it is always desirable that the man make choice of such a pursuit, as will call his faculties into exercise the most harmoniously. But in one direction this is more than merely desirable, it is quite essential to all safe self-reliance.— The end proposed must not array one faculty in conflict with others. External obstacles are of far less account. A wise mind will avoid all the difficulties which it may, and a resolute mind will summon its energies to conquer all the rest. But when the object necessarily calls up some of the most inflexible inner powers in opposition, or moves across some of the most tender susceptibilities in its attainments, and calm self-reliance is impossible, every step of your progress obliges you to trample upon some of the laws of your well-being, and your confidence must somewhere desert you. You cannot keep resolutely on, thrusting a new thorn in the flesh at every step, and aggravating with every act a wounded spirit; somewhere you will give back, with a heart all lacerated and bleeding within you.

Such must be the case, where the effort puts the action of the mind at war with the health of the body, or the condition of the body in hostility to the peace of the spirits; where the claims of patriotism are violated, and your way lies across the prosperity and the liberties of your country; where the ties of natural affection are severed, or self-respect is forfeited, or the dictates of an honest conscience are unheeded; in all such cases you will find it impossible to urge on your perilous enterprize with a calm and courageous spirit.— Your object comes in collision with the permanent principles of your own being, and conflicts with the necessary conditions of your own welfare, and you cannot succeed but to your own undoing. It is true that we sometimes see strong passion exciting to a furious and reckless pursuit of its unworthy object, while all the deeper and steadier principles of human nature are overborne and stifled. But its violence is soon exhausted in its own action, or the appetite sated in its own gratification, while nature within is constant, and inevitably brings on the day of reaction and terrible retribution. Passion must flag; its tides of excitement must cave their ebb; and like the bent bow resisting its tension, nature recovers itself with the first opportunity and asserts its violated rights. The guilty man is unmanned; the shaking of a leaf terrifies him; the whip of scorpions pursues him. The object of his pursuit puts his own nature in conflict with itself, and he dooms his own bosom to be torn by contending forces, and he lays his hand upon his object only in his own ruin. This is not to be successful.

Even the attainment of an unworthy end must leave the mind unsatisfied, and such a man cannot properly be said to have been successful. True success in life elevates the mind in its own dignity, and fills it with peace in the contemplation of its possession. Look at Alexander as he aspires after universal dominion. He exhibits prodigies of valor and heroism, and expands his plans and his means as broad as the end of his ambition. The Macedonian phalanx was irresistible. The empire of the west attained, he rushes on unsated to the conquest of the eastern world; and in the subjugation of Asia, the whole known east lies prostrate at his feet. He has got his object; but has Alexander satisfied his mind in its possession, and been truly successful in life! See him, as he stands on the banks of the Hyphasus. Behind him are the subjected nations of the world, before him a waste unpeopled solitude with no more victims for his ambition. Like the weak child that has become tired of his rattle, so is this great hero weeping because there is not another world to conquer. He goes back to the luxuries of Babylon, gives himself up to sensuality, and in less than a year dies a drunkard. Our object must conform to the claims of humanity, or even its attainment is only successful misery.

3d. *The mind must be held to its purpose undiverted by other objects.*—When Alexander would invade Persia, and had crossed the Hellespont, he ordered every boat to be burnt upon the shore, thus letting the army know that henceforth there

could be but the one purpose, to subjugate Darius; and as retreat was impossible there must be victory or death. So in every important undertaking there must be an undiverted resolution, or all effort will be imbecile and abortive. A man only half in earnest will never attain self-confidence, nor inspire others with courage; but that mind which can wisely select its object, and hold its powers undivided and undiverted in action towards it, is in that very fact strong and great.—You may put such a mind among a thousand and it will throw its influence over them all. Little minds show their weakness in the want, and great minds evince their strength in the possession, of an unshaken purpose more than in all things else. Said the mighty Timour Bey, "the grand secret of my greatness is this; I acted with resolution: on what undertaking soever I resolved, I made that the sole object of my attention: and I never drew back my hand from that enterprise until I had finished it."

"A double minded man is unstable in all his ways." His double objects divide and distract his powers in their pursuit, and he succeeds in nothing. The needle vibrates tremblingly between two conflicting magnets, and at last settles to rest in a direction which is towards neither of them. That object which it is to be the employment of your life to pursue must be engrossing. It is the way in which you are to serve God and your generation, and except as you succeed in it, your life is in vain. What you allow to be diverted and expended upon interfering objects is so much thrown away, and indeed thrown as obstacles in your own path. It was this unswerving purpose that made Demosthenes shave his head, and shut himself up in his cave, to come forth from thence an orator for whom the world has not yet found a rival. When Sheridan had failed in making his first speech, it was this that made him undiscouraged say to his friend; "I know it is in me, and by heaven's help it *shall come out*." This it is which inspires confidence every where, and leads to prosperity and success in all the walks of busy life. The inward consciousness of such undiverted decision makes all hindrances to become but as "the green withes" which were put upon the Hebrew giant.

4th. *This undiverted purpose must persevere untiringly.*—Cicero says of Brutus, *Quid vult valde vult*—what he willed he strongly willed. And this must be true of every man who would attain to a wise self-reliance. There must be a purpose so direct that it cannot be diverted from its object, not only, but also so strong that it cannot be stopped till it gets its object. Look at Luther, before the assembled princes and cardinals in the German Diet; or, at Washington crossing the frozen Delaware to the Hessian camp; the purposes of both were not only direct and undiverted, but unflinching in perseverance till they should conquer. Look at the progress of any great enterprize whatever, and as it moves steadily onward, somewhere you will find the persevering energy of a mind which has hold of the whole business, and which carries it in its strength as Atlas carried the mountain on his shoulders.

Very few great objects are to be gained by any one effort. A series of preliminary and consecutive agencies must work on, each of which is as essential to the issue as the last act in which the success is consummated. The perseverence must hold on through all the process. The scale turns with the last grain, but this could not thus preponderate except from all the previous accumulation. According to the old Arab proverb, "it is the last feather only which breaks the camel's back;" but this is not because it is one feather *only*, but one feather *more* than the camel's back can bear. No matter how much nor how long you may have toiled to reach your object, if you do not put forth the very last effort to attain which is necessary for its possession, you cannot have it. From the very laws of the human mind success is often impossible except through many trials and long perpetuated exercise. An Apollo Belvidere was never the first production of any artist's chisel. The power of a Webster was never attained at one leap by any statesman. He who is in doubt whether his determination is sufficiently inflexible to hold on to the end, is so far wanting in self-reliance. The old Roman proverb encouraged to perseverence by saying "*gutta cavat lapidem, non vi, sed saepe cadendo*," the drop wears the stone, not by force, but by often falling. Impatient haste and untimely weariness may alike defeat all success. Said Timour, "I was once forced to take shelter from my enemies in a ruined building where I sat alone for many hours. To divert my mind in its almost hopeless condition, I fixed my observation upon an ant that was carrying a grain of corn, larger than itself, up a high wall. I numbered the efforts it made to accomplish this object; the grain fell sixty-nine times to the ground, but the insect persevered, and the seventieth time it reached the top of the wall. The sight gave me courage at the moment, and I never forgot the lesson it conveyed."

Thus may it be understood what a safe and wise self-reliance is, and how it is to be attained. In all our varied pursuits, something of this spirit is necessary. No man can become either successful or useful in the great purposes of life without it, and the capability for its attainment, in a greater or less degree, is the birth-right of us all. Thrown as we are amid a thousand responsibilities and claims, we cannot fulfil our mission without the control of our own powers, the prompt and ready use of our own faculties; and the calm self-possession, which the consciousness of such a capability gives, is the surest pledge of success. Let us have high and noble aims; a fixed decision and persevering energy; and under the wise providence of Jehovah, we may trust ourselves for success, with but little anxiety about distinctions of birth, or patronage, or party. He who possesses these adventitious distinctions must, after all, have this manly entrepidity and engergy, or he will be outrun in the race by such as wisely rely upon their own resources. A man's goodness and greatness must be his own; they are what he *is*, not what another can *give* to him.

Every man should, as every man at last must, stand or fall by himself. Under God, the talisman of our own fortunes is within us. It will be most unmanly, if we repine at another's success while we are unsuccessful, when his success has been the fruit of his heroic resolution and endurance, and our defeat has sprung from our own folly and imbecility. Let all go to work wisely, manfully, cheerfully, to attain success, each in his own calling, and expect and be ready to meet all the results of his own agency.

"What men most covet, wealth, distinction, power—
Are baubles nothing worth; they only serve
To rouse us up as children at the school
Are roused up to exertion. Our reward
Is in the *race* we run, not in the *prize*.
These few, to whom is given what they ne'er earned,
Having by favor, or inheritance
These dangerous gifts placed in their hands,
Know not, nor ever can, the generous pride
That glows in him, who on himself relies,
Entering the lists of life. He speeds beyond
Them all, and foremost in the race succeeds.
His joy is not that he has got his crown,
But that *the power to win* the crown is his."

HENRY WHEATON.—The reaper Death is gathering a rich harvest. To the illustrious names of ADAMS and Chief Justices KENT and SPENCER, who have died within a brief space, we have now to add that of HENRY WHEATON, late U. S. Minister to Berlin, who died at Dorchester, Mass., last Saturday night. No country in the world could boast of more truly great names. The three first mentioned, were alike venerable for their years, their virtues, their great acquirements, lofty intellects and eminent public services. Mr. WHEATON, though much their junior in years, being but little past sixty when he died, was worthy such companionship. He was one of the most profound jurists and scholars of the age, and by his labors and varied accomplishments did much to relieve this country from the charge of showy, superficial attainments so often, and not always unjustly, preferred against it. We copy the following from the Boston Transcript:

Mr. Wheaton was born in Providence, November, 1785. In 1827 he was appointed by John Quincy Adams Charge d'Affaires to Copenhagen. In 1836, he was transferred to Berlin, and the year after, was raised to the rank of Minister Plenipotentiary. In Prussia his services were long and eminent. He stood confessedly at the head of American diplomacy, and was regarded, more than any other man, as the representative of the American government. His reputation was even greater in Europe than at home, for there he was better known and more intimately appreciated. Among the friends who esteemed him, were the King of Prussia, the King of the French, Prince Metternich, Baron Humboldt, and M. Guizot. On his return home, he accepted the Chair of Professor of International Law in Harvard University, and was about to commence upon the duties of the appointment when he was attacked with the illness which resulted in his death.

Mr. Wheaton's principal works are a treatise upon the Law of Captures, Elements of International Law, Sketch of the Law of Nations, from the Peace of Westphalia, an Essay on the Right of Search, twelve volumes of Reports and a Digest of the Reports, The Life of William Pinckney, and a History of the Northmen. Perhaps no American Minister has ever been distinguished by so many despatches upon a variety of topics, and of such uniform interest and value.

A post mortem examination indicated deep-seated disease of the brain. He had been a great intellectual worker. He leaves a wife, two daughters, and a son.

GOOD FOR FARMERS.—If half the swords that have been presented to men who have "seen the elephant" in Mexico, as a reward for their deeds of prowess, shall be beaten into ploughshares at the termination of the war, we may look for great things in agriculture. The Mexican battles surpass even the famous fights of Napoleon, in the opportunities they furnish for the sudden manufacture of fame, to order. A man has but to stand up with the rest of his company, and if he is so lucky as to be only grazed by a bullet he is good for a beautiful sword and a series of resolutions from some back town in his native State. The amount expended in compliments of swords to heroes would buy ploughs for all the farmers in the Union, and if they who have been laid beneath the sod were now able to turn the sod, who would not rather have their services than the whole of Mexico?—*Utica Gazette.*

THE GENTLEMAN.—Extracts from Bishop Doane's Address at Burlington College:

"When you have found a man, you have not far to go to find a gentleman. You cannot make a gold ring out of brass. You cannot change a Cape May crystal to a diamond. You cannot make a gentleman, till you have first a man. To be a gentleman, it will not be sufficient to have had a grandfather.

To be a gentleman, does not depend upon the tailor, or the toilet. Blood will degenerate.—Good clothes are not good habits. The Prince Loo Boo concluded that the hog, in England was the only gentleman, as being the only thing that did not labor.

A gentleman is just a *gentle*-man; no more, no less; a diamond polished, that was first a diamond in the rough. A gentleman is gentle. A gentleman is modest. A gentleman is courteous. A gentleman is generous. A gentleman is slow to take offence, as being one that never gives it. A gentleman is slow to surmise evil, as being one that never thinks it. A gentleman goes armed, only in consciousness of right. A gentleman subjects his appetites. A gentleman refines his taste. A gentleman subdues his feelings. A gentleman controls his speech. A gentleman deems every other better than himself. Sir Philip Sidney was never so much a gentleman—mirror though he was, of England's knighthood—as when, upon the field of Zutphen, as he lay in his own blood, he waived the draught of cold spring water that was brought, to quench his mortal thirst, in favor of a dying soldier. St. Paul described a gentleman, when he exhorted the Philippian Christians. "Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report, if there be any virtue, and if there be any praise, think on these things." And Dr. Isaac Barrow, in his admirable Sermon on the calling of a gentleman, pointedly says, "he should labor and study to be a leader unto virtue and a notable prompter thereof; directing and exciting men thereto by his exemplary conversation; encouraging them by his countenance and authority: rewarding the goodness of meaner people by his bounty and favor: he should be such a gentleman as Noah, who preached righteousness, by his words and works, before a profane world."

ADDRESS TO A YOUNG LAW STUDENT.—[Found among the MSS. of Cotton Mather.]—"When thou speakest of thy studies, be sure that thou eschew presumptuous words; and if thou be interrogated as to them, do thou in all meekness say *that thou hangest thy hat in a lawyer's office.* For hereby shalt thou, peradventure, be nigh unto the truth."

LET CHILDREN SING.—All children can learn to sing if they commence in season. In Germany, every child is taught to use its voice while young. In their schools all join in singing as a regular exercise, as much as they attend to the study of geography; and in their churches the singing is not confined to a choir, who sit apart from the others, perhaps in one corner of the house, but there is a vast tide of incense going forth to God from every heart, which can give utterance to this language from the soul.

For the Western Literary Messenger.

Eventide.

'Tis eventide—let me go forth
Beneath the azure zone,
As went the patriarch of old
To meditate alone.

Yonder appears the crescent moon,
While one by one around,
Like angels looking down from heaven,
The blessed stars look down.

They look upon the sleeping earth
And on the sleeping flowers—
A messenger of love each ray
From yon bright world to ours.

Oh, it doth cheer my watch to know
Those stars are gleaming bright—
It is not solitude to be
Alone beneath their light.

ROYATON, N. Y. J. H. BIXBY.

Divine Revelation.

A Letter from Hon. John Quincy Adams to his Son on the Bible and its Teachings.

The first point of view in which I have invited you to consider the Bible, is in the light of *Divine Revelation*. And what are we to understand by these terms? I intend as much as possible, to avoid the field of controversy, which I am not acquainted with, and for which I have little respect, and still less inclination. My idea of the Bible as a *Divine Revelation* is founded upon its practical use to mankind, and not upon metaphysical subtleties. There are three points of doctrine, the belief of which forms the foundation of all morality. The first is, the Existence of a God; the second is, the Immortality of the Human Soul; and the third is, a Future State of Rewards and Punishments. Suppose it possible for a man to disbelieve either of these articles of faith, and that man will have no conscience, he will have no other law than that of the tiger, or the shark; the laws of man may bind him in chains, or may put him to death, but they never can make him wise, virtuous, or happy. It is possible to believe them all without believing that the Bible is a Divine Revelation. It is so obvious to every reasonable being that he did not make himself, and the world which he inhabits could as little make itself, that the moment we begin to exercise the power of reflection, it seems impossible to escape the conviction that there is a Creator. It is equally evident that the Creator must be a spiritual, and not a material being; there is also a consciousness that the thinking part of our nature is not material, but spiritual—that it is not subject to the laws of matter, nor perishable with it. Hence arises the belief that we have an immortal soul; and pursuing the train of thought which the visible creation and observation upon ourselves suggests, we must soon discover that the Creator must also be the Governor of the Universe; that His wisdom, and His goodness, must be without bounds—that he is a righteous God and loves righteousness—that mankind are bound by the laws of righteousness and are accountable to Him for their obedience to them in this life, according to their good or evil deeds.—This completion of Divine Justice must be reserved for another life. The existence of a Creator, the immortality of the human soul, and a future state of retribution, are therefore so perfectly congenial to natural reason when once discovered—or rather it is so impossible for natural reason to disbelieve them—that it would seem the light of natural reason could alone suffice for their discovery; but the conclusion would not be correct.—Human reason may be sufficient to get an obscure glimpse of these sacred and important truths, but it cannot discover them in all their clearness. For example: in all their numberless, false religions, which have swayed the minds of men in different ages and regions of the world, the idea of a God has always been included:

> "Father of all! in every age,
> In every clime adored—
> By Saint by Savage, and by Sage—
> Jehovah, Jove, or Lord."

So says Pope's Universal Prayer. But it is the God of the Hebrews alone who is announced to us as the Creator of the world. The ideas of God entertained by all the most illustrious, and most ingenious nations of antiquity were weak and absurd. The Persians worshiped the Sun; the Egyptians believed in an innumerable multitude of gods, and worshiped not only oxen, crocodiles, dogs and cats, but even garlics and onions. The Greeks invented a poetical religion, and adored men and women, virtues and vices; air water and fire, and every thing that a vivid imagination could personify. Almost all the Greek Philosophers reasoned and meditated upon the nature of the gods; but scarcely any of them reflected enough even to imagine that there was but one God, and not one of them ever conceived of Him as the Creator of the world. Cicero has collected together all their opinions upon the nature of their gods, and pronounced them more like the dreams of madmen than the sober judgment of wise men. In the first book of Ovid's Metamorphoses, there is an account of the change of Chaos in the world. Before the sea and the earth, and the sky that surrounds all things, (says Ovid) there was a thing called Chaos, and some of the gods (he does not know which) separated from each other the elements of this Chaos, and turned them into the world; thus far and no farther, could human reason extend. But the first words of the Bible are "In the beginning God created the heavens and the earth." The blessed and sublime idea of God, as the Creator of the universe, the source of all human happiness for which all the Sages and Philosophers of Greece and Rome groped in darkness and never found, is recalled in the first verse of the book of Genesis. I call it the source of all human virtue and happiness; because when we have attained the conception of a Being, who by the mere act of His will, created the world, it would follow as an irresistible consequence,—even if we were not told that the same being must also be the Governor of His own creation—that man, with all other things, was also created by Him, and must hold his felicity and virtue on the condition of obedience to His will. In the first chapters of the Bible there is a short and rapid historical narrative of the manner in which the world and men were made—of the condition upon which happiness and immortality was bestowed upon our first parents—of their transgression of this condition—of the punishment denounced upon them—and the promise of redemption from it by the "Seed of the Woman."

There are, and always have been, where the Holy Scriptures have been known, petty witlings, and self-conceited reasoners, who cavil at some of the particular details of this narration. Even serious inquiries after truth have sometimes been perplexed to believe that there should have been evening and morning before the existence of the Sun—that man should be made of clay, and woman from the ribs of man—that they should have been forbidden to eat an apple, and for disobedience to that injunction, be with all their posterity doomed to death, and that eating an apple

could give "the knowledge of good and evil,"—that a serpent should speak and beguile a woman.

All this is undoubtedly marvelous, and above our comprehension. Much of it is clearly figurative and allegorical; nor is it easy to distinguish what part of it is to be understood in a literal and not in a symbolical sense. But all that it imports us to know or understand is plain; the great and essential principles, upon which our duties and enjoyments depend, are involved in no obscurity. A God, the Creator and Governor of the Universe, is revealed in all His majesty and power; the terms upon which He gave existence and happiness to the common parent of mankind are exposed to us in the clearest light, Disobedience to the will of God, was the offence for which he was precipitated from paradise; obedience to the will of God is the merit by which paradise is to be regained. Here, then, is the foundation of all morality—the source of all our obligations, as accountable creatures. This idea of the transcendent power of the Supreme Being is essentially connected with that by which the whole duty of man is summed up; obedience to His will. I have observed that natural reason might suffice for an obscure perception, but not for the clear discovery of these truths. Even Cicero could start to his own mind the question; Whether justice could exist upon earth unless founded upon piety? but could not settle it to his own satisfaction. The ray of Divine light contained in the principle, that justice has no other foundation than piety, could make its way to the soul of the heathen, but there it was extinguished in the low, unsettled and inconsistent notions which were the only foundations of *his* piety. How could his piety be pure or sound, when he did not know whether there was one God or a thousand—whether he, or they had or had not any concern in the formation of the world, and whether they had any regard to the affairs or the conduct of mankind? Once assume the idea of a single God, the Creator of all things, whose will is the law of moral obligation to man, and to whom man is accountable, and piety becomes as rational as it is essential; it becomes the first of human duties; and not a doubt can thenceforth remain, that fidelity in the associations of human piety, and that most excellent virtue Justice, repose upon no other foundation. At a later age than Cicero, Longinus expressly quotes the 3d verse of the 1st chapter of Genesis as an example of the sublime. "God said let there be light, and there was light;" and wherein consists its sublimity? In the image of the transcendent power presented to the mind, with the most striking simplicity of expression. Yet this verse only exhibits the effects of that transcendent power which the first verse discloses in announcing God as the Creator of the world. The true sublimity is in the idea given us of God. To such a God the heart of man must yield with cheerfulness, the tribute of homage which it never could pay to the numerous gods of Egypt to the dissolute debauchees of the Heathen Mythology, nor even to the more elevated, but not less fantastical imaginations of the Grecian Philosophers and Sages.

From your affectionate Father,
JOHN QUINCY ADAMS.

Real "British Opinion."—George F. Ruxton Esq., an English traveller in Mexico, has recently published sketches of his travels. In the course of these, speaking of the American regular army, Mr. Ruxton, who was himself formerly a British officer, says:

"There is a vast disparity between the officers of the regular army and the men that they command. Receiving at West Point (an admirable institution) a military education by which they acquire a practical as well as a theoretical knowledge of the science of war, as a class *they are probably more distinguished for military knowledge than the officers of any European army.* Uniting with this a high chivalrous feeling and most conspicuous gallantry, they have all the essentials of the officer and soldier."

Mr Ruxton then mentions the former assaults upon this institution, but says that late operations in Mexico "have sufficiently proved that to their regular officers alone, and more particularly to those who have been educated at the much desired West Point, are to be attributed the successes which have every where attended the American arms; and it is notorious that on more than one occasion the steadiness of the small regular force, and particularly of the artillery under their command, has saved the army from serious disasters."—*Richmond Rep.*

Arrival of the Cambria.

The *Cambria* arrived at Boston this morning. She sailed from Liverpool on the 27th ult., and brings two weeks later intelligence. She arrived at Halifax on the 15th, having had a constant succession of westerly gales.

Corn has been very dull for all descriptions, but without much change. The market is rather firmer. At the close Flour was 27s 6d. Corn, 26s to 30s. Wheat, American, 60s to 68s. Cpton down ½ to ¼d.

Provisions fair demand and rather improving.

Revolution in France!

The Royal Family left for England!!!

Count of Paris is King. The National Guard strongly joined by the people. There was considerable loss of life—Palais Royal and Tuilleries sacked—Republic called for—All communication cut off with Paris—People in possession of Railway stations—they have torn up the rails.

A change of Ministry is expected in England.

Laws for the Punishment of Libertinism.

The two following bills have passed the Legislature of this State:

An Act to Punish Abduction as a Crime.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. Any person who shall inveigle, entice, or take away, any unmarried female of previous chaste character, under 25 years of age, from her father's house, or wheresoever else she may be, for the purpose of prostitution at a house of ill fame, assignation or elsewhere, and every person who shall aid or assist in such abduction for such purpose, shall be guilty of a misdemeanor, and shall, upon conviction thereof, be punished by imprisonment in a state prison not exceeding two years, or by imprisonment in a county jail not exceeding one year. Provided that no conviction shall be had under the provisions of this Act on the testimony of the female so inveigled or enticed away, unsupported by other evidence, nor unless an indictment shall be found within two years after the commission of the offence.

An Act to Punish Seduction as a Crime.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. Any man who shall, under promise of marriage, seduce and have illicit connexion with any unmarried female of previous chaste character, shall be guilty of a misdemeanor, and upon conviction shall be punished by imprisonment in a state prison not exceeding five years, or by imprisonment in a common jail not

exceeding one year; provided that no conviction shall be had under the provisions of this act, on the testimony of the female seduced, unsupported by other evidence, nor unless indictment shall be found within two years after the commission of the offence; and provided farther, that the subsequent marriage of the parties may be plead in bar of a conviction.

From China.

The *Panama* arrived at New York last Saturday in sixty-eight days from Canton. The news she brings, a very brief report of which was received by Telegraph, is important, and warrants the belief that war between England and China, will soon be resumed, if it has not already commenced, in consequence of the massacre by the Chinese of a party of Englishmen. The following are some of the particulars as gathered from the Hong Kong "*Friend of China*" of the 11th of Dec.:

Six Englishmen, Messrs. RUTTER, BROWN, SMALL, BELLAMY, BALKWELL, and McCART, left the factory on the 5th in a Hong Kong boat, for a cruise on the river. They did not return, and on the next day great alarm was felt for their safety. A party, dispatched to search for them, learned that the party landed near some village on the Fatee Creek.

On the 7th the Hong Kong boat returned, but could give no further intelligence than that the Englishmen were surrounded immediately on landing by the native villagers, and that the crew and boat had to flee for safety. The Chinese report that on landing the villagers surrounded their victims and intercepted their retreat to the boat. Shots were exchanged, and two of the Englishmen and five Chinese were killed at this place.—The others fled inland, and were hunted from village to village until they were all destroyed.

A letter dated Canton 9th, says that four of the bodies, namely: Messrs. McCart, Balkwill, Small and Brown, or Bellamy, had been found, and returned to their friends. All of which were horribly mutilated, and one of them had upwards of 40 wounds on the body.

The British and American flags were at half-mast at the factories.

Sir JOHN DAVIS, the Governor of Hong Kong, had arrived at Canton, and demanded from the Chinese Government the fullest redress for the outrages committed; but no satisfaction having been received, a consultation of the officers was held, and they had partly concluded to blockade Canton. The force, however, was not sufficient.

Two British steamers were ordered to proceed as far up the river as practicable, in order that they may be in readiness to blockade as soon as determined upon.

KEYING, the Imperial Commissioner, in a communication addressed to Sir JOHN DAVIS, says he has—

"despatched the Prefect of Canton with the district military, to order the gentry all around to assemble to investigate what had really become of these six Englishmen, and with all haste to find out (the culprits) seize them with the utmost severity, and when apprehended, punish them according to the extreme penalty of the law. These villains act with total disregard of the regulations, and create disturbance. Should they not submit, soldiers will instantly be appointed to surround and apprehend them, and not one individual shall escape. Thus the national laws will be vindicated, and the hearts of men will rejoice. The Honorable Envoy need not entertain any anxiety on this point."

Vote on the Ratification of the Treaty.

The above Treaty, with the amendments, was ratified by the American Senate at a quarter past 9 o'clock, on Friday night, the 10th of March, 1848, by the following vote:

AYES—Chester Ashley, D., Ark.; Chas. G. Atherton, D., N. H.; Arthur P. Bagby, D., Ala.; John Bell, W., Tenn.; James W. Bradbury, D., Maine; Jesse D. Bright, D., Ind.; A. P. Butler, D., S. C.; John C. Calhoun, D., S.C.; Simon Cameron, D., Penn.; Lewis Cass, D., Mich.; John H. Clarke, W., R. I.; John J. Crittenden, W., Ky.; John Davis, W. Mass.; Jefferson Davis, D., Miss.; Wm. L. Dayton, W., N. J.; Daniel S. Dickinson, D., N. Y.; John A. Dix, D., N. Y.; S. N. Downs, D. La.; Alpheus Felch, D., Mich.; Henry S. Foote, D., Miss.; John P. Hale, Abo., N. H.; Edward A. Hannegan, D. Ind.; R. M. T. Hunter, D. Va.; Reverdy Johnson, W., Md.; Herschel Johnson, D., Ga.; Henry Johnson, W., La.; Willie P. Mangum, W., N. C.; James M. Mason, D., Va.; Jacob W. Miller, W., N. J.; W. B. S. J. CLEMENT, EDITOR.

Foreign Periodical Literature.--Its Republication.

In the Democratic Review for this month is an article on English and American Literature from which is made the following extract. It shows the difference in expense between the republishing of American periodicals in Great Britain and of English periodicals in this country:

"The formalities, taxes and charges that go to make up the cost of an English publication swell the price beyond the value of the thing, and it will not circulate here; but republished here in a cheap style, under our free institutions, the government not interfering, it can be sold for something nearer its value. The Democratic Review, for instance, is furnished at $3 per annum; a *single number costs its English subscriber eight shillings sterling, or* $2 for admission, which would make the subscription price $27 per annum, of which $24 would would go to the English government. It could not be reprinted to circulate in England under $10.—The oppressive laws of England effectually exclude any reprints of American periodical works, while the absence of all laws in the United States allows of the reprint of English books at very low prices, and therefore considerable numbers are circutated in Canada, and purchased by English residents, who could not or would not afford it at home; and for the same reason great numbers drink themselves to death, because brandy, which costs one shilling sterling at home, can be had here for one and a half pence. The English works so reprinted have the sublime assurance to complain of this as an injury to them; and precisely those prints which most strongly advocate oppressive and restrictive laws at home, are those most zealous of availing themselves of free trade in the United States. These facilities for printing have long caused the writers of Great Britain, more particularly the Edinburgh Review, to boil over with wrath at what they call "piracy," "robberies," &c. of their works and matter, by all which hard names and many more, they mean, that if a man buys a book or magazine in England, as for instance the Edinburgh, at 60 cents per number, and brings it to this country, and employs printers to get it up in a new style for general sale, at 25 cents, that he has "robbed somebody." The simple truth is, that he has entered into an enterprize both laudable and praiseworthy, Suppose no such enterprize was undertaken, would any body be wronged?—The English publisher would not sell a copy the more, and that the American publisher should make a market by his skill and enterprize for works that otherwise would not be sold, is no just cause of complaint to any one."

Leonard Scott and Co., of New-York, *have* made, by their skill and enterprize, a cheap market for English works "that otherwise would not be sold. By reference to our last page it will be seen that five of the ablest foreign periodicals, which cost English subscribers about thirty dollars, can be obtained in this country for *ten*. And we assure the reader there is nothing like flim-flam in the manner of their re-publication. The type in which they appear is beautiful and new, or nearly so, and the paper used is thick and of a fine texture. Touching the character and standing of each of these several periodicals a favorable opportunity is afforded for saying a word.

Blackwood, which has been published for thirty years and has, we are told, long maintained a circulation of forty thousand copies at home, would, by many, be placed at the head of the list. Among its contributors have been such writers as Jeffrey, Sidney Smith, Bulwer, James, Lockhart, Dr. Warren, and Professor Wilson. The last named gentleman is the editor; and he holds a mighty sway in the republic of letters. The only thing objectionable to him, to an American, is his *toryism*, of which his magazine has long been redolent (!) And yet, even to a republican, it is one of the most readable periodicals. It treats of such a variety of subjects, aside from politics, and its papers are written in such a finished and fascinating style as to please and even enchain any individual of the least cultibation of taste.

The North British Review, the youngest of this number, and a promising competitor for fame, is decidedly religious in its character. It sprang into existence soon after the great ecclesiastical movement in 1840, and is, we suppose, considered the organ of the Anti-National Church party, particularly in Scotland. It is published in Edinburgh. Having for its basis "the Evangelism of the Nineteenth Century," it has strong claims on "the million" of the sober minded. It was edited until his death by Dr. Chalmers. The chair is now filled by his son-in-law, Dr Hanna.

The London Quarterly, like Blackwood, is a speaking trumpet of toryism, but its papers embrace so wide a range of topics, civil, ecclesiastical, literary and scientific, and exhibiting so much scholastic ability that one cannot fail to be charmed with its contents. Scott and Southey, when alive, were amongst its regular contributors. The pens of Mrs Somerville, Wordsworth, Ferguson, Lord Mahon, Dr. Milman and Lockhart, have also been yielded in its support. The last named gentleman is its Editor.

The Edinburgh and Westminster Reviews belong to the liberal class, The former, always an unflinching champion of the right of man, has at times shaken the halls of British legislation like an earthquake: the latter also, the organ of the *ultra* liberals of the House of Commons, has, we believe, from the day of its foundation, stood like a rock in the ocean of despotism, breaking and half destroying the power of the waves that were intended to overwhelm the poor and defenceless. If the alliance of Church and State is ever shipwrecked this is the rock on which the rotten fabric will be split. The former of these two last mentioned periodicals, is edited by Napier, and he has around him a strong band—though composed of but few names—which can at any moment be summoned to his aid. It takes but two or three such writers as Macaulay and Brougham to make a host; and the former has long been a liberal contributor. His Missellapies, so powerful in analysis and so rich in diction as to have given the au-

thor a world-wide reputation, originally appeared in this periodical. He has been paid as high as a hundred guineas for some of them. Southey, who wrote for the same work, always received at least fifty guineas a piece for his articles.

All of these publications are sustained by the best living English writers, and the political sagacity, mental strength and literary refinement displayed in their columns, may well give them a lofty position among the periodical literature of the age.

CYCLOPEDIA OF MORAL AND RELIGIOUS ANECDOTES: a collection of several thousand facts, incidents, narratives, examples, and testimonies; arranged and classified on a new plan. In eight numbers. Number one. By Rev. K. ARVINE, A. M.; with an introduction by Rev. GEORGE B. CHEEVER, D. D. New-York: Leavitt, Trow and Co., 191 Broadway. 1848.

Here is a work arranged just as a book of anecdotes should be, with a full and correct index, making not only a useful, but very convenient book of reference. The number before us is well printed; and from the correctness of judgment displayed in the selection and arrangement of the matter, we may expect a work far surpassing in value any preceding one of the kind. It will please and edify all classes, and must be particularly serviceable to the minister and Sunday school teacher.

For sale by L. Danforth & Co., 230 Main St.

THE PICTORIAL HISTORY OF ENGLAND: being a history of the people, as well as a history of the kingdom. Illustrated with several hundred wood cuts. New-York: Harper and Brothers.

This great work is finally completed. It is a more full and satisfactory history of England than any other extent. "It is," to use the language of high authority—the editor of the *Literary World*—a brilliant and successful attempt to bring before us a complete view not only of the sequence of events in English history, but of the whole interior condition of the people, their customs, arts, habits and religious, moral and social state from the landing of Cæzar, to the present time." Harper, Brothers the distinguished publishers, have executed its republication in a thorough and able manner, strictly in keeping with the magnificence of the design. The typographical execution is said to be superior to that of the English edition. The work is for sale by Hawks, and booksellers generally.

RELAXATION OF PENALTIES ENCOURAGES CRIME.—Sir James Graham stated the fact last season in the British Parliament, that "the relaxation of penalties in some of the greatest crimes has been followed by a large increase in their number—that forgeries have increased 100, arson 60, and rape 90 per cent. since they ceased to be capital offenses."

CITY SUBSCRIBERS who change their residence the first of May, will please give us early notice of the fact.

ST. PATRICK'S DAY, the 17th inst., was observed by a very large number of the sons of the Emerald Isle. Two societies, "The Friendly Sons of St. Patrick," and "The Sons of Erin," formed a procession, marched through several streets accompanied by music, and in the evening partook of a collation at the Mansion House.

THE ELECTION IN NEW HAMPSHIRE, which took place on the 14th instant, resulted in the re-election of JARED W. WILLIAMS, democrat, by about three thousand majority. The whigs and abolitionists united on Mr. BERRY.

TO CORRESPONDENTS.—Communications have been received and accepted from our Jackson, Mich., correspondent, from "H. R. W." of Bloomsburg, Pa., and from two new contributors at Mt. Healthy, Ohio.

The agent in this city for the British periodicals advertized on our last page, is Mr. A. Burke under the Mansion House.

The News from Europe.

ARCHBISHOP OF CANTERBURY.—The Queen has nominated the Bishop of Chester, to be Archbishop of Canterbury, in place of Dr. Howley, deceased, and the nomination has been confirmed.

The British Parliament was engaged upon an Emigrant Law, regulating the number of persons and the quantity and quality of food in ships bound to Quebec or America.

It is estimated that there are 140,000 bbls foreign Flour, and 641,000 quarters Wheat in Great Britain.

A Regiment of Volunteers, ("The Queen's Own") consisting of gentlemen, has been organized in London.

The Governments of Europe manifest great solicitude and apprehension in regard to the popular *movements* in Italy, France, &c. The Emperor of Russia, through Prince Metternich, has addressed Diplomatic notes to the Courts of England, Austria, Prussia, &c., declaring his intention to *guarantee* the sovereignty of the Italian States.

The Grand Duke of Tuscany has given a Constitution more liberal than that granted by the King of Naples.

The Emperor of Austria had avowed his determination not to interfere with revolutionary movements in Italy.

The Sicilians have extorted a Constitution from Ferdinand. A Congress is soon to assemble at Palermo.

The total population of the Italian States is over 24,000,000.

The King of Sardinia has granted a Constitution to the people similar to that of France, of July 1830.

The Pope has secularized his ministry, by the admission of four laymen. He had published a proclamation to allay the fears of a foreign intervention, which he pronounced impossible. The Austrian Cabinet has declared to the British Government that it would not interfere with the political ameliorations in Italy.

There was a rumor in Paris that the Pope had been deposed. At Bologna the Papal colors had been discarded, and the tri-color of Italy adopted.

Particulars of the French Revolution!

From Wilmer & Smith's Times.

We noticed in our last the feverish state in which political affairs stood in Paris on the night of Thursday, the 10th, and we regret to announce that each day has added to that excitement which had increased to such a pitch on the 22d, the day on which it had been fixed to hold the great reform banquet, that the entire city was in open insurrection. The conversation which took place in the Chamber of Deputies, on Monday evening, between Barrot and Duchatel, prepared the people for the formal prohibition of the reform banquet which was to take place on the following day. Proclamations by the prefect of police, and an order of the day by the commander of the National Guards, were published, forbidding the banquet, and all assemblages of the people, and prohibiting the appearance of National Guards in uniforms, unless ordered by their chiefs. In consequence of these acts of Government, the Opposition Deputies met, and resolved that this banquet should not take place, that the people be entreated to submit, and that a motion for the impeachment of ministers be made in the Chamber of Deputies. It was further resolved that should this motion be negatived, they should resign their functions as deputies.

The army collected withiu Paris and the surrounding villages and forts considerably exceed one hundred thousand men. This force, unless the soldiers sympathise with the people, could crush the Parisians; while the King and M. Guizot might indulge their animosity to public meetings with perfect safety. But if the army join the people, this revolution would be more effectually completed from the fact that so many men are congregated in the capital and its environs.—Orders have been given to take military occupation of all the points of the capital on which the assemblage of the people might be expected. As the day advanced, the assemblages in the streets gradually increased, until dense crowds filled the principal thoroughfares leading to the legislative chamber, and large bodies of police and military were called out to preserve order. They assembled in great multitudes round the Chamber of Deputies, and forced their way over the walls.

They were attacked by the troops and dispersed; but reassembled in various quarters. They showed their hatred to M. Guizot by demolishing his windows and attempting to force an entrance into his hotel, but were again repulsed by the troops. All the military in Paris, and all the National Guards, were summoned to arms, and every preparation made on the part of Government to put down the people. The latter barricaded in various places, and unpaved the streets, overturned omnibuses, and made preparations for a vigorous assault, or a protracted resistance.

All the accounts from Paris represent the city in a terrific state of excitement and dismay, the whole of the day. All the streets leading to the Chamber of Deputies were, like the bridge, occupied by strong detachments of troops, and no one was allowed to pass except the deputies, the newspaper reporters, and those who were furnished with special tickets of admission.

We take the following from the London Morning Chronicle:

PARIS, Tuesday Evening.

The accounts which I send you this morning will have prepared you for great confusion in the streets of Paris, if not for actual insurrection.—The result is just what might have been expected. Immense masses have paraded the public thoroughfares throughout the day. Troops in vast numbers were on foot, and occasionally, where the masses became more than ordinarily dense, charges of cavalry were made upon the people, and the streets cleared with wonderful quickness. The shops were all closed, and business of every kind was suspended. The crowd generally directed itself towards the Place de la Madeleine, (where, if the banquet had gone on, the procession of the deputies was to have started from) to the Place de la Concorde, and to the neighborhood of the Chamber of Deputies. The principal portion of the crowd appeared to have been drawn together more from curiosity than from the wish to create disorder, and they were far more formidable from their vast numbers than from their apparent intentions; still, however, there were occasional parties of a very different character.—Masses of men in blouses, frequently amounting to thousands, were to be seen marching together with a certain degree of order and apparently under regular leaders. A large body of students also paraded the Boulevards, mixed with others of a more ambiguous, if not of a more dangerous description, singing the *Marseillaise* at the very pitch of their voices, and vociferating—*a bas Guizot! a bas le Ministere; Vive la reforme!* accompanied with groans or cheers, as the case might be. If to this you add regiments of Municipal Guards, horse and foot, drawn up in different quarters and occasionally charging the people where they assembled in large numbers or appeared threatening; thousands upon thousands of cavalry and infantry in all the public squares, Boulevards and quays; and multitudes of anxious people crowding the windows wherever there was a chance of seeing what was going on; you have before you a picture of what was during the whole of this day.

I shall now proceed to give detached details which it is difficult to arrange in a regular and connected form. I have already said that the principal point to which the crowd tended was the Place de la Madeleine and the Place de la Concorde. About half-past 11 a regiment of infantry and several squadrons of cavalry drew up near the church of the Madeleine, where the crowd was most dense. A few minutes afterwards an immense body of persons, almost all dressed in blouses, and said to amount to upwards of 6,000, appeared from the direction of the Boulevards, but no one could exactly say from what place they came. They marched in procession, holding each other's arm, and sung the Marseillaise in one general chorus. When passing Durand's restaurant, they gave three cheers for reform, and then proceeded without stopping to the Place de la Concorde, their evident intention being to make their way to the Chamber of Deputies, however, they were stopped by a large body of cavalry and infantry, drawn up on the bridge. They were then brought to a stand still, and their numbers were so great that they filled the whole of the Place de la Concorde, one of the largest squares in Europe. Just at that moment a portion of the regiment of cavalry on the bridge charged upon the mass, separated it, and drove a considerable portion back towards the Boulevards, while the rest were driven into Champs Elysees and the Rue Rivoli. The whole of the place was cleared in less time than can be conceived, but the soldiers, though they did their duty with great determination and effect, so far from using unnecessarily harsh means, appeared to go about it with great humanity and even good humor. The portion of the crowd driven back towards the Boulevards and still marching in order, had four National Guards at their head, armed with sabres. In the Place de la Madeleine an attempt was

made by the troops to disperse them, which was only partially successful, and shortly afterwards they met another large body, the leaders of whom fraternally embraced the National Guardsmen. On arriving in front of the Hotel des Affaires Etrangeres, they stopped and sung the Marseillaise in full chorus. They then began to cry out "Abas Guizot! abas la Ministere!" and the excitement was evidently increasing. At length a very young man took up a large stone, which he hurled against the great gate of the hotel, an example which was followed by the rest, who began knocking against it; a shower of stones was thrown at the same time, and broke several windows. During this time a body of the Municipal Guards, infantry, who had drawn up within the gates, deliberately loaded their muskets and prepared for what might follow; but a body of cavalry emerging from the Rue des Capucines, at that moment charged, struck some of the most active with the flat side of their sabres, and very soon succeeded in dispersing the crowd and relieving the residence of the President of the Council from the danger it was in.

In a small street in the neighborhood of the Rue Vivienne, a body of ruffians attempted to break into a gunmaker's room, but failed. They then attempted the shop of a poor *marchand de bois*, and plundered it of the small quantity of firewood it contained, which they formed into stakes In the different attacks made by the troops some severe blows were occasionally dealt, and upon the whole a considerable number of persons received sabre cuts and severe bayonet wounds: but I did not hear of any one being killed.

I may as well mention that among the other cries which issued from the crowd was that of *vive la ligne*, which was to be heard every time the compact bodies, which appeared from time to time, passed a regiment of infantry. A great number of prisoners were taken by the police, who had been caught in the act of uttering seditious cries or throwing stones.

These are the principal incidents which have come within my notice in the course of the day. They were not very serious in themselves, but they are just of a nature that might at any moment lead to a catastrophe. One thing must appear evident to any one who has seen the aspect of Paris during this day; and that is, that the Government, in determining not to allow procession of deputies, and the enormous additional number of persons which would have assembled had it taken place, came to a wise determination. Whether they would not have done better had they given the orders for stopping it at an earlier period, and before the preparations were made, is another matter. I think they would. Had the notice been given three days ago that the meeting was not to be allowed, a great deal of the excitement and confusion of this day would have been avoided. The excuse of the Government is, that it did not interfere until promoters of the banquet began to organize and arrange National Guards and other persons to form the procession. The excuse is hardly tenable, for it was known and clearly announced several days before, that the procession was to be one of the principal parts of the demonstration. It is rumored that eleven of the twelve deputies of Paris have resigned their seats.

Impeachment of the Ministry.

At the meeting of the Chamber of Deputies on the 22d, the deputies of the Opposition, to the number of 53, submitted the following proposition:

"We propose to place the Minister in accusation as guilty—

"1. Of having betrayed abroad the honor and the interests of France.

"2. Of having falsified the principles of the constitution, violated the guarantees of liberty, and attacked the rights of the people.

"3. Of having, by a systematic corruption, attempting to substitute, for the free expression of public opinion, the calculations of private interests, and thus perverted the representative government.

"4. Of having trafficked for ministerial purposes in public offices, as well as in all prerogative and privileges of power.

"5. For having in the same interest, wasted the finances of the state, and thus compromised the forces and the grandeur of the kingdom.

"6 Of having violently dispoiled the citizens of a right inherent to every free constitution, and the exercise of which had been guaranteed to them by the Charter, by the laws, and by former precedents.

"Of having, in fine, by a policy overtly counter-revolutionary, placed in question all the conquests of our two revolutions, and thrown the country into a profound agitation"

[Here follow the signatures; M. Odilon Barrot at the head.]

M Genoude submitted in his own name a proposition of accusation against the minister, conceived in these terms:

"Whereas the Minister, by his refusal to present a project of law for electoral reform, has occasioned troubles, I propose to put in accusation the President of the Council, and his colleagues."

The Reform Manifestation.

The following is the reform manifestation issued on Monday morning by the opposition, and published in all the liberal papers, and by which the Ministry support their reasons for prohibiting the banquet:

"REFORM MANIFESTATION.

"The general committee charged to organize the banquet of the 12th arrondissement, think it right to state that the object of the demonstration fixed for Tuesday in the legal and pacific exercise of a constitutional right, the right of holding political meetings, without which representative government would be only a derision.

The Ministrp having declared and maintained at the tribune that this right is subjected to the good pleasure of the police, deputies of the opposition, peers of France, ex-deputies, members of the Council-General, magistrates, officers, sub-officers, and soldiers of the National Guard, members of the central committee of electors of Paris, have accepted the invitation which was made to take part it the demonstration, in order to protest, in virtue of the law, against an illegal and arbitrary pretension.

As it is natural to foresee that this public protest may attract a considerable gathering of citizens; as it may be assumed also that the National Guards of Paris, faithful to their motto, 'Liberte, Ordre Public,' will desire, on this occasion, to accomplish the double duty of defending liberty by joining the demonstration, and protecting order, and prevent all collision by their presence; and as, in the expectation of a numerous meeting of National Guards and of citizens, it seems right to take measures for preventing any cause of trouble and tumult, the committee has thought that the demonstration should take place in that quarter of the capital in which the width of the streets and squares enables the population to assemble without excessive crowding: accordingly, the deputies, peers of France, and other persons invited to the banquet, will assemble on Tuesday next at eleven o'clock, in the ordinary place of the meeting of the parliamentary opposition—Place de la Madeleine 2; the subscribers to the

banquet, who belong to the National Guard, are requested to meet before the church of the Madeleine, and to form two parallel lines, between which the persons invited will place themselves; the cortege will be headed by the superior officers of the National Guard who may present themselves to join the demonstration: immediately after the persons invited and the guests will be placed a rank of officers of the National Guard; behind the latter the National Guards, formed in columns according to the number of the legions; between the third and fourth columns, the young men of the schools, headed by persons chosen by themselves; next, the other National Guards of Paris and the suburbs, in the order set forth above.

The cortege will leave at half-past eleven o'clock, and will proceed by the Place de la Concorde and the Champs Elysees to the place in which the banquet is to take place. The committee, convinced that this demonstration will be the more efficacious the more it be calm, and the more imposing the more it shall avoid even all pretext of conflict, invites the citizens to utter no cry, to carry neither flag nor exterior sign; it invites the National Guards who may take part in the demonstration to present themselves without arms; for it is desired to make a legal and pacific protest, which must be especially powerful by the number and the firm and tranquil attitude of the citizens. The committee hopes that on this occasion every man present will consider himself as a functionary charged to cause order to be respected; it trusts in the presence of the National Guard, it trusts in the sentiments of the Parisian population, which desires public peace, with liberty, and which knows that, to secure the maintenance of its rights, it has only need of a peaceable demonstration, as becomes an intelligent and enlightened nation, which has the consciousness of the irresistible authority of its moral power, and which is assured that it will cause its legitimate wishes to prevail by the legal and calm expression of its opinion."

From the Buffalo Commercial Advertiser.

The French Revolution.

The revolution in France, now announced, may be regarded as but the legitimate result of the principles inculcated by the revolutions of '89 and '30,—principles that, however repressed for a time from active manifestation by governmental influences and physical force, have sunk deep into the hearts of the best informed, most patriotic portion of the French people, who clearly understand what constitutional liberty and equality of political rights are, and are determined to obtain a full, complete recognition of them, and a guarantee for their future maintenance. Louis Philippe had proved false to the principles which hurled his predecessor from the throne, and to the pledges he made when elevated to the vacant royal seat. By his consummate skill as a politician, the restricted constituency of the popular House of the Legislature, the immense force at his command, his sedulous cultivation of the arts of peace, and well-directed efforts to aid the merely physical progress of the French Nation, he has succeeded for years in repressing the revolutionary spirit. But it has at last become too powerful to be resisted, and we hail the new revolution as the dawn of a brighter day for France and the nations of Europe.

We do not anticipate any exhibition of that frenzy which made the old revolution so horrible.—The men at the head of this new movement are the children of that revolution, but they are educated children, who have grown to man's estate. And this may be said of the great mass of the French people. They are well characterised in the following queries, extracted from a speech lately delivered by Sir William Molesworth, in the English House of Commons:

Are you not aware that the French are as civilised as ourselves—in some respects intellectually our superiors? Have you forgotten that they have passed through a great social revolution, which has equalized property, abolished privilege, and converted the mass of the people into thrifty and industrious men, to whom war is hateful, and the conscription detestable? Are you not aware that they possess a constitutional government, with the forms and practice of which they are daily becoming more and more conversant; that no measure of importance can be adopted without being first debated and agreed to in the Chambers?

We may feel very sure that a people of whom this can be said with truth, will not disgrace themselves, and outrage the principles they profess by sanctioning any Jacobin clubs, September massacres or *noyades*. The new revolution we look upon as the triumph of constitutional liberty, law and order over despotism. The men engaged in the movement and put forward as its representatives, are among the ablest, purest, clear-thinking that France can boast. The revolution under their auspices cannot go backward nor forward, except in a way that the true friends of civil freedom can heartily approve. Such men will never commit the fatal mistake of putting another Louis Philippe on the throne, wise and great as that monarch was in many respects.

We may be too sanguine, but we look with great confidence to the establishment in France of a permanent republic modeled substantially after our own. The people are prepared for it, and, under the restrictions that for a time will probably be imposed, capable of sustaining it. The old monarchical forms have become worn out, effete, and cannot again be resuscitated among such a people as Sir William Molesworth so truly describes. The French nation has passed through the baptism of fire and blood—an ordeal such as no other civilised nation on earth has undergone—and we cherish the fullest hope that they will not prove false or unequal to the glorious destiny that now seems to await them.

Congressional.

Washington, March 20.

In the House of Representatives to-day, Mr. Sawyer moved to take up a bill he had previously introduced, making provision for bringing home the dead from Mexico, and spoke briefly in support of the bill, and Mr. Hascall against it. Referred to the Military committee.

Mr. Clingman moved to suspend the Rules to introduce a resolution, asking the President why Gen. Scott and Mr. Trist's correspondence with the government was not communicated. Objections were made by Mr. Houston, of Ala.

A Message was then received from the President containing said correspondence, and the usual number ordered printed.

Mr. Crozier moved to suspend the Rules to inquire of the Secretary of War respecting monies collected in Mexico, and their disposition.

On motion of Mr. Vinton, the House went into committee, and took up the Indian appropriation Bill.

SENATE.—Sundry petitions presented and referred.

Mr. Ashley on notice introduced a bill which was read twice and referred to the Committee of the Judiciary, to regulate costs and fees in Federal Courts.

Mr. Westcott from the Committee on patents reported recommending the Senate to disagree with the House amendments to the bill providing additional examiners at Patent Office.

A discussion sprung up in which several Senators participated, and farther consideration of the bill postponed.

Mr. Atherton moved to take up the pending question being Mr Benton's amendment in relation to the mission to Rome. Agreed to.

Mr. Atherton replied that the fiscal year had not expired and the object was to send a Minister immediately.

Mr. Hannegan moved a full Minister—lost 12 to 19.

The question was reconsidered on Mr. Benton's amendments.

Mr. Clayton opposed a full Mission but would vote for a Charge- Mr. Niles spoke against a Mission.

Mr. Hale spoke in opposition to Mr. Benton's amendment, charging that it was intended to pander to Catholic votes.

The question was taken, and the amendment lost, yeas 13, nays 28.

Some slight amendments being adopted, on motion, the Senate adjourned.

FROM VENEZUELA.—The New York *Herald* learns by the *Orbit*, 23 days from Porto Cabello, that the white inhabitants of La Guayra and Caraccas are flying in all directions from the vengeance of the black and colored races, who have completely overawed these cities, and have assumed so menacing an attitude toward the whites, as to inspire them with a dread of being murdered if they remained.

The party of MONAGAS, the President, himself a Creole, were going about the streets, in armed gangs, and impressing all the mixed races or blacks they could find.

It was rumored from the interior that the whole of the country was on the eve of a general revolution, and that the celebrated General PAEZ was making great efforts to rally the whites.

The white population along the sea-coast were trying to escape out of the country. Most of them were going to the Island of Curacoa, and taking passage in different United States vessels. Mr. F. WEISMAN, lady and family, came passengers in the *Orbit*, being obliged to abandon their beautiful estate, by this dreadful panic.

There may be, probably is, some exaggeration in these reports; but after the late slaughter of several members of the Venezuelan Congress, the reduction of the government to anarchy or a military despotism might be expected. General PAEZ lived many years in this country, and is one of the most enlightened and truly patriotic men in South America, as well as a skilful soldier.—We have great hopes that he will succeed in restoring order.

MARRIED.

This morning, 15th instant, by the Rev. Montgomery Schuyler, WILLIAM FITCH, Esq., and Mrs. W. S. ROCHESTER, both of this city.

DIED.

At Black Rock, on the 15th instant, at the residence of her son, W. A. Bird, Esq., Mrs. EUNICE PAWLING, relict of the late Col. Pawling, of Troy, and sister to Judge and Gen. Porter, of Niagara Falls, in the 83d year of her age.

BRITISH PERIODICAL LITERATURE!

Subscribe early while the terms are low!!

REPUBLICATION OF

THE LONDON QUARTERLY REVIEW,
THE EDINBURGH REVIEW,
THE NORTH BRITISH REVIEW,
THE WESTMINSTER REVIEW, and
BLACKWOOD'S EDINBURGH MAGAZINE.

The above Periodicals are reprinted in New-York, immediately on their arrival by the British steamers, in a beautiful clear type, on fine white paper, and are faithful copies of the originals, Blackwood's Magazine being an exact fac-simile of the Edinburgh edition.

They embrace the views of the three great parties in England—Tory, Whig, and Radical—"Blackwood" and the London Quarterly" are Tory; the "Edinburgh Review" Whig; and the "Westminster Review" Radical. The "North British Review" is more of a religious character, having been originally edited by Dr. Chalmers, and now since his death, being conducted by his son-in-law, Dr. Hanna, associated with Sir David Brewster. Its literary character is of the very highest order.

PRICES FOR 1848, (IF SUBSCRIBED FOR EARLY.)

For any one of the four Reviews,	3,00	per annum.
For any two, do.	5,00	"
For any three, do.	7,00	"
For all four of the Reviews,	8,00	"
For Blackwood's Magazine,	3,00	"
For Blackwood and three Reviews,	9,00	"
For Blackwood and the four Reviews,	10,00	"

Payments to be made in all cases in advance.

CLUBBING.

Four copies of any or all of the above works will be sent to one address on payment of the regular subscriptions for three—the fourth copy being gratis.

EARLY COPIES.

A late arrangement with the British publishers of Blackwood's Magazine secures to us early sheets of that work, by which we shall be able to place the entire number in the hands of subscribers before any portion of it can be reprinted in any of the American Journals. For this and other advantages secured to our subscribers, we pay so large a consideration, that we may be compelled to raise the price of the Magazine. Therefore we repeat 'subscribe early while the price is low.'

Remittances and communications should be always addressed, post paid or franked, to the publishers.

Where art thou, Brother?

BY MRS. C. A. CHAMBERLAIN.

Where art thou brother? Years have fled,
Since last upon thy face
I gazed, as one looks on the dead
They'd hold from earth's embrace;—
And strove my heart's prophetic strain
To hush, that said we ne'er again
Should meet in that sweet place,—
When earth would wear that Eden hue,
And heaven that pure, resplendant blue.

Thy lofty worth I ne'er had known,
In those all-beauteous years—
All hearts seemed truthful as thine own,
When hopes danced over fears;
Thy presence could not all reveal
That absence taught my soul to feel—
And knowledge dawned 'midst tears;—
Yet half I blest the cloud's dark fold,
When through it shone that hue of gold.

Where art thou brother?—Wanderer lone
Upon the changeful deep!
My spirit seeks thee, with a moan
I fain would hush to sleep;—
It asks if thou hast found a tomb
'Midst ocean's solemn waste of gloom,
Or on its waves dost weep?
It seeks thee with a sorrowing care—
Where'er thou art, it would be there!

Perchance thou rov'st by fairy isles,
In strange, deep beauty drest—
Where man alone the scene defiles,
With Deity impressed;
Perchance when day-beams brightly glow,
Thy heart drinks in the glittering show
Till thou, as erst, art blest;
Ah! not for with a holy will,
I bid the past to haunt thee still.

The past! oh! never shall its hours
In cold oblivion lie;—
The pure, deep loveliness of flowers,
Forbids them thus to die:—
By beauty's power—by music's tone,
Their spell around thy life is thrown—
By holy thought and high;
The past—its memory still shall live,
When time no darkning blight can give.

What though thy wanderings be afar,
On land or on the sea?—
From its lone height yon radiant star
Doth shed shed its beams for me;—
E'en as those beams their pathway trace
To earth, love steals through night of space,
All fetterless and free—
I see them—but thy spirit's light
I feel doth blend with mine to-night.

Why should I vainly seek to know
Where thou in form dost dwell?
Or ask, from thy dear lips to flow,
What sympathy should tell?
For by a love almost divine,
I've made and still shall make thee mine,
And by that holy spell—
Here, brother!—here, to-night thou art,
Here in my home—here in my heart!

TERRE HAUTE, Ia.

The Enchanted Piper.

BY AUGUSTA BROWN.

From Cork to Commemera there was not to be found a more likely or decent boy than Barney O'Brien. It was himself that was come of first rate people, for he could trace back his origin to the "rale" ould stock, at a fair, or gathering who could number such an amount of kith and kin as Barney? But more than all, Barney was the handsomest boy as well as the best dancer, within twenty miles. No wonder then, that all the colleens looked kindly on him nor that Miss Biddey O'Flanagan, the heiress, who had for her fortune two cows, a trifle of clothes and a feather bed, besides twenty pounds in gold, had openly expressed her admiration of him; but all in vain, for Barney's heart had long been the property of sweet Norah O'Riley, of the next village.

Now Norah's father, Phelim O'Riley had been from almost time immemorial, piper in chief, and oracle of the whole country round. Was there a wedding? who must be there to heighten the hilarity, but Mr. O'Riley? Or a wake. Who could drive away grief but Phelim, who was in the main, a good natured man; but alas, we each have our individual failing, and his was vanity—vanity in his musical prowess—and to such a pitch did he carry it, one night, in a moment of excitement, that he vowed that no one should ever obtain his pretty Norah, who was not as fine a player as himself—the thought that, there *could* be a finer, never entered his brain. Here was a severe blow to the young people. Barney was ignorant of a note in music; and even did he try to learn, the very idea of becoming such a player as Mr. O'Riley, was so immeasurably above the highest summit of his imagination, that the poor fellow was thrown into a state of the deepest despondency. It was at this period of things that he and Norah *accidently* met as she was going in quest of the cow.

"Norah mavourneen," said Barney, "sure that cruel music 'll be the death of me intirely, so it will."

"Thry to learn then, for my sake, Barney dear." "Sorra a use but folly is there in thrying to learn the pipes. Where could I get pipes, or who can tache me unbeknownst to yer father? and worse nor all, if I spent years at it, how could I ever put up to play like him? Now listen, Barney, agra, sure a thought strikes me. You have often heard tell that any one that goes into the great cave beyond the ould ruin gets the gift of music. Och, Barney, asthore, thry it! for my sake! and on my bended knees I'll pray for you from the time you go in till you come out again—only thry."

"The great cave is it? sure it's a bould deed, but the love of you, mavourneen, makes me strong, and I *will* thry, whatever happens."

The next morning, therefore, before sunrise, in pursuance of his resolution, Barney set out for the cave, and taking with him for company his friend Tim McDermott, whose greatest motive, I grieve to say, at this time, in accompanying Barney in his arduous journey, was not friendship, but an eye to the gold reported to be hid in the cavern. It was spring, and nature was clad in her purest and most brilliant robes of loveliness. But neither the beauty of the landscape, the perfume of the hawthorn hedges, nor the song of the lark, as he soared to welcome the sun, could awaken in the heart of Barney one throb of joy; for might he not return unsuccessful, if indeed, he returned, at all? But had not his beloved Norah, for whose sake, he was about encountering peril and uncertainty, promised to pray for his success and safety? This thought revived his spirits, and strengthened his hopes. Having cleared away a multitude of bushes and briars with which the ground was overgrown, they at length found the entrance to the cave, an opening barely large enough to admit two or three persons: and after lighting their splinters of bogwood, grouped their way until they arrived at the margin of a deep and dark lake on whose tranquil bosom a sudden burst of light like moonshine, discovered sleeping beds of the snowy lotus flower. The soft light illumined the whole space around them, and they heard above their heads the rustling as of a myriad of tiny wings. Beside the lake was a fairy ring, into which, as Barney inadvertently stopped, he was struck to the earth, and instantly deprived of all consciousness.

He was awakened by sounds of sweetest music, and opening his eyes, beheld surrounding him a large company of little people, many of whom were playing on musical instruments, while others were singing, who the moment they saw that he was awake, addressed him in *recitation*, desiring him to follow them, and then led the way onward through the cavern, chaunting, until they came to the margin of a river, across which they flew—Barney in the midst—and alighted on an Island, which they informed him was named "Musicians' Land."

Through this happy island flowed a river of such crystaline clearness, that Barney could plainly distingnish the gleaming of the precious gems which studded its bed, whilst the gently modulating cadences of its murmur, awoke his soul to the highest rapture. The sun shone with a radiance above our's, seven fold, and yet his beams were so tempered by the freshness of the breeze, that the heat was never at any time great. Flocks of birds, vying in beauty with the far famed birds of Paradise, skimming through the air, joined their gushes of melody to the rapturous combination of sounds, pervading ether.

All this, and much more Barney observed at a glance, as the fairies were conducting him into the presence of Carolan, the Bard of Erin, whose province it was to bestow the gift of music on his countrymen. The Bard held his court on a beautiful elevation covered with the softest moss of never fading green, and the throne on which he was seated, was formed of a single huge emerald, elaborately carved over with fanciful musical devices; and a most imposing personal appearance did he present. On his head was a crown of intermingled shamrocks and bays, and the face which shone beneath beamed with genius, wit and hospitality. His robe was a tissue of the most gorgeous colors, and from his chin flowed a venerable beard which descended to his girdle; while ever and anon he sipped usquebaugh from a rich goblet of ruby, proffered him by a little page. At the approach of Barney and escort, all was hushed, and one of his conductors making a low obeisance, informed the Bard of having found this mortal within the precincts of enchanted ground and so brought him to answer for himself

Carolan looked with a stern eye upon the bewildered Barney, paused a moment, and demanded—

Mortal, in visiting this our fairy Island, say, what the cause and what the object you seek.—"Love and the gift of music." Love! Your motive is a good one; but know you not, mortal, the gift of music may not be lightly bestowed, the power to sway and bend the passions of men to your own will? and most especially know you not, that the gift of music but seldom confers on its possessor happiness? That oft when you have stirred up fountains of joy in the hearts of others, your own may be sinking beneath the intensity of its feelings? Now, what do you want with this dangerous gift, or how shall I trust a weapon of such might into your hands? With this, Barney gathering courage, told the Bard the whole tale of his sorrows, and how is love for Norah had occasioned his visit to the enchanted cave, and concluded by most humbly begging him to bestow the smallest taste in life of skill upon him.

Carolan was touched and highly gratified by the poor fellow's devotion.

"Well, Barney, you shall hear some of our music, and as there are various styles, judge which you like best," and calling to one of his attendants to reach him a Bagpipe he played several airs, melodies and ballads of other lands, and at length enquired of the enraptured Barney how he liked them? and if he were prepared to make a choice of any particular one, in order, that he may be gifted to do likewise? "Arrah yer honor," said Barney, "sure their's no mistake, in it, but its mighty grand music entirely; yet still and all may be you'd let me be so bould as to ax you for that fine *ould ancient* Irish air called 'Ehrrouise a ghire Corrige,' och asthore, 'tis the chanter can speak it in its true plaintive soul touching tones, or as I am by no means particlar, maybe you'd squeeze us out a good decent lively jig, such as 'Cover the Buckle' or 'Morgan Ratler.'"

"With all the pleasure in life, I'll do that same," said Carolan. And now the Bard commanding silence, played his own immortal "Ehrrouise a ghine Corrige" with such exquisite pathos, that the tears ran in torrents down the tender visage of Barney; the dying cadences were softly echoed by the soughing of the trees, and the melodious whispers of the flowers.

"Give me *that*, give me *that*," shouted Barney, as soon as his senses were unlocked from the delicious trance; "give me *that*, that I may cast beames of sun-shine into the sorrowful heart and bring pace into the laboring bosom."

"Barney O'Brien," said the Bard, solemnly, taking Barney by the ear, and drawing him into close proximity, "your request is granted; you came here with a pure motive, and for the sake of your Norah, I now endow you with the gift of Irish music. Take a "dhourneen" of this nectar (Barney eagerly availed himself of the invitation and did take a good "ghorlough") and from this hour you are the greatest piper in all Ireland."

Oh! what a happy man now was Barney; his heart was full as he thought of his beloved Norah—now surely his, glad was he that he had followed her advice, and determined at that moment to be governed solely by her as long as he lived. There may have been—I will not deny it, for we are all weak creatures a little a very little, speck of pride passing through his mind as he anticipated future triumphs in surpassing rivals, not forgetting Phelim himself; but his first chief source of joy was Norah. In this train of thought, the elated Barney indulged, until at length he swooned: how

long he continued in this state remains a mystery. But at last he was aroused from his trance, by his friend Tim shaking him and roaring lustily.

"Och, botheration then, will you even, wake at all, at all?"

"And Tim, honey, give him a drap o' the holy wather," chimed in a sweet voice which Barney well knew.

This was done, and the unlucky Barney was thoroughly drenched, an Irish drop generally amounting to something under a pailful. He essayed to speak, but could not, he had only time to feel that his precious bagpipe was still under his arm, before relapsing again into a state of insensibility. In this state he was borne by Tim and another crony out of the cavern, to his father's cabin, where he was placed in bed. He remained there insensible for a whole week, amid the cajoles and lamentations of his old mother and Norah, who scarcely ever left him. The pipes he tightly grasped all the time, and in spite of the almost overpowering curiosity which prevailed, not a creature dared to touch them, through fear of the enchantment. At the expiration of the week, however, he awoke, and seizing them, burst forth into such strains of music, that speedily a large concourse of people were assembled to listen, who at once proclaimed him the greatest player living.

Phelim himself, to do him justice, immediately acknowledged his superiority, and voluntarily resigning to him for the future, all his honors and emoluments, retiring with dignity into the rank of a mere amateur. Nor were Barney's acquirements confined to one instrument, for he found, on trying, that he was a performer on several, though his strength lay in the pipes.

But to return, as soon as Barney was sufficiently recovered to speak, he treated his wonder-stricken hearers to an account of his adventures, and a description of the enchanted island; but o course it fell far short of the real splendor and pomp of that wondrous place. Tim McDermott vouched for the truth of Barney's being prostrated to the earth, and carried off by *invisible* beings; nay in his enthusiasm, he went so far as to say that he had seen them: moreover, he further averred that he had discovered great heaps of gold and jewels of which he was about to take possession, when Barney's alarming fall caused him to make the best of his way out of the cave. Nothing could exceed the pertinacity with which Tim clung to his statement, although he steadily resisted all inducements to re-enter for them. Whether Norah eventually was *right* Mrs. Bernard O'Brien, I deem it unnecessary to chronicle: suffice it to say, that to the end of her life, she plumed herself considerably on being the occasion of Barney's luck, never failing to hint dubiously about some cave whenever he manifested the slightest symptoms of obstreperousness, or disposition to govern himself.—*Weekly Sun.*

MARRIAGE OF VULCAN AND VENUS.—At a public meeting held in Sheffield, England, on the occasion of laying the corner stone of a new building for the Sheffield Athenæum and Mechanics' Institution, Lord Morpeth made an admirable speech, in the course of which he made allusion to the fabulous story of Vulcan and Venus, in the following happy manner:

These of you who have the opportunity of consulting the old legends and classical mythology, are aware that among the fancied deities with which they peopled their world, one more especially was regarded as the god of labor and of handcraft, Vulcan by name, who was always represented as employed in huge smithies and workshops, hammering at heavy anvils, blowing huge bellows, heating furnaces, and begrimmed with soot and dirt. Well, ladies and gentlemen, for this hard-working and swarthy-looking divinity they wished to pick out a wife. (Loud laughter.) And they did not select for him a mere drab—a person taken from the scullery or kitchen dresser; but they chose for him Venus, the goddess of love and beauty.

Now, ladies and gentlemen, pick out for me the moral of this tale, for I believe that nothing ever was invented—certainly nothing by the polished and brilliant imagination of the Grecian intellect—which has not its meaning and its moral. I have no doubt that all the legends of our own country—that the one even of your own neighborhood, the Dragon of Wantly, itself, has some appropriate allegory and meaning, if we only knew how to find them out. But what is the special meaning of the marriage of Vulcan with Venus—of the hard-working artificer with this laughter-loving queen—of labor with beauty?

What is it, ladies and gentlemen, but this: That even in a busy hive of industry and toil like this, even here, upon a spot which is in many respects no inapt representation of the fabled workshop of Vulcan—even here, amid the clang of anvils, the noise of furnaces, and the sputtering of forges—even here, amid stunning sounds and sooty blackness, the mind—the untrammeled mind—may go forth, may pierce the dim atmosphere which is poised around us, may wing its way to the freer air and purer light which are beyond, and may ally itself with all that is most fair, genial, and lovely in creation. (Applause.) So, gentlemen, I say, your labor, your downright, hard, swarthy labor, may make itself the companion, the help-mate, and the husband of beauty. I dare say, and have reason to believe, from the inspection which I am able even now to command, and I have no doubt a more intimate acquaintance with your wives, sisters and daughters, would enable me to prove, that I was not wrong in my illustration. But above this beauty, I say your labor may ally itself with intellectual beauty—the beauty connected with the play of fancy, with the achievements of art, and with the creation of genius—beauty such as painting fixes upon the glowing canvas—such as the sculptor embodies in the breathing marble—such as architecture developes in her stately and harmonious proportions, such as music clothes with the enchantment of sound. But there is a beauty of a still higher order, with which I feel more assured it is still open to it to unite itself. I mean with moral beauty—beauty connected with the affections, the conscience, the heart, and the life. (Loud cheers.) It is most true that in the busiest and blackest of your workshops—in the most wearying and monotonous tasks of daily drudgery, as also in the very humblest of your own dwellings—by the smallest of your firesides—you may, one and each of you, in the zealous and cheerful discharge of the daily duty, in respect for the just rights, and in consideration for the feelings of others—in a meekness and sobriety of spirit, and in the thousand charities and kindnesses of social and domestic intercourse—even thus you may attain to, and exhibit the moral beauty of which I have spoken—beauty beyond all others in degree and excellence, because in proportion as it can be reached it makes up the perfection of man's nature here below, and is the most faithful reflection of the will of his Creator, (applause); and thus I close my explanation of the marriage of Vulcan with Venus, of labor with beauty.

Parents and Children.

A few months ago I buried my eldest son, a fine manly boy of eight years of age, who had never had a day's illness until that which took him hence to be here no more. His death occurred under circumstances peculiarly painful to me. A younger brother, the next in age to him, a delicate, sickly child from a baby, had been down for nearly a fortnight with an epidemic fever. In consequence of the nature of the disease, I used every precaution that prudence suggested to guard the other members of my family against it. But of this one, my oldest, I had but little fear; he was so rugged and so generally healthy. Still, however, I kept a vigilant eye upon him, and especially forbade his going into the pools and ponds of water near his school, which he was prone to visit.

One evening I came home, wearied with a long day's hard labor, and vexed at some little disappointments, and found that he also had just come into the house, and that he was wet and covered with dock-mud. I taxed him with disobedience, and scolded him severely—more so than I had ever done before—and then harshly ordered him to his bed. He opened his lips, for an exculpatory reply, as I supposed, but I sternly checked him and motioned him away; when with a mute, sorrowful countenance and a swelling breast he turned and went slowly to his chamber. My heart smote me, even at the moment, though I felt conscious of doing but a father's duty; but how much keener did I feel the pang, when I was informed in the course of the evening, by a neighbor, that my boy had gone to the dock at the earnest solicitation of a younger and favorite play-mate, and by the especial permission of his school-master., in order to recover a cap belonging to the former, which had blown over the wharf. Thus I learned that what I had treated with unwonted severity as a fault, was but the impulse of a generous nature, which, forgetful of self, had hazarded perhaps life for another. It was but the quick prompting of that manly spirit which I had always endeavored to engraft upon his susceptible mind, and which, young as he was, had already manifested itself on more than one occasion.

How bitterly now did I regret my harshness, and resolve to make amends to his grieved spirit in the morning! Alas! that morning never came to him in health! Before retiring for the night, however, I crept to his low cot and bent over him. A tear had stolen down upon his cheek, and rested there. I kissed it off; but he slept so sweetly and so calmly, that I did not venture to disturb him. The next day he awoke with a raging fever on his brain, and in forty-eight hours was no more! He did not know me when I was first called to his bed-side, nor at any moment afterward, though in silent agony I bent over him until his death and darkness closed the scene. I would have given worlds to have whispered one kind word in his ear, and have been answered: but it was not permitted. Once indeed a smile, I thought of recognition, lighted up his eye, and I leaned eagerly forward; but it passed quickly away, and was succeeded by the cold unmeaning glare, and the wild tossing of the fevered limbs, that lasted till death came to his relief.

Every thing I now see that belonged to him reminds me of my dear little boy. Yesterday I found some rude pencil sketches which it was his delight to make for the amusement of his younger brother; to-day, in rummaging an old closet, I came across his boots, still covered with dock-mud, as when he last wore them; and every morning and evening I pass the ground where his voice rang the merriest among his play-mates. All these things speak to me vividly of his active life; but I cannot, though I often try, recal any other expression of his face than that mute, mournful one with which he turned from me on the night I so harshly repulsed him. Then my heart bleeds afresh. Oh! how careful should we all be, that in our daily conduct toward those little beings sent us by a kind Providence, we are not laying up for ourselves the sources of many a future bitter tear! How cautious, that neither by inconsiderate word or look we unjustly grieve their generous feeling! And how guardedly ought we to weigh every action against its motive, lest in a moment of excitement we be led to mete out to the venial errors of the heart the punishment due only to wilful crime! Alas! perhaps few parents suspect how often the sudden blow, the fierce rebuke, is answered in their children by the tears, not of passion, not of physical or mental pain, but of a loving yet grieved or outraged nature?

The Fashionable Preacher.—There is a charming *naivete* in this description of a fashionable clergyman at the "West-end" of London, and the slyly assumed simplicity gives a keen edge to many of the remarks. We have heard of an American clergyman in one of the Atlantic cities who used "to regret the painful necessity of his duty, which required him to remind his dearest hearers that the flowery path in which they trod was *not* the way to eternal happiness." He never said anything more disagreeable to his hearers or more contemptible to reasoning men. As for this English clergyman—who is only a caricature of what may be found in many places and sects—our author says—

He always dressed in black, of course, and his clothes and patent leather boots were so elegantly made, that he certainly did look a perfect gentleman. Indeed, everything about him was extremely quiet; even down to his jewellery—he wore very little, but very good; for the only article of *bijouterie* to be seen were the agate buttons of his wrist-bands, and two or three inches of a thin gold chain, running to his waistcoat pocket, besides a magnificent diamond ring, set quite plain, on the little finger of the right hand—and this was the hand I noticed, off which he took his black glove while in the pulpit. The reverend gentleman, mamma soon found out, was a widower of several years' standing. He had, in early life, married a young lady with a small fortune and a confirmed consumption. As he had but little interest in the church, he thought it better, instead of devoting the money his wife had brought him to the purchase of an advowson—for indeed he had a moral objection to the sale of such holy offices—he had thought it better, I repeat, to build a commodious chapel at the West-end of London, especially as the accommodation at the churches was far from sufficient, and his personal appearance was highly attractive.

This chapel he had taken great pains to have so well warmed in winter, and ventilated in summer, that—with the softness of the cushions and hassocks—and having three or four professional singers in his choir—and there being only free seats enough to accommodate the footmen—and what with the rhetorical language of his sermons, and the elegance and grandeur of his delivery—and his being an extremely devout Christian, and a remarkably handsome man—and what with his having written two epic poems, one entitled "Paradise Found—in Women!" and the other

"Beelzebub, the King of Rome!"—there was soon not a seat to be had in the place for love or money, and it was currently reported that the rent of the pews yielded him a considerable income. Mamma and I went there the very first Sunday after we had made his acquaintance; and of all the elegant congregations I ever saw, there never was anything equal to his! Nine-tenths of the pious and fashionable assembly were ladies. As for the Rev. Evelyn Dossey, too—Oh! it was so beautiful to hear him, in the most choice and poetical language, raising his musical voice, and lifting up his beautiful white hand—till his diamond ring sparkled again in the light—against all the pomp and vanities of this wretched vale of tears; and when he paused for a moment to take his pocket handkerchief from his black silk gown, I declare that the scent that came from it was so heavenly and refreshing that I could see all the ladies in the gallery feasting upon the perfume. Then it was so charming to hear him warn the be-rouged old dowagers, in the kind and elegant way he did, of the shortness of this life; while the splendid figures of speech in which he alluded to our all being miserable sinners, took away greatly from the truth. And if—to give greater effect to his sermon—he found it necessary to comment in strong terms upon the innate sinfulness of the human race, he invariably directed his eyes to the free seats, and addressed himself in the most solemn and severe tones to the congregated footmen in particular.—*Whom to Marry and how to get Married.*

FRENCH SPEECHES.—At a festival held two or three months ago at Rouen, for the purpose of advancing Electoral Reform, and at which 1800 Electors were present, Monsieur CREMIEUX, then one of the Chamber of Deputies and now a prominent member of the Provisional Government, spoke and said:

"Heaven grant that the day may come when the world shall be one nation! God gave us the earth not to bathe it with blood, but that we might make it smile with fertility. (Cheers.) Oh! gentlemen, which nation has found the grandest success in war? What country can exhibit such glorious triumphs as France, whose soldiers rushed to the field of battle in search of death, or rather immortality? (Applause.) But after glory come reverses; we have found that if war has its immense triumphs, it has also its immense disasters. Besides, what changes are going on around us! If war, during so many ages, was the rule, and peace the exception, in our days peace ought to be the rule and war the exception. (Cheers.) See in fact what is passing throughout civilized Europe. People are fraternizing by their industry, and by those novel means of communication which are almost annihilating distances. In four days you are at the extremity of Germany; in five days you may visit Berlin and Vienna; in seven days you are upon the banks of the Vistula. In a short time we shall be as near to the empire of Russia; already travellers are carrying ideas of liberty into that country, frightening tyranny, which will one day fall from its seat. Enough of conquering! Who would wish again to arm people against each other? Why should they think of the aggrandizement of territory when there are no longer any barriers between nations? (Prolonged cheering.) Let me not be told that this is a dream—a Utopia; already we begin to realize it. By their intercourse, nations are beginning to know and understand each other; they are ridding themselves one and all of those ancient prejudices and hatreds which have hitherto separated them. Why should they not fraternize together? Why should they be enemies? Are they not the children of one God? Have they not all the same immortal spirit, which is the emanation from Heaven? And, upon earth, have they not the same interests to protect and develop? (*Prolonged sensation—bravos!*)

And Monsieur VISSET said at the same meeting:

"How long will it take to turn from theory into practice the very simple idea, that, apart from the precepts of religion, which we do so often quote, but so seldom practice, that upon the merest calculations of an enlightened self-interest, nations have a far different mission upon earth than to excite in each other mutual fear? How long will it be before they discover the selfish objects of those who have an interest in persuading them that the name of a foreigner is synonymous with that of enemy? When will they learn that, as children of the same Father, their real and only enemies, those which they ought to struggle to destroy, are, ignorance, oppression, misery, and superstition?—(cheers)—that in proclaiming their mutual friendships they will tend to the consolidation of peaceful relations with each other!—When will they discover that the maintenance of formidable armaments, in countries whose nationality is not seriously menaced, inflicts an evil upon all, and confers benefits on none?

THE TWO KINDS OF KNOWLEDGE.

"A knowledge of the sciences is comparatively easy, and may be acquired by very ordinary intellects. Though it requires a great intellect to originate profound views, a child may learn them when originated, and therefore ordinary intellects can acquire considerable knowledge of the laws of nature; but a knowledge of life is the result of abundant experience drawn by a reflective mind. The labors of philosophers, extending through centuries of observation and experiment, are amassed in books. There the student may find them, question them, and having furnished himself with their results, begin the study of nature, rich in the experience of ages. Not so the student of mankind. He is almost like a philosopher who should set to work to observe phenomena, without having studied the results obtained by others. No amount of experience is stored up in books for him to consult. He must study the living subject. He must draw his own conclusions. The works of poets and moralists, indeed, contain the results of great experience; but unfortunately these are of little help: we are unable to appreciate them until we ourselves have discovered the same truths. A man shall read Shakspeare for thirty years, and at the end of that period shall detect truths of human nature, which escaped him before: and why?—because he himself, not having discovered them before, could not recognise them when he saw them written. From poets, we learn confirmations of our views—never the views of human nature themselves.

"The knowledge of life is marvellously complex: its materials are drawn from past experience, present observation, and prevision of the future. In youth, we are subject to deceptions as much from the boundless confidence of hope, as from the dazzling novelty of our impressions.—We have no standard to test things by. We have no experience to correct the rashness of our wishes, and the immaturity of our judgment.—In youth, we can seldom judge men aright; for to judge men aright, we require to be arrived at that age when experience is weighty enough to balance the inventive nature of hope, and capable of analysing all impressions in the crucible

of the understanding. In truth, a knowledge of men is always difficult and rarely certain, for men themselves are ever vacillating between new ideas and ancient prejudices; between their interests and passions.

Method in Business.

Success in business is usually the result of intelligent and well-directed efforts.

Many of the failures in mercantile life, as well as in other pursuits, arise from a want of proper knowledge of the *principles* upon which success is based.

The uncertainty of mercantile business has become a proverb: and from estimates made, and publicly proclaimed on various occasions, the proportion of those engaged in that employment, who are eventually successful has been extremely small.

But is this a *necessary* result? The writer thinks not. Men who have been successful, and who have been successful as a consequence of their practical knowledge and their prudent management, know to the contrary. And yet failure follows failure. Why is it thus! Need we continue in the dark upon this subject? Are there not minds, engaged in the pursuit of business competent to enlighten us, and whose feelings would prompt them to the task if their attention was suitably turned to it?

It is a subject of grave importance, and the remedy, as far as possible, should be provided: as, for want of it, the integrity of worthy men is constantly placed in jeopardy, and when laid waste, destruction of character and happiness is the usual consequence. This frequently occurs with persons who desire to do right, but, for want of a proper knowledge of the *land-marks*, get into a false position, and thereby involve themselves and others without intending it.

The young and experienced, who are pressing forward confident of success, and yet without that knowledge that would insure it; and successful men, who stand in the position of creditors, are alike interested; indeed, the whole community has a deep and an abiding interest in all measures that will promote good morals, and lead to successful and happy results.

A portion of the evil arises from defective business training—partly from the indolence or inattention of the learner, and partly from the incompetency or disinclination of the instructor — The obligations mutually existing between master and apprentice are therefore not faithfully discharged, and loss is sustained by both parties.

The more strictly methodical a business is conducted, provided it insures correctness and proper despatch, the nearer it will approach success, and the more those engaged in it will become fond of its details; and, as a consequence, the more willingly they will devote themselves to those duties which they feel at the same time promotes their pleasure and advances their interests.

Why may not the profession of the merchant be reduced to a science?

There *are* principles, that lie at its foundation, which are as true as those applicable to any other pursuit; and it needs but their development and arrangement, to enable those engaged in its duties to be equally successful.

The attention of intelligent and philanthropic merchants is in this manner invited to the subject, in the hope that some one, competent to the task, will accomplish it, and thereby confer a lasting benefit upon an extensive and valuable class in society, so that, while young men are acquiring a knowledge of their business practically, they may also study its principles, and thus become fitted not only to secure advantages to themselves, but useful in training others, and eventually be ornaments to their profession.

In the meantime let each one interested in the subject, whether merchant, mechanic, or manufacturer, provide a book, and accustom himself to noting every important *fact, precept, principle*, or *illustration*, having a bearing upon his particular occupation, classified under suitable heads.— By adopting this course, it will in time be found that he has not only improved his own mind and his own habits, and collected a mass of information important to himself and to those in his employ, but that he has provided a valuable legacy for his children, or for those who may succeed him in his line of business.—*Hunt's Merchant's Magazine.*

The Anti-Sabbath meeting, so long talked of, has at length assembled in Boston. Among those present, the reader will not be surprised to see such names as the following: Francis Jackson, Edmund Quincy, Eliza J. Kenney, W. L. Garrison, C. C. Burleigh, Maria W. Chapman, Lucretia Mott, Henry C. Wright, and Parker Pillsbury. About 300 females were on hand.— Messrs. Garrison and Brown offered resolutions, and spoke to them. C. C. Burleigh also spoke half an hour. Mistress Abby Folsom was present, and took a liberal part in the proceedings.— Once she rose to a point of order. Theodore Parker, the clergyman! spoke in the afternoon, and the notorious Stephen Foster, in the evening. By vote, all present were declared entitled to seats as delegates, who esteem all days in the week alike, and Abby Folsom, among others, claimed under this rule. In the course of some hairbrained speaker's harangue, there occurred a warm denunciation of colleges as humbugs, and churches also; and the speaker at last arrived at the sublime conclusion that men should live by love. But, said he, the men of the present age have not love enough to carry them through this wicked world. "I have!" shouted Abby Folsom, amidst shouts of laughter.

British policy in Canada.—The London Chronicle of the 23d ult., notices that the elections have terminated in the success of the liberals, upon whom it bestows the epithet of "turbulent demagogues." It praises the character of the French Canadians and says, that nineteen-twentieths of the prisoners in Montreal are of English or Irish origin, and that "to change them into English clod-hoppers or American loafers, would be a misfortune and a sin."' It thus remarks:

"Such is the people whom it has been our task for half a century to make rebels of; and at length it is evident that we have pretty thoroughly succeeded. We mocked them with representative institutions, framed after the British model, while we denied them that without which representative institutions are only a device for discord—namely, an Executive responsible to the people. Common and instinctive jealousy of the British Government has produced among them an apparent sympathy with the American or Republican party in the province. From this combination arises the majority with which Lord Elgin has now to deal."

"Lord Elgin's true policy is to take his stand simlpy on the preference of allegiance to the British Crown. Let it be understood that the whole power of Great Britain will be exerted to

repress any attempt at rebellion—the British boundary line must never recede—the Union Jack must never be hauled down. Upon this point all Englishmen are united. *But in colonial matters let the colonists take care of themselves.* There must be no halting between two opinions now; responsible government has been given, and *it has become impossible to rule Canada from Downing street.* The Canadians will soon, for their own sake, be tired of putting the worst pilots at the helm of state."

It is perfectly clear to all thoughtful politicians on this side of the Atlantic, that such "thus-far-and-no-farther" policy cannot possible prevail for more than a very limited period. But the present concessions which it implies, form the only policy capable of shoving off present difficulties. The future will take care of itself.

Selling Dry Goods.

From the Island City.

People generally think that it is a very easy matter to stand behind a counter and retail dry goods; but a week's experience in the business would convince the cleverest man that it is much more difficult and laborious than the task of turning a grindstone twelve hours per diem. The office of salesman embodies, in its duties, necessity for the shrewdness of a politician, the persuasion of a lover, the politeness of a Chesterfield, the patience of Job, and the impudence of a pickpocket. There are salesmen who make it a point never to lose a customer. One of these gentlemen, who is in a store in Chatham street, not long since was called to show to a very fastidious and fashionable lady, who "dropped in while going to Stewart's," some rich silk cloaking.—Every article of the kind was exposed to her view, —the whole store was ransacked—nothing suited. The costly material was stigmatized as "trash," —everything was common, and not fit for a lady. She "guessed she would go to Stewart's." The salesman pretended to be indignant.

"Madam," said he, in a tone of injured innocence, "I have a very beautiful and rare piece of goods—a case of which I divided with Mr. Stewart, who is my brother-in-law; but it would be useless to show it to you. It is the only piece left in the city."

"Oh! allow me to see it," she asked, in an anxious tone, and continued, "I had no intention of annoying you, or of disparaging the merits of your wares."

The salesman, who was now watched in breathless silence by his fellow clerks, proceeded, as if with much reluctance, and with expressions of fear that it would be injured by getting tumbled, to display an ancient piece of vesting, which had been lying in the store five years, and was considered to be unsaleable. The lady examined and liked it much. That was a piece of goods worthy to be worn. How much was it a yard?

"Twenty-two shillings."

"Oh! that is very high."

"There!" exclaimed he, beginning to fold it up, "I knew you would say that."

"Stay! stay! don't be in so great a hurry!" she cried—"I'll give you twenty shillings."

"Madam, you insult me again."

"Cut me off —— yards, and you can make up the deduction on some velvet which I require for trimmings," almost entreated the fair shopper.

The salesman, after much persuasion, sold the lady the vesting, for which they had in vain sought to get five shillings per yard, at the price above indicated. The profits of the sale, on vesting and velvet, amounted to *thirty-three dollars*, out of which the clerks were permitted to pay for a supper of oysters. The best of this brief tale of dry goods is to be told. The lady had her cloak made, and one or two of her friends, delighted with it, bought the rest of the velvet at the same price.

There is a moral in this anecdote, which we leave to be discovered by the ingenuity of all our lady readers who occasionally go shopping.

NEWSPAPERS IN COLLEGE.—The learned Professor of History and Philosophy in the South Carolina College, Dr. Francis Lieber, is in the habit of delivering regular newspaper lectures.—Every fortnight the students assemble for this purpose, and are expected to be well acquainted with the chief events, both foreign and domestic, that may have transpired during the preceding two weeks, in the political, literary, and scientific worlds. They are first examined according to a plan which systematically embraces all countries, and are not only required to know the events, but are directed to use books of reference, so as to give a fair account of their development. After this, the Professor takes up one of the chief subjects and lectures upon it, avoiding, with great skill, the dangers of party politics.

In his political ethics he imposes the duty of reading carefully the newspapers of the day, and teaches the most profitable method of doing so. Thus he trains up the young men under his instruction to be enlightened and practical statesmen.—*Jour. of Com.*

THE MILITARY OF PARIS.—The Boston *Atlas* gives the following account of the organization of the two corps who have played the principal parts, on opposite sides, in the recent Parisian Revolution:

The Municipal Guard is a Police force, consisting of nearly seven thousand picked men, who are divided into cavalry and infantry, probably the most serviceable corps in the world.—Though most of them have served in the army, they consider themselves above the line, and are insufferably vain. The Prefect of Police was their nominal commander, acting under Monsieur Duchatel, Minister of the Interior. He also commands a battalion of Sapeurs Pompiers, or soldier firemen, consisting of 829 men and officers.

The National Guard enrols every man established in business or who is a householder, and is thus a militia, composed of the citizens, who have an interest at stake. They are well uniformed and equipped, as infantry and cavalry, and have generally been called out about five days in the year, as one legion is, in its turn, on guard at the Palace. They ballot once in five years for five candidates for each office, from which the Ministers commission one, and have thus managed to get in their supporters. They number about sixty thousand in the city limits, and twenty-five thousand in the *banlieus* or suburbs, commanded by Gen. Jacqueminot. Their annual expense for music, staff officers, guard houses, &c., is about $125,000, and the individual expenses for uniforms are large.

On one occasion, during the progress of Mr. Hastings's trial, Mr. Fox, struck by the solemnity of Lord Thurlow's appearance, said to the Speaker, "I wonder whether any one ever was so wise as Thurlow looks."

☞ It appears that in China a man condemned to death can procure a substitute for about $250, and is often allowed to do so.

A Ballad.

The earth beneath the force of vernal showers,
Grew soft and green,
Fresh on her musing bosom infant flowers
Rocking were seen.

"O, mother, let me make a garden;
Dear mother, do?"
No more the North to rimy drops shall harden
The twinkling dew.

Bright butterflies on painted wings now flutter,
Like human souls,
Their melting notes of love now blue-birds utter,
And orioles.

"Come mother, dearest mine, do let me make it,
With spade and line."
"But who shall work it, weed it, dress it, rake it?"
"These hands of mine!"

Her mother gave consent, the rosy maiden
To labor speeds;
Ere morrow eve her taper hands are laden
With garden seeds.

The garden plan was all her own invention,
A strange, wild plan,
Of one like to it she had ne'er heard mention
By maid or man.

But when the seeds began to shoot and quicken,
In their warm bed,
The maiden, strange to tell, appeared to sicken,
With drooping head.

She sickened more and more, until she faded
In earth's embrace,
And then they buried her, with tresses braided,
And pallid face.

The love lorn mother's tears in floods came flowing,
Without relief,
At last they led her where sweet flowers were growing,
To soothe her grief.

Melodious birds on every bough were singing,
Bright rung the morn,
But long the mother stood, her thin hands ringing,
Forlorn! forlorn!

What sees she in her daughter's garden blooming,
A coffin's form*
She must have seen, methinks, her own entombing,
While fresh and warm.

* The above ballad was founded upon an incident which occurred in the vicinity of the author. An humble maiden sought her mother's leave to make a garden; but, ere the flowers bloomed, she sickened and died—when lo! the mother going forth to weep, beheld the work of her child, arranged in a coffin's form, as if with a presentiment of her fate.

For the Western Literary Messenger

Tricklings—Mr. Luckyman.

BY "AN IDLER."

If the observation of Mad. De Stael, "*Quand on souffre, on se persuade aisment que l'on est coupable; et les violents chagrins portent le trouble jusque dans la conscience,*" be not strictly philosophical, it is undoubtedly true that when *others* suffer, "we easily persuade ourselves" that *they* are "culpable," ascribing to want of foresight or something still worse, what in reality is the result of inevitable circumstance. Equally apt are we to hug ourselves in the belief, that whatever good fortune may fall to our lot, is the legitimate and proper reward of our own sagacity and well-directed exertion, while, in general, our success and our effort stand in about the same relation to each other, that a failure of a New Zealand yam harvest does to the price of Irish potatoes. There is, in particular, a certain class of men in this our world, who, having been born "in the right time of the moon," and being always fortunate in whatsoever desperate speculation they embark, suppose themselves possessed of undoubted wisdom, and indebted to their superior sagacity for what to other men appears the offspring of mere "good-luck," a name that some people give to Providence. Let a fellow of theirs "do well," and they can understand at once, that "it was nothing but accident;" if a neighbor meets with a misfortune, of course "he should have known better," but at every new proof of the partiality of Fortune for them, (these gentlemen never meet with adversity,) they are as blind to the hand that turned the wheel, as they are ready to seize the prize it has brought up for them.

Mr. Luckyman is a good and apt illustrative specimen of this class. Born "with a silver spoon in his mouth," and knowing no more of casualty, personally, than a college graduate knows of Greek or the Decalogue, he has spent all his life time, up to his present very respectable age of forty-five or thereabouts, without ever having occasion to lower in the least his naturally very favorable estimate of himself, and his abilities. Not but he has *changed* that estimate! bless you! it has altered with every moon, unlike the goddess however, waxing forever, with no symptom or thought of waning. And no wonder.—Let him engage in whatever enterprise, however unpromising to appearance, and you may rest assured it will turn out well. No one ever knew Mr. Luckyman to fail in an undertaking, or lose a stiver in a speculation. However vague and visionary may be the scheme in which he embarks, he is sure to "make money." He once bought a tract of land in Georgia, which, on examination, seemed worthless, but while his acquaintances were chuckling over the idea that for once at least "Luckyman was done" news came that thereon had just been discovered a valuable gold mine. If he buys up cotton at a ruinous price, the crop is certain to be cut off, and he clears his thousands, and if he should venture some day, on sending a ship load of "coals to Newcastle," the mines would be found full of water on its arrival, and he would double on his investment. I am of the decided opinion myself, that had he been interested in Locke's Mississippi scheme, the stock would have turned out on settlement "of the concern" worth at least one hundred and ten cents on the dollar.

Misfortunes favor him, and what are accidents to other men, are mere lucky chances to him. If a coach is overturned, the only man killed will be a rich old uncle, to whom Mr. Luckyman is sole heir; if a bank where he is a heavy depositor, should chance to "suspend specie payments," (which I believe is the financiering phrase for a blow-up,) he is sure to have overdrawn his account that morning, and if his warehouse takes fire and burns to the ground, every body knows that he renewed his insurance for double its value only the week before. If a tornado blows his vessel ashore, the natives of the coast are in extreme need of the very articles comprising the cargo, and if high floods deluge his estate, the

waters discover a box of treasure that has remained hidden ever since Kid buried it. And with all this good fortune, speak to him of his "*luck*," and he stares at you as though you were a grizzly bear, or a New Zealander. Why, bless your simplicity, it is all owing to his foresight. *He* lucky? Nonsense! If *he* should go into such wild speculations as that harum scarum Luckless, he wouldn't have a stiver at the end of a twelve month. But thank his stars *he* always "looks before he leaps;" and you might as well attempt to convince a politician that "honesty is the best policy," as him that his good fortune is not the direct result of his own sagacity and long-headedness.

But let a neighbor merchant win or lose, and he would see the cause through an iron door. Let once another man make an unlucky venture, though with the best prospect of success at the outset, and our sage friend, exclaims, "I told you so" with the wise gravity of an owl. "He knew how it would turn out. It is really astonishing how foolish some folks can be—but if such people will sow the wind they must reap the whirlwind—for *his* part he never enters into any such rash speculations"—and he turns away, gingling the change in his plethoric pocket, with as much self-complacent thanklessness as though he were truly indebted to his own exertions, for those benefits that are undeniably the bestowal of Heaven.

How many such people are there in society, who seeing all things through the distorting medium of their conceit and selfishness, daily grow more important in their own eyes, and become, if not by merit, at least by an overweening pride, continually more removed from the body of mankind around them. "*Celui qui n'a pas souffert, que sait il?*"—he who has not suffered, what knows he? said a prophet,—and the always fortunate would do well to remember it.

For the Western Literary Messenger.

Sarah B. Judson.*

This little volume has been looked for with interest by the public generally, irrespective of class or denomination. Some have waited with anxiety to learn the more minute details of the early life, missionary toils, and death of the subject of this memoir—others, with curiosity to see how "Fanny Forester" would acquit herself in this new field of labor—and others with a deeper and holier feeling—longing for a keepsake of one who is enshrined in their "heart of hearts;" and there is no doubt but that the author has satisfied the expectations of all. She has certainly shown much good sense in the selection and arrangement of the material furnished her; carefully avoiding that extreme minuteness which wearies the general reader, and suppressing nothing which can add to the interest, or full development of the character of Mrs. Judson. Though she may at times have attempted to "gild refined gold" or invest with a hue of romance the life of one who, from the cradle, learned to "suffer and be strong," yet throughout the volume the subject of it is the "bright luminous point" to which the eye is directed. In other instances she has perhaps sacrificed dignity to the graces of style, and complimented her husband in rather a fulsome manner, yet many of her pictures are exquisitely drawn, while the hand of the limner is never seen. The following description of the robbery of Mr. Boardman's house shortly after his arrival at Maulmain, is very graphic and beautiful.

"On the evening of the fourth day, as it deepened into night, the books of study were thrown aside, and the book of God taken in their stead; then the prayer was raised to heaven, and the little family went to rest. Feeble were the rays of the one pale lamp, close by the pillow of the young mother, scarce throwing its light upon the infant resting in her bosom, and penetrating into the remote darkness, but by feeble flickerings. So sleep soon brooded over the shut eyelids: and silence folded its solemn wings about the little habitation.

"The infant stirred, and the mother opened her eyes. Why was she in darkness? and what objects were those scattered so strangely about her apartment, just distinguishable from the gray shadows? The lamp was soon relighted, and startling was the scene which it revealed. There lay, in odd confusion, trunks, boxes, and chests of drawers, all rifled of their contents; and strewn carelessly about the floor, were such articles as the marauders had not considered worth their taking. While regarding with consternation, not appreciable by those who have access to the shops of an American city, this spoiling of their goods, Mrs. Boardman chanced to raise her eye to the curtain beneath which her husband had slept, and she thought of the lost goods no more. Two long gashes, one at the head and the other at the foot, had been cut in the muslin; and there had the desperate villains stood, glaring on the unconscious sleeper with their fierce murderous eyes, while the booty was secured by their companions. The bared, swathy arm was ready for the blow, and the sharp knife or pointed spear glittered in their hands. Had the sleeper opened his eyes, had he only stirred, had but a heavy long-drawn breath startled the cowardice of guilt—ah, had it! But it did not. The rounded limbs of the little infant lay motionless as their marble counterfeit; for if the rosy lips had moved, but to the slightest murmur, or the tiny hand crept closer to the loved bosom in her baby dreams, the chord in the mother's breast must have answered and the death-stroke followed. But the mother held her treasure to her heart and slept on. Murderers stood by the bedside, regarding with callous hearts, the beautiful tableau; and the husband and father *slept*. But there was one Eye open—the Eye that never slumbers; a protecting wing was over them, and a soft invisible hand pressed down their sleeping lids."

The life of Mrs. Judson furnishes a theme which might inspire a duller pen than Fanny Forester's: whether we view her as a daughter, a sister, a wife, a mother, or a missionary, we see the same faultless symmetry—the same earnest, loving, self-sacrificing, enduring spirit.—True, while at Calcutta, amidst the blandishments

* Memoir of SARAH B. JUDSON, member of the American Mission to Burmah. By Fanny Forester. New-York. L. Colby and Co., 181 Nassau street. 1848

of English society, and the pleasures and duties of the domestic circle. she was beguiled into a momentary forgetfulness of her "consecration vow"; but when chastened by affliction, the burning enthusiasm of her early youth, burst forth in prayers and tears, toils and sacrifices for the benighted beings by whom she was surrounded.

During her missionary life, she performed an almost incredible amount of literary labof. Notwithstanding her ill health, the pressure of family cares, management of schools and private instruction, she atill found time to study. Of some of her later literary performances Dr. Judson, in the Obituary Notice, thus speaks:—

"Her translation of the Pilgrim's Progress Part 1st, into Burmese, is one of the best pieces of composition which we have yet published.—Her translation of Mr. Boardman's 'Dying Father's Advice,' has become one of our standard tracts; and her hymns in Burmese, about twenty in number, are probably the best in our Chapel Hymn Book—a work which she was appointed by the Mission to edit. Besides these works, she published four volumes of Scripture Questions, which are in constant use in our Sabbath Schools"

Beside these. she frequently contributed valuable articles to the Burmese newspaper, and several times, in the absence of Mr. Stevens, took the editorial charge of it. Fanny Forester says "she was a true poet." In her exquisite sensibility, and delicacy of thought she resembles Mrs. Hemans. Her last lines were written on the Isle of France, after she, with Dr. Judson and three children, had taken passage for America, and when there was hope of her final recovery. She heard the poor Burmans calling their teacher, and feeble as she was, formed the resolution that they should not call in vain; her husband must return to Burmah, and she, with her children, would pursue her way to her native land. They are the outgushing of deep devoted affection.

"We part on this green islet, Love,
Thou for the Eastern main,
I, for the setting sun, Love—
Oh, when to meet again?

My heart is sad for thee, Love,
For lone thy way will be;
And oft thy tears will fall, Love,
For thy children and for me.

The music of thy daughter's voice
Thou'lt miss for many a year;
And the merry shout of thine elder boys,
Thou'lt list in vain to hear.

When we knelt to see our Henry die,
And heard his last faint moan,
Each wiped the tear from other's eye—
Now, each must weep alone.

My tears fall fast for thee, Love,—
How can I say farewell?
But go;—thy God be with thee, Love,
Thy heart's deep grief to quell!

Yet my spirit clings to thine, Love,
Thy soul remains with me,
And oft we'll hold communion sweet,
O'er the dark and distant sea.

And who can paint our mutual joy,
When, all our wanderings o'er,
We both shall clasp our infants three,
At home, on Burmah's shore.

But higher shall our raptures glow,
On yon celestial plain,
When the loved and parted here below
Meet, ne'er to part again.

Then gird thine armor on, Love,
Nor faint, thou by the way,
Till Boodh shall fall, and Burmah's sons
Shall own Messiah's sway."

This interesting work cannot fail to benefit the reader, and will no doubt be eagerly sought in a circle where an ordinary missionary memoir would be openly sneered at, or thrown aside in silent contempt. ELIZABETH.

LADIES AND RAILROADS.—The system of Rail Road travelling has hardly yet been long enough in use to have made its code—especially in what concerns "manners" those "minor morals" of the world.

Generally speaking, indeed, there is remarkable decorum in the conduct of Rail Road travellers—who thrown together, of all classes, without previous acquaintance or much identity of habits or associations do nevertheless get along together without much cause of offence or difficulty. Occasionally, however, we have seen instances of this sort, and that among persons whose appearance denoted any thing but a mean condition in life. Some two or three ladies occupying seats for twice as many—filling the vacant parts with bundles and bandboxes (against the direct printed regulations of the cars) and when others (females, too, very often,) would be pressing through the cars in search of a seat, not an offer from any of these monopolizers. Nay, we have seen gentlemen leave their seats in order to accommodate females whom their own sex thus disregarded—and seen these gentlemen permitted to stand the whole route—while two, three or four seats were occupied by the bundles and bandboxes of those who had not the grace to perceive that in the homage done to their sex, by thus denying themselves from seats previously secured, these gentlemen had entitled themselves at least to ordinary politeness, from that sex.

Another, and very striking characteristic, which indeed has been often commented upon before, in the conduct of females travelling in our Railroad cars, and we may say omnibuses to, is the absolute air of right with which on entering a crowded car they look round for gentlemen to spring up and give them seats, and absolute indifference and absence of even an ordinary "thank you sir," with which they take such seats.

Such conduct is doubly wrong—ungracious in the present, injurious for the future: for civilities not acknowledged will soon come to be unpaid.—The other sex shall have its turn in a day or two. —*Cour. & Enq.*

VISIT TO A PRINTER.—We live in an age of progress. At Hartford, Conn., the ladies have had a "Leap Year Ball," in which they assumed the position usually occupied on such occasions by the other sex. A petition has been presented to the legislature from ladies in Genesee county, claiming to be held from all moral and legal responsibility, by reason of their civil and political disabilities. But the most wonderful event of all, and the greatest (and best) innovation, is a "Visit to the Printer," on the plan of visits to clergymen. The happy recipient of this new honor is Mr. Cowdery, editor of the Cuylerville Telegraph.—*Rock. Amer.*

J. CLEMENT, EDITOR.

French Kingship: its Sickness and Death.

In 1744 Louis XV was seized at Metz with a malady which threatened his life, and it was at that time, according to the writings of President Henault, that he received the title of *Bien aime* (Well-beloved). Kingship was in good repute *then*, and while he lay upon his royal couch, Paris, whither the sad news had flown as on the wind, "seemed taken by storm; the churches resounded with supplications and groans, and the prayers of priests and people were every moment interrupted by their sobs."

So, says Carlyle, "stands it written; in lasting memorial of that year 1744. Thirty other years have come and gone; and this great prince again lies sick; but in how altered circumstances! Churches resound not with excessive groanings: Paris is stoically calm; sobs interrupt no prayers, for indeed none are offered, except priests' litanies, read or chanted at fixed money rate per hour, which are not liable to interruption. The shepherd of the people has been carried home from Little Trianon, heavy of heart, and been put to bed in his own Chateau of Versailles: the flock knows it and heeds it not." * * * * "Alas! *much more lies sick than poor Louis:* not the French king only, but the *French Kingship*: *this too*, after long and rough tear and wear, *is breaking down*. The world is all so changed; so much that seemed vigorous has sunk decrepit, so much that was not is beginning to be! Borne over the Atlantic, to the closing ear of Louis, king by the grace of God, what sounds are these; muffled-ominous, now in our centuries? Boston harbor is black with unexpected tea; behold a Pennsylvania Congress gathers; and ere long, on Bunker Hill, DEMOCRACY announcing, in rifle-volleys death winged, under her STAR BANNER, to the tune of Yankee-doodle-doo, that she is born, and, whirlwind-like, will envelope the whole world."

For three-quarters of a century French Kingship has been lingering under a fatal malady. On one or two occasions the cadaverous and emaciated thing was supposed to be dead and its winding sheet was prepared; but bone clung to brother bone and it was re-placed, and propped up, on the throne. It is generally supposed to be *now* fairly dead; and the next arrivals from Europe may bring the particulars of its interment.

YOUNG MEN'S ASSOCIATION. — We omitted to mention last week that lectures had been delivered before this society by Dr. TREAT and ELLICOTT EVANS, Esq., both of this city. On Friday evening of last week S. WILKESON, Jr, also of this city, lectured on Limitation to the Right of Suffrage.

THE LIFE OF BUNYAN, compiled from his writings and from other authentic sources. By IRAH CHASE, D. D. New York: L. Colby & Co., 122 Nassau street.

Bunyan, whom Cowper termed the "ingenious dreamer," was born in 1628 (twenty years after the birth of Milton) and died in 1688. Contemporary with him in the arena of literature were Locke, Boyle, Clarendon, Dryden and Cowly, together with the blind bard of Paradise; and in the theological field were such men as Jeremy Taylor, Barrow, Tillotson, Owen and Baxter. These, each in his own sphere, were great lights in their day, and their radiance gilds the Present and will stream far into the Future. But their genius—unless we except Milton's—was no brighter, nor will their light last longer than the Bedford tinker's. While all his works—and they were sixty in number—are stamped with genius and make their mark upon each succeeding generation, the Pilgrim's Progress is "the most popular religious book in the English language." Consequently anything touching its author must be interesting. The neat little pocket edition of his life before us, prepared by a teacher in Newton (Mass.) Theological Institution, has been compiled mostly from his own writings, and has all the interest of a spirited and any thing but self-adulatory authobiography. Hand in hand with the Pilgrim's Progress, it ought to take a pilgrimage through christendom.

THE SACRED MOUNTAINS. By J. T. HEADLEY. New York: John S. Taylor. 151 Nassau st.

We are not surprised to learn that this work is selling very rapidly. Its perusal elevates the feelings and quickens the christian heart. It fills up some of those outline Bible sketches which are hallowed by the most sacred associations, and which will not lose their interest till the end of time. Mr. Taylor has issued the work in a neat and cheap form. The price is twenty-five cents.

For sale by A. Burke.

TEACHERS' AND PARENTS' MANUAL OF EDUCATION: being a plan for a uniform course of study for schools and academies. By WILLIAM P. LYON, A. M. New York: Clark, Austin & Co. 1848.

A beautifully printed little *vade-mecum* for educators, public and *private*. Its specification of the studies adapted to the various ages of pupils, is valuable to many; and the labors of Professor Lyon will be appreciated by the class generally for whose benefit the work has been prepared.

THE POWER OF ILLUSTRATION an element of success in Preaching and Teaching. By JOHN DOWLING, D. D. New-York: L. Colby & Co. 122 Nassau st. 1848.

This neat little unpretending volume, by the author of the History of Romanism, is pregnant with well digested thought; rich in specimens of illustration; bears evidences of great care in its preparation, and will be found useful not to teachers and preachers merely, but to all public speakers and in private *conversazione*.

GODEY'S LADY'S BOOK for April is not a whit behind and of its contemporaries in literary merit, and its artistic department has no rival in the country. The "Book" is one of our oldest acquaintances; and always welcome as a tried friend.—We understand that in the May number will appear a plate entitled "The Queen of May" to be *printed in colors*. This will be a new thing—just what might be expected from Godey

---

THE LITERARY WORLD, which commenced the second year of its existence two months ago, is a publication which every bookseller in the United States should take. Each number contains papers that would not be out of place on the shelf with the critiques of Macaulay and Jeffrey. The price of the work is three dollars a year. Derby & Hewson of this city, are agents.

ERRATA.—In speaking of the London Quarterly Review in our leader last week, the word exhibiting was used for exhibit, and the word yield for wield. These errors were not discovered until the form was worked off.

ALFRED B. STREET, Esq., the poet, has been appointed State Librarian. He makes a good book and ought to know how to take care of the like article.

THE COTTAGE BAPTIST SOCIETY of this city have sold their property to the Second Universalist society, and are intending to build a new church somewhere on the west side of Main street the present season.

THE PEARL STREET CHURCH is soon to change its name to the "Central Presbyterian Church of the City of Buffalo." The society are about to build a new house of worship on the corner of Genesee and Pearl streets.

From the Buffalo Commercial Advertiser.

Cause of the French Revolution.

The cause of this Revolution was the necessity of Electoral Reform—an extension of the right of Suffrage. By the law of 1831, only 200,000 people in France possess the right of voting.—The whole population of France is 35,000,000.—Why waste words in attempting to prove the injustice of this state of things? The French are an intelligent people. Landed property is so much subdivided there that the proprietors are ten times as numerous as in Britain. But in Britain there are about five voters in national politics for one in France. Tried, therefore, not only by an American, but even by a British standard of comparison, this condition was unendurable. But did it constitute a just reason for hazarding the various contingencies and the certain loss of life attending a Revolution? Perhaps not, in itself. The Progressive party, unable to obtain any aid from Government, tried the effect of popular agitation, by which results such as they desired had already been attained in Britain.—They organized a Central Committee in Paris and sub-committees in every section of the provinces, whose intention it was to hold *re-unions* throughout the country. These were conducted in a manner from which the friends of peace and order had nothing to fear, and which gave the friends of political progress many reasons to hope for success. Among those by whom they were supported were LAMARTINE, BARROT, ARAGO, CREMIEUX, MARIE. The phrase "*Vive la Reforme*" was becoming national.

With the folly that so often precedes destruction the Ministry prohibited these meetings, and, not content with this, they stigmatized those who attended them, in the annual address to the King, which it was necessary that the Chambers should adopt before it could be presented. It was proposed to strike out the offensive words.—Nearly all parties supported the accused, and a few friends of the Ministry proposed a new section, which should be free from personal allusions, and should express a hope that some measure of electoral reform should soon be enacted.—This was repelled by GUIZOT, and after he had made every effort, the result was a Ministerial majority of 33—which was there scarcely considered as a triumph.

They were defied by the opposition, who made preparations, for a magnificent Banquet, of the same nature as the 66 re-unions by which it had been preceded. GUIZOT, ever pure, philosophical, and philanthropic in his writings, and of base morality in his political practices was reminded of a passage in one of his own speeches, arguing that "the association of citizens for the exercise or the defence of their constitutional rights, is indicated by the charter—and it cannot have anything in it that is illegal. These associations may be grave, and even dangerous, for the Government—but that is the fault of the Government itself—when it menaces these associations, it is in the wrong." The present, said the humane and intellectual LAMARTINE, was not the time to enslave France or "to clap the hand of the policeman on the mouth of the country."

The 22d was the day appointed for the Festival. A large procession, comprising the opposition deputies, the students of the University and the well-known schools, was to be formed at the Church Madeleine, and march thence to the place chosen on the Champs Elysees. The National Guards offered their services as a *cortege*.

The Government collected 60,000 troops within 30 miles of Paris, ready to march at any moment. They erected batteries near Paris, distributed cartridges and made every possible preparation.

On the morning of the 22d, the opposition, foreseeing a certain sacrifice of life, changed their proceedings and adjourned the Banquet and drew up the series of charges which we published yesterday. These were made the special order of the 24th, in the Chambers.

The 22d was a day of great disorder. The troops assembled round the Chambers and were forcibly assailed by the crowd. After the crowd had been formally ordered to disperse, it was scattered by a charge of the cavalry. The insurrection continued in various parts of the city. The troops behaved with admirable coolness and moderation.

On the 23d, the bells of the churches sounded the tocsin. and the scenes of the previous day were renewed. The National Guards declared in favor of the people, against the Government. Seven of them were killed by the city municipal Guards. At two o'clock the King had a long conference with GUIZOT, who announced in the Chamber of Deputies, the dissolution of the Cabinet. On the 24th, Paris was in a state of war. Before the day closed, LOUIS PHILIPPE had *abdicated*—the regal phrase for a necessitous choice. The city was in possession of the troops. LOUIS PHILIPPE, no longer a King, was glad to secure his personal safety by a hurried exit from one extremity of the Tuilleries, while an infuriated mod were entering at the other. Thus the very climax of the revolution was attained in three days, another "*trois jours;*" the Revolution of 1830 repeated, as to the time of accomplishment, but with more of the character of 1789 and 1792.

After Louis Philippe's abdication on Thursday, the Duchess of Orleans and her infant son repaired to the Chamber of Deputies to claim protection. This was promised, but nothing more. The Chamber refused to recognize the rights of the Count of Paris or the Constitution of the Regency. The more moderate members and these disposed to support the Regency withdrew, headed by the President, (M. Sauzet,) who declared the sitting at an end. But many of the mob had penetrated to the Chamber, and encouraged by them the Radical Deputies resolved themselves into session, declared that session permanent, and declared for a Republic.

Arrival of the Caledonia.

NEW YORK, March 28—2½ P. M.

The Steamship *Caledonia* arrived at Boston last night at half-past 8 o'clock.

Best Western Canal Flour in Liverpool is quoted at 28s@28 6d; Canadian 27@28s; U. States and Canadian sour, 24@25s. Wheat, U. S. and Canadian, white and mixed, 7s 4d@8s 7d per 70 lbs; red 6s 4d@7 9d. Indian Corn, per 480 lbs., 27s 6d@30s 6d: Meal, per bbl., 13s@14s. Oatmeal, per 240 lbs., 21s@22s ½d.

From the European Times.

BRIGHTON, March 1.

We have great pleasure in announcing the arrival of the Ex-King and Queen of the French. The King on landing had on a green blouse, blue overcoat borrowed from the Captain of the Express. The King had not in fact a change of clothing. The King and Queen for some days have been moving from farmhouse to farmhouse in the neighborhood of the port. They were nearly exhausted by fatigue, and on arriving, the King stated that for a night or two back he thought he must have given himself up.

On Thursday, LOUIS PHILLIPPE and Queen, with a male and female attendant, who had during a week, constituted the suite, embarked in a French fishing boat from Treport, with the intention of crossing the Channel at sea. The party was picked up by the express steamer, for New Haven, which arrived off the harbor of 7 o'clock in the morning. On landing, the King and Queen were welcomed by the inhabitants, nearly the whole of whom flocked out and gratified them by shaking them by the hand.

LOUIS PHILIPPE and Queen proceeded to the Bridge Hotel. Their Majesties' first action on reaching the Hotel was to despatch a messenger to Brighton to procure attendance. Mr. PARKHOUSE was then directed to write a letter to Queen VICTORIA communicating their arrival.

On the 6th of March the Provisional Government received a deputation of 280 citizens of the United States who walked to the Hotel de Ville, bearing American and French flags on the same staff.

The Revolution has spread throughout France. All the Departments have engaged in it. The Republic is confirmed, recommended by the Representatives of the United States, England, Belgium and Switzerland.

The Royal Family and Ministers are in England.

The Chamber of Peers has been overturned and all titles of nobility abolished.

The National Assembly is to meet on the 20th of April, to form a definite government. The members chosen by universal suffrage.

All Frenchmen of 20 years of age have a right to vote, and all of 25 years eligible to the Assembly, to consist of 900 members.

There has been some trouble with the workmen of Paris, and financial affairs in a very bad condition, The funds having fallen enormously. The Government had extended the time of payment of Bills.

A Steamer has been placed at the disposal of the Prince de Joinville and the Duke de Aumale to go wherever they please.

The Tuillieries has been turned into an hospital for workmen.

In Bavaria the people have risen and demanded a Constitution from the King, at the point of the bayonet.

Prince Metternich has resigned. The Prussian people are ready for a Revolution, and all Germany breaking out.

SPAIN.—The Orleans party have been overthrown. Advices of no outbreaks in consequence of the French Revolution. The news had just reached there.

ENGLAND.—There had been some disturbances and riots at London, Glasgow, Edinburgh, and Manchester.

No breach of peace in Ireland.

☞ It has been said that any lawyer who writes so clearly as to be intelligible, is an enemy to his profession.

Porter P. Pierce—Probable Murder.

Our Telegraph report yesterday mentioned that the body of PORTER P. PIERCE—whose sudden disappearance caused so much excitement in Rochester some two months ago—had been found in the Genesee river, near its mouth. It was discovered floating down stream, by the ferryman, who succeeded in getting it to the shore, when it was immediately recognized by friends and acquaintances. The following summary of facts elicited by the testimony before the Coroner's Jury, we take from the *Advertiser* of this morning:

The body had upon it the clothes worn by the deceased when he disappeared with the exception of his two coats; suspended to the neck was his gold lepine watch, with the hands stopped at ten minutes before six. There was also found upon his person a gold pen, a pencil and pin cushion, but a bead purse known to have been in his possession, was missing. *The right hand pocket of his pantaloons was turned inside out.* The vest was unbuttoned, but perfectly whole, as was also the shirt. No money was found upon the body.

The most remarkable circumstance connected with the whole matter, however, is the fact that *there is a frightful gash upon the upper and back portion of the head*, which, from appearances—and the testimony of physicians bear us out in this opinion—could have been caused in no other way than a severe blow with some heavy instrument.

The physician sworn before the Coroner's Jury, gave it as his deliberate conviction that the wound upon the head had been received before the body came in contact with the water. A portion of the skull had been broken, and jammed in upon the brain, the cavity being filled with clotted blood, while the upper portion of the scalp was as white as is usually the case.

There were some other marks upon the head, but none but what might have been caused by passing over the smaller falls, or coming in contact with drift wood in the river. One important question remains of course to be solved. How could his *coats* have got off his person, if torn off by the water or floating wood, without the least injury to his shirt or vest?

After a careful examination of the body, and of the facts in the case by a highly intelligent jury, they rendered a verdict that "*he came to his death by a blow or blows inflicted by some person to the jury unknown.*" In this opinion, we believe the jury are sustained by nine-tenths of the community.

PROMOTION OF TEACHERS.—We have heretofore expressed a desire that some farther stimulus might be given to induce teachers to feel an additional pride in their most useful and honorable calling, and that some plans would be adopted by which a young man, devoting himself to that pursuit, might see before him a prospect of professional advancement—which might appropriately terminate in a Professorship. At a meeting of the New York City Teachers' associatien, the following resolution was passed. We need not explain the facts to which it refers:

Resolved, That the promotion of teachers, who have attested their ability by successful service in our city schools, to the rank of Professors in the Free Academy soon to be organized, cannot fail to exercise a powerful influence in elevating the social standing of the profession generally, and thus to redouble our efforts for professional excellence, by increasing its appropriate rewards.

Great loss of Life.

BOSTON, Saturday, March 25, 1848.

From Capt. Laybold, of the brig Halifax at this port, 42 hours from Halifax, we have received the following painful intelligence:

DREADFUL DISASTER AND SUFFERING.—The barque Aurora, reported by the Highland Mary, of New York, as taking on board part of the passengers of the Br. ship Omega, *from Liverpool*, arrived at Halifax, on Saturday last, with seventy-three of these unfortunate people, having landed thirty-three at Canso, and the remainder, about sixty, having died on board. Many of the survivors are suffering from sickness. During the last seventeen days they were on board the Aurora, the allowance of food was limited to two and a half ounces of bread, and a wine glass of water a day, to each individual.

The British brig Barbara, Capt. Skinner, from N. Y. for Cork, with a cargo of corn, took on board about one hundred and fifty more on the 11th Feb., and afterwards bore away for New Foundland. On the 2d March, the steamer Hibernia, Capt. Shannon, from N. Y. via Halifax, hove in sight. A signal of distress was made—The steamer bore down to the Barbara, when the Capt. of the latter vessel acquainted the steamer, that they were out of water, and farther that there were one hundred and fifty persons on board dying for want of water. To which the Captain's reply from the steamer was, "there is the land; go there and get it." The steamer then passed on; without showing any inclination, or making any effort to render them assistance; though the wind was blowing off the land so strongly at the time, that it was impossible to make it. In attempting to reach St Johns, N. F., they mistook the land, and drifted into a cove at the entrance of Petty Harbor, N. F., and went ashore: and on account of the heavy surf struck a cliff, and stove a hole in the vessel's bow.

Thirty-five individuals managed to reach the shore; and in about five minutes after, the Barbara fell over and went down, carrying with her about one hundred and fifteen souls, among whom was Capt. Skinner of the B.

EUROPEAN CATHOLIC MISSIONS IN THE UNITED STATES.—The money collected in this country, every year, for all sorts of Christian Missions in various parts of the world is estimated at eight or nine hundred thousand dollars. But few of our readers know to how great an extent pecuniary aid is extended to various Catholic Missions in this country:

The Association (in Europe) for the propagation of the Faith, have granted to the missions in America, this year: $5,000 to the Bishop of Dubuque; $6 000 to the Bishop of Detroit; $4,000 to Bishop of Cincinnati; $3,000 to Bishop of Philadelphia; $3,000 to Richmond; $4,000 to Bishop Hughes, New York; $1,000 to Friars of Mercy, N. Y.; $2,000 to Hartford; $3,000 to Nashville; $3,000 to Louisville; $8,000 to Bishop of Vincennes and $3,000 to congregation of Holy Cross, same diocese; $6,000 to St. Louis; $2,250 to Milwaukee; $3,500 to Bishop of Little Rock; $7,500 to Bishop Quarter at Chicago; $3,500 to Natchez; $4,750 to New Orleans; $7,500 to Mobile; $8,000 to Charleston; $6,000 to Lazarists in the United States; $2,150 to Society of Jesus, Mo.; $9,000 to Society of Jesus in Rocky Mountains; $700 to Dominicans in do.; $10,000 to Dr. Odin, Vicar Apostolic, Texas; $3,000 to Jesuit Missions in America; $26,000 to West Indian and South American Missions; $11,000 to the Archbishop of Oregon city; $4,000 to Vicar Apostolic Hudson's Bay; $26,000 to British American Missions; $11,600 to Oblats, Canada and Hudson's Bay; $6,000 to Jesuits in Canada. These grants, with

the donations of the people, will uphold a very large number of missionaries of the Church of Rome on this continent.

CAUSES.—The *National*, of Paris, some time since, in enumerating the causes of disaffection against Louis Philippe, stated that he had abused the very power that raised him to the throne, because—

1st. Since the revolution of July, there have been 1129 prosecutions against the public press.

2d. There have been 37 newspapers suppressed.

3d. There have been 7,110,500 francs drawn in the shape of fines from editors and proprietors of journals.

4th. There have been 14,000 citizens imprisoned within ten years on political charges.

4th. Last year, the 17th anniversary of Louis Philippe's reign, not a single political prisoner was included in the royal amnesty, although a great many common malefactors were pardoned.

6th. The prison of St. Pelagie is crowded with the responsible managers of public journals.

PENNY TRAVELLING--ALMOST.--We understand that the authorities of one of our railroads, whose President is a thoroughly practical man, are organizing a system of cheap travelling, for the thousands in our city and outskirts, who are at present, in a measure, deprived of healthful exercise of this kind, through lack of means. The plan is said to resemble that of cheap steamboats, &c., of London, who carry thousands of the working classes of that city into the adjoining villages, at the very cheap rates of from one to three pence each. This plan would enable hundreds and thousands of our working classes to make an excursion of five or ten miles, at an expense stated at three cents per head each way.—It is also stated that the plan will be tried the coming summer. It will, without doubt, if fairly tried, be of great benefit to the people at large, and profit to the originators.—*Boston Traveller.*

☞ REMARKABLE FACT IN NATURAL HISTORY.—The Narrative of Judge PORTER abounds with anecdotes of an interesting kind—the results of the observations of a long and active life. During an expedition which he undertook from Buffalo to Erie, in 1795, a very remarkable circumstance presented itself. We will give it in the words of Judge PORTER himself:

"Before starting from Buffalo we had been detained there for two days by a heavy fall of rain, accompanied by a strong northeast gale. When off Cattaraugus Creek on our upward passage, about one to two miles from land, we discovered some distance ahead a white strip on the surface of the lake, extending out from the shore as far as we could see. On approaching this white strip we found it to be some 5 or 6 rods wide, and its whole surface covered with fish, of all the varieties common to the lake, *lying on their sides as if dead.* On touching them however they would dart below the surface, but immediately rise again to their former position. We commenced taking them by hand, making our selections of the best, and finding them perfectly sound we took in a good number, (indeed if we had desired we might have loaded our boat with them.) On reaching Erie we had some of them cooked and found them perfectly good. The position of these fish on their sides in the water placed their mouths partly above and partly below the surface, so that they seemed to be inhaling both water and air, for at each effort in inhaling, bubbles would rise and float on the water. It was these bubbles that caused the white appearance on the lake's surface. I have supposed that these fish had from some cause, growing out of the extraordinary agitation of the lake by the gale from the eastward, and the sudden reflux of water from west to east after it subsided, been thrown together in this way, and from some unknown natural cause had lost the power of regulating their specific gravity, which it is said they do, by means of an air bladder furnished them by nature."

PRESCOTT, (C. E.) March 17.

HORRIBLE MURDER.—At a funeral of a child, on the 10th inst., in the Township of Wolford, County of Greenville, several men, after getting infuriated with liquor, fell upon one John Wilson, and beat him almost to a pummice. His skull was smashed, his ribs were all broken, and one of his legs fractured in several places. The man lived until Monday the 13th. An inquest was held, and thirty or forty men are in pursuit of the murderers. The revival of an old feud which originated in Ireland, was the cause of this most brutal outrage.

Professor Nichol, of the University of Glasgow, Scotland, who is about to lecture in Philadelphia on Astronomy, has transmitted to the British Consulate, a circular from Lord Palmerston, requesting aid on his behalf in the prosecution of an inquiry into the state and system of public education in the United States. This inquiry, says the Philadelphia Enquirer, is one great object of the Professor's visit to America. Instructions also have been given to British functionaries in this country, to investigate our militia system. This is very sensible, though not exactly characteristic of John Bull.

The secrets of our national enlightenment and military success lay deeper than in the mere common school or militia systems. They are to be found in the fundamental principles of our political constitution, which guarantees equal and exact justice to all classes of men.

At the same time the system of popular instruction which has grown up under these auspices, has a very conservative and quickening influence upon the American mind. Some of the New England States, have, it is believed, a better school system than is to be found in the world.—Those of Connecticut and Rhode Island in particular.

MORALITY OF PUGILISM.—We learn that Brady, the man who was tried for the murder of O'Rourke, the celebrated pugilist, some months ago and acquitted, died a few weeks since, and before his death confessed not only the murder of O'Rourke, but of another man; the latter crime having been perpetrated some years ago. This man was acquitted of O'Rourke's murder in the face of the strongest evidence we ever heard in our lives, both direct and circumstantial.—*Montreal Courier.*

MURDER FOURTEEN YEARS AGO.—Mr. John Cook, jr., of Winchendon, Mass., was arrested and examined last week at Fitchburg, on a charge of murdering his wife in 1834, by administering arsenic. The friends of the deceased had suspicions of poisoning at the time of her death, and recent developments greatly increased these suspicions. The body was kept in a tomb, and continued in a remarkable state of preservation. The remains of the stomach and bowels were brought to Boston a few weeks since, and a chemical analysis was made by Prof. Webster, at the Medical College, who obtained four or five grains of arsenic. The testimony of the nurse of Mrs. Cook, the sexton, and some eight or ten medical gentlemen, showed a strong *prima facie* case against the prisoner, who was committed by the Justice to Worcester jail, to take his trial for murder at the next term of the Supreme Court.

KEEP COOL.

From Mr. Dix's Poem before the Mercantile Library Association, Boston.

Keep cool! the secret of success in life
Lies not in haste, excitement, bustle, strife,
This 'bolting dinners,' hurrying to and fro;
Keeping up one continued, constant 'go;'
Taking your pleasure jaunts at railroad speed,
And never stopping aught to see or heed;
This going to China just to have a chat,
Taking but one clean dickey in your hat;
These are the features of the times, I own,
That give to modern life its zest and tone;
But do they bring us real, genuine joy,
True happiness, unmixed with base alloy?

Keep cool! don't strive for sudden wealth too fast,
Fortunes, quick made, are seldom known to last;
Like wat'ry bubble that in air revolves,
A breath but makes them, and a breath dissolves;
Write letters, if you've any time to waste,
But don't, I pray, subscribe yourself 'in haste;'
Men have been known their hopes in life to kill,
By heedless scratching of some wayward quill;
And e'en our generals see their fortunes droop,
When trusted to a 'hasty plate of soup.'
Be wise, discreet—of dangers take good heed;
Be cautious, and you cannot but succeed;
Shun all rash acts—let moderation mark
Each enterprise on which you may embark;
And from your mind ne'er let there be effaced
The old, yet sterling proverb—"Haste makes waste!"

Great Fire in Watertown—Two Men Burned.

A destructive fire occurred in Watertown on Tuesday last. It commenced in a carpenter shop in the rear of the Union Mills, spreading thence to a shop owned by Messrs. Noble & Johnson, consuming the factory of Mr. Winslow Patridge, the extensive paper mill of Messrs. Knowlton & Rice, the shop owned by H. W. Woodruff, the tannery of Mr. Farnham, and several other buildings. In the factory buildings, two men were burned to death. The moment the flames, which were raging without the building, caught within, the whole interior became one sheet of flame.—Three men were then in the second story of the building, Messrs. Jas. DeLong, Lemuel Wright, and Levi Palmer. DeLong escaped with slight injury by jumping from the second story door; the others perished. One was seen to approach the door from which DeLong had just escaped, and which was standing open at an angle of about forty-five degrees. He took hold of the door and shut it, thinking probably, in the confusion of the moment, that he was opening it, or not knowing what he was doing. The pressure of the atmosphere from without immediately re-opened the door, when the unfortunate man was discovered to fall in the midst of the devouring element.—The other was also seen, enveloped in fire, and endeavoring to reach the door, but failed. Thus did these unfortunate men fall and struggle in death before the eyes of their friends. The daughter of Mr. Wright, knowing that her father was in the building, stood at the door of their dwelling near by, and saw him fall, with the horrid consciousness that it was the last she would ever see of her father.—*Roch. Adv.*

THE NEW UNPARDONABLE SIN.—We do not know whether the slaveholders of the South have gone so far as apply the above phrase to the worship of God, but they have gone a long way in that direction:

A number of colored persons, both slave and free, were arrested in New Orleans on Sunday, the 8th ult., for the crime of assembling to worship God! A New Orleans paper mentions, as an evidence of criminality, that one of them had a Bible and three prayer books.

MARRIED.

On the 21st inst., by the Rev. Timothy Stillman, Mr. HORACE STILLMAN, and Miss LISKA H FARNHAM, all of this city.

At Williamsville, on the 18th instant, by the Rev. Mr. Branch, Mr. ENOS PAIR, and Miss MARY WELLS, both of this city.

DIED.

On the 21st inst., CHARLES F., son of Charles T. & Julia E. Colt.

BRITISH PERIODICAL LITERATURE!

Subscribe early while the terms are low!!

REPUBLICATION OF
THE LONDON QUARTERLY REVIEW,
THE EDINBURGH REVIEW,
THE NORTH BRITISH REVIEW,
THE WESTMINSTER REVIEW, and
BLACKWOOD'S EDINBURGH MAGAZINE.

The above Periodicals are reprinted in New-York, immediately on their arrival by the British steamers, in a beautiful clear type, on fine white paper, and are faithful copies of the originals. Blackwood's Magazine being an exact fac-simile of the Edinburgh edition.

They embrace the views of the three great parties in England—Tory, Whig, and Radical.—"Blackwood" and the London Quarterly" are Tory; the "Edinburgh Review" Whig; and the "Westminster Review" Radical. The "North British Review" is more of a religious character, having been originally edited by Dr. Chalmers, and now since his death, being conducted by his son-in-law, Dr Hanna, associated with Sir David Brewster. Its literary character is of the very highest order.

PRICES FOR 1848, (IF SUBSCRIBED FOR EARLY.)

For any one of the four Reviews,	3,00 per annum.
For any two, do.	5,00 "
For any three, do.	7,00 "
For all four of the Reviews,	8,00 "
For Blackwood's Magazine,	3,00 "
For Blackwood and three Reviews,	9,00 "
For Blackwood and the four Reviews,	10,00 "

Payments to be made in all cases in advance.

CLUBBING.

Four copies of any or all of the above works will be sent to one address on payment of the regular subscription for three—the fourth copy being gratis.

EARLY COPIES.

A late arrangement with the British publishers of Blackwood's Magazine secures to us early sheets of that work, by which we shall be able to place the entire number in the hands of subscribers before any portion of it can be reprinted in any of the American Journals. For this and other advantages secured to our subscribers, we pay so large a consideration, that we may be compelled to raise the price of the Magazine. Therefore we repeat 'subscribe early while the price is low.'

Remittances and communications should be always addressed, post paid or franked, to the publishers.

LEONARD SCOTT & CO.,
79 Fulton st., New-York.

T. S. HAWKS,

LITERARY DEPOT, Post Office Buildings, Buffalo, N. Y. All the Cheap Publications, Magazines, &c., kept constantly on hand, at New-York prices. Orders by mail attended to when accompanied with the cash.

AMBROSE S. CARNER,

DRAPER AND TAILOR, Nos. 274 and 276 Main street, (Kremlin block, up stairs,) Buffalo.

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, Buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
a7 No. 164 Main Street, Buffalo.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 146 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.

PUBLISHERS,

COMMERCIAL ADVERTISER BUILDINGS

MAIN STREET, BUFFALO.

TERMS.—To mail subscribers, $1,50 per annum in advance, four copies for $5,00, ten copies for $10,00. To city subscribers who receive their papers from the carrier, $2,00. Mail subscribers will also be charged $2,00 if payment is not made in advance.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

*** All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

VOL. X. BUFFALO, SATURDAY, APRIL 8, 1848. NO. 10.

For the Western Literary Messenger.

Death's Angel.

BY MISS ALICE CAREY.

The day was stormy that had passed,
The broken clouds flew by,
And one by one came forth at last,
The army of the sky.

As faded in the west the glow
Of sunset's sinking fire,
Thro' tree-tops, heaving to and fro,
I saw the village spire.

That night as by the bed of pain
I kept my watch apart,
While golden dreams of hope in vain
Were gathering to my heart;

I saw the roses brightly stirred
That o'er my window hung,
And something heavenlier than a bird
That fluttered there and sung!

A light one moment, clear as day,
Around the death-bed shone,
The next the hand I held was clay—
The living spirit flown.

MT. HEALTHY, O.

For the Western Literary Messenger

Human Progress.

A Lecture, delivered before the Young Men's Association of Buffalo, January 8, 1848.

BY GEORGE W. CLINTON, ESQ.

I consented reluctantly to be enrolled among the able and distinguished gentleman who compose your chosen lecturers for this course. Despite vivid recollections of your past indulgence, my heart fails me as I contemplate my ill-considered engagement, amid the distractions of business and the heavy cares of life. True it is that my highest ambition, if it deserve the name, is but to secure the esteem of the estimable, and be useful in my day and generation. Let others be likened to portentous meteors flaming through space, or shed a solemn radiance like the serene stars from Heaven; it will suffice for me, if, like the humble taper, I can but cheer the fireside circle or afford a little aid to some of those who are travelling the dim and dangerous path of life. But how can I hope to cheer, or amuse, or guard?

Nature, exuberant Nature, is fruitful of swelling themes, and I have loved her, love her still—and, when I was free to choose, chose her. First love is never utterly dethroned; and even now, I often gaze wistfully upon her exceeding loveliness, and ponder over her miracles and mysteries. It is delightful, though painful, to retain the shreds of past knowledge, all incomplete and formless, though glorious to fancy we once understood the wondrous affinities of matter, and could indistinctly trace the workings of the plastic hand which compounds its few elements into a vast diversity of substance, and moulds them to an infinity of uses: or to dream of creation in its progress, and see our world rising from chaos, "without form and void," and swinging blindly and unregulated in the eternal space, till, in His own good time, God spake light into existence, and gave law unto the spheres; to behold it ever advancing, through His willing, from good to better, even through convulsions that seemed destruction and threw it into ruins, until it attained its present palmy state, perchance but the precursor of a purer, stabler phase; to recognize the endurance now of the old agents of former changes, in the earthquake, the volcano, and the ocean, and remembering that God has promised that the heavens and the earth shall be renewed, knowing that the same force that raised the Himalayan peaks, and flung Cotopaxi's summit upwards and hung it, like a Fury's torch, in the mid-air, still rages in earth's centre; that the continents dip and raise their edges slowly, as though they floated, and that their general level is but a few hundred feet, two or three minutes walk for man, above the surface of the great deep which has devoured all things, and which, at one stride, would swallow all again, to believe that Science and Revelation may concur, and that the earth will perish, but will rise again, and bloom, in the freshness of its resurrection into a residence fit for the saints. It is pleasant too, to recall a fading knowledge of anatomy, and with awful exultation realize that man is fearfully, wonderfully made: or, in the fields and forests, and by the flowing streams, to meet and recognize the inferior animals we once knew well; and to revive, with every flower and twig we pluck, some knowledge of the vegetable world replete with beauty and utility. But many years have glided by, like a changeful river, and the maturing Sciences I courted in my youth, have expanded into a diviner and more majestic loveliness, and given their charms to others. The views I now have of Nature, are but glimpses of the free heaven and beauteous earth, caught by a time-worn prisoner from the loop-hole of his high turret—the snatches of a carol warbled below by the gay-hearted, heard but imperfectly through the massive walls that compass him, rousing his spirit, and giving him but the sad luxury of tears. These recollections of earlier pursuits are "the memory of joys that are past, sweet, but mournful to the soul." They are too few and ill-compacted to be profitably or creditably presented here. They are cherished rose-leaves, young Affection's gift: withered and inodorous and valueless to others, we prize them above all price, treasure them up religiously through life, and wear them on our bosoms in the grave. Others must discourse to you of Nature!

Nothing remains for me but to grasp for a while some one of those great themes, fruitful of speculation, which float at times through all men's minds, and consider it maturely as I can. Whatever it may be, I can apply to it no undistracted inquiry. I cannot, I fear, investigate it systematically, nor present it to you either fully, or in order: I can but approach it in good faith, and with an absorbing love of Truth: While I disclaim all title to the bays which others will deserve and you award them, I do hope to win your approbation of the spirit in which my task will be discharged, and that amid the rude materials I may present, you will find some that can be elaborated

and put to profitable use. And, with these hopes I will pursue my course, as does the fugitive captive, who plods thankfully, though with toilful and tottering steps, across the thorny wastes and burning sands which intervene between his Arab master's tent and home.

Let us entertain the great question of the terrestrial destiny of our race! We cannot surely solve it; but it is an inquiry not forbidden to reason, and one which has been confidently and variously answered by human oracles. Is our race, as a race, approaching nearer to happiness and God? Or is it where it was before the flood? Or has it retrograded? Must we despair of general improvement save by Heaven's special miraculous interposition? Or may we humbly hope that Providence has sown the good seed in the world, and in our nature, which will ultimately ripen and yield a harvest of universal peace and joy?

These are momentous questions? How shall we answer them! I have no disposition to assail the opinions of others; and, where I differ from them, would so express myself as to invite candid investigation rather than litigious controversy. Our own best interests, if consulted, would prompt us, in such high matters, to seek truth, not triumph. Let us not be misled by the vanity attributed, perhaps justly attributed to this our age, but rather contend with it, and wrestle with the holy hope of Progress, as did in the old times Jacob with the Angel of the Lord!

Man is the noblest terrestrial work of the Great Being who made him six thousand years ago in His own likeness, and gave him a world to conquer and to govern, and hopes of a blissful immortality. He was expelled from Eden: and, with a sin-stain on his soul, deep, but not ineffaceable, an intellect, vast but unexercised, and a form majestic, but clothed in skins, he entered, weaponless, upon his new dominions, to work out his mortal destiny. Have his descendants achieved nothing for their own good and the glory of their Maker and Sustainer? Are the men of this day, in all the corners of the earth, in the same condition as those who filled the world with violence and brought the flood upon it, four thousand years ago? It may be so! It may even be that man has degenerated, is ever degenerating! But, prove either hypothesis, and farewell the most precious, balmy hopes that visit the bosom of Philanthropy—welcome impious Doubt, and fell Despair!

Man is, and always has been, and will forever be substantially stationary. He has expanded in numbers; and some few men, or nations, have here and there, at long intervals, appeared like tall stalks in a field of corn, or like Saul among the Jews, over-topping their fellows; but the sum of the doings and achievements of each of his several generations is the same; he has lived, and thought, and fought, aspired, enjoyed, and suffered, in about the same way, and to the same extent in every age, and so will for the future! Preach ye this doctrine, ye who place man among the brutes, and scoff at immortality! Man has sunk in moral dignity and intellectual power, and is ever sinking! Why then does God withhold his judgments? Ask it reverently, my soul!—Why sleeps the justice which broke up the fountains of the great deep, and whelmed a less guilty world in its wild waters? Why has not the solid earth yawned to ingulph cities far more corrupt and vicious than incestuous Sodom? No improvement—no hope of improvement! Then has not the earth been made in vain? Is it not, with all its wondrous tenants, but the result of a blind chance? May there not be reason in the philosophic theories of a fortuitous creation—of a progressive life, that, rising from the lowest forms, ended in man, and having reached its flood must ebb again! May not Christianity be a fable, invented to keep man in certain bounds, but deriving no authority from Heaven, and valueless save for temporal restraint? For it has done nothing, can do nothing for the restoration of our race, or why exhibits the earth no change in the nineteenth century since it was first proclaimed, and why is it now hopeless of betterment!

It may be the offspring of human presumption, or mere delusion of a philanthropy which looks to God in hope, to believe that all things, under His providence, have been directed to the working out of good and even of the temporal advancement of that race, upon whom He has everrained blessings, and to whom He gave His word and Son. It may be an error, but it is a most natural and pleasing one, to believe in human progress in all good things. It is a faith well calculated to cheer and fortify, and purify the soul; for if it reposes partly in a high estimate of man's gifted grandeur, its main dependence is on Providence. They who contend against it, do so, I would fain believe, from a misapprehension of what it is, and lose themselves and the subject in idle disputes about terms somewhat loosely used in such discussions. They fancy perchance that Human Progress is a creation of the brain, hostile to Christianity—a new false god, akin to infidelity, and they the Daniels to demolish the modern Dagon. It is no new thing. It may have cheered the heart of our first parents as they wept over Abel's murdered body. It must have illuminated the gloom of the ark, and shed joy in the else hopeless breast of Noah, as he floated, in gloom and storm, above the drowned hosts of earth, and saw in his three sons those, who, though prone to the same sins which God had so condignly punished, were destined to people the world anew. It did mingle in the hopes, and was the subject of the prayers of the wise and good of the old ages, and prophets saw its consummation afar off in holy visions, and were filled with ecstacy.

"And it shall come to pass in the last days, that the mountain of the Lord's house shall be established in the tops of the mountains, and shall be exalted above the hills: and all nations shall flow unto it. And many people shall go and say, Come ye, and let us go up to the habitation of the Lord—to the house of the God of Jacob, and he will teach us of his ways, and we will walk in his paths, for out of Zion shall go forth the law, and the word of the Lord from Jerusalem. And he shall judge among the nations, and shall rebuke many people; and they shall beat their swords into ploughshares, and their spears into pruning hooks: nation shall not lift up sword against nation, neither shall they learn war any more." Is the triumph of the Prince of Peace here foreshadowed by Isaiah as an angry flash of lightning, dazzling and blinding the world, and then leaving it in darkness as before? Or does he rather see it stealing gently over mankind like natural day,—faintly breaking in the East in flushes of rosy light, touching the mountain tops with splendor and increasing in effulgence, till the sun rushing upwards from the horizon illuminates the world! Has not "the mountain of God's house" been immoveably "established in the top of the mountains, and exalted above the hills?" Has not Christ come, and are not all nations flocking unto him? Does not the prophet clearly describe a consultation among many people, and a consequent going to the mountain of God?—a judging among the nations, and a rebuking of many people, as preceding their beating their swords into ploughshares and their spears into pruning-hooks,—and an indefinite continuance of

the nations in a state of peace, and the existence of just and happy generations who shall learn war no more? These are suggestions for your consideration. It is not for me to interpret prophecy authoritatively.

But let us descend to a sober consideration of our subject, and endeavor to examine it unbiased by hope or fear. So far as practicable in a discussion in which our feelings are so deeply involved, we will argue it coolly, remembering that emotions are not proofs, and that metaphors are the weakest substitutes for arguments.

Man has a threefold nature. He has a physical, an intellectual, and a moral constitution. The accidents, of climate, food, and pursuits have varied somewhat his body in non-essentials, and have marred in most or all of their descendants, the fair proportions of our first parents: nor will we question, though we cannot know the fact, that their progeny failed to inherit in their full vigor, the mighty intellects which God implanted in those who sprung directly from his creative hand, and the first souls may have been of a sublimer constitution than those we hope to have. But the first pair were not a race, but the appointed origin of all the families of man. The frame of society and national bonds, with their excitements and antagonisms, were not in Eden, nor in the Ark; and we are considering man in a collective, not an isolated state,—in masses and aggregated, not abstractly.

In the abstract man is as he has always been: and ever will be as God made him. His body everywhere, and in all time, has had and will have the same organic composition, be endowed with the same senses, and subject to the same appetites: his mind has ever been and will be the same in essence; and so with the soul. Differences of development in every of these particulars in the same family or nation, and different nations, at a particular time, or in different eras may and will occur. The man of to-day was the cradled infant a quarter of a century ago. Time will bleach his brown locks, quench his burning appetites, dim his aspiring intellect, extinguish his affections, and yet leave him the same body, mind and soul which he possessed, when his mother "forgot her travail in joy that a man-child was born into the world." David, St. John, and Newton differed from each other and from the most degraded man that lives, not in body, mind, or soul, but in the development of their common physical nature, and the expansion and direction of mind and soul.

There is no evidence to my knowledge, that our race, as a race, has either improved or been debased in body. The old records of the world seem to concur with its more modern ones to prove, that, in all ages, sin and accident have done their work, and that disease and deformity of person, crookedness of mind, privation of sense, and seeming privation of intellect have ever afflicted man. Nor have we, to my knowledge, any reason for supposing that the body has, in general, been expanded or dwarfed, strengthened or weakened by time. Armor worn by crusading knights is hardly capacious enough for men of our generation: The most ancient graves yield bones that indicate no change in man's dimensions. Mummies raised from Egypt's catacombs have been stripped of their cerements, and disclose the fact, that three thousand years ago the civilized Egyptian raised his head no nearer heaven than we. Dwarfs and giants have always existed here and there, but have always been noticed as exceptions to the orderly dimensions of our nature.—Mind, or soul, or both, seem to be impaired in their manifestations by an undue development of body. Nor are the dwarfed nations nor the tribes that vary from our variable standard of physical perfection, proofs of degeneration. True, the Negro is black, the Indian red, and the Tartar yellow, but we are not sure that our European complexion, if amid nations of such differing hues there can be said to be one, is the true tint of Paradise. The Hottentot, the Esquimaux, the Shoshonie root-digger of the Rocky Mountains, are, in our eyes, monstous and degraded in form; and it is most probable that they, rather than we of the Anglo-Saxon blood, are farther removed from Adam. But are any of these differences proofs of degeneracy? God adapts his creation to their place of action. He made man capable of various metamorphoses, but within fixed limits, so as to adapt himself to universal nature, and this power of adaptation is the perfection of his general constitution. He gave man the whole world to dwell in and replenish, and so endowed him with the power to change with the latitude and clime in which he fixed his dwelling. He created him in a temperate Asiatic clime; but, had the body he gave him, perfect for that clime, been the fixed mould of all his descendants, and they incapable of corporeal change, how could man have extended his permanent dominion over the icy North and South, or the burning central zone? Had God created him in Guinea or in Lapland, are we not justified in believing Adam would have been a Negro or a Laplander, with the same capacity to change, upwards and downwards, within the same range which Asiatic Adam's sons have occupied in their extension over the globe?

These remarks, which might perhaps be profitably pursued more into detail, did time permit, apply equally to the intellectual and moral phases our race has undergone in its diffusion over the round world. Such changes prove nothing. All are men alike. The barbarous New Hollander, the poor Boothian, the swarthy Arab, and all the human habitants of earth collectively, are man.—Man in the aggregate was not perfect until he had conquered all climes and countries to his use, and suffered in the contest: And we may reverently say that his creation as an universal race, was not complete in Eden—was completed only by the individual changes which enabled the race to occupy the whole fulness of its allotted sphere.

It would be most satisfactory could we prove that every generation had ascended regularly one step above its predecessor, and so man was approaching, however slowly, towards perfect light, and love, and peace. But the responses of history, when interrogated, dispel all such illusions. Progress, great progress has been made from time to time, but not sufficient to ensure stability; and civilization has often been beaten down, and crushed apparently forever. But, like Antæus, she has always risen with renovated vigor, and has now, we fondly hope, established her throne immoveably.

What is civilization? This term is hard to be defined. It is used in various and differing senses by the disputants, and hence perchance the wide seeming disagreement about the fact of progress. Let us endeavor to determine the meaning or meanings we will attribute to it.

It has been strongly maintained that, "civilization is the original condition of mankind, and barbarism the law of progress,"—or as I translate this paradoxical proposition, that man was originally civilized, and as population increased and men spread over the earth, they became barbarous and rude. Had the meaning of the word "civilization" been correctly understood, I doubt whether such a proposition would have ever been advanced.

The word is remotely from the Latin *civis*, a citizen; or more nearly, from *civilis*, pertaining to a citizen; or directly, from the imaginary or coined verb, *civilizare*, to make a citizen, to bring under

the stable government of laws, or make a component and subject of a state. A slight glance at sacred history will suffice to show that in this sense civilization had not a primeval origin.

Adam and Eve were not civilized, in this sense, surely, in Eden; nor were their descendants probably for centuries. We have no record of the institutions of states and governments before the Flood, save the one meagre fact from which we may infer it, that Cain "builded a city." The patriarchal government would satisfy the wants of men for ages, as family by family, they were sparsely spread through Asia. Governments, or aggregations of many families under laws and rulers, would be framed only when necessary to preserve extended peace, and repel outward aggressions. The Deluge was a visitation of God's wrath upon a disordered world. Before it there may have been gatherings and combinations of men for purposes of plunder, but the existence of governments of any force or worth can scarcely be compatible with His declaration, that "the earth was filled with violence through man."

After the Flood man propagated rapidly, and cities were soon founded, and States sprung into existence; or in the sense to which we have so far restricted it, civilization commenced. Was it perfect? Would Babel, or Egypt in the days of Pharaoh, the contemporary of Abraham, afford us models of Government? Or were Nimrod's subjects and the old Egyptians so superior to us, that we may well infer their laws were better than ours?

But governments vary in all their material qualities, and so every nation has a civilization peculiar to itself. That government, however repugnant to our notions of equality and justice, which is best adapted to secure the general happiness of its subjects, is worthy of all commendation. Arbitrary power is best suited to a vicious, barbarous, people, whose disposition to crimes injurious to their fellows can be effectually repressed, only by an ever overshadowing fear of bloody and horrible inflictions; and, in such conditions of mankind, the one "that 's best administered is best." A mild and industrious people, prone to superstition, like the Eyptians may, for temporal purposes, be well governed by a learned priesthood, who keep them debased and shear not their flock too closely. A bold and energetic nation, inclined to action which leads to excess and wrong, demand freer institutions for present happiness, and flourish with plain and rigid but reasonable laws. The stringency of law may well diminish with the increase of knowledge and virtuous inclination. And when man shall be a sufficient law unto himself, outer law or government must perish. Hence, accuse me not of overweening love of country! the gradual loosening of the bonds of law in this, our own dear land, the abolition of restrictions on individual enterprize, which fall like the outer leaves of opening flowers. —the strong tendency to work out social order by moral instruments, rather than by coercion, and to leave the citizen the freest scope, the largest liberty of action. Hence the paradoxes that the perfection of government is no government—that the proper end of civilization is its own destruction.

(CONCLUSION NEXT WEEK.)

FORCE OF CONSCIENCE.—The Grand Jury has found a true bill against Baldwin, the murderer of his brother-in-law Mathews in Missouri.

When Baldwin was first imprisoned, some few weeks since, he was a fine looking, robust young man; he is now a maniac, and so emaciated and feeble, that those who knew him before his incarceration, would not now recognise him. He does not speak to any one, and his head is constantly bowed down, fearing to look up, as he imagines his victim is constantly before him.

THE NEW ARCHBISHOP OF CANTERBURY.—The appointment of the Bishop of Chester, the Rt. Rev. John Bird Sumner, D. D., as Archbishop of Canterbury, in place of the venerable Doctor Howley, deceased, which we have already announced, will doubtless create a profound sensation in the Episcopal Church in America, as well as in Great Britain. The new Archbishop was created Bishop of Chester in 1826, and his brother, the Rt. Rev. Charles Richard Sumner, D. D., was made Bishop of Winchester in 1826. The brothers are both known as coinciding generally in their views of Christian doctrines and the Church with Archbishop Whately of Dublin, and others of the same school.

The appointment of the Bishop of Chester to the high ecclesiastical dignity of Primate of England, while the Bishops of London, Durham and Winchester each hold a higher rank in the Church, is understood to have been brought about by Lord John Russell, whose sympathies are opposed to the views of the Oxford school of Divinity. The violent opposition to the appointment of Dr. Hampden to the see of Hereford, by the High Church clergy, is also understood to have had an influence in effecting the promotion of Doctor Sumner to the See of Canterbury.

The organization of the Church of England, it will be recollected, consists of two Archbishops, and twenty-five Bishops, for England and Wales

The last English papers state that it is probable Doctor Hampden may be transferred from the See of Hereford to that of Chester.

The Liverpool Times says:

Dr. Summer, the new Archbishop of Canterbury was born in 1790, and consequently is in his 58th year. He was educated at Eton, and became in due course a fellow of King's College, Cambridge and subsequently a prebendary of Durham. He was raised to the bench in the year 1828, on the promotion of Dr. Bloomfield to the see of London.—*N. Y. Express.*

WANTED.—One hundred and seventy-five young men of all shapes and sizes, from the tall graceful dandy, with hair enough on his upper lip to stuff a cushion, down to the beardless upstart. The object is to form a *Gaping Corps*, to be in attendance at the Church door on each Sabbath before the commencement of divine service, to stare at the females as they enter, and make delicate and gentlemanly remarks on their persons and dress. All who who wish to enlist in the above corps will appear at the various church doors next Sabbath morning, where they will be duly inspected, and their names, personal appearance, &c. &c., registered in a book kept for that purpose, and published in a newspaper. To prevent a general rush, it will be well to state that none will be enlisted who possess more than ordinary intellectual capacities.—*Exchange paper.*

FOOLISH NOTION.—A village school teacher, who had committed suicide near New Orleans, by hanging himself, might have been saved by a person who discovered him while yet the body was warm, but that he thought he must go for the coroner first.

The above is not the only case of the kind on record. In 1822 a similar occurrence happened near this city, and in 1823 a Mr. Aaron Wheeler, of Madison, Lake county, was drowned in Cunningham's creek, while spearing fish. He accidentally fell with his breast across a log and his face in the water. Deprived of his senses and the power of extricating himself he was left to die by a person who supposed the law prohibited the removing of any one found dead or dying without first calling the coroner.—*Cleve. Her.*

GERMANY is advancing towards a great reform, and according to the *Cologne Gazette*, "will and must be raised to the degree which appertains to it among the States of Europe." The Diet is now called upon to exercise the powers of a vigorous, intelligent and united government; and whatever may be the effect upon some of the minor German States, we may hope for the consolidation of that "Federal Union" of Germany which is now fast ripening into national identity. The town council were sitting in deliberation when a large crowd assembled and demanded:

1st. Universal suffrage; all legislation and government to proceed from the people.

2d. Liberty of the press and freedom of speech.

3d. Abolition of the standing army, and armament of the people—who are to elect their own officers.

4th. Full right of public meeting.

5th. Protection to labor and a guarantee for the supply of all necessaries.

6th. State education for children.

King William of Weirtemburg has granted freedom of the press and other "reforms to his people.

On the 4th March, at Wiesbaden, a large concourse of people assembled in the town, opposite to the palace of the Duke of Nassau. The Duchess Dowager appeared on the balcony with her children and threw herself on the protection of the multitude, at the same time assuring them that their claims should be attended to, and their grievances redressed by the Duke (her stepson) immediately upon his return from Berlin. The Minister, Mons. Von Dungern, immediately after this issued a proclamation, pledging himself to the entire fulfilment of the desires of the people. It was signed by Pauline Duchess of Nassau, Prince Nicholas of Nassau, and the Ducal Minister of State himself, in the presence of several of the most influential citizens. This measure allayed the tumult for a time, but the people began again to grow impatient, when, fortunately, at half past four o'clock, the Duke arrived by an express train. He addressed the people and agreed unconditionally to their demands. Thus the people are delighted, as they are promised all that they ask for; but had the Grand Duke of Nassau remained absent another hour he would undoubtedly have periled his crown.

The censorship of the press in Saxony is as rigorous as in Austria, and at Leipsic the people were preparing a memorial to demand the liberty of the press and other reforms.

Mayence is in a disturbed and excitable state. The guns are pointed against the town. Prince Frederick of Prussia declares that "the moment any attempt is made to effect a revolution, he will bombard and destroy the place." This is certainly amiable and candid.

At Frankfort-on-the-Maine the people assembled in large numbers, and the Burgher Guard were turned out, who, while parading the streets, uttered loud cries of "*Vive la Republique!*" The people demanded the same changes, with a few additions, as those just granted by the Duke of Nassau; but they retired without committing any act whatever, upon being assured that freedom of the press should be granted.

In some of the German States of the Rhine, public opinion has been yielded to without even an attempt at resistance. M. Beck, the Minister of the Interior of the Grand Duchy of Baden, has published the following proclamation:

1st. The censorship of the press is abolished.

2d. The national guard will be immediately organized.

3d. The government will submit to the Chamber a law establishing trial by jury. By this proclamation the Ministry has granted all that the people demanded. Independently of these concessions, the Grand Duke has called to his councils M. Welker, the leader of the constitutional opposition, who has demanded the creation of a German Parliament instead of a Diet.

A telegraphic despatch from Metz has been received, which says that the Duke of Hesse-Cassel has been banished and his castle burned; that the Duke of Nassau had fled from his states.

At Sarrebruck a lively sympaty with the French revolution had been manifested; at Sarvalouis the garrison was blockaded in the fort; rigorous watch had been kept during the night, and the trees on the glacis had been cut down.

Austria is in a most deplorable state. So much are her people hated, that to be an Austrian is a sure passport to abuse. As an instance of this, Fanny Ellsler, who had been almost adored in Italy, appeared a short time since at the theatre *La Scala* at Milan, and when she appeared every one rose and left the house. In Hungary an Austrian meets with the greatest contempt. The ladies turn their backs upon the Austrian officers, and at several of the theatres of Italy within a few days every Austrian officer present was tumbled headlong from the boxes into the pit. This occurred also at Venice, where the military were so unwise as to hiss Mme. Certo in a Sicilian dance. The Austrian government does its best to conceal from the people the hatred and disgust in which it is held, but it is looked upon as quite certain now that the only hope of securing the crown for the imperial family consists in granting a free constitution to the Empire.

SENTIMENTS OF THE FRENCH PRESS.—The *Union Monarchique* says:

"We have only one wish to express—let the nation be consulted; but before all let order be re-established. The people who have shown so much devotedness, bravery, and generosity, can re-establish it. It is now their first duty."

The *Univers* says:

"The dynasty of July has succumbed. The combat was terminated before the end of the third day. The revolution is consummated, and it is one of the most astonishing of history. All has been carried away by the tempest. New men are about to appear on the scene. God does his work by all hands; he proceeds to his designs by paths which the world knows not. To-day, as yesterday, religion is the only possible basis of society, religion is the aroma which prevents liberty from becoming corrupted. It is by Jesus Christ that men are brethren; it is by Jesus Christ that they are free. A sincere liberty may save all. The new government incurs great duties towards France—towards the whole of human society.—We wish it may be able to fulfil them. All governments have in them the faculty of strengthening themselves. To do this it is sufficient for them to love justice, and serve liberty frankly."

The British government, through Mr. Elliott, the British pro Consul at Boston has awarded £500 sterling, to be distributed by him to the owners, master and crew of the American bark Byron, Capt. Read, of Stonington, Conn., and a Gold Medal, bearing the portrait of Her Majesty the Queen, to Capt. Read—for their humane exertions in rescuing eighteen British seamen, wrecked on the coast of Patagonia. Mr. Elliott has also been directed by the British government to give £100 sterling to the owner of the schooner Leander, of Boston, for rescuing and taking into port the crew of the British brig Lelia.—*Transcript.*

Prussia and the Rhenish Provinces.

The London *Times* has a letter dated Cologne, March 8th, from which we extract a few remarks. That venal paper whilst correct in its information, endeavors almost uniformly to weaken the effect in Britain of the late occurrences on the Continent by instituting comparisons between them and those of England in 1830. The intelligence contained in the letter is such as at any other than at the present exciting period would be news enough to furnish gossip and speculation for the newspapers for many weeks:

The middle classes of Prussia, as well as of the other Rhenish states, are determined to achieve their political independence, and to have a potential voice in the government; they are peaceful, but resolutely devoted to their country, and firm in asserting their rights. Their's is no new resolution, no scheme rashly or hastily formed, but one which has been well considered and deliberately planned. They have waited even with more than German patience, knowing that their hour was not yet come. They have bided their time, which has at length arrived. Their case presents an exact parallel to that of England in 1830. Ours was a long and peaceful struggle between the middle classes and the aristocracy, the people exercising a voice potential after their own fashion; events occurred elsewhere which brought our struggle to a close, and we obtained reform. Here the conflict (if conflict occur) will be between the burghers and the sovereign; the people not idly observing events as they happen, and ready to take their part with the former when occasion requires. At this moment a glorious spirit of nationality pervades all classes. No threat is held out—no unfair advantage taken of the occurrences in France. The people require what they consider themselves entitled to, and nothing more. Will the king comply with their request, or will he run the risk of having a discontented nation, and trust to their repelling a republican army, should his frontier be invaded? It surely behoves him to consolidate their affections, the rather that some of the smaller States of Germany, (Baden, for instance) have already been compelled to reform their constitutions. Prussia is a strong military power, and her bayonets might, for a short time, suffice to coerce the nation; but such a rule would be of short duration. *Already petitions for reform have been prepared, which are lying at the different hotels on the Rhine, and in the Rhenish provinces; the burghers flock in crowds, and sign them to a man.* Such a state of things is unheard of in Prussia; to take the initiative in so decided a manner has never before occurred to her citizens; and we all know *ce n'est que le premier pas qui coute.* You may conceive how thoroughly the German spirit must be roused; and if, in the course of events, a French army should threaten the Rhine, the people would compel the king to grant that reform which would now be considered in the nature of a boon. But it is not in Prussia and Rhenish provinces only that this determination exists. Meanwhile Prussia is taking every precaution, and using all means to strengthen her frontier. 6,000 soldiers are quartered in this town. The reserve has been called out. Two regiments have marched through to Aix-la-Chapelle, and the Rhine is alive with steamers carrying troops to one point or another. The 7th and 8th *corps d'armee*, (the Rhenish and Westphalian,) are at once to be raised, and every day regiments or conscripts enliven Cologne as they march through with their magnificent bands. For the last two days politics have been forgotten; the king's reply is patiently awaited, and the thoughts of all mankind (including the fair sex) are turned towards the carnival, which, on the Rhine, and at Cologne in particular, enjoys a great reputation. The streets yesterday were crowded with maskers; I saw many groups of morris dancers, with pipe and tabor; the dragon was common, nor was the hobby horse forgot. All were good-humored, and enjoyed themselves after their own fashion. There were several masquerades in the evening; I went to two, which were intolerably stupid, and there was nothing of that entertainment which is found at Paris on similar occasions; in short, they were rather more dull than those which the Londoners enjoy under the auspices of M. Jullien.

Geology.—The explorations of geologists have brought to light wonders scarcely exceeded by those of astronomy. While many fanciful theories have no doubt originated, the facts which are constantly developed are adapted at once to gratify and stimulate the friends of science.

Mr. Lyell traveled across Sweden from the east to the west coast, on the summit-level, and found everywhere the same appearance as on the coast. The whole country affords incontestible upheval, but varying in different districts, being greatest towards the north, where the rise has been from 600 to 700 feet, near Christina 400 feet, and at Uddevalla 200 feet. The elevation, however, has been neither uniform nor continuous; what is now rising was once sinking, interrupted by long intervals of rest.

Perhaps the most interesting fact noticed by Mr. Lyell, is the discovery of a wooden fishing hut, at a depth of sixty feet beneath the surface of the soil, during the excavations for a canal to unite Lake Malar with an inlet of the Baltic. The structure was about eight feet square; the walls crumbled away on exposure to the air, but the floor timbers remained sound. There was a rude stone fire place in the center, with fragments of half-burnt wood, and outside a heap of wood, piled up for fuel. Not a particle of iron appeared to have been used in the construction of this singular building. It was compactly buried in fine sand, on which coarse gravel and large boulders in wavy strata were super-imposed. It has been shown that the submergence, if caused by a sudden inundation, would have left the boulders, as the heaviest portion of the materials, at the bottom; instead of where they are now found—at the surface; a position in which they have been deposited by floating ice. And we learn from this remarkable fact, that since the building of fishing huts in Sweden, the land where the canal is dug, has sunk during a period long enough for the deposition of strata sixty-four feet in thickness by the sea, and has subsequently been raised to its present elevation.

Business.—"Business," says a celebrated writer, "is the salt of life, which not only gives a grateful smack to it, but dries up those crudities that would offend, preserves from putrefaction, and drives off all those blowing flies that would corrupt it. Let a man be sure to drive his business rather than let it drive him. When a man is but once brought to be driven, he becomes a vassal to his affairs. Reason and right give the quickest despatch. All the entanglements that we meet with arise from the irrationality of ourselves or others. With a wise and honest man a business is soon ended, but with a fool and knave, there is no conclusion, and seldom even a beginning."

ADDRESSED TO HUSBANDS.—A woman ought to have her own purse, great or small, whichever it may be. Ten, fifty, a hundred, or a thousand dollars, according to circumstances, but her own, for which she accounts to—herself. Would you know "why," you gentlemen who make your wives account for pins and cents? Why, most especially and particularly for your own sublime peace and prosperity. You do not think so? Well, then; a tea-cup, a glass are broken, or suddenly tea-pot, cup, and glass, all at once fall in pieces, and *nobody* has broken them; and so on. The wife who has not her own purse, but who must replace the cups and glass, goes to her husband, relates the misfortune, and begs for a little to make good the damage. He scolds the servants, his wife, who ought to look after the servants. "Money, indeed!—a little money—money does not grow out of the ground, nor yet is it rained down from heaven—many small brooks make a great river." And such like. At last he gives a little money, and remains often in a very ill humor. Again: if the wife have her own little purse, then such little vexations never come near him. Children, servants, misfortune, remain the same; but no disorder is remarked; all is made right as at first; all is in order; and the head of the house, who, perhaps, with the greatest ease, could lay down a thousand rixdollars at once, need not for a few pence, squeezed out at different times, loose the equipoise of his temper, which is as invaluable to the whole house as to himself. And dost thou reckon as nothing, thou unfeeling nabob, those little surprises, those little birth-day and names-day pleasures, with which thy wife can give herself the delight of surprising thee—those thousand small pleasures, which, unexpected as falling stars, gleam like them on the heaven of home, and which must all come to thee from the affection of thy wife, through—*a little money*, which thou must give to her in the gross, in order to receive again in the small, with rich interest of comfort and happiness?—Now, is it clear yet? To every true woman's heart it is indescribably delightful *to give*,—to feel itself alive in the satisfaction and happiness of others;—it is the sunshine of the heart, and is more needed here in the cold north perhaps than elsewhere.—*Mary Howitt.*

NAPOLEON'S PROPHECY.—During his imprisonment on St. Helena, NAPOLEON made to LAS CASES the following prediction—part of which has been already fulfilled:

"In less than twenty-five years from the present time, the whole European system will be changed. The French *will cast the Bourbons and the debts off*, as my Arabian steed would any stranger who would dare to mount him. Then, if my son be in existence, he will be seated on the throne amid the acclamations of the people; if he be not, *France will go back to a Republic;* for no other hand will dare to seize a sceptre which it cannot wield. The *Orleans branch*, though amiable, are too much like other Bourbons, *and will share the same fate*, if they do not choose to live as simple citizens under whatever changes take place. France once more a republic other countries will follow her example—Germans, Prussians, Poles, Italians, Danes, Swedes and Russians, will all join in the crusade for liberty."

It will be remarked, as one of the strongest evidences furnished of the consistency of the Republicanism of the present French government, that one of its first acts was a decree abolishing slavery in the entire dominion of France!—*Alb. Jour.*

Rural Department.

DEBATE IN A FARMERS' CLUB.—'Tis true, 'tis pity, pity 'tis, 'tis true—that the discussions in Farmers' Clubs and in similar institutions sometimes assume an eminently Pickwickian character. Those excessively scientific persons who speak whenever they can in words of three syllables, or as much longer as they can invent, and rail at practical farmers who will not adopt their whims, do as much or more to perpetuate ignorance and prejudice, than the most stubbornly old fashioned Agriculturists in the remotest part of Dutch Pennsylvania or Lower Canada. We were led to make these remarks by that excellent paper, "The American Agriculturist," which bears the following testimony:

The course, which discussions in a Farmers' Club often take, renders it evident that the experiments made are generally conducted on no fixed principles, but are for the most part under the guidance of chance. For instance, let the subject under consideration be the use and application of liquid manure, the debate will almost invariably take a course similar to the following:

Mr. Hope has tried the manure in question, and derived no benefit from it. Mr. Playfair, on the other hand, announces the brilliant success of his experiments with it; while Mr. Drawback declares his his experience to be the very reverse of this, and to coincide with that of Mr. Hope—"Liquid manure." he says "is liquid nonsense; and a few loads of rotten dung are worth more than all the nitrates of soda and potash in creation." This Mr. Goodluck as stoutly denies, and so the discussion proceeds to the extent of at least a dozen speakers, until Mr. Fairweather, the chairman, wisely sums up with becoming impartiality, by declaring that, "there is a great deal to be said on both sides."

DOMESTIC ARCHITECTURE.—The February number of The Horticulturist has an article on this subject, which contains some hints on the moral influence of good houses, and the want of fitness or propriety in our strivings after architectural beauty, which may be useful. Here is a sensible extract:

"Almost the first principle, certainly the grand principle which an apostle of architectural progress ought to preach in America is, 'keep in mind propriety.' Do not build your dwellings like temples, churches, or cathedrals. Let them be, characteristically, dwelling houses. And more than this: always let their individuality of purpose be fairly avowed: let the cottage be a cottage—the farm-house a farm-house—the villa a villa, and the mansion a mansion. Do not attempt to build a dwelling upon your farm after the fashion of the town house of your friend, the city merchant; do not attempt to give the modest little cottage the ambitious air of the ornate villa.

"Be assured that there is, if you will search for it, a peculiar beauty that belongs to each of these classes of dwellings, that heightens and adorns it almost magically; while, if he borrows the ornaments of the other, it is only debased and falsified in the character and expression. The most expensive and elaborate structure, overlaid with costly ornaments, will fail to give a ray of pleasure to the mind of real taste, if it is not appropriate to the purpose in view, or the means or position of its occupants; while the simple farm-house, rustically and tastefully adorned, and ministering beauty to hearts that answer to the spirit of the beautiful, will weave a spell in the memory not easily forgotten."

For the Western Literary Messenger.

To my Album.

BY MRS. E. M. SHELDON.

Album! thou art old-fashioned, and as such
Fair belles would blush to see their names subscribed
To sentiment upon thy page: and beaux
Would frown if thou shouldst come, begging of them
Small favor for thy cabinet of thought—
And still I love thee: for methinks I've read
That *friendship* is old-fashioned. David's love
For his adopted brother, e'en surpassed
The unbounded depth of female tenderness;
And friendship dwelt among the band who caught
Its very essence from the Savior's lips.—
Then go thou forth into life's garden, roam
Mid its unnumbered sweets, and bring from thence
Young buds, the unfolding, and the full-blown flower,
And e'en the yellow leaf, and bind them up
With florist's skill, into a rich boquet
Of fadeless bloom—and when these eyes shall need
The aiding glass, their tints will be more bright
And odor long preserved, more sweet than now;
For memory lendeth to the long-since past,
Charms which the present doth not realize.
Haste! gather thy boquet! for Time doth write
With tireless finger on earth's loveliness
Stern sentence, and each zephyr sighs in sad
Response, "Passing away! passing away."

JACKSON, Mich.

For the Western Literary Messenger.

The Old Familiar Places.

Who loves not the familiar objects which clustered around his youthful home? Whose heart does not cling to its loved haunts all the closer the longer they have gladdened his sight, and remember them with ardent longings when afar from their hallowed scenes?

Oh! the old familiar places of my childhood! They seem part and parcel of life itself. The hills—the woods—the purling streams and sunny slopes, are endeared to my mind by recollections of past pleasures, with which I can still hold sweet communings.

When walking along this secluded forest path, I remember the friends of my boyhood with whom I once strolled here so often, and most vividly arise the scenes of long-ago. When I sit on this mossy bank, still the haunt of the early spring flowers, whose delicate leaves seem pictured with memories of the olden time, my mind reverts to the blessed days when with beloved sisters I gathered their scented treasures; our hearts as free from sorrow and care as were the pure blossoms of which we wove our fragrant garlands.—When reclining beneath this solitary tree I think of one who long, long ago sat with me here; who has since braved the dangers of the world and shared its honors and rewards, as well as felt its disappointments: while the scene of my humble labors and influence has ever been within sight of its spreading branches.

And yonder sunny hill-side—can I walk there without remembering one who shared my noonday rambles when at school? Can I forget the trembling hopes—the unspoken wishes—the half-formed aspirations, and unowned depth of love which thrilled my heart even then? Never! never! though years teach me, again and again,

"Spring bids full many buds to swell
That cannot grow to flowers,"—

Ye old familiar places! May my life be passed within the charmed circle of your influence.—May my last steps on earth be along the paths where I bounded so merrily in youth, and my body repose at last beneath the sod on which it has so often lain in life. H.

From the Commercial Advertiser of April 4.

Last Night's Meeting.

There has seldom been a more general interest pervading the city than in reference to the Meeting assembled last evening, to express the sentiments of our citizens upon the recent news from France. It is difficult to give with any approach to accuracy the numbers of those present, but if we include the dense mass of spectators who crowded Main street, from Genesee Square to below the Liberty Pole at the time when the procession passed, *twelve thousand* would not be too high an estimate.

After forming, chiefly in accordance with the programme published yesterday, the procession marched from Genesee Square to the Liberty Pole, illuminating Main street by the light of some hundreds of torches. A platform had been erected at the Liberty Pole for the speakers.

The following officers were appointed:

PRESIDENT,

HON. ORLANDO ALLEN,

VICE PRESIDENTS,

Joseph G. Masten,	Isaac Sherman,
I. T. Hatch,	T. Coburn,
James McKay,	S. Wilkeson, Jr.,
Eli Williamson,	F. P. Stevens,
C. C. Bristol,	James Wadsworth,
James G. Dickie,	R. W. Haskins,
Oliver G. Steele,	A. P. Nichols,
F. O. Handel,	E. R. Jewett,
C. H. S. Williams,	I. A. Verplank,
Samuel T. Atwater,	James Spencer,
Conrad Hellreigel,	William Rink,
James L. Barton,	F. Gridley.

SECRETARIES.

George V. Brown,	A. M. Clapp,
William A. Seaver,	G. J. Bryan

ORATORS,

S. G. Haven,	H. K. Smith,
Seth C. Hawley,	G. W. Clinton.

Resolutions were then read, in French by Mons. GEORGER; in German by W. ESSLINGER, and in English by Dr. THELLER. They were warmly applauded and unanimously adopted. The following are the Resolutions offered in the English language:

Whereas, we who are here assembled are natives of nearly every christian country in Europe and America, but are now enjoying all the blessings resulting from its natural advantages and a system built upon the broadest foundations of political and religious liberty; and, whereas we heartily rejoice in every wise effort to enable man to enjoy the blessings of which he who made the world intended that all men should equally partake. We therefore unanimously concur in the following Resolutions:

Resolved, That the news of the dethronement and expulsion of Louis Phillippe, by the long suffering, but surely avenging spirit of the French people, who were seduced by his hypocrisy to consent to his elevation, and cheated of promised liberty by his treachery when in power, brings a thrill of joy to the heart of every friend of human rights.

Resolved, That the result of the eighteen years labor of the "citizen king" to establish a perpetual dynasty, and to rivet the chains of slavery upon the people of France, proves the utter futility of the efforts of the most crafty tyrant to fix gyves upon the soul of a great nation, in which love of liberty is innate and inextinguishable.

Resolved, That we cordially congratulate the people of France upon the results of the *late* "glorious three days," and cherish the liveliest confidence that the institutions they may adopt for the permanent government of that great country may comprehend the fullest recognition of the representative system, and the right of suffrage, and thus ensure happiness to themselves and the good effects of a memorable example to the world.

Resolved, That these principles, aided by a proper system of education, which is to the mind what light is to the eye, afford full means of developing all the happiness of which human nature is capable, as they tend to the realization of equality, fraternity, and liberty.

Resolved, That whilst we honor France for her great deeds of valor and forbearance in her struggles against despotism and military power, we must not overlook the undaunted spirit of liberty already manifested in Germany, Switzerland and the Italian States, and many other parts of Europe. Under various forms the spirit and purpose are one and the same.

Resolved, That we believe France is admirably adapted by the intelligence of the people, and the number of those who own her soil, to govern herself as a great nation should be governed, to maintain the first requisites of society, which are order and security—and to advance the welfare of her people by recognizing the fact that the honest laborer is worthy of his hire.

Resolved, That the right of Revolution when governments forget the high responsibility of their trust, and offend against the rights of the people of which they are the reflection, is sacred and inalienable. The blood of tyrants is the seed of liberty.

Resolved, That while we hail with joy the progress of freedom, in continental Europe, our minds revert with painful solicitude to a sorely oppressed people that has large claims upon our warmest sympathies—and we ask of each other what will Ireland do? That she will do what she can all must hope; and that she can burst asunder the chains which bind her in thraldom, if she strike at once while tyranny cowers, none can doubt. "Now or never," should be the rallying cry of Ireland.

After the adoption of the Resolutions the meeting was addressed by H. K. Smith, G. W. Clinton, and S. G. Haven. From the size and density of the crowd, we were unable to obtain a position where we could hear the whole of the speeches. They were frequently interrupted by applause, and we heard enough to show us that they were fully in accordance with the spirit of the events which they commemorated and were well worthy of the occasion. Dr. Brunck also addressed the meeting in an enthusiastic manner. He was highly applauded by our German friends whose language he spoke. The Marseilles Hymn was admirably sung by the Frenchmen, and in connection with the glare of the bon-fires and the vast concourse of assembled citizens, brought before the imagination of many who were present some of the scenes in the late Revolution itself. The German National song also was sung by the Germans.

In conclusion, his Honor the Mayor proposed nine cheers for the Revolution, which were given with great spirit. The assemblage then dispersed.

From the Buffalo Commercial Advertiser.

The Returning Pestilence.

BY JOHN C. LORD, D.D.

By river and fountain,
By desert and plain,
Over valley and mountain
I am coming again
To execute judgment—an Angel of Wrath,
With Terror and Anguish and Death in my path.

In the East I began,
O'er the dank jungles sweeping,
In the Old Hindoostan
Was wailing and weeping:
From the plague-smitten city, e'en the Pariahs flee,
And Gunga, corpse burthened, rolls on to the sea.

On the flower-scented gale
Is the taint of my breath,
And Persian wives wail,
For the Angel of Death
In the land of the rose his shadow hath cast,
And darkened the hopes of their hearts as he passed.

Then Siberian snows
In my passage I crossed,
And the death wail arose
In the regions of frost;
For the Ice-Monarch's mantle was there no defence
'Gainst the life-quelling touch of the pestilence.

By the Sign of Salvation
I paused for a time;
From each Christian nation
Rose voices of crime.
Though the symbol was there, the substance was gone,
To the harvest of Death I went speedily on.

Then Russia—the cold—
In my pathway I swept,
And in Moskwa the old
The grey bearded have wept,
Who saw, without tears, their palaces fired
For him whose commission at Moscow expired.

And onward advancing,
Like a strong man from wine,
Where the sun-browned are dancing
In the land of the vine,
With the step of a giant, Death's wine press I tread,
Before me the living—behind me the dead.

Weep, maids of Vienna!
Howl Paris and Rome!
The gates of Gehenna
Are opening for doom.
The plague-cart shall wait by your mansions of pride,
The rich with the poor to the Dark House shall ride.

At the last I shall sail
For the star-bannered West,
And my barque shall not fail
O'er the Ocean's broad breast
To land me—long dreaded—though my ship-mates shall sleep
Where o'er the sea-buried the mermaidens weep.

Editorial Department.

J. CLEMENT, EDITOR.

The News from Europe.

Our paper went to press last week before any of the foreign files brought by the Caledonia, had reached us, and as we gave only the brief telegraphic reports we shall devote a page or so this week to a condensed statement of certain affairs abroad.

On the 26th of February, M. de LAMARTINE officially announced the establishment of a Republic in France in these words:

"Citizens,—The provisional government of the republic has called upon the people to witness its gratitude for the magnificent national co-operation which has just accepted these new institutions. (Prolonged acclamations from the crowd and national guards.)

The provisional government of the republic has only joyful intelligence to announce to the people here assembled.

Royalty is abolished.

The republic is proclaimed.

The people will exercise their political rights.

National workshops are open for those who are without work. (Immense acclamations.)

The army is being re-organized. The national guards indissolubly unites itself with the people, so as to promptly restore order with the same hand that had only the preceding moment conquered our liberty. (Renewed acclamations.)

Finally, gentlemen, the provisional government was anxious to be itself the bearer to you of the last decree it has resolved on and signed in this memorable sitting—that is, the abolition of the penalty of death for political matters. (Unanimous bravos.)

The same gentleman also announced a manifesto to the powers of Europe the whole of which amounts to this, that "*The French Government is equally determined not to make war upon any one, and to accept war from whatever quarter it may come.* It declares that the treaty of Vienna ceased to exist in the fall of Cracow."

On the 29th of February, Mr. RICHARD RUSH, our minister at the French Court, went to the Hotel de Ville where the Provisional Government was sitting and addressed the members as follows:

"Gentlemen,—As representative of the United States, charged with care of the rights and interests of my country, and of my fellow-citizens residing in France, and being at too great a distance to await instructions, I seize the earliest opportunity of offering my congratulations, persuaded that my Government will approve the step, of which I have taken the initiative. I must not omit to remind you that the alliance and friendship which have so long united France and the United States is unimpaired. I am certain that a loud and universal expression of hope will arise in my country for the prosperity, happiness and glory of France under the institutions which she has now inaugurated in conformity to the will of the nation. Americans will have an ardent hope that under the wisdom of France these institutions will have for the whole human race results, of which the magnanimous conduct of the people in the late events afford a happy presage. Under similar institutions, the United States have enjoyed for seventy years an increasing prosperity, with a Government of uninterrupted stability; and if the Union invariably leaves to other countries a free choice of Government, without any interference, it will naturally feel gratified in seeing another great nation flourish under institutions which have assured to themselves the benefits of social order and public liberty.

Permit me, Gentlemen, to employ the words of the great and excellent Washington, the immortal founder of our republic, used by him on a similar occasion to the present, and to terminate this address by adding to my congratulations the earnest hope that the friendship of the two republics may be co-extensive with their duration.

M. Arago replied—'The Provisional Government thanks you for the good wishes you entertain for the greatness and prosperity of France. It is delightful to re-echo the words of Washington, and it has a firm reliance that these words will not only be a desire but a reality.'

M. Dupont de l'Eure, then addressing the Ambassador, said—'Permit me, Sir, in offering you my hand, to assure you that the French people tender a hand of friendship to the American nation.'

Mr. R. Rush was accompanied by Mr. Martin, Chief Secretary of Embassy, and also by Major Poussin. When these gentlemen quitted the Hotel de Ville, the guards presented arms, and cries of '*Vive la Republique des Etats Unis!*' saluted the Embassador."

The Revolution in France has caused great commotion in other parts of Europe. The Jesuits have been obliged to flee from Geneva. The journals of Turin are urging the king to take the command of the national forces, and effect, if possible, the salvation of Italy. Great military preparations are being made at Piedmont and Alexandria. Germany, says a foreign journal, "is advancing towards a great reform." And the only hope of securing Lombardy for the imperial family, according to the same journal, "*is by granting a free constitution.*" Hungary has lost her respect for Prince Metternich, and the people of all Austria seem determined, hereafter, to frame their own constitution.

This Revolution in France is evidently the result of the pure "leaven" of Democracy; and as Europe constitutes one "lump," we should not be surprized if, ere long, the whole were leavened.

WILLIAM A. SEAVER, Esq., late of the Batavia *Spirit of the Times*, has become associated with Mr. FOY in the proprietorship, and with Mr. DOTY in the editorial department of the *Courier* of this city. As Mr. S. succeeded in making the best *weekly village* paper in Western New York, his labors will no doubt tend to materially increase the growing popularity of a *daily city* journal. It may not be known to our citizens that he has for years furnished occasional condiments for the "Editor's Table" of the Knickerbocker Magazine.

THE CULTIVATOR.—We have several agricultural papers in exchange, the choicest and best printed of which is the Albany Cultivator, issued monthly at one dollar a year. Each number contains thirty-two pages.

THE NORTH BRITISH REVIEW.—The American edition of this young yet manly Quarterly for February, republished by Leonard Scott, & Co., contains ten papers prepared by able pens. The first, on the Female characters of Goethe and Shakspeare and the sixth, a review of Dr. Chalmers' Posthumous Works, will be found particularly interesting. Speaking of the deceased himself, the reviewer says:

Dr. Chalmers was a ruler among men: this we know historically; this every man who came within his range felt at once. There was something about his whole air and manner, that disposed you at the very first to make way where he went—he held you before you were aware. That this depended fully as much upon the activity and the quantity—if we may so express ourselves—of his affections, and upon that unknown combined action of mind and body which we call temperament, and upon a straightforward, energetic will—as upon what is called the pure intellect, will be generally allowed; but with all this, he could not have been and done what he was and did, had he not had an understanding, in vigor and in capacity, fully worthy of its great and ardent companions. It was large, and free, and mobile, and intense, rather than penetrative, judicial, clear, or fine—so that in one sense he was more a man to make others *act* than *think;* but his own actings had always their origin in some fixed, central, urgent *proposition*, as he would call it, and he always began his onset with stating plainly what he held to be a great seminal truth; from this he passed at once, not into exposition, but into illustration and enforcement—into, if we may make a word, overwhelming insistance. Something was to be done, rather than explained.—There was no separating his thoughts and expressions from his person, and looks, and voice. How perfectly we can at this moment recal him as he went in and out before us!

Thundering, flaming, lightening in the pulpit; teaching, indoctrinating, drawing after him his students in his lecture room; sitting among other public men, the most unconscious, the most kinglike of them all, with that leonine countenance, that beaming, liberal smile; or on the way out to his home, in his old-fashioned great-coat, with his throat muffled up, his big walking-stick moved onward in an arc, its point fixed, its head, circumferential, a sort of companion, and playmate, with which, doubtless, he demolished legions of imaginary foes, errors, and stupidities in men and things, in church and state. His great look, large chest, large head, his amplitude everywhere: his broad, simple, shieldlike, inturned feet; his short, hurried, impatient step; his erect, royal air: his look of general goodwill; his kindling up into a warm but still vague benignity when one he did not recognise spoke to him; the addition, for it was not a change, of keen speciality to his hearty recognition; the twinkle of his eyes: the immediately saying something very personal to set all to rights, and then the sending you off with some thought, some feeling, some remembrance, making your heart burn within you; his voice indescribable; his eye, that most peculiar feature—not vacant, but *asleep*—innocent, mild, large; and his soul, its great inhabitant, not always at its window; and then, when he did awake, how close to you was that burning vehement soul! how it infected you, and went through you! how mild and affectionate, and genial its expression at its own fireside. But we may not enter there; a stranger may not intermeddle with the joys that are gone and remembered, and the sorrows that remain and that refuse to be comforted. He was a man unlike many public and even great men, the nearer you went to him, the better, the goodlier, did he appear.

The nineth article, touching Sir John Herschel's astronomical observations at the Cape of Good Hope, will claim the attention of all scientific minds.

For sale by A. Burke.

THE MAIL BOOKS, belonging to the office of the Anglo Saxon newspaper published in New York city, were stolen on the 25th or 26th ult., and the proprietors have no clue to the list of their subscribers. In a card which they have issued and a copy of which we have received, they wished their loss made known to their subscribers, and request the same to address them, *post paid*, stating particularly to what date they are entitled to the paper.

THE UNION MAGAZINE, for this month is very richly embellished. "The lost Glove" and "Memory," two finely conceived and finished engravings, are worth the price of the number. The literary contents are mostly by the best female writers in the country. Mrs. Child, Mrs. Sigourney, Mrs. Kirkland and Mrs. Embury, and other such writers are contributors this month.

TO CORRESPONDENTS.—The following articles, lately received, are filed for insertion:—

"*To Death*," translated from the German, by Prof. A. C. KENDRICK; "*Astronomy*," by "IRIS;" "*The Mission of the Flowers*" and "*To Minna.*" by "ION;" and "*A Song for May*," by "ADELIA." As other communications, previously received, will be inserted first, these friends will exercise patience.

"*Rising of the People*" is indiscreet in sentiment, extravagant in language, pointless in thought and faulty in construction. Declined.

IMPERFECT FILES.—A subscriber at Austinburg, O., writes to us for certain missing numbers in volumes six and seven, which we would cheerfully forward had we them on hand. Persons wishing to complete their files, should notify us at the end of each volume, and then we shall find but little trouble in supplying their wants.

NAVIGATION on lake Erie has been open for two weeks. It has been with difficulty, however, that boats could enter or leave our harbor on account of the ice. This obstruction is proving less and less formidable every day. Sail craft will leave in a few days.

PRESERVE YOUR PAPERS.—Our subscribers who preserve their papers, will have a complete history of the French Revolution of 1848 to refer to in future years. We shall be particular to record every thing interesting pertaining to it.

JOHN JACOB ASTOR died in New-York city on the morning of the 29th ult. He was probably the wealthiest man in the United States.

Additional Items from France.

Ledru Rollin has written an address to the Commissaries through the Departments, explaining to them the principles on which the Republic was founded, and recommending them not to displace any of the public functionaries whose position is purely administrative, and who obtained their places by useful services. He calls particular attention to the condition of mechanics and laborers, and says:

"On your arrival at your headquarters, invite round you the most influential patriots. Their advice should always have great weight with you, but forget not that the best mode of obtaining their assistance, and with them that of the entire population, is to impress an indefatigable activity on every branch of the administration. We are the servants of the people, and by our application and our zeal we will prove that we are worthy of their confidence. Give, therefore, everywhere the example of vigilance and of industry, that by your care no interest may suffer from the momentary perturbation occasioned by the fall of a detested power, and you will have usefully fulfilled your commission. I need not tell you that your attention should be directed in a special manner to the organization of the National Guard. Composed of all classes of citizens, as it is about to be, it is the force and the glory of the country and the guaranty of our liberties. Send me an exact statement of the composition of each of the cantonal legions of your Department. Cause the chiefs to be elected, maintain numerous reports with them, and communicate to them the spirit which animates you. Apply yourselves, in fine, to collect clearly and precisely all facts relating to the operatives in your Department. It is by them and for them that the Republic was founded, whose mission is to put an end to their sufferings, and to consecrate their rights. If urgent necessity should appear to you to command extraordinary measures, apply to me forthwith. But even in that case endeavor to spare all sudden transition. Disturb no respectable interests; by so doing, even those you wish to serve may be injured. In some parts of the country lamentable acts of violence have been committed. Enlighten those who may for the moment be led astray.—The operatives by breaking machinery compromise their cause and produce universal ruin.—Still, a little patience, and those wonders of the human genius which have not merited mutilation, set in motion by capital and labor, will enrich those who at present execrate them. Agriculture, resuming the rank and importance of which it has been deprived, will cover the earth with the produce which the neglect of other governments suffered to be engulphed, and will thus throw into circulation elements hitherto unknown, which will regenerate industry. Such is the prospect reserved for us if we are really revolutionary—if our ideas, our deliberations, our acts, are conformable to the law of fraternity, which ought to be the rule of future societies. Happy to prepare such an advent which belongs to us, to re-assure the public mind, to consolidate credit, to renew transactions, and to collect the materials of the vast edifice which the national assemblage will raise, let all generous hearts and all intelligent minds set to work and come to our assistance. This is a subject of noble ambition.—Give to the world the example of tranquility after an extraordinary victory, and appeal to the influence of ideas and of reason to accept courageously the rude trials of the present moment, and to unite in order to traverse and to vanquish them. Such a course characterizes, and must immortalize, a great nation. Such is the object of our common efforts. In order that mine may be efficacious, I have need, citizen Commissary, of your assistance, and your patriotism enables me to count upon it unreservedly."

The new mode of election in France.

The Siecle says:—"We believe we are warranted in giving the following as the mode to be adopted in the formation of the electoral lists, and the verification of the votes. The electoral capacity of the citizen is to be attested at the Mairie. Every elector, therefore, must present himself at the Mairie of his arrondissement, with a certificate of his birth, or any other voucher of the *stat civil*, upon the inspection of which the Mayor will deliver him a certificate containing his name, profession, age, and residence. Lists of these certificates will be sent by the Mayor to the chief town of the canton, and those lists of the electors will be made and published in great numbers; so that every citizen will be able to point out, and cause to be erased, any persons who may be disqualified by article six of the decree. Lists made out from these certificates will be deposited a few days before the elections at the Mairies, and be delivered to each elector who may demand them. The certificate will give the elector the right of entering the place of voting appointed for his section. The following is the manner in which the difficulty attending the voting in places where the population is very numerous has been overcome. The general list for the Department of the Seine will be divided, as nearly as may be, into sections of 500 electors; so that those resident within that circle will vote together at the place which will be marked on their certificates. Each must then inscribe on the bulletin which has been delivered to him the names of such candidates as he means to vote for. Those who cannot write must have their marks certified by two witnesses. At each section a *proces-verbal* of the votes will be drawn up, and sent to the chief town of the Department, where a general scrutiny of the votes will be made. The minimum of the votes for the election of a member of the National Assembly cannot be under 2,000.

It is not perhaps generally known that the tri-color flag, as now hoisted at sea on the French packets, is not arranged as formerly, blue, white, red, but is changed for blue, red, white; on coming into harbor, the old one replaces it, as if the new one was not recognized by our government.

Burke, under the Mansion House, has the Edinburgh Review for January and Blackwood's Magazine for March, republished by L. Scott & Co., New-York. We shall speak of the latter again.

The Phrenological Journal for this month, which is for sale by Hawks, contains a likeness of Mr. Freeman Hunt, editor of the Merchant's Magazine, accompanied by an article on his phrenological and physiological character.

The Life of Dr. Judson's second Wife, noticed last week, we have since learned is for sale at Breed's Bookstore in this city.

The Barker Family were here last week. Since the success of the Hutchinsons and Cheneys, strolling families are becoming fashionable.

The Public Funeral.

The following graphic account of the Funeral of the victims of Louis Philippe's tyranny, which we copy from Douglass Jerrold's newspaper, will not fail to be read with interest. No people on earth, except the French, could get up anything so grandly dramatic:

The ceremony took place on Sunday, and all Paris seemed to participate in it. The procession, however, had more the character of military pomp than of funeral solemnity. Legion after legion of the National Guards marched on; there were 5,000 volunteers also, and many old soldiers in the uniform of the empire; there were deputies from the provinces, the pupils of the Lyceums, the Polish Emigrants, and the workmen of Paris, in the procession or lining the streets, while every window on the line of the route was crowded, flags and inscriptions of all kinds being seen in the streets or displayed from the windows. The funeral service took place in the church of the Madeleine. "The arrival of the Provisional Government at the church," says the correspondent of the Times, "was hailed by the Marseillaise, splendidly sung, with the accompaniment of a military band. The instrumental piece that followed, a funeral march by Cherubini, was comparatively weak; little of it was heard above the hum of the crowd; this was succeeded by the 'oath' chorus from 'Guillaume Tell,' a piece from the 'Creation' ('the Heavens are telling,') and the 'prayer,' from 'Mose in Egitto.' The selection seemed to alternate mourning and supplication with the notes of triumph; the effect was sublime. As the music ceased, the funeral cars on which the coffins, fifteen in number, had been placed, were ready to proceed. As the first of the six moved onward, the Marseillaise was repeated; one verse was sung by the female voices alone, the men taking up the chorus, 'aux armes.' As the spirit-stirring strain arose, the whole crowd uncovered and remained so till the last of the cars, which were open, showing the forms of the coffins, until the black palls had passed. The dramatic effect at that moment, the homage of the people, the fierce invocation to battle, the stillness of death, all uniting, made the hearts of all beat quicker with excitement. The scene for that moment was grand, almost overpowering; but from this point it sunk, and for the five hours the ceremony lasted it did not rise again above a spectacle."

The interior of the church was hung with black, and lit with funeral lamps. The coffins were deposited on a sarcophagus, Egyptian in style—on the side of which was inscribed "Dead for their country!" Several bodies had, of course, been privately interred. There were five hearses, the last being followed by the mourners, the families of the slain, next to whom rode a squadron of National Guards, and behind them marched the eleven members of the Provisional Government, the Ministers, and the civil authorities of the capital. The members of the Government were dressed in black, and wore tri-colored sashes. Their presence every where excited the liveliest enthusiasm; and they were saluted with deafening cries of "Vive la Republique!" To which they responded by waving their hats. After them advanced the patriots condemned for political offences, under the reign of Louis Philippe, amidst whom was the celebrated Habert, who, being ill from long confinement, was unable to walk, and had hired an open carriage to accompany his friend. Last of all came the car called that of "The Republic," drawn by eight white horses, simply caparisoned, and bearing the symbol of the Republic, decked with crowns of laurel and tri-colored banners. The corners of the pall were borne by representatives of the laboring classes, the National Guard, the press, the army, the Invalides, the schools, &c.

M. Dupont (de l'Eure,) M. Daguerre, M. Cremieux, and M. G. Pages addressed the people. Throughout the whole proceedings, no breach of the peace occurred, and but one spirit—a thoroughly Republican spirit—seemed to pervade the masses of the French capital.

Congressional.

In Senate, March 28.

Mr. Davis, of Mass., from the Committee on Military Affairs, made a report of a bill for the establishment of an asylum for invalid soldiers.

Mr. Turney of Tennessee, moved that the Judiciary Committee be instructed to inquire into the expediency of a law providing for the punishment of persons who may obtain, surreptitiously and publish, any Executive Document in regard to which secrecy is not removed. Adopted.

Mr. Rusk submitted a resolution of inquiry as to the merits of Colt's revolving firearms.—Adopted.

Mr. Johnson, of Maryland, presented a memorial of C. L. Jones, asking redress for appointment of Col. Hughes to the command of the battalion of Volunteers raised in the District of Columbia. Referred to Committee on Military Affairs.

Mr. Cass moved to take up the bill for ascertaining, and paying the claims growing out of the operations in California. Agreed to.

Mr. Cass addressed the Senate in behalf of the bill, urging both the justice and propriety of settling the claims immediately.

The Loan Bill was then taken up. Mr. Phelps spoke in opposition, and went into a detailed exposition of the finances of the country, reckoning the present public debt at $92,000,000. The bill was read a third time and passed—ayes 34, nays 9.

Mr. Allen gave notice of his intention to request leave tomorrow to propose a resolution proffering the congratulations of Congress to the French People, on account of their recent glorious triumph in the establishment of a Republican Government.

House—The Committee of the Whole took up the Oregon Territorial bill. Mr. Gale opposed the bill strenuously, denying the power of Congress to legislate for the people of Territories, assailing the Wilmot Proviso as a dangerous and unnecessary element.

Mr. Smart followed in support of the bill, and of the Wilmot Proviso.

Senator Hale presented the petition of citizens of New York, asking Congress to make report defining its opinion as to whether Slavery ever had a constitution existence; table.

The resolutions congratulating the people of France was then taken up, when Mr. Hale moved to amend by adding "and manifesting the sincerity of their professions of liberty by emancipating slaves in all their colonies."

Mr. Calhoun moved to lay the resolution on the table, saying that he thought action on the part of the Senate at present premature. It were better in his opinion to wait until we ascertain whether the Republican Government was firmly established—at least we ought to wait the result of the Constituent Convention. Motion lost.

Mr. Allen moved to make it the special order for the first Monday in May.

Mr. Douglass opposed delay. What credit would it be to us or what good would it do France for us to wait until the struggle was over before expressing our sympathy? No action was taken.

House.—The House was engaged on the Refunding Bill and Oregon Bill. Nothing important transpired.

Mr. Hilliard made a regular Taylor speech.

Washington, March 30.

Senate.—Mr. Dix of N. Y. presented a petition from citizens of Rochester, for the purchase of Mount Vernon by the Government, which was referred to the military committee, as it is proposed, in case of the purchase, to employ the estate for an asylum for invalid soldiers.

Mr. Underwood presented a petition from Ky. for an appropriation to repair the dam at Cumberland Island, on the Ohio.

Mr. Bradbury presented a petition for an appropriation to repair the piers on Saco river.

The French congratulation resolutions were taken up and debated by Baldwin and Downs.

Mr. Baldwin advocated the reference of the resolutions to the committee on Foreign Affairs. He was also of the opinion that Congressional action was unnecessary. The people had taken the matter in hand themselves. Mr. Downs was quite urgent in behalf of the bill, saying that his constituents were especially interested in its passage.

The resolutions were laid aside without action, and on motion of Mr. Hannegan the Senate went in executive session, after which they adj. till Monday.

House.—Nothing of much importance was done in the House today. A number of private bills were discussed in committee of the whole, but no decisive votes were taken.

Washington, April 1.

The Senate was not in session to-day.

The House resolved itself into a committee of the Whole on the state of the Union. Mr. Cocke reported the bill granting compensation to the Land Register, Mr. Scott, of Chillicothe; [was then taken up, and discussed at considerable length and passed. The committee rose without transacting any other business, and adjourned.

Tribute to Brig. Gen. Wool.—The following Resolutions were offered in the Assembly on Thursday, by Wessel S. Smith, and laid over under the rule:

Resolved, (if the Senate concur,) That the thanks of this Legislature are due, and are hereby tendered, to our distinguished fellow citizen, Brig. Gen. John E. Wool, for his valor, skill and judicious conduct, conspicuously displayed in organizing and preparing for the service of his country, with unprecedented rapidity, more than 12,000 volunteers, in the summer of '46, in disciplining the column under his command during a rapid march through an enemy's country, disarming that enemy by his humane and vigilant observance of their rights, in the courage and good conduct displayed in the battle of Buena Vista, his uniform gallantry and activity on the field, and the ability and success with which he has since discharged his arduous and responsible duties.

Resolved, (if the Senate concur,) That the Governor be, and he is hereby requested, to procure a sword, with suitable emblems and devices, and present it to Brig. Gen. Wool, in the name of the people of this, his native State, as a testimony of their high appreciation of his services.

Resolved, (if the Senate concur,) That the Governor be, and he is hereby requested, to cause the foregoing resolutions to be communicated to Brig. Gen. Wool, in such terms as he may deem best calculated to give effect to the purposes thereof.

New York, March 3—3 P. M.

The extensive sugar refinery of Dennis & Harris, in Duane street, was totally destroyed by fire at 4 o'clock yesterday morning. In the progress of the fire, some kind of gas was generated from the various sugar or other substance within the building, which exploded and forced a greater portion of the front wall into the street.—At this time, the fire sixty or sixty five feet in the rear of the wall, two men, General W. Kerr, assistant engineer, and Henry Farguis, assistant foreman of engine company No. 8, were killed by the falling of the wall. Seventeen others, including two policemen, were more or less injured—some quite severely. Mr. Harris owned the whole establishment.

His stock on hand was valued at $80,000—the machinery at $50,000 to $60,000. The building was valued at $25,000. Total valuation $165,000—$95,000 of which was covered by insurance. The books and papers of the establishment and $600 in cash were saved by the virtues of one of Herring's salamander safes.

Correspondence of the New Orleans Picayune.

Mexico, Feb. 28, 1848.

Yesterday an incident occurred as Gen. Smith's brigade was returning to the plaza, the relation of which was hearkened to by every American in Mexico with delight. The Rifles—a regiment that landed at Vera Cruz nearly 800 strong, and has been cut down to little over 200—on coming opposite the quarters of Gen. Scott, unable to restrain themselves, broke through the barriers of discipline with the same impetuosity they have many a time rushed over an enemy's battery and halting, gave three as hearty cheers as were ever heard from stout fellows with big lungs.

Horrible Discovery.—It will be recollected that a Doctor Goss, of Seneca county, very mysteriously disappeared some months since, and that the most thorough searches, in that county and elsewhere, proved entirely fruitless. There was great excitement at the time in reference to the matter, but the long time that has elapsed in a measure dissipated this feeling, and all hope of discovering him had been given up. We learn that a man was discovered in Geneva a few days since, having in his possession a note which it was known belonged to Dr. Goss at the time of his disappearance. He was immediately arrested and is said to have made a full confession of the manner in which Dr. Goss was murdered.—The substance of it is that himself and *Featherly*, who is now in jail at Canandaigua for the brutal fight at Geneva some time since, murdered Dr. Goss, supposing him to be the collector of Waterloo; that they afterwards *burnt his body in a lime kiln*, and that some of the bones which were not entirely consumed were buried; and these have been found in the spot indicated by the man who makes the confession. Thus the perpetrators of a most foul murder, are suddenly and unexpectedly exposed, at a moment when they supposed themselves most secure. The mysterious case in this city may possibly be thus suddenly, by some unlooked for circumstance, unravelled, and the murderers brought to justice.—*Rech. Dem.*

One Day Later from Europe.

NEW YORK, March 30—7 P. M.

BRITISH MINISTRY RESIGNING—EXTENSION OF THE ELECTIVE FRANCHISE.—The *Morning Star* has received a London paper of Sunday, March 12, with one day later from Paris and London, and several days later from Algiers.

Lord John Russell's resignation was decided upon on the 11th. The Cabinet had under consideration important concessions to Ireland, and a considerable extension of the elective franchise was talked of.

Douglass Jerrold had visited Paris as representative of the Liberals of London, and was cordially received by Lamartine. The Liberals had triumphed in the election in Lancaster, Armstrong their candidate being returned by 16 majority.

At Algiers on the receipt of the news from Paris there was great excitement among the military. The officers of the Chasseurs D'Afrique, and of the Light artillery were most prominent. They declared unanimously their adhesion to the new order, singing the Marseilles and Parisienne, with great enthusiasm.

The Moniteur Algerine, of Feb. 28, contains an announcement from the Governor General Duc do Anmale, of events in Paris up to the 24th of February:

DE ORLEANS, Algiers, Feb. 22.

A second announcement of the Governor General says, he has not received from France any official information, but he is informed that the following despatch has been addressed to all Public and Sub Prefects. After giving the despatch announcing the information of the Provisional Government, the announcement continues, "nothing is changed in our duties towards France.—The population and the army will wait with the greatest calmness the order of the mother country."

DE ORLEANS, Feb. 28.

The Prince de Joinville also united in proclaiming the Republic at Algiers.

At Brussels all was quiet.

Rising in Lombardy continually expected.

Successor to Metternich not appointed.

Cortez of Spain on the 3d adopted the 1st article of the bill giving extraordinary powers to ministers, by a large majority.

IRELAND.—In Ireland no breach of the peace has yet taken place, but the exciting language of a certain portion of the press, which surpasses anything within our recollection, has not escaped the attention of the authorities.

An address of congratulation to the French people was agreed to by the committee of the Repeal Association, who held an open meeting on the 6th—the Lord Mayor presiding. The attendance was immense, anticipating a reference to the French revolution. The new repeal journal, the *United Irishman*, contains extraordinary articles, inviting the people to arms, and showing how barricades can be erected, how telegraphs can be destroyed, railroads torn up, and a city street warfare carried on. Its editors ask those men who have not got guns or pistols, to sell their garments and purchase. The excitement produced in Ireland has been intense.

The address to the Irish people was agreed on, which thus concluded: "We are ready to forget party injuries for the sake of our country; in her service, humiliation, danger, sacrifice and death, are welcome where required. Whoever leads, we follow—insisting that we march forward, though graves were to yawn, and gibbets to cross our path."

PLANK ROADS.—The Michigan Assembly passed 26 plank road bills on the 21st of March.

COURAGE AND GENEROSITY HANDSOMELY REWARDED.—On Friday last, we had the pleasure of seeing a beautiful silver tankard, on which were inscribed the following appropriate words:

"Presented to Miss Sarah E. Rogers, by Caleb Jones, Agent of the Virginia Woolen Company, as a mark of respect for and in compliment to her presence of mind, courage and fortitude, in saving the life of Joseph Robinson, caught in a belt at the Factory, March 14, 1848."

The circumstances of this interesting case were briefly as follows: On Tuesday last, one of their workmen, Joseph Robinson, was engaged about some of the machinery, when he was caught by a belt, and would have lost his life, but for the presence of mind of Miss Rogers, one of the operatives. She ran to his assistance, and risking her own saved the life of the man by cutting the belt and thereby immediately relieving him. His arm was badly broken, and he received other injuries—but is now doing very well. It gives us proud pleasure to record the intrepid deed of such noble-minded heroines as Miss Rogers.—*Richmond Enquirer.*

DEATH OF COL. NICHOLAS VAN RENSSELAER.—Another of the venerable relics of the Revolution has departed, we trust to receive the recompense of the just and patriotic. Col. Nicholas Van Rensselaer, a venerable soldier of the Revolution, expired in this city on Wednesday, in the 94th year of his age. Col. VAN RENSSELAER was with Montgomery at the storming of Quebec, was at Ticonderoga, Fort Miller, Fort Ann, and at Bemis' Heights, (in two engagements at the latter,) and was deputed to convey the intelligence of the surrender of Burgoyne to Albany. What events did he not live to witness in the course of his nearly centennial existence! What progress in the history of the great country the liberties of which he fought to establish!—*Albany Argus.*

WONDERFUL FALL OF WATER.—Within the recollection of that respectable old gentlemen, (or whom we have heard so often,) never have the waters of Niagara run so low.

Table Rock and some 200 yards more were left dry, Islands and places where the foot of man never dared to tread, have been visited, flags placed upon some, and mementos brought away.

Judge Porter with his troop of blasters under the command of that active and efficient foreman, Jas. Macafee, was early in the canals, leading to the mills, and factories, where the thunder of their blasts were heard all day on a spot where never before stepped the foot of man, where heretofore the rushing waters forbade too near approach, they worked safely on dry ground.

Rocks which at very low water had sometimes touched the keel of the steamer Maid of the Mist, and for which the Captain had made liberal offers for their removal, were yesterday blown to pieces, and removed with the same ease as though it had been on dry land.—*Niagara Falls Iris.*

A CASE OF CONSCIENCE.—One of our esteemed citizens, who was formerly a merchant among us, on Saturday showed us a brief and significant letter just received by him, which was in these words: "Buffalo, March 29, 1848. The enclosed belongs to you;" the enclosure was *fifteen dollars* in good bank notes. The postmark was "Railroad"—giving no indication as to the point whence it came. The gentleman is not aware of having lost such a sum at any time. But he evidently has; and that silent monitor, conscience, has caused a restitution of the value of which he had been wrongfully deprived.—*Rock. Adv.*

There's Something Good in Every Heart.

BY THEODORE A. GOULD.

Wouldst win the crime-stained wanderer back
From vice's dark and hideous track—
Let not a frown thy brow deform;
'T will add but fierceness to the storm;
Deal kindly—in that bosom dark
Still lingers virtue's glimmering spark;
Plead with him—'t is the nobler part—
There's something good in every heart.

Bring to his mind the early time,
E'er sin had stained his soul with crime;
When fond affection blest'd his hours,
And strewed his joyous path with flowers;
When sportive jest, and harmless glee,
Bespoke a spirit pure and free.
Plead with him—'t is the nobler part—
There's something good in every heart.

There was a time that head did rest,
Close to a mother's yearning breast—
A time his ear the precepts caught,
A kind and virtuous father taught;
It matters not what treacherous ray
First lured his steps from virtue's way—
Enough to know thou yet mayst save
That soul from sin's engulphing wave.
Plead with him—act the nobler part—
There's something good in every heart.

STEAMBOAT ASSOCIATION.—We hear that the arrangements for this association are about completed and will no doubt be perfected in a short time, and made public! We believe it is the intention to lay up a large number of the older class of steamers and have none but the first class boats brought into service.—*Detroit Free Press.*

MARRIED.

On the 28th inst., by the Rev. A. Wright, Mr. JAMES ELDERKIN, and Miss EUNICE RICHMOND, both of Le Roy, Genesee county.

In Clarence, on the 28th inst., by Rev. D. B. Lawton, Mr. W. SCOTT HUTCHINSON, of Williamsville, and Miss SARAH MARSH, of the former place.

At Warsaw, Mr. SYLVANUS HOWES, of Middlebury, and Miss ELLEN PARKER, of the former place.

In Milwaukee, on the 23d instant, by Rev. B. Akerly, JAMES KNEELAND, Esq., of that place, and Miss ANNA MARIA, daughter of G. A. Foster, of Washington county.

In Newstead, on the 30th ult., by Rev. D. B. Lawton, Mr. MATHIAS VANTINE, of Clarence, and Miss AMANDA L. VAN VALKENBURGH, of the former place.

In Newstead, on the 28th ult., by the Rev. F. Danforth, Mr. GARRA K. LESTER, and Miss PHEBE A. HAVENS, both of that place.

DIED.

On the 28th instant, Mr. JAMES MORRISON, aged 63 years.

On the 20th inst., JAMES SMITH, aged about 25 y'rs.

On the 30th inst., EMILY, daughter of Charles G. and Sarah J. Trusdell, aged 7 weeks.

On the 31st ult, MARIE ANTOINETTE, daughter of Aaron and Lurani Bean, aged 17 years and 11 months.

In Hamburgh, on the 27th inst., SEWELL BROWN, aged 55 years.

At Aurora, on the 16th ult., SILAS WRIGHT, youngest son of Dr. D. J. and M. A. Williams, aged 2 years and 21 days.

BRITISH PERIODICAL LITERATURE!

Subscribe early while the terms are low!!

REPUBLICATION OF

THE LONDON QUARTERLY REVIEW,
THE EDINBURGH REVIEW,
THE NORTH BRITISH REVIEW,
THE WESTMINSTER REVIEW, and
BLACKWOOD'S EDINBURGH MAGAZINE.

The above Periodicals are reprinted in New York, immediately on their arrival by the British steamers, in a beautiful clear type, on fine white paper, and are faithful copies of the originals, Blackwood's Magazine being an exact fac simile of the Edinburgh edition.

They embrace the views of the three great parties in England—Tory, Whig, and Radical.—"Blackwood" and the London Quarterly" are Tory; the "Edinburgh Review" Whig; and the "Westminster Review" Radical. The "North British Review" is more of a religious character, having been originally edited by Dr. Chalmers, and now since his death, being conducted by his son-in-law, Dr Hanna, associated with Sir David Brewster. Its literary character is of the very highest order.

PRICES FOR 1848, (IF SUBSCRIBED FOR EARLY.)

For any one of the four Reviews,	3,00 per annum.
For any two, do.	6,00 "
For any three, do.	7,00 "
For all four of the Reviews,	8,00 "
For Blackwood's Magazine,	3,00 "
For Blackwood and three Reviews,	9,00 "
For Blackwood and the four Reviews,	10,00 "

Payments to be made in all cases in advance.

CLUBBING.

Four copies of any or all of the above works will be sent to one address on payment of the regular subscription for three—the fourth copy being gratis.

EARLY COPIES.

A late arrangement with the British publishers of Blackwood's Magazine secures to us early sheets of that work, by which we shall be able to place the entire number in the hands of subscribers before any portion of it can be reprinted in any of the American Journals. For this and other advantages secured to our subscribers, we pay an large a consideration, that we may be compelled to raise the price of the Magazine. Therefore we repeat 'subscribe early while the price is low.'

Remittances and communications should be always addressed, post paid or franked, to the publishers.

LEONARD SCOTT & CO.,
79 Fulton st., New York.

T. S. HAWKS,

LITERARY DEPOT, Post Office Buildings, Buffalo, N. Y. All the Cheap Publications, Magazines, &c., kept constantly on hand, at New York prices. Orders by mail attended to when accompanied with the cash.

AMBROSE S. CARNER,

DRAPER AND TAILOR, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected; comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
No. 164 Main-Street, Buffalo.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 189 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.

PUBLISHERS,

COMMERCIAL ADVERTISER BUILDINGS

MAIN STREET, BUFFALO.

TERMS.—To mail subscribers, $1,50 per annum in advance, four copies for $5,00, ten copies for $10,00. To city subscribers who receive their papers from the carrier, $2,00. Mail subscribers will also be charged $2,00 if payment is not made in advance.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

* * All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

To Death.

FROM THE GERMAN OF UHLAND.

Thou, that through earth's garden-bowers,
Walk'st at twilight's hour so lone,
Golden fruits and blooming flowers
Pluck'st, which God for thee hath sown;
Spare, O Death, the tender blossom
Which to life's young rapture clings,
Nestling on the mother's bosom,
Cradled by the song she sings.

Leave earth's hardy sons all cheery
Battling with the wintry skies,
From the direst depths so dreary
Bidding life's glad accents rise.
Quench not wisdom's soul so beaming,
Round whose sacred, sun-lit glance
Moons, in youthful radiance streaming,
Weave for aye the mystic dance.

Gently glide when stars are peeping
On thy cloud of silvery rays,
Where an aged sire is weeping
O'er the loved of earlier days.
Speak the names so fond, so tender;
Bear him to those radiant spheres,
Where the eye's eternal splendor
Ne'er is dimmed by parting tears.

And the youth, whose bosom's burning
Was with love's sweet transports fed;
Who in passion's restless yearning
Hath his eager arms outspread;
Now, for love's lost object, gazes
Toward yon star-sown plain and weeps.—
Clasp him in thy kind embraces,
Bear him through heaven's azure deeps;

Where that angel form shall meet him
Cloth'd in bridal loveliness,
Which doth now in spirit greet him,
And in spirit-tones address:
Where spring spreads her glad dominion,
Where the soul, renewed and young,
Ever soars on rapture's pinion,
Ever sings heaven's rapturous song.

A. C. KENDRICK.

Christian Progress.

A Lecture, delivered before the Young Men's Association of Buffalo, January 3, 1848.

BY GEORGE W. CLINTON, ESQ.

(CONCLUDED.)

But civilization has also a larger meaning. It supposes something more than the social tie, or mere submission to law—it implies also an advance from barbarism. And hence the hordes of Goths, Huns, and Vandals, who swarmed from the Northern hive, and overran Southern Europe, though bound by laws into communities, yet, being unlettered, savage and sanguinary, were but barbarians. Hence, too, the piratical States of Northern Africa, were popularly, at least, called barbarians, or at best half civilized.

Civilization is frequently used in a wrong sense, as implying "merely the multiplication of artificial wants, and of the means and refinements of physical enjoyment." In this sense it is justly scoffed at and derided by those who would separate Religion from it, as from an unclean thing. But in truth it implies "an improved state of physical well being, and of superior intellectual and moral culture," resulting originally from government. It differs in degree, as has been before observed, and the great blot upon it, in all times and in all countries, whatever its degree, is the want of universality, its benefits being never predicable of all those under the government in which it flourishes. To explain!—The Athenians, as a nation, in their republic, were physically happier than, and morally and intellectually superior to the rude Scythians. But there were Athenians poorer, more hunger-pinched, and in intellect and morals baser than the free Scythian. The Egyptians of antiquity, though favored by climate, were far behind the modern Britons in civilization, but vast multitudes, under the old Egyptian, and under the modern British rule, were, and are miserable, the children of crime, and ignorance, and woe. Inferior degrees of civilization may be compatible with a ruder, but more extended felicity. The golden age was one of mere plenty. Arcadia, if realized, would be a state composed of simple, full-fed shepherds, in a benign climate, and their sheep straying in bounteous pastures, would be about as noble as their keepers. The fact that in modern communities, individuals or classes are oppressed, imbruted and miserable, from naught save that civilization has not reached its zenith. It is susceptible of continued progress, and has progressed.

Government is the foundation of social improvement, which is the improvement of the members of the society or nation. Civilization is a condition of individuals as well as of countries; and in fact, the true measure of the civilization of two countries, is their relative proportion of civilized people. For, apart from abstractions, civilization resides primitively in man, and, under its influence he is the source of government. What then is a perfectly civilized man? Is it not a man developed in all his faculties—corporeally comfortable, intellectualy exalted, morally pure? If all were such, there would be but one people on the earth. If a nation were wholly composed of such, it would need no internal, or municipal law, and would preserve so much of government only, as would enable it to deal collectively with foreign powers. A civilized nation, then, is one largely composed of such men, and the proportion of them is the measure of its civilization.

As body, mind, and soul, are all affected favorably by true civilization, it is usual to consider the state of the arts, both the mechanical and fine, the progress of invention, and the condition of literature, morals, religion, philosophy, and the sciences, as inextricably interwoven with it, and as appending criteria, more or less sure, of its extent and worth. And here it is that the advocates of antiquity principally repose their hopes of victory. We will briefly, very briefly, combat them, not to the entrance, but merely shiver a lance or two in a friendly tilt, and leave them to enjoy their old convictions.

We take our stand upon the present, gloomy as it seems to some; and challenge hoary antiquity to produce a nation more civilized than England. Or, for that is the test our airy opponents profess, to specify an ancient period, in which knowledge, literature, the arts or sciences, or morals, were in a palmier state than now.

Will we be referred to solitary triumphs of mind, or wondrous works of art? To Homer, the pyramids, or Cleopatra's needle; the lost art of hardening copper and giving it a cutting edge; the so called republican government of the Hebrews! All these but one this age now has, besides ten thousand better things antiquity never dreamed of, and the sum of civilization is what we have, not merely what we originate. Homer is better possessed by this age than any that preceded it, for many more read him and appreciate his genius. But this age has produced no Homer, nor sphynx, nor pyramid, nor winged lions, and the exhibition of strength and genius is the measure of civilization. The question is not what you have, but what have you created! Indeed I had supposed that there was an hair-loom of honor and wealth, comprising the wholesome of human discovery and power, which descended from generation to generation, to be enriched by each, and held in trust for its successor. Break into the common treasury, if you will, and give each age its own. Which age of long-lived Egypt will you choose? Take all of her many centuries, from the seven years of sore famine, when all of her people, save the priesthood, gave, through Joseph, their money, their flocks, and a fifth part of the produce of their lands, forever to Pharaoh, for bread, and the kingly and priestly power that built the pyramids was thus firmly rooted in the pleasant land they cursed, down to the time that Cleopatra applied the asp to her false bosom, and Egypt became tributary to Rome. Say that she drew not from tradition, or other nations, any of the secrets of the antediluvians which Noah bore with him in the ark, and that she owed naught to the patriarchs, and the active and energetic men who lived ere Thebes was founded. Grant that she sprung into existence, like Minerva from the head of Jove, in the full panoply of her perfection, and what was she, or what did she, that this age should envy her? I am not aware that the deciphered hyeroglyphics have as yet yielded any proof of any great improvement in law or morals by her devised, or that they exhibit her as a free, magnanimous power of the earth, or as the worshiper of God in purity. False, perfidious, and besotted with idols, was she not the special subject of prophetic denunciation? She built the pyramids! Thank God man wastes not now his energies in works requiring only an immensity of labor, without a correspondent usefulness! She hewed a monument, and transported it from its native quarry hundreds of miles, and French engineers the ablest in the world were unable to remove it a few rods further to the sea! This is, I think, exaggeration. We have no reason believe that any of the mechanical powers are lost to us, nor do I admit that aught man has ever done is now impossible to man. But grant these assertions true, and then enquire where is proof of the high purpose of good to man, or the deep feeling, poetic or religious, which beams out of these stupendous and eternal evidences of Titanic strength; the soul that makes them live and speak, and hallows them? Perched on the Alps is a lonely convent, which rises nearer heaven than does the tallest pyramid, and the humblest Bethel church, or the honest school house in our land, is a nobler proof of culture, a higher evidence and surer augury of progress than all the artifices of all the Pharaohs. But they did these great works with tools of copper! And with the same metal did the Peruvians hew out lesser pyramids, and temples, and idols as fantastic as the sphynx. Having steel, we need no substitute to shape the blocks we build with. But chemistry, a science all unknown to Egypt, the fruit of this our age, gives us the composition of the Peruvian chisel.

Admit, if you please, that the sculptured idols and emblems of ancient Nineveh, though they be monsters, evince a deep sense of beauty in those who framed them, and a power to conceive and execute ideal notions of symmetry and grandeur; that the marble Venus and Apollo of the Greeks are still unrivalled: what then? They have naught of divinity about them, save that which is inherent in the perfection of the human form. No inspiration was necessary to their conception. Their living models were then—are now accessible; and perchace our fancy contributes much to the halo which encircles them. And the old poets sang divinely, and the muses expired with them. Be it so. And yet that very poetry, divine though it be, proves a social state, far, far beneath that of our sober age. Is it not possible, that in the fine arts akin to poetry, and in poetry itself, priority of time is in itself a mighty advantage, hard to be overcome. Nature and man with all his passions, hopes and accidents remain the same. There is but one harvest, and they who reaped its first fulness, cannot well reproach those who come after with the scantiness of their gleanings.

The Jewish government, ordained by Heaven for a semi-barbarous people, answered its ends.—But surely there is no irreverence in saying that now it would scarcely satisfy the Jews, were they again the free occupants and owners of the Holy Land. A new dispensation has replaced the old, and the Mosaic law and cumbersome Jewish polity were blotted out by Heaven. He has given us a faith irreconcilable with the narrow civil constitution of the Jews, and commends it to the adoption of the world. That faith is the author of the progress of our race. It descended dove-like from Heaven, in the fulness of appointed time, when man had reached a point beyond which he could not unaided move. Christianity is the very root of modern progress, and the tree of life must grow and cast its salubrious shade, even as the roots extend. You cannot separate this, its greatest element from Progress. As well might you take out man's heart and bid him live.

Before Christ's coming there had been advancement to a certain point. Civilization arose, and flourished, and faded, or was extinguished in blood—revived, and brightened to about the old degree of lustre, and then again expired. The world was barbarous, and civilization was an exception in its general condition. It was a torch carried onward in time by nations. As one fell breathless in the race, another grasped it, and so it was preserved and continued, rather than exalted. Egypt, Babylon, Greece, Carthage, and Rome, were but successive billows of the human ocean, though the latest, like the ninth wave, may have risen a little higher, and dashed a little farther on the shore.—Something was wanting in man himself—a sustained stimilus which would bear him over the great obstacle he had encountered—and that something was first furnished by Christ's teachings. His doctrines were not only those of peace and holiness, but he taught human equality. Not that the Saviour was a teacher of political equality, but the doctrine flows directly from those he uttered. "All men are equal in the sight of God." Do men see clearer than their Maker? Let a Christian look upon his fellows and say if he be entitled to take place of them! Can he boldly raise his eyes to Heaven and pray within himself, saying:—"God, I thank thee that I am not as other men are, or even as this Publican?" Does

our religion justify a spirit of oppression, and bear the sword and torch of persecution; or is it full of that charity "which endureth all things, hopeth all things?" True it is that all men are not Christians, in our or any land, but its spirit is diffused around and operates upon them. The infidel philosopher who rejects it, is swayed by it. Its maxims and the sense of right it introduced penetrate every where, and elevate humanity.—Our laws, our manners, our habits of thought are fashioned by it to some extent, and are conforming more closely to its genius as light increases in our intellectual atmosphere.

Understand me not as claiming that a Christian nation *must* be most eminent in art and science, and refined by literature, or that a barbarian cannot be a Christian. But I utterly abhor the doctrine that Civilization and Christianity are antagonists. I cannot conceive that this knowledge of nature, which sublimes the soul, refinement of manners, a deep sense of the beautiful in art, advance in literature, or even the perfection of machinery, repel, Faith, Hope and Charity. Savage nations have indeed received the word gladly; but have they not always been but as the stony ground, until the good seed found room to root itself in added civilization? Imagine, if you can, an ignorant Christian community, and ask your reason whether their religion would not impel them toward civilization with a power unprecedented in the history of man! Would they not labor faithfully *for* bread? study nature with a zeal proportioned to the love they bore towards its Maker? appreciate and struggle for the beautiful in all things? seek to do good in all ways? and even invent and improve machinery to the utmost, so that the shortest possible duration of equitably apportioned labor might leave the greatest space for the expansion of knowledge, which feeds both mind and soul, which fit us for immortality, and through which we commune with Heaven?

We are very far from claiming perfections for our age; but we cannot err when we pronounce it far superior, in true civilization, to any that has preceded it. We would divide the history of Progress into two great portions, pre-Christian and Christian. The former was necessarily limited, the latter is limitless. Civilization attained in the former, a certain elevation and worth, could go no farther, and paused till Christ descended and gave it wings. The reign of Benevolence commenced when Jesus preached love. Before his coming a ferocious spirit not yet subsided, swayed the whole world and guided even the sons of Israel.

Think you man has made no progress since Egypt flourished? A perusal of some history of the laws of Nations may go far to dispel the illusion, and I know not where you will find it more ably and scientifically sketched than by the venerable, jurist Kent, in the first chapter of his Commentaries.

"The law of Nations is the offspring of modern times. The most refined states among the ancients seem to have had no conception of the moral obligation of justice and humanity between nations. They regarded strangers and enemies as nearly synonymous, and considered foreign persons and property as lawful prize. Their laws of war and peace were barbarous and definable. In the most enlightened age of the Grecian republics, piracy was regarded as an honorable employment. It was the received opinion that Greeks were bound by no duties, nor by any moral law, without compact, and that prisoners taken in war had no rights, and might lawfully be put to death or sold into perpetual slavery, with their wives and children. In the latter ages of the Roman Empire, when the municipal law became highly cultivated, and adorned by philanthropy and science, the law of nations was recognized as a part of the natural reason of mankind. The Roman jurisprudence in its most cultivated state, was a very imperfect transcript of the precepts of natural justice on the subject of national duty. It retained strong traces of ancient rudeness, from the want of the Christian system of morals, and the civilising restraints of commerce. We find the barbarous doctrine still asserted, that prisoners of war, become slaves, *jure gentium*; and even in respect to foreign nations with whom the Romans were at peace, but had no particular alliance, it is laid down in the digest, that whoever passed from one country to the other became immediately a slave. It is impossible to conceive a rule of National law more directly calculated to destroy all commercial intercourse, and to maintain eternal enmity between nations."

What now is the state of international law,—this lustrous and decisive *proof* of the superiority of modern civilization? This law, which tends to promote justice and tranquility among nations, even as does the municipal law in individual states, to favor commerce the surest guaranty of peace, and to mitigate the cruelty of war,—this best fruit of modern, and most sure augury of future progress, has for some centuries been gradually acquiring form and potency. Again I refer you to Kent.

"The irruption of the Northern tribes of Scythia and Germany overturned all that was gained by the Roman law; annihilated every restraint and all sense of national obligation, and civil society relapsed into the violence and confusion of the barbarous ages. Mankind seemed to be doomed to live once more in constant distrust or hostility, and to regard a stranger and an enemy as almost the same. Piracy, rapine, and ferocious warfare defaced the annals of Europe. The law of nations remained in the rudest and most uncultivated state down to the period of the 16th century. In many instances the shipwrecked strangers were made prisoners and sold as slaves, without exciting any complaint, or offending any sense of public justice. Numerous cases occurred of acts of the grossest perfidy and cruelty towards strangers and enemies. Prisoners were put to death for their gallantry and brave defence in war. There was no reliance on the word and honor"—he might have added, nor on the sacramental oath—"of men in power. Reprisals and private war were in constant activity. Instances were frequent of the violation of embassies, the murder of hostages, the imprisonment of guests, and the killing of heralds. The victor in war had his option in dealing with his prisoners, either to put them to death, or reduce them to slavery, or exact an exorbitant ransom for their deliverance. So late as the time of Cardinal Richelieu, it was held to be the right of all nations to arrest strangers who came into the country without a safe-conduct."—How dark and awful is this true picture! How glorious in comparison the present state of Europe and the world! Bad as we may deem the times, deplorable as is, in weak human judgment, the present position of our race, O, who can say we have made no progress, and that hope resides not in the future.

Civilization is a diffused and fruitful, not an individual and barren possession. It is knowledge used, not hoarded. Grant that the Chinese possessed ages ago, a knowledge of the compass, of the art of printing, and of gunpowder. In their hands all these have been but as the barren figtree. But in Europe they have changed the whole character of war, diminished its frequency, mitigated its horrors, created commerce, promoted morals, and given an impulse to the hu-

man mind which has resulted in a tremendous extension of its grasp. How shallow the knowledge of the ancients seems to us, in astronomy, geography, natural history, political science, geology; and all the arts of life. Chemistry was all unknown to them, save in a few phenomena, which served but the base end of bowing the people before their priests in abject reverence. Science has explored depths unknown to the wisest of the ancients, is exploring all things, and adds daily to the sum of our possession wealth that cannot be diminished or destroyed.

Our civilization differs from that of the old times in being impenetrable. No force can shake it into ruins, or make it retrograde. So long as the earth on which it is established shall endure, so long it must exist and gather increasing splendor. The round world has been explored, and where are the barbarian hordes who can contend with our armies, or successfully oppose our navies? Egypt, Babylon, Jerusalem, Greece, and Rome, fell before superior arms or barbarian swarms. But where is the external human power that can by possibility destroy the budding civilization of warlike Europe? Printing, too, forbids the loss of the least tithe of our acquirements of substantial knowledge—and printing perpetuates by diffusion.

What of the future? Confiding in Providence, I boldly answer, good! To what extent? I cannot measure it. What are the signs of the times that justify these swelling predictions? Bear with me yet a little, and I will tell you as briefly as I can. Just hope is always founded on experience. Man has advanced, and therefore we hope for further progress. We find that the greater portion of our improvement flows from the direct gift of God, divine religion. We find, too, proofs conclusive that, however He may have permitted confusion and darkness to prevail, He has so governed all things in His providence, that good has been educed from seeming evil, and convulsions threatening continuous ruin have resulted in increasing order and more perfect light. Roman civilization had passed its meridian, and was effete when it fell, and a nobler race succeeded the self-styled masters of the world. We will, I think, also discover, if we examine history closely, that Providence has done all things—that the great men who are supposed to have influenced human destiny, are but creations of what we term accident; that circumstances, but trivial as we weigh them, made these giants; or made them conspicuous; that they were in fact, as such men always will be, shaped by, or the creatures of, rather than the creators of the age or sphere in which they moved. Ponder these things well! Again, we find that the greatest of modern discoveries, such as gunpowder, artillery, printing, and gravitation, were the offspring of chance thought, or accidental observation, rather than of any supereminent mental exertion or endowment. Indeed the belief is firmly rooted in my soul, that Heaven vouchsafes the exaltation of our race, and that, when man's true interests require them, all the necessary instruments of progress, whether corporeal or mental, will be evolved by Providence.

Our trust then is in God. How He will bring about His purposes of good, it would be presumptive to predict. But surely we may, without irreverence, point out what we humbly believe are some of the means and symptoms of a progressive Providence.

The very turmoil of the world, and the longing for a better social state, though they give rise to daring speculations and crude plans, is encouragement to hope. Agitation precedes improvement, as distorted shadows the full triumph of day over darkness. The violent project of philanthropy, peace societies, and social schemes, originate in the pressure of great evils, and spring from a spirit which may contribute to remove them. True, the projection of such things are often the subjects of our just ridicule, as one-ideaed, irreflective men, who vainly boast they have found the lever by which they would move and adjust this disordered world, if the silly world would but permit them to apply it. But the partial entertainment of these elaborate vagaries distinctly proves a pervading yearning after something better than the present condition of society.

We may mark too that men are far less prone to magnify their fellows. I deem it a mighty omen. No demigods can rise in our age, and we pay far less regard to human greatness. We appreciate more justly the dignity of human nature, distinguish more clearly between true and false, or factitious eminence, and pay deeper homage to virtue, than to mind or sway. It seems to me that men are more inclined than in the past, to regard individual superiority, rather as a gratifying evidence of the divinity of manhood, than as a title to peculiar personal reverence—to joy in and worship the Creator, rather than to minister to the vanity of the created.

Freedom is undoubtedly the true soil in which all that is good for man will most vigorously flourish. Is not Freedom extending her domain? Look back in history, and see, while wars have ever ravaged the world, how few have been truly waged for her! The ambition of rulers has been the great fountain of this tremendous curse. But, if wars come now, will they not be far other in their objects or results? Will they not be to destroy once reverenced prerogative and ancient monopoly, to uproot old abuses and demolish thrones, rather than to settle successions, or extend the boundaries of kingdoms? What one of the European nations is in a condition to wage a long war? Bankruptcy stares every one of them in the face, and war offers but new burdens for their people, already heavily oppressed. In the mean time the sentiment is everywhere spreading, that governments should be fashioned for the people, rather than men for governments. And, in Europe at least, the masses, instead of being as heretofore moved by, are visibly swaying their rulers. The people are demanding and obtaining concessions; and, in this age, whatever power concedes is lost to it irretrievably, and leads to greater losses. Everywhere too, it would seem that the true elements of States, as defined by Sir William Jones in his imitation of Alcæus, are springing up. It is a noble whole, that poem, and as it has a general relation to our subject I will not mangle it to extract the lines which first occurred to me:

"What constitutes a State?
Not high-raised battlement, or labored mound,
Thick wall, or moated gate;
Not cities proud, with spires and turrets crowned;
Not bays and broad armed ports,
Where, laughing at the storm, rich navies ride;
Not starr'd and spangled courts,
Where low-browed baseness wafts perfume to pride.
No! Men, high-minded men,
With powers as far above dull brutes endued,
In forest, brake, or den,
As beasts excel cold rocks and brambles rude;
Men who their duties know,
But know their right, and knowing dare maintain,
Prevent the long-aim'd blow,
And crush the tyrant, while they rend the chain.
These constitute a State:
And sovereign law, that State's collected will,
O'er thrones and globes elate,

Sits empress, crowning good, repressing ill:
Smit by her sacred frown,
The fiend discretion, like a vapor sinks,
And e'en the all dazzling crown,
Hides her faint rays, and at her bidding, shrinks."

Such men are fast multiplying, and tottering thrones must give place to juster institutions.

Is it not also observable, that there is a growing distrust of artificial institutions, and a more prevalent and widening belief that the devices by which nations are kept asunder, are all injurious; that the community of nations is in the same predicament as each community; that as the true interests of a State are best subserved by removing all restrictions upon the pursuits of its citizens, allowing them the freest intercourse, and unshackling competition, so the world's best interests would be most successfully consulted by the abolition of all those regulations which disserver States and bring them in collision with each other. Naturalization laws are growing in favor with European powers, and the old dogma that perpetual allegiance follows birth, in practice is becoming obsolete; tariffs and other checks upon commerce have been radically liberalized; intercommunication has become more general, more rapid, and more free, and it truly seems as though the world was approaching a cordial acknowledgment of the great truth that all men are brothers.

There is another variation in the aspect of the world, which, though we may not always approve its causes, is of high moment. The nations whose civilization, however high, has long been stationary because destitute of the great elements of progress, the christian principle, are receiving an impetus at last. The Turk and the Egyptian acknowledge the supremacy of Europe, and ape its customs. Hindostan is British territory — The isles of the sea everywhere rejoice under European rule or contact. And even China, that seemed impenetrably inclosed in her imperfect institutions, has opened her gates to christian powers, and Christianity will enter.

But I must close this hurried performance. Still I will venture to touch upon two other topics, and leave you to pursue them if you wish.

May we not add, as one of the most irrefragable proofs that man has progressed, and that he must continue to improve, that liberty has at least achieved an assured abiding place; that the world has now one free hand—one government at least, which originated in popular will, consults only the wishes of its people, declares all men equal, receives the worthy of all nations and all creeds into its bosom, and maintains a high rank in the scale of nations.

While an irrepressible energy pervades every department of life, and commerce is multiplying its blessings; while the minds of men are everywhere directed with successful and pertinacious application to the extension of knowledge, the refinement of the fancy, the improvement of the arts, and the perfection of international regulations, and a tendency to freedom seems the characteristic of our age, and we derive from these auspicious signs enlivening hope, our auguries would be but ambiguous at best, were they not sustained and corroborated by something holier and more decisive, the moral tendencies of this our time. A spirit of kindness and humanity is rife. Wherever men suffer, a helping hand is extended, and the tones of a soothing sympathy mingle with the groans extorted by calamity. Not only does the good Samaritan bind up the wounds of those whom he finds lying wounded by the way side, but he seeks opportunities to relieve and bless his neighbors. Benevolence takes every beauteous form at home, and sends the gospel to every land; and her big heart knows no distinction of clime or country, but over-reaches the broad ocean, girdles the earth, and imbosoms and relieves whole nations. God, who has so moved this generation, will bless its endeavors; and that charity which covereth a multitude of sins, will plead for us and our posterity.

Resolute Contentment.

He was one of those happy beings whose contentment allies itself with fancy, and twines flowers around every stub; for whom the narrow room extends itself to a fairy palace, and which can suck honey from the least promising flower. With almost childish pride, he told me about his little town, which to him was the world's centre; it had also increased in cultivation in latter times, and had a private theatre.

"'Yes,' said he, 'you shall see it! There is no one would ever think of its having been a stable before! The stalls are painted with violins and flutes, by our old painter; and the music itself—yes, i'faith it is really good for such a small town!—two violins, a clarionet, and a great drum; they play very nicely!

"'I know not really how it can be, but music goes strangely into the heart, and I can well imagine how it must be with the little angels in heaven. But with us, now, we don't pretend to those hocuspocuses and tra-la-la's, which they have in Brunswick and Berlin. No, our old sexton, who is the leader, gives us a good honest Polish tune, and a Molinasky between the acts; our women hum in with them, and we old fellows beat time on the floor with our sticks; it is a real pleasure!"

"'And how of the acting?' I asked.

"'Charming! for, you must know, in order that those who perform may have courage to appear before us, they are gradually accustomed to it at the rehearsals; and at the general rehearsal every house must send two servants, that the benches may be filled, and that they who perform may have courage.'

"'It must indeed be a great pleasure—'

"'A pleasure?' interrupted he, 'yes, in our hearts' simplicity we all amuse ourselves, and don't envy them in Berlin. But we have also splendid scenery, machinery, drop-curtains, and performances. On the first drop-scene we have the town fire-engine, and the jet stands just as in nature. But they are altogether painted—beautifully painted. The drop-scene representing the street is the finest: there we have our own town-market, and it is so distinct, that every one can see his own house, play whatever piece they may. The worst thing we have is, the little iron chandelier: the candles drip so terribly, that if there be ever so many persons present there is always a large space under the chandelier. Another fault—for I am not the man to praise everything—another fault is, that many of our women when they *act*, and happen to know any one on the seats, directly giggle and nod to them. But, goodness gracious, the whole is only pleasure!"

"'But when there are no performances in the winter, it must be very quiet in your little town; the long evenings—'

"'O, they go on quite delightfully. My wife, both the children, and the servant girl, sit down to spin; and when all the four wheels are going, I read aloud to them; so the work goes on easier, and the time flies away. On Christmas Eve we play for gingerbread-nuts and apple-fritters, whilst the poor children sing outside the doors about Christmas joys and the infant Jesus—and that brings the tears in my eyes, although I am so inwardly glad.'"

THE MONK AND THE RABBI.—During an eastern voyage, which a learned and pious rabbi took to visit the Hebrew academies, he made the acquaintance of a monk who was on a pilgrimage to Jerusalem. The two travelers got on very harmoniously, and their conversation at first was truly amicable, till it was disturbed by religious controversy, when their wrangling became so violent that, on their arrival at the caravansery, they were incensed against each other. During the night, the monk, sinking under the influence of an eastern climate, fell seriously ill. Rabbi Solomon put aside every other consideration, and paid him due attention; and, as the rabbins at this period generally knew something of medicine, he was fortunately able to assist his fellow-traveler, who thus became indebted to him for life. The rabbi postponed his departure to attend upon the invalid till out of danger, and when he came to bid him adieu, the priest thanked him with an overflowing heart, in these words: "I am poor, and can do nothing for you, but I pray to Heaven for your prosperity. The most delightful day of my life will be, when I can prove my gratitude."

Rabbi Solomon interrupted him by saying,—"You owe me nothing. Although opposed in religion, humanity ought to unite us, and the law of Moses commands me to act toward you as I have done. Adieu! We may never meet again. Live worthily, and, if you ever meet a suffering Jew, assist him as I have assisted you." Years afterwards, on his return to France, Rabbi Solomon stopped at Prague, where his co-religionists received him with honors and fetes. The Jews of Bohemia were then under the domination of Duke Vladislas, who allowed no opportunity to pass without manifesting his hatred to them.

When he heard of the reception given to the stranger, like all tyrants, the duke regarded him as a conspirator, a Messiah, or a plotter of revolution, and gave immediate orders for his arrest. During this era of persecution to bring a Jew to judgment was to send him to death. The community of Prague were thrown into trouble and despair. When brought in chains before the duke, Rabbi Solomon was the only one who preserved his tranquility.

His representations were rejected, and Vladislas was about to pronounce his condemnation, when the Bishop of Olmutz advanced towards the ducal throne and exclaimed, "My lord, in the name of the God of Christians, I forbid that even a hair of this Jew be touched. He is noble, generous and conscientious, and never was deaf to the voice of humanity." The duke and the court were confounded; but the bishop related with warmth the service which had been rendered to him by the generous Rabbi when he was only an obscure monk. The duke instantly ordered the irons to be removed from Rabbi Solomon, and the courtiers vied with each other in overwhelming him with compliments. The Christian bishop thus distinguished himself by his gratitude, and Rabbi Solomon had an escort of honor, and was loaded with presents and blessings. But that which was more grateful to him, was, that the Jews of Bohemia enjoyed peace and security under the protection of which the bishop gratefully accorded to the brethren of his fellow-traveller, the benevolent Rabbi.—*Moral and Religious Tales.*

FASHIONABLE CHURCHES.—Fine ladies flock thither for a little religious excitement. The sermon is their Sunday dram. An impassioned manner, real or assumed—a flow of high-sounding words—strong appeals to the imagination—sweeping assertions, with as little argument as need be, and nothing of grave simplicity or solemn thoughtfulness about the whole—are pretty sure to fill a metropolitan church, especially when the preacher is neither old nor ill-favored, and has a liberal supply of portraits in the print-shops!—But we shall deceive ourselves greatly if we encourage the conviction that the cause of true religion is promoted by this crushing of carriages and this storming of pews. The atmosphere is altogether an unwholesome atmosphere. There is a smell of the foot lamps. The whole thing is a show—a spectacle. Men flock to it as they do to a theatre—and women as they swarm to an execution.

Extract from an Oration On the Death of John Quincy Adams,

Delivered before the Legislature of the State of New York, at Albany, on the 6th day of April, 1848.

BY WILLIAM H. SEWARD.

The model by which he formed his character was Cicero. Not the living Cicero, sometimes inconsistent; often irresolute; too often seeming to act a studied part; and always covetous of applause. But Cicero, as he aimed to be, and as he appears revealed in those immortal emanations of his genius which have been the delight and guide of intellect and virtue in every succeeding age. Like the Roman, ADAMS was an orator, but he did not fall into the error of the Roman, in practically valuing eloquence more than the beneficence to which it should be devoted.—Like him he was a Statesman and Magistrate worthy to be called "The second Founder of the Republic,"—like him a teacher of Didactic Philosophy, of morals, and even of his own peculiar art; and like him he made all liberal learning tributary to that noble art, while Poetry was the inseparable companion of his genius in its hours of relaxation from the labors of the Forum and of the Capitol. Like him he loved only the society of good men, and by his generous praise of such, illustrated the Roman's beautiful aphorism, that no one can be envious of good deeds, who has confidence in his own virtue. Like Cicero he kept himself unstained by social or domestic vices; preserved serenity and cheerfulness; cherished habitual reverence for the Deity, and dwelt continually, not on the mystic theology of the schools, but on the hopes of a better life. He lived in what will be regarded as the virtuous age of his country, while Cicero was surrounded by an overwhelming degeneracy. He had the light of Christianity for his guide; and its sublime motives as incitements to virtue; while Cicero had only the confused instructions of the Grecian Schools, and saw nothing certainly attainable but present applause and future fame. In moral courage, therefore, he excelled his model and rivalled Cato. But Cato was a visionary, who insisted upon his right to act always without reference to the condition of mankind, as he should have acted in Plato's imaginary Republic. ADAMS stood in this respect midway between the impracticable Stoic and the too flexible Academician. He had no occasion to say, as the Grecian orator did, that if he had sometimes acted contrary to himself, he had never acted contrary to the Republic; but he might justly have said, as the noble Roman did, "I have rendered to my country all the great services which she was willing to receive at my hands, and I have never harbored a thought concerning her that was not divine."

More fortunate than Cicero, who fell a victim of civil wars which he could not avert, ADAMS was permitted to linger on the earth, until the

generations of that future age, for whom he had lived, and to whom he had appealed from the condemnation of contemporaries, came up before the curtain which had shut out his sight, and pronounced over him, as he was sinking into the grave, their judgment of Approval and Benediction.

The distinguishing characteristics of his life were BENEFICENT LABOR and PERSONAL CONTENTMENT. He never sought wealth, but devoted himself to the service of mankind. Yet, by the practice of frugality and method, he secured the enjoyment of dealing forth continually no stinted charities, and died in affluence. He never solicited place or preferment, and had no partisan combinations or even connections; yet he received honors which eluded the covetous grasp of those who formed parties, rewarded friends, and proscribed enemies; and he filled a longer period of varied and distinguished service than ever fell to the lot of any other citizen. In every stage of this progress he was CONTENT. He was content to be President, Minister, Representative, or Citizen.

Stricken in the midst of this service, in the very act of rising to debate, he fell into the arms of Conscript Fathers of the Republic. A long lethargy supervened and oppressed his senses.—Nature rallied the wasting powers, on the verge of the grave, for a very brief period. But it was long enough for him. The rekindled eye showed that the re-collected mind was clear, calm, and vigorous. His weeping family, and his sorrowing compeers, were there. He surveyed the scene, and knew at once its fatal import. He had left no duty unperformed; he had no wish unsatisfied; no ambition unattained; no regret, no sorrow, no fear, no remorse. He could not shake off the dews of death that gathered on his brow. He could not pierce the thick shades that rose up before him. But he knew that Eternity lay close by the shores of Time. He knew that his Redeemer lived. Eloquence, even in that hour, inspired him with his ancient sublimity of utterance. "THIS," said the dying man, "THIS IS THE END OF EARTH." He paused for a moment, and then added, "I AM CONTENT." Angels might well draw aside the curtains of the skies to look down on such a scene—a scene that approximated even to that scene of unapproachable sublimity, not to be recalled without reverence, when, in mortal agony, ONE who spake as man never spake, said, "IT IS FINISHED."

Only two years after the birth of JOHN QUINCY ADAMS, there appeared on an Island in the Mediterranean Sea, a Human Spirit, newly born, endowed with equal genius, without the regulating qualities of Justice and Benevolence which ADAMS possessed in such an eminent degree. A like career opened to both—Born like ADAMS, a subject of a King—the child of more genial skies, like him, became in early life a patriot and a citizen of a new and great Republic. Like ADAMS he lent his service to the State in precocious youth, and in its hour of need, and won its confidence. But unlike ADAMS he could not wait the dull delays of slow and laborious, but sure advancement. He sought Power by the hasty road that leads through the fields of carnage, and he became like ADAMS, a Supreme Magistrate, a Consul. But there were other Consuls—He was not content. He thrust them aside, and was Consul alone. Consular power was too short.—He fought new battles and was Consul for life.—But Power, confessedly derived from the People, must be exercised in obedience to their will, and must be resigned to them again, at least in death. He was not content. He desolated Europe afresh, subverted the Republic, imprisoned the Patriarch who presided over Rome's comprehensive See, and obliged him to pour on his head the sacred oil that made the persons of Kings divine, and their right to reign indefeasible. He was an Emperor. But he saw around him a mother, brothers and sisters, not enobled; whose humble state reminded him, and the world, that he was born a Plebeian; and he had no heir to wait impatient for the Imperial Crown. He scourged the earth again, and again Fortune smiled on him even in his wild extravagance. He bestowed Kingdoms and Principalities on his kindred—put away the devoted wife of his youthful days, and another, a daughter of Hapsburgh's Imperial house, joyfully accepted his proud alliance. Offspring gladdened his anxious sight; a diadem was placed on its infant brow, and it received the homage of princes, even in its cradle. Now he was indeed a Monarch—a legitimate Monarch—a Monarch by Divine appointment—the first of an endless succession of Monarchs. But there were other Monarchs who held sway in the earth. He was not content. He would reign with his kindred alone. He gathered new and greater armies, from his own land—from subjugated lands. He called forth the young and brave—one from every household—from the Pyrenees to the Zuyder-Zee—from Jura to the Ocean. He marshalled them into long and majestic columns, and went forth to seize that universal Dominion, which seemed almost within his grasp. But Ambition had tempted Fortune too far. The nations of the Earth resisted, repelled, pursued, surrounded him. The pageant was ended. The Crown fell from his presumptuous head. The wife who had wedded him in his pride, forsook him in the hour when fear came upon him. His child was ravished from his sight. His kinsmen were degraded to their first Estate, and he was no longer Emperor, nor Consul, nor General, nor even a Citizen, but an Exile and a Prisoner, on a lonely Island, in the midst of the wild Atlantic. Discontent attended him there. The wayward man fretted out a few long years of his yet unbroken manhood, looking off at the earliest dawn and in evening's twilight, towards that distant world that had only just eluded his grasp. His heart corroded. Death came, not unlooked for, though it came even then unwelcome. He was stretched on his bed within the fort which constituted his prison. A few fast and faithful friends stood around, with the guards who rejoiced that the hour of relief from long and wearisome watching was at hand. As his strength wasted away, delirium stirred up the brain from its long and inglorious inactivity. The Pageant of Ambition returned. He was again a Lieutenant, a General, a Consul, an Emperor of France. He filled again the throne of Charlemagne. His kindred pressed around him, again reinvested with the pompous pageantry of Royalty. The Daughter of the long line of Kings again stood proudly by his side, and the sunny face of his Child shone out from beneath the diadem that encircled its flowing locks. The Marshals of the Emperor awaited his command. The legions of the Old Guard were in the field, their scarred faces rejuvenated, and their ranks, thinned in many battles, replenished.—Russia, Prussia, Austria, Denmark and England, gathered their mighty hosts to give him battle.—Once more he mounted his impatient charger, and rushed forth to conquest. He waved his sword aloft and cried "TETE D'ARMEE." The feverish vision broke—the mockery was ended. The silver chord was loosed, and the warrior fell back upon his bed a lifeless corpse. This was the END OF EARTH. THE CORSICAN WAS NOT CONTENT.

STATESMEN AND CITIZENS! The contrast suggests its own impressive moral.

For the Western Literary Messenger.

Song.

BY MISS PHEBE CAREY.

The first and lovelest star of even
Shines on me with its first sweet light:
O thou, to whom my heart is given,
What visions haunt thy soul to-night?

Dost thou, as this soft twilight steals
So softly over hill and plain,
Think of the hour we parted last,
And wish me by thy side again?

I ask not that thy love should be
As deep, as trusting as my own,
I do not ask that thou should feel
All that my woman's heart has known:

But if, for every thousand times
My spirit fondly turns to thee,
One thought of thine to me is given,
I doubt not thy fidelity!

For me, when on the hills alone,
Or treading through the noisy mart,
There is no time, there is no place,
But thou art with me, in my heart.

I only think upon the past,
Or dream of happier days to be,
And every hope, and every fear,
Is something hoped, or feared for thee:

MT. HEALTHY, O.

For the Western Literary Messenger.

Arabic Literature.*

Although what are called the Dark Ages reached as far down as the Eleventh century, yet nearly three hundred years before their termination gleams of light began to streak the gloomy canopy of mental night. As early as the middle of the Eighth century, that is, at the period when the family of the Abassides ascended the throne of the Caliphs, the dominions of the Arabians began to be illuminated. Even a century earlier, Ali, the fourth Caliph from Mahomet, extended protection to letters, as did also his successor, Moawihah: but it was not till the reign of Haroun-al-Raschid, which commenced in 786, that the full blaze of morning light burst upon the Saracens. This celebrated Caliph attached a school to each new mosque that he built, and in various ways rendered his reign promotive of science and literature. His son, Al-Haroun, was also a warm and a more efficient friend of Arabic letters, and by some is considered the founder of the same. He was a worthy scion of the noble stock; and his reign (813—833) was a glorious epoch in learning. The educated came to his court, by invitation, from all parts of the then known world; important books were collected from subject provinces, such as Egypt, Syria, etc.; the literary relics of the conquered countries were gathered by his direction and piled before his throne; and "hundreds of camels," says Sismondi, "might be seen entering Bagdad, loaded with nothing but manuscripts and papers, and those which were thought to be adapted for the purposes of public instruction, were translated into Arabic, that they might be universally intelligible." Under his reign, speculative philosophy, the art of medicine, the mathematics, astronomy and other branches of science found numerous votaries; and not only Bagdad, but Cufa, Bassora, Ispahan, Samercand and neighboring places became the homes of science. A thirst for knowledge soon spread to the utmost extremities of Arabic dominion. Spain shared in the enthusiasm, and received the honor of being more especially, "the seat of Arabic learning. It was there that it shone with superior brightness and made the most rapid progress. Cordova, Grenada Seville, and all the cities of the Peninsula, rivalled one another in the magnificence of their schools, their colleges, their academies' and their libraries."

This progress of letters, which commenced in the ninth century, and which extended over all the Arabian empire, continued till the fourteenth century. All parts seemed to preserve, almost to the last, an unclouded day of literary splendor, nor was its five hundred years' continuance in vain. Great progress was made in some of the physical sciences, and history, in its several branches, was studied with great avidity. Perhaps, however, the keenest relish was manifested for poetry. Mahomet himself cultivated the art; and hence it is not surprising that his subjects generally, followed his example. It has been asserted that "this people has produced more poets than all others combined." Among so many it is not remarkable that a few were worthy of the exalted name; and that fragments of their writings, preserved in European libraries and the convents of the monks, have been handed down to the present day. The few specimens which have met our eye, are exceedingly chaste in sentiment and are replete with beautiful imagery. The love poems, however, which seem to preponderate, are somewhat extravagant in language, and would not be safe for very young writers to study. They are valuable, however, as mementoes of mental fruitage in the early harvest of modern civilization.

The most popular production of Arabic intellect extant, is The Thousand and One Nights. It has been translated into most if not all of the European languages, and is read by millions in every generation. In brilliancy of conception and richness of imagination it is unsurpassed by any work of fiction; and from the insight it gives into the manners and customs of oriental society, it is sought not only by the mere reader of romance, but by the profound scholar. It is said that the legandary traditions of Europe generally, owe their origin, partly, at least, to this famous work.

The new edition of The Arabian Nights, which is being published by Harper and Brothers,

* The Thousand and one One Nights; or, the Arabian Nights' Entertainment: translated and abridged for family reading. Illustrated with six hundred wood cuts In Twelve Parts, or two volumes. New-York: Harper and Brothers, Publishers. 1848.

is superbly embellished and is truly "an unrivalled specimen of art."

City Item.

A poor man was to be buried: four men bore the coffin, and the wife followed: they had some difficulty in passing through the narrow lane; the way was straight; not a sunbeam found its way down here,—it was only when they had emerged into the broader streets that the sunlight fell on the humble coffin. I heard a story about this funeral, which is as poetically touching as it is true.

Within this narrow street, high up in an equally narrow chamber, lay this poor corpse: the wife sat and wept over it; she knew of no expedient to get it buried—she had no means. The window stood open, when a canary bird flew into the room and settled by the head of the corpse, where it began to sing.—it made a strange impression on the woman; she could weep no longer, for she imagined it must have come down to her from the Lord. The bird was tame; it allowed itself to be caught directly; and as she related the circumstance to a neighbor, and showed her the bird, the woman remembered that she had shortly before read an advertisement in the newspaper about a canary bird that had flown away from its home.

It was the same bird: and the woman on restoring it to its owners, found them humane hearts, who rendered her such assistance as enabled her to bury the dead.

"How do you spell Boots?"—The New York correspondent of the Philadelphia Inquirer tells an amusing story of a wealthy Wall street broker, who lives in great style in the fashionable quarter, and ranks as one of the "upper ten." It appears that he recently purchased a splendid fire-proof safe, in which to secure his valuables against the devouring element, to which he had affixed that new invention for protection against thieves, called the "Combination lock." These strange pieces of mechanism are so extremely complicated that you may look them, hand the key to the manufacturer even and the chances are as one to ten thousand, that he will not be able to open them. The wards and interior arrangements of these locks are alphabetically arranged, and you select a word in the language, take the letters, and look the wards answering to these letters one by one. Thus, take the word chair—you look *c*, then *h*, then *a*, then *i*, then *r*. Now it must be unlocked in the same way, and unless you hit upon the exact word, you will never be able to unlock it. Well, the broker in question locked his new safe according to the word "boots," but after working at it for an hour or more the next morning, he could not unlock it, and gave it up in despair. As his funds were all locked up, (says the letter,) he had no money with which to pay his notes and carry on his business that day, but as his credit was good, he raised sufficient for the purpose by borrowing of the banks. The next morning the manufacturer of the lock, according to request, called to ascertain the difficulty. He said he had no doubt he could unlock the safe, if the gentleman would tell him the word to which he locked it. "Boots" was the word, and to work he set to unlock it to "boots." Well, he tried, sanguine of success, but "boots" would not unlock the safe. He tried again and again, and was no more successful. He tried an hour, two hours, and three hours, with no success. Finally, a happy thought struck him.—He wiped the perspiration from his face, took a drink of water, examined the key again, and looking at the broker straight in the eye, said—

"Sir, allow me to ask you how you spell 'boots?'"

"How do I spell 'boots?'" said the broker; "why, I spell it right—how do you spell it?"

"Oh, never mind," said the man of combination locks, "I know I spell it; how do you spell it?"

"B-u-t s, to be sure," said the broker.

"The d—l you do!" said the lockman:—"and if you spell boots *buts*, I will unlock the safe *buts*," and he did unlock it in the twinkling of an eye.

Electoral Votes.—1844.

In accordance with a request to that effect, and to aid those who may be speculating on the chances of success in the approaching Presidential contest, we give below a table of the Electoral vote by States in the contest of 1844. The whole number of electoral votes then cast was 275, of which Mr. CLAY received 105 and Mr. POLK 170, as follows:

STATES.	Clay.	STATES.	Polk.
Massachusetts	12	Maine	9
Rhode Island	4	New Hampshire	6
Connecticut	6	New York	36
Vermont	6	Pennsylvania	26
New Jersey	7	Virginia	17
Delaware	3	South Carolina	9
Maryland	8	Georgia	10
North Carolina	11	Louisiana	6
Kentucky	12	Mississippi	6
Tennessee	13	Indiana	12
Ohio	23	Illinois	9
	105	Alabama	9
		Missouri	7
		Arkansas	3
		Michigan	3
			170

Since 1844 the following named States have come into the Union: Texas with 4 electoral votes, Iowa with 4 votes, Florida with 3 votes, and Wisconsin, by the recent adoption of a State Constitution, will come in with 4 votes, in time to take part in the next election, making an aggregate of 290 electoral votes, and rendering it necessary that the successful candidate shall receive 146.

LOUIS PHILIPPE'S PECUNIARY RESOURCES.—The London *Times* states that, so far from Louis Phillippe having amassed the large sums in foreign funds which the world supposes, he has invested the whole fortunes of himself and children in the soil of France, so that, if the present Legislature should confiscate the private property of the house of Orleans, the whole family will be reduced to destitution. The French papers say it is well known that Louis Phillippe has immense sums in the French funds in other names besides his own, and it is not improbable that the ex-King may, through his agents, be at this moment operating on the Stock Exchange of Paris, for the purpose of embarrassing the Provisional Government.

MR. HOTCHKISS.—It is stated that this unfortunate gentleman, who was so nearly murdered in New York some months since, has recovered his bodily health and is slowly regaining his mental faculties. He seems to have forgotten everything he learned during his life, and has to be taught to speak and learn his letters as if he were a child. The sound of his own voice, in learning to articulate a new word amuses him exceedingly. —*Tribune.*

SPECIE OVERBOARD.—The Cincinnati *Chronicle* tells the following, which is both sad and ludicrous:

One of the emigrant Germans who came up in the Duchess having the nice little sum of $150 in the hard stuff, fearing it might be carried off by the light-fingered gentry, rolled it up nicely in a rag, opened his straw matttrass, and deposited it amongst the straw for safe keeping, without advising his wife of what he had done. As usual when steamers are nearing port, the Clerk gave orders to weigh the freight previous to making out their bills. The wife of the German noticing the man weighing their movables, carried the bed to the afterguard, opened it and threw the straw overboard, for the purpose of making the weight of the bed less! Their stock was being weighed, when the husband discovering that the contents of the bed had been taken out, immediately commenced searching for the dimes, when the wife informed him of what she had done.—The reader can imagine the German's situation, "a thousand miles from home, without a cent of money in his pocket," &c. The affair leaked out, and got among the cabin passengers, when they raised one hundred dollars for the distressed, and the clerk knocked off his freight bill.

The facts are highly creditable to the passengers and the clerk. They will, no doubt, teach the husband to hide no more cash in bed-ticks, and keep no more such secrets from his wife.

QUITE IMPORTANT, IF TRUE.—Mr. Broadmeadow has taken out a patent for the application of steam to the extinguishment of fires. He thinks he can extinguish any fire which can possibly happen on board steamboats, or any vessel where the apparatus is provided, whether in the vessel or cargo, or in buildings of any kind, by forcing steam into the apartment where the fire exists.—One public experiment has been made in the presence of scientific gentlemen, and another is to be made on Tuesday, at 5 o'clock, at Williamsburgh. The experiments have, so far, been successful, and if the thing is fully established, fire may consider itself as effectually put out. The chief terror of steamboating will be effectually subdued, yet the thing is so very simple, that it is hardly possible to believe so great a discovery should so long have escaped the keen eyes of science.—*Journal of Commerce.*

POLICE POETRY.—"Mister Johny O'Conner, a man of no honor, went out with Miss Brady, a nice little lady, and treated to brandy, and sponge cake and candy, and more things so dainty, and kisses so plenty. But at length the sad fellow grew awfully mellow; and as he was walking and kissing and talking, with pretty Miss Brady, the nice little lady, a purse full of rhino, (I wish it was mine, oh,) he whipt from her pocket, and cleared like a rocket. But soon he was taken, while tracks he was making, and lodging assigned him, where justice may find him. But the maid on the morrow, came forward in sorrow, her little heart heaving, and tears her eyes leaving, and begged that his Honor would pity poor Connor; to which he consented, as Connor repented—when off went the couple, with limbs mighty supple, and left us presuming, that maiden so blooming, herself to a life of much trouble was dooming; for Johny, the blockhead, who picked the maid's pocket, when married, I'm thinking, will whip her like winking!"

RIDICULE.—If ridicule be applied to any position, as the test of *truth*, it will then become aq nestion whether such ridicule be just; and this can only be decided by the application of *truth* as the test of ridicule.—*Johnson.*

A SHIP FOR BOSTON.—The idea of a ship receiving freight and passengers at Cincinnati for Boston direct, would have been laughed at a year ago. The fine new brig Gilmore was advertised to sail yesterday for the Metropolis of the Bay State. There is doubtless a new commercial era about to dawn upon us, and the timber of the Ohio shores will, ere many a year, float upon every sea. Already a ship-yard for the exclusive construction of sea vessels has been established at Marietta, and several have been built in this city. Timber here is more abundant than at the East, and, as we learn, of a better quality, rendering it therefore, a matter of much interest, on the score of economy, on the part of eastern merchants to seek the rivers of the West. The freight always to be obtained at the ports on the Ohio, will more than overbalance the expense of the distance from the sea-board.—*Cin. Com., 23d.*

THE LITERATURE OF HUMANITY.—Whatever is most excellent in the literature of every country is precisely that which belongs to *humanity* and not to the nation. What is dearest and most prized at home is exactly that which has a world-wide interest; that which touches the *sympathies of* all men. Are the highest truths *National?*—Is there any trace of *locality* in the purest and noblest sentiments? We invariably find that the same writers and the same passages which are admired at home are the most admired abroad.—Nationality one is sure to have, whether desirable or not, but the great writers of every people are unquestionably those who, without foregoing their national character, rise to be countrymen of the world.—*Blackwood.*

AN AMPUTATED LUNG.—The following notice of a singular and successful operation we find in the Cincinnati Commercial:

When Barnard, a young man in this city, was stabbed in a fracas not long since, Dr. E. K. Chamberlain, "Old Medicine," was sent for, and upon his arrival and on examination of the wound, he found that a portion of one of the lungs was protruding some two inches from the wound, it having been forced out, probably, by respiration. As the case was a critical one, and requiring immediate operation, the doctor resorted to a new method of treatment. The end of the protruding lung, which had been injured by the shot, was bound with a silk thread, and the injured end *cut entirely off*, and the remainder forced back into its natural location. Barnard is now in the enjoyment of good health. The Doctor has the *amputated lung* now in his possession.

☞ The Baptist Recorder states that the receipts of the month of March, to their Foreign Mission Treasury, amount to $20,000.

The donations to the American Board, for the month of Frebruary, amounted to $23,259.

A Bible Society for Erie County was organized at West Aurora on the 6th ult., by the election of the following officers:

President—WELLS BROOKS, Esq., Springville.
Vice President—WM. PRATT, Newstead.
Secretary—Rev. JAS. REMINGTON, Alden.
Treasurer—Rev. L. A. SKINNER, Lancaster.

EXECUTIVE COMMITTEE.

Rev. H. Eddy, Springville.
Rev. Joseph W. Hines, Springville.
Rev. J. H. Havens, Lancaster.
Rev. R. M. Sandford, West Aurora.
Rev. F. Danforth, Clarence.

Editorial Department.

J. CLEMENT, EDITOR.

BLACKWOOD'S MAGAZINE for March contains a sprightly sketch of some foreigner's travels in this country, called, My Route into Canada, which opens with the following account of the "rise and progress" of the Hudson river:—

"The sources of the Hudson must be sought in those wilds of the State of New York which lie in the interior between Lake Ontario and Lake Champlain. The tide of immigration setting westward through the valley of the Mohawk, or eddying about the shores of those lakes, has insulated that region of country, and it remains to this day almost a wilderness. Within a morning's ride from the springs of Saratoga, where luxury and fashion keep holiday from June to September, one can find oneself in a solitude that would become the Rocky Mountains. The amateur Daniel Boone may there roam through the primeval forests, and even yet snap his trigger at the wild buck, or engage the panteer and bear.

Starting from such a cradle, the Hudson, like a young Hercules playing with serpents, catches up a hundred little tributary brooks, and goes leaping and brawling through the woods till it finds itself a river. Then gathering size and strength every curve of its way, it turns eastward to seek its fortunes in the big world. As if on purpose to try its strength and power, it comes rolling to the rocks at Glenn's falls, and then flings itself down in a froth, with the air of a stripling who signalizes his majority by a terrible outbreak from parental restraint. Then, with a graceful sweep that seems the result of society on the young forester's impetuosity, it turns its full tide into a picturesque valley, and, bending southward, begins its bright and prosperous career. Awhile it loiters along, now winding through meadows, now murmuring through glens; and then catching to its strong embrace the lovely Mohawk that comes down with her roar of waters to meet it, the espoused Hudson, with a new dignity that soon swells into majesty, takes its straight and glorious course through sloping uplands and mountain passes, to lose itself in the sea."

The same article concludes with a lengthy and very candid recital of the bloody strife on the field of Saratoga, which resulted in the surrender of Burgoyne, and from which period, as a British writer has truthfully remarked, "America was a nation." The author of My Route into Canada, says that "the American may justly tread that battle-ground with veneration for the achievement which secured to his country a place among the nations of the world, but not without a holy regard for the disasters, which were like the travail-throes in giving her daughter birth."

The same number of "Maga" contains among other things, an account of the Hudson's Bay Company, which is thrillingly interesting.

For sale by Burke.

GOOD FOR WHAT?—"The writings of George Lippard are good in one respect," observed a "son of the quill." "And what is *that*?" asked a bystander. "They are good for *nothing*," was the reply.

THE KNICKERBOCKER for this month, which contains many good things and may be obtained of Hawks, has the following scrap in the Editor's Table:—

"They have in Buffalo a new and very beautiful Episcopal church, which we remember surveying with pleasure, outside and in, last summer, in company with a friend. We have recently heard an amusing circumstance connected with the figures in stained glass in the eastern window. The process of baking in the colors was a slow one, and the glazier becoming impatient after a long delay, went to the artist to ascertain how far the pictures, which were those of St. Peter and St. Paul, were advanced. The artist replied to this query: 'I've got a first-rate bake on Paul, but Peter is n't more than half baked, and I'm afraid he's a little cracked!' It sounded oddly enough to his interrogator."

MR. EZEKIEL LANE, the first white resident of Buffalo and who built the first house is this place, in 1784, died on Thursday the 6th instant, aged *one hundred and two years!* He was in the Revolution, and fought at the battle of Minisink, in 1779. For the last twenty years he was a member of the Methodist church; and, retaining his mental faculties to the dying hour, he peacefully took

"His chamber in the silent halls of death."

TO PATRONS.—We shall not be able to visit our distant patrons so often as heretofore; hence we hope they will not wait to be called upon for their subscription. Let such as are in arrears remit without delay, one, two, or three dollars according as their accounts stand and their feelings dictate. We want a hundred local agents, besides those already appointed: and among the fifteen or eighteen hundred of our patrons with whom we are personally acquainted, and whom we are pleased to call friends, is there not this number who will pledge themselves to act, and to act efficiently. Our terms of agency are encouraging; and it would be gratifying to receive applications without delay.

THE BUFFALO MEDICAL JOURNAL, edited by AUSTIN FLINT, M. D., is drawing near the close of the third volume. Its circulation has rapidly increased for a year past; and it is destined to take a high stand among the medical periodicals of the country.

SPRINGVILLE ACADEMY.—We learn privately that the next term of this old and flourishing institution will commence the 27th instant. It is located in the pleasantest village in this county, and would be a very healthy place of resort for young persons in the city who wish to spend the summer at school in the country.

HYDROPHOBIA.—Speaking of dogs, the editor of the *Commercial Advertiser*, says that "we shall soon arrive at the season of hydrophobia." It is to be feared that other animals besides dogs will run mad this season.

A USEFUL LIFE AND A PEACEFUL DEATH is the title of a discourse occasioned by the death of Ex-President Adams; delivered in the Ninth-street Baptist church, Cincinnati, Ohio, by the Rev. ELIAS L. MAGOON. It is replete with classical allusions and bears the stamp of genius. Bating a redundancy of quotations, one or two of which are misquoted, it would be difficult to find fault with the production. The following passages on education will commend themselves to every admirer of important thought beautifully expressed:

"The will of God requires us not to elevate a few by depressing the many, but on the contrary to seek the greatest good of the greatest number. What means are to be used? We must educate. Let us not leave the mass of mind to grow ignorant and corrupt, and afterwards attempt coercively to bind it; Xerxes may as well expect to chain the vexed Hellespont in peace. Legislation is impotent any longer to resist the beamings of a brighter day. Knowledge is generous and communicative, and jealousy at its progress is a sure symptom of its want. But, thank God, the day has come when it cannot be successfully resisted. Superstition may condemn Galileo for his improved astronomy, but the earth continues to turn round with all its stupid inhabitants revolving into light. Some are born in darkness, have always dwelt there from choice; it is *their* native land; for if they fight, and it is the only sense in which they are patriotic. This is natural, but they and all like them who fear the effulgence bursting up the horizon, should quickly kindle counter fires and *educate*, EDUCATE! The more obstructions you throw before the flooding tide of knowledge, the more destructive energies will be developed. The force of cannon may quell mobs, but education will prevent them. Moral power creates the strongest munitions of safety; while arbitrary compulsion degrades both the tyrant and his victim. We may expect that a few will continue to cry out against increased illumination, as that which they deprecate shames bigotry, cures superstition, and destroys all tyranny over body and soul. But the fire-cross of wisdom is shining from hill-top to hill-top, and is rapidly bounding from hand to hand. Aggressions into the kingdom of darkness have commenced. We do not 'cry havoc and let slip the dogs of war,' but in God's name and for all God's creatures we do say 'Let there be Light!'"

THE PSALMIST: a collection of Hymns for the use of the Baptist churches. By BARON STOW and S. F. SMITH. Boston: Gould, Kendall and Lincoln.

We have noticed this collection of hymns before. Regarding it as the best of the kind with which we have any acquaintance, we most cheerfully recommend it to the denomination for which it has been compiled.

For sale at Breed's Bookstone, 188 Main-st.

CHRESTOMATHIA OR MORAL AND RELIGIOUS ANECDOTES.—The second number of this really valuable work, has been received and is for sale by L. Danforth, &c. It would make an important addition to one's library, and is cheap at twenty-five cents a number.

AGENTS are informed that we shall be able to furnish the back numbers from the beginning of this volume, for two months to come.

Later from Mexico.

NEW YORK, April 4th—7, P. M.

A despatch from Augusta, Ga., announces an arrival at New Orleans, with dates from Vera Cruz to the 25th. Later accounts had been received from the city of Mexico—the telegraph says to the 25th, which is, of course, a mistake. Probably the dates are to the 20th ult.

A renewal of the difficulties between Generals Scott and Worth had taken place. Mr. Trist had been retained at the capital as a witness against Gen. Scott, but will leave for the U. S. when the Court of Inquiry adjourns.

Gen. Twiggs and a number of other officers have arrived at New Orleans. Col. Henry Wilson has succeeded Gen Twiggs as Governor of Vera Cruz. No more supplies than are necessary are to be sent to the interior, in view of the immediate withdrawal of the troops.

IRELAND.—The monster meeting came off at the North Wall on the 20th ult., and was convened on the requisition of 3,000 persons, the Lord Mayor having refused to call it. The number of persons present were estimated at 10,000, but the reporter for the Morning Chronicle estimates them at 7,000.

In Leipsic, on the 14th, the town was illuminated in honor of the victory gained by the people of Vienna over Metternich, and the announcement of a Constitution to Austria. An address of congratulation was signed by numerous inhabitants to their brothers in Austria.

The news of the proclamation of the French Republic created great excitement in Stockholm. The students assembled and had a grand torch light procession, crying, "Vive la Liberte," "Vive la Republique Francais," "Vive la Sued," "Vive la Charlemagne," "Vive la Chartel Abas les Jesuits." The Police very wisely abstained from all interference, and the students, after parading the city, quietly dispersed.

PLOUGHING WITH ELEPHANTS.—It is stated that in Ceylon, elephants are employed in ploughing new grounds for the cultivation of coffee, pepper, etc. One of these animals when well trained, it is said, will do the work of twenty oxen; consequently, more labor is performed in a given time, and the period is hastened for putting in the crops. The price of an elephant, in Ceylon, varies from $50 to $75.

RHODE ISLAND.—Returns from most of the towns are given in the Providence Journal of the 7th, showing the following aggregates for Governor:

Harris, (Whig) - - -	4976
Hackett, (Dem) - - -	3982
Abolition, - - - -	316

☞ The majority for Hon. HORACE MANN, recently elected to Congress from Massachusetts, to fill the vacancy occasioned by the death of Mr. ADAMS, is 1,118.

HARPER & BROTHERS have in press a great work, called the Encyclopedia of Biography, to appear during the summer. It is being stereotyped.

Major S. Borland has been appointed Senator from the State of Arkansas, to fill the vacancy caused by the resignation of Mr. Sevier.

President's Message on the Overthrow of the French Monarchy.

The following message was received from the President by the hands of his private Secretary, J. KNOX WALKER, Esq:

To the Senate and House of Representatives of the United States:—I communicate to Congress, for their information, a copy of the dispatch, with the accompanying documents, received at the Department of State, from the Envoy Extraordinary and Minister Plenipotentiary of the United States, at Paris, giving official information of the overthrow of French monarchy, and the establishment in its stead, of a provisional government based on republican principles. This great event occurred suddenly, and was accomplished almost without bloodshed. The world has seldom witnessed a more interesting or sublime spectacle than the peaceable design of the French people, resolved to secure for themselves enlarged liberty, and to assert in the majesty of their strength, the great truth, that in this enlightened age, man is capable of governing himself. The prompt recognition of the new government by the representative of the United States, at the French Court, meets my full and unqualified approbation; and he has been authorized in a suitable manner, to make known this fact to the constituted authorities of the French republic, called upon to act upon a sudden emergency, which could not have been anticipated by his instructions.

He judged rightly of the feelings and sentiments of his government and his countrymen, when in advance of the diplomatic representatives of other countries, he was the first to recognize, so far as it was in his power, the free government established by the French people.

The policy of the United States has ever been that of non-intervention in the domestic affairs of other countries, leaving to each to establish the form of government of its own choice. While this policy will be maintained towards France, now suddenly transferred from monarchy into a republic, all our sympathies are naturally enlisted on the side of the great people, who imitating our example have resolved to be free. That such sympathy should exist on the part of the people of the United States with free government in every part of the world, and especially in France, is not remarkable. We can never forget that France was our early friend in our eventful revolution, and generously aided us in shaking off a foreign yoke and becoming a free and independent people. We have enjoyed the blessings of our system of well regulated self-government for near three fourths of a century, and can properly appreciate its value. Our ardent and sincere congratulations are extended to the patriotic people of France, upon their noble, and thus far successful efforts to found for their future government liberal institutions similar to our own. It is not doubted that under the benign influence of free institutions, the enlightened statesmen of republican France will find it to be for her true interest and permanent glory, to cultivate with the United States the most liberal principles of international intercourse and commercial reciprocity, whereby the happiness and prosperity of both nations will be promoted.

JAMES K. POLK.

WASHINGTON, April 3, 1848.

PRAYERS IN PUBLIC BODIES.—For the first time in the history of Pennsylvania, prayers have been regularly offered this session in the Legislature of that State. Clergymen of various denominations officiated alternately.

Arrival of the Washington.

NEW YORK, Jan. 7—3 P M.

The *Washington* sailed 22d.

Some disturbances in France.

Spain, Sardinia and other governments have recognized the Republic.

Order is restored in Lyons.

Victoria delivered of a Princess.

The Austrian Ambassador notified the Provisional Government that Austria would not interfere with France.

Russia has adopted the non-intervention policy.

Disturbances have taken place in Vienna. The troops fired on the people.

Prince Metternich has been driven off, his house burned, and the revolution is complete.—Grand Dukes have retired to private life.

The Emperor of Austria has granted the liberty of the press, and made other concessions.

The people are in rebellion in Wurtemberg.

A successful revolution has also taken place in Berlin. The people assembled—the troops fired upon them—and the King granted all the concessions required.

The Duke of Saxe Coburg Gotha promises a Constitution.

The King of Saxony has been required by Deputations to make reforms, and he promised to refer the matter to the next Diet.

The reply was unsatisfactory, and his Ministers resigned. An Extraordinary Diet was called. Disturbances prevail all over Germany.—The people are burning the castles of the nobility.

The King of Naples consented to the formation of Sicily as a separate State.

A constitution was to be proclaimed at Rome on the 11th.

There is a report of a League between the Pope and the Duke of Tuscany, and the King of Sardinia.

There is a report that Milan is in open revolution, and that it has been bombarded by the Austrians, which however, is doubted.

At Warsaw, censorship has prohibited the mention of the French Revolution.

At Posen, the Revolution created great sensation.

Lord CLARENDON is spoken of as successor to Lord JOHN RUSSELL.

France is in great financial difficulties. There are great fears of outbreaks in Scotland. The marine of England is being increased. Large numbers of troops are in Dublin prepared to suppress an insurrection.

The *Gazette Silesio* reports the death of the Emperor of Russia. Letters from St. Petersburgh to the 3d March say nothing on the subject.

Louis Philippe resides at Claremount, and has frequent interviews with ex-Ministers.

The people are in arms against Elector Hesse Cassel. Three days have been given to decide to grant or refuse reforms.

Don Carlos of Spain is about to join the Duc de Bordeaux at Venice.

There is a rumor at Kiel that Copenhagen is in open insurrection. The King was besieged in his palace.

The grand Duke Wiemer was besieged in his palace also, when he promised the liberty of the press, &c.

Elector Hesse Cassel barely escaped with his life.

Bavaria is quiet, and the King is popular.

The Duke of Nassau and free city Lubec decreed the liberty of the press.

There was a rumor in London that an attempt was made on the life of the Queen of Spain.

Three private banks in Paris have stopped.

The French Committee organization have fixed the term of labor per diem to eleven hours.

Large numbers of workmen have been employed by Government.

Disturbances have taken place at Hamburgh and Lubec. Several persons were killed and the riot was suppressed.

A German Journal says Hungary has declared itself independent of Austria, and has established a Republic.

Lola Montez has returned to Munich in male attire. Great excitement prevailed at her audacity. The king arrested her sent her and sent her away.

The Duke and Duchess D'Aumale and Prince de Joinville have gone to England.

The prospects of the industrial trade in France are very unfavorable. The future is replete with anxiety and trouble.

The only quotations of breadstuffs that I can find, are—

LIVERPOOL, Saturday.

Flour, 28a29; Corn, 28a31; Wheat, Canadian 7a8. At London—Corn, 28a32; Flour, 26a28.

SANDWICH ISLANDS.—Rev. Mr. THURSTON, in a recent letter from Kailua, Island of Hawaii, says there is a more religious interest among the people than has been witnessed for several years past, and, as in other parts of the Island, the schools are improving under the new system.—He also states that the chief who succeeded Kaukini as Governor of Hawaii, has been removed for want of mental and moral qualifications; and that one of the common people, far better qualified for the office, is now the acting Governor.—"This," says the Missionary Herald for April, "is a new and strange thing under the Hawaiian sun; and by teaching the people, impressively, the advantage of knowledge and virtue, exercised a very beneficial influence on the cause of education."

FIRST IMPRESSIONS.—If you want to gain any man's good opinion, take particular care how you behave the first time you are in company with him. The light you first appear in to one who is neither inclined to think well or ill of you, will strongly prejudice him either for or against you.

DR. COX AND THE WAGONER.—The Rev. Dr. Cox, of Brooklyn, is a man of talents, and we have heard him discourse when his energetic and fervid eloquence forcibly impressed us, but he has recently been placed in two unpleasant predicaments. The first was that little affair with Capt. Hoskin, touching the Great Britain steamer, and the cause of her being wrecked, in which he came off second best, to say the least; the second we will proceed to illustrate:

The Doctor was driving out in thoughtful mood the other day in a one horse wagon, in a narrow street in the suburbs of the town, when two wagons, one on each side, attempted to pass him.—All three got stuck fast together, "so that they could not be moved." After trying for some time, a crowd began to collect around, and Dr. Cox began to grow red in the face and to remonstrate in strong terms, and with much repetition against the carelessness of one of the green delinquents. At last the other replied (and we suspect the wag must have known the Doctor)—

"I—I—I couldn't help it; you *know* I couldn't, and what then is the use of an old white-headed man like you standing there, *swearin'* at me in that way?—swearin' at me for what I couldn't help? What's the use of swearin' any how?—I couldn't help it, I tell you; I didn't *go* to do it, 'course! Swearin' away at a fellow for what he didn't go to do!"

The Doctor blushed, and looked a little guilty: the charge was so *outrageous*, he couldn't help it; and it was made before a good many bystanders who had often seen him in the pulpit.

"I *swear* at you?" exclaimed the Doctor in utter amazement.

"Ye-a-a-a-s!" said the other, with prolonged emphasis; "swearin' at a fellow like a trooper, when he didn't go to get you stuck!"

The Doctor shrunk away abashed, he being fairly driven from the ground.

COOLNESS AND GOOD FORTUNE.—On Friday last, at a sale of plants at auction in the Arcade, General T. N. Waul, of Mississippi, while under the pressure of a large crowd of people, felt the pressure particularly severe in the region of his pocket-book, which he soon after discovered had been taken from him by some pickpocket. The pocket-book contained a large amount of money. Without being disconcerted, as is generally the case, the General walked quietly without any outcry to the door, to prevent egress from the room. He then addressed the crowd, stating his loss and his belief that the gentlemen present would aid him in detecting the thief. A general search was proposed, which was readily assented to by the shouts of those present. As the operation was about to begin, a gentleman present saw the waving and agitation of a large plant, as tho' a bird had just alighted upon a slender bough.—Upon examination the bird was found to be the identical pocket-book which had been lost—the rogue who stole it, no doubt, finding it like a hot potatoe, hard to hold, took this means of relieving himself of his ill-gotten treasure. The general then informed the assemblage that the pocket-book was unrifled of any of its contents, and thanked them for the ready manner in which they had assented to the "searching operation;" closing with the remark that no crowd could be found where a combination of honest men would not triumph over, and detect the rogues.—*New Orleans Pic., March* 12.

☞ At a recent examination of Law Students at Rochester, the Judge intimated that a majority of them were numbscalls, but to spare their feelings he would admit them all to the Bar.

Congressional.

WASHINGTON, April 6.

Mr. Hannegan from the Committee on Foreign Relations, reported a joint resolution of congratulations to France, but on motion of Mr. Allen, his resolutions on this subject offered several days ago, were taken up, and Mr. A made a forcible speech in favor of them.

Mr. Hale's amendment in regard to the abolition of slavery in the French Islands being read, Mr. Mangum proposed a substitute for the resolutions and amendment, which was lost.

Mr. Niles thought Mr. Allen's resolutions went beyond the facts and expressed more than had actually occurred in France. He thought we had better wait till France established a Republic before offering our congratulations.

Mr. Dickinson spoke at length in favor of the Resolutions. He was satisfied with what France had already done.

Mr. Hale gave his views at length, and tho't France had done much for liberty, and deserved our warmest congratulations.

Mr. Hannegan and Mr. Downs advocated the immediate adoption of the resolution.

Mr. Henly reported in favor of the printing of 10,000 extra copies of the Trist and Scott correspondence, which gave rise to an animated debate in regard to the treatment of Gen. Scott by the Government.

Messrs. Henly, Klingman and Turner participated in the discussion.

FRIDAY, April 7.

SENATE.—A debate was had on the proceedings in relation to the Fremont Court Martial.

Mr. Cass moved to take up the Volunteer Bill, but after some discussion, the motion was passed over.

The bill authorizing the sitting of the U. S. Supreme Court during the year, was rejected after some debate.

The Senate then went into Executive session.

HOUSE.—The French sympathy resolutions were received from the Senate.

The bill establishing regulations in regard to ships engaged in the transportation of emigrants, was passed.

SATURDAY, April 8.

Nothing of moment done in the House. The Senate not in session.

In Senate, yesterday, Mr. Hale, of New Hampshire, presented a number of Abolition petitions. Mr. Hale also presented a petition that Congress would prohibit Slavery and Monarchy on this Continent. Referred to Committee on Foreign Relations.

Mr. Dickinson gave notice that he should on Tuesday next move that the bill to establish a new branch mint be taken up for the perpose of making it the special order at an early day.

Mr. Badger introduced a resolution instructing the committee on printing to inquire as to the expediency of repealing the joint resolution requiring public printing to be alloted by contract.

A message from the President communicating the number of troops sent to Mexico, the number killed and wounded, and the number perished by disease, was received.

The California claim bill was then taken up. Mr. Andrew Stewart moved to suspend the rules in order to take up the Senate's resolutions of sympathy with the French people. The motion prevailed.

Mr. Ashman addressed the House and gave his reasons for moving to amend the resolutions on the same subject, offered by Mr. Cummings of Ohio, and for refraining from such a motion in connection with the present resolutions. The latter originated in the Senate and are entitled, for that reason, to much more consideration.—He then entered upon the slavery question and replied to Mr. Bailey.

Mr. Baily replied with a great deal of warmth.

Mr. Stevens moved a verbal amendment.—Lost.

The question was then taken on the adoption of the resolutions. Adopted—174 yeas—2 nays. The two nays were Messrs. Cranston and Root.

Arrival of the Hibernia.

NEW YORK, April 10—3 P. M.

The Hibernia arrived last night at eleven o'clock, in fifteen days passage.

LONDON, March 24.

Corn trade duff, and no quotations of prices.

LIVERPOOL, March 24.

Wheat dull—lower prices than on sailing of the Washington. Flour 6d per bbl lower, and 1s per sack.

Indian corn 1s per quarter lower—Indian meal 6d lower.

FRANCE.—Nothing startling. Going on well. Financial difficulties continue. A Revolution has taken place in Lombardy. The Viceroy has fled from Milan, and the people there are triumphant. The troops are negociating with them to evacuate.

The Pope has granted a Constitution to the People of Rome.

Great rejoicing in Vienna. All tranquil there.

BERLIN.—The people are triumphant. The Ministers have been dismissed, and the Constitution promised.

CRACOW.—A Republic proclaimed.

HANOVER.—Emeute—order maintained. The King abolishes censorship, and other reforms are promised.

DENMARK.—Disturbances have taken place in Denmark, and a Constitution has been refused. The German Duchies reject the King's plan, and unite with Denmark.

Hungary and Bohemia are all alive and on the point of revolt.

Lola Montez has been in Munich again, and has been sent away to Switzerland. The King of Bavaria is reported to have abdicated.

Russia is making military preparations for self defence.

Luxembourg has declared itself a Republic.

Ireland is tranquil. The leader of the Young Ireland party has been arrested for sedition.

The French Minister of War is very busy preparing an army of observation for eastern frontiers.

The Constitution of Rome permits the judicial tribunals to be independent of the government.—No extraordinary commission is requisite. Courts to be in future established. The Pope prorogues Legislation. The Chamber dissolves the Council of Deputies, being required to convoke a new Chamber within three months afterwards. The sessions are to be public. The members of the Senate are appointed by the Pope for life. The qualification of Senators is the age of 30 years and

plenary exercise of civil and political rights. The Senate will be chosen par preference from the Prelates and Ecclesiastics, Ministers, Judges, Councillors of State, Consistorial Lawyers and the possessors of an income of four thousand scudi per annum.

BERLIN.—Hard fighting took place between the Government troops and the people. The people fired from behind barricades and the roofs of houses and did great execution. The troops fired grape, and a great deal of bloodshed took place. The alarm bells were rung and universal terror prevailed, especially among the women.

The next day the King proclaimed an amnesty, on which occasion a change of ministry took place and the King promised to forget and forgive all, and hoped the people would do the same. The people were satisfied.

The inhabitants of Cracow announced themselves a Republic on the 18th. Fifteen thousand insurgents were under arms on the day before. The Governor was compelled to release four hundred political prisoners.

NEW YORK, April 7—7 P. M.

ENGLAND.—In the House of Commons, Mr. Hume's motion that the income tax shall be imposed for one instead of three years, negatived, 363 to 138.

FRANCE.—M. Rollin issued a circular which created a considerable excitement among the people.

A decree for troops came near upsetting the Government. The old Guard were greatly enraged, and 3,000 marched to the Hotel de Ville, and demanded a repeal of the obnoxious decree. No promise was given, and they threatened to take the matter into their own hands if their request was not complied with. The following day the Guards to the number of 5,000 appeared unarmed. The people also assembled in multitudes and hissed them. The Government still refused to withdraw the decree, which created great excitement, and terrible collision was anticipated.

A majority of the Provisional Government demanded the resignation of Rollin. This he refused, and threatened to appeal to the people. M. Pages drew a pistol, but the matter was finally hushed up.

Mobs menaced the manufacturing establishments in the vicinity of Havre and other parts of France, threatened them with conflagration, unless all the British workmen were dismissed.

The new Government of France is being somewhat weakened by a commercial and monetary crisis. Several large establishments have been declared bankrupt and others are closing their business.

There are about 500,000 men out of employment in Paris and the principal cities. As late as the 18th inst. Paris was tranquil.

LIFE.

In childhood when the golden sand
Stands high within the magic glass,
We shake it with a careless hand
And heedless see the atoms pass.

But when the footsteps of the years,
Have left their traces on the brow,
And worn deep channels where the tears
Of unforgotten sorrows flow—

Within the glass the sparkling grain
Falls with a sad and warning tone,
Yet half with pleasure, half with pain,
We count them falling one by one.

MARRIED.

On the 4th instant, by Rev. Dr. Tucker, Mr. JOHN G HOYT, and Miss SARAH McALLESTER.

DIED.

On the 5th inst., MATILDA DAVIS, wife of Rev. A. Davis, aged 30 years.

On the 6th inst., HERMAN WENDELL GRIFFITH, son of John Morris and Catalina W. Griffith, aged 4 years and 28 days.

On the 6th instant, Mr. EZEKIEL LANE, aged 102 years.

In the city of New York, on the 7th inst., CHARLES HENRY, only son of Charles P. and Mary Salisbury, aged 6 months and 11 days.

FEMALE SEMINARY.

THE regular Spring and Summer Sessions of the BLACK ROCK FEMALE SEMINARY will commence on the first Wednesday in May, and continue twenty-two weeks, under the direction of Mrs. C. H. STEELE, as Principal, aided by competent Assistant Teachers.

The Seminary buildings are commodious, and are pleasantly located within a mile of the limits of Buffalo, on a site commanding Lake Erie and the Niagara River—uniting the advantages of country air and quietude with all the privileges of the city.

TERMS.—For Board, Washing, and Tuition in all the English Studies, $113 per annum. The extra charges are, for lessons on the Piano or Harp $18 per Quarter; on the Organ $25; on the Guitar $6; the German or French Language $7 50; Drawing and Painting $5.

☞ Circulars, containing further particulars, may be obtained by applying to the Principal or Trustees.

April, 18, 1848. mh18.

T. S. HAWKS,

LITERARY DEPOT, Post-Office Buildings, Buffalo, N. Y. All the Cheap Publications, Magazines, &c., kept constantly on hand, at New York prices. Orders by mail attended to when accompanied with the cash.

AMBROSE S. CARNER,

DRAPER AND TAILOR, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected; comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great variation. Their facilities as Publishers enable them to offer Booksellers as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
No. 164 Main-Street, Buffalo.

The Gone Before.

Gone before
To that unknown and silent shore—*Chas. Lamb.*

O, could we see that band—
The friends of other years,
Lights of this vale of tears—
Whose spirits now expand
Within the happy land;—

Could we hear once again
Each well remembered voice,
Say comforting,—"rejoice!
Our hearts with yours remain;
Life's love we still retain;"—

Then might we mourn no more,
But calm and trusting, wait
Till Death unbars the gate,
That shuts us from the shore
Where they have gone before.

April, 1848. J. H. B.

The Canterbury Pilgrims.

BY NATHANIEL HAWTHORNE.

The summer moon, which shines in so many a tale, was beaming over a broad extent of open country. Some of its brightest rays were flung into a spring of water, where no traveller, toiling as the writer has, up the hilly road beside which it gushes, ever failed to quench his thirst. The work of neat hands and considerate art, was visible about this blessed fountain. An open cistern, hewn and hollowed out of solid stone, was placed above the waters, which filled it to the brim, but, by some invisible outlet, were conveyed away without dripping down its sides. Though the basin had not room for another drop, and the continual gush of water made a tremor on the surface, there was a secret charm that forbade it to overflow. I remember, that when I had slaked my summer thirst, and sat panting by the cistern, it was my fanciful theory, that nature could not afford to lavish so pure a liquid, as she does the waters of all meaner fountains.

While the moon was hanging almost perpendicularly over this spot, two figures appeared on the summit of the hill, and came with noiseless foot-steps down toward the spring. They were then in the first freshness of youth; nor is there now a wrinkle on either of their brows, and yet they wore a strange, old-fashioned garb. One, a young man with ruddy cheeks, walked beneath the canopy of a broad-brimmed gray hat; he seemed to have inherited his great-grandsire's square-skirted coat, and a waistcoat that extended its immense flaps to his knees; his brown locks, also, hung down behind, in a mode unknown to our times. By his side was a sweet young damsel, her fair features sheltered by a prim little bonnet, within which appeared the vestal muslin of a cap; her close, long-waisted gown, and indeed her whole attire, might have been worn by some rustic beauty who had faded half a century before. But that there was something so warm and life-like in them, I would here have compared this couple to the ghosts of two young lovers, who had died long since in the glow of passion, and now were straying out of their graves, to renew the old vows, and shadow forth the unforgotten kiss of their earthly lips beside the moon-lit spring.

"Thee and I will rest here a moment, Miriam," said the young man, as they drew to the stone cistern, "for there is no fear that the elders know what we have done; and this may be the last time we shall ever taste this water."

Thus speaking, with a little sadness in his face which was also visible in that of his companion, he made her sit down on a stone, and was about to place himself very close to her side; she, however, repelled him, though not unkindly.

"Nay, Josiah," said she, "giving him a timid push with her maiden hand, "thee must sit farther off, on that other stone, with the spring between us. What would the sisters say, if thee were to sit so close to me?"

"But we are of the world's people now, Miriam," answered Josiah.

The girl persisted in her prudery, nor did the youth, in fact, seem altogether free from a similar sort of shyness; so they sat apart from each other, gazing up the hill, where the moonlight discovered the tops of a group of buildings. While their attention was thus occupied, a party of travellers, who had come wearily up the long ascent, made a halt to refresh themselves at the spring. There were three men, a woman and a little girl and boy. Their attire was mean, covered with the dust of a summer's day, and damp with the night dew; they all looked woe-begone, as if the cares and sorrows of the world grew heavier as they climbed the hill; even the two children appeared older in evil days, than the young man and maiden who had first approached the spring.

"Good evening to you, young folks," was the salutation of the travellers; and "Good evening, friends," replied the youth and damsel.

"Is that white building the Shaker meeting house?" asked one of the strangers. "And are those the red roofs of the Shaker village?"

"Friend, it is the Shaker village?" answered Josiah, after some hesitation.

The travellers, who from the first had looked suspiciously at the garb of these young people, now taxed them with an intention, which all the circumstances, indeed, rendered too obvious to be mistaken.

"It is true, friends," replied the young man, summoning up his courage. "Miriam and I have a gift to love each other, and we are going among the world's people, to live after their fashion. And ye know that we do not transgress the law of the land; and neither ye nor the elders themselves, have a right to hinder us."

"Yet you think it expedient to depart without leave taking," remarked one of the travellers.

"Yea, y-e-a," said Josiah, reluctantly, "because father Job is a very awful man to speak with, and being aged himself, he has but little charity for what he calls the iniquities of the flesh."

"Well," said the stranger, "we will neither use force to bring you back to the village, nor will we betray you to the elders. But sit you

here awhile, and when you have heard what we shall tell you of the world which we have left, and into which you are going, perhaps you will turn back with us of your own accord. What say you?" added he, turning to his companions. "We have travelled thus far without becoming known to each other. Shall we tell our stories, here by this pleasant spring, for our own pastime, and the benefit of these misguided young lovers?"

In accordance with this proposal the whole party stationed themselves round the stationed themselves round the stone cistern. The two children, being very weary fell asleep upon the damp earth, and the pretty Shaker girl, whose feelings were those of a man or a Turkish lady, crept as close as possible to the female traveller, and as far as she well could from the unknown men. The same person who had hitherto been the chief spokesman, now stood up, waving his hat in his hand, and suffered the moonlight to fall upon his front.

"In me," said he, with a certain majesty of utterance, "in me you behold a poet."

Though a lithographic print of this gentleman is extant, it may be well to notice, that he was now nearly forty, a thin and stooping figure, in a black coat, out at the elbows; but notwithstanding the ill condition of his attire, there were about him several tokens of a peculiar sort of foppery, unworthy of a mature man; particularly in the arrangement of his hair, which was so disposed as to give all possible loftiness and breadth to his forehead. However, he had an intelligent eye, and on the whole, a marked countenance.

"A poet!" repeated the young Shaker, a little puzzled how to understand such a designation, seldom heard in the utilitarian community, where he had spent his life. "O, ay, Miriam, he means a verse maker, thee must know."

This remark jarred upon the susceptible nerves of the poet; nor could he help wondering what strange fatality had put into this young man's mouth an epithet, which ill-natured people had affirmed to be more proper to his merit than the one assumed himself,

'True, I am a verse maker," he resumed, "but my verse is no more than the material body into which I breathe the celestial soul of thought. Alas! how many a pang has it cost me, this same insensibility in the etherial essence of poetry with which you have here tortured me again, at the moment when I am to relinquish my profession forever! Oh, Fate! why hast thou warred with Nature, turning all her higher and more perfect gifts to the ruin of me their possessor? What is the voice of song, when the world lacks the ear of taste? How can I rejoice in my strength and delicacy of feeling, when they have but made great sorrows out of little ones? Have I dreaded scorn like death, and yearned for fame as others pant for vital air, only to find myself in a middle state between obscurity and infamy? But I have my revenge! I could have given existence to a thousand bright creations. I crush them into my heart, and there let them petrify! I shake off the dust of my feet against my countrymen! But posterity, tracing my footsteps up this weary hill, will cry shame upon the unworthy age that drove one of the fathers of American song to end his days in a Shaker village!"

During this harangue, the speaker gesticulated with great energy, and, as poetry is the natural language of passion, there appeared reason to apprehend his final explosion into an ode extempore. The reader must understand, that for all these bitter words, he was a kind, gentle, harmless, poor fellow enough, whom Nature, tossing her ingredients together without looking at her receipt, had sent into the world with too much of one sort of brain and hardly any of another.

"Friend," said the young Shaker, in some perplexity, "thee seemest to have met with great troubles, and, doubtless, I should pity them if—if I could but understand what they were."

"Happy in your ignorance!" replied the poet, with an air of sublime superiority. "To your coarser mind, perhaps, I may seem to speak of more important griefs, when I add, what I had well nigh forgotten, that I am out at the elbows and almost starved to death. At any rate, you have the advice and example of one individual to warn you back; for I am come hither a disappointed man, flinging aside the fragments of my hopes, and seeking shelter in the calm retreat, which you are so anxious to leave."

"I thank thee, friend," replied the youth, "but I do not mean to be a poet, nor Heaven be praised! do I think Miriam ever made a verse in her life. So we need not fear disappointment. But Mirirm," he added with real concern, "thee knowest that the elders admit nobody that has not a gift to be useful. Now what under the sun can they do with this poor verse maker?"

"Nay, Josiah, do not thee discourage the poor man," said the girl, in all simplicity and kindness. "Our hymns are very rough, and perhaps they may trust him to smooth them."

Without noticing this hint of professional employment, the poet turned away, and gave himself up to a sort of vague reverie, which he called thought. Sometimes he watched the moon, pouring a silvery liquid on the clouds, through which it slowly melted till they became all bright; then he saw the same sweet radiance dancing on the leafy trees, which rustled as if to shake it off, or sleeping on the high tops of hills, or hovering down in distant vallies, like the materials of unshaped dreams; lastly, he looked into the spring, and there the light was mingled with the water. In its crystal bosom, too, holding all Heaven reflected there he found an emblem of a pure and tranquil breast. He listened to that most etherial of all sounds, the song of crickets, coming in full choir upon the wind, and fancied that if moonlight could be heard, it would sound just like that. Finally he took a draught at the Shaker spring, and, as if it were the true Castalia, was forthwith moved to compose a lyric, a Farewell to his Harp, which he swore should be its closing strain, the last verse that an ungrateful world should have from him. This effusion, with two or three other little pieces, subsequently written, he took the first opportunity to send by one of the Shaker brethren to Concord, where they were published in the New Hampshire Patriot.

Meantime, another of the Canterbury Pilgrims, one so different from the poet, that the delicate fancy of the latter could hardly have conceived of him, began to relate his sad experience. He was a small man, of quick and unquiet gestures, of about fifty years old, with a narrow forehead, all wrinkled and drawn together. He held in his hand a pencil, and a card of some commission merchant in foreign parts, on the back of which, for there was light enough to read and write by, he seemed ready to figure out a calculation.

"Young man," said he abruptly, "what quantity of land do the Shakers own here in Canterbury?"

"That is more than I can tell thee, friend," answered Josiah, "but it is a very rich establishment, and for a long way by the road side, thee may guess the land to be ours by the neatness of the fences."

"And what may be the value of the whole," continued the stranger, "with all the buildings and improvements, in round numbers?

"Oh, a monstrous sum more than I can reckon." replied the young Shaker.

"Well, sir," said the Pilgrim, "there was a day and not very long ago, neither, when I stood at my counting-room window, and watched the signal flags of three of my own ships entering the harbor from the East Indies, from Liverpool, and from up the Straits: and I would not have given the invoice of the least of them for the title deeds of this whole Shaker settlement. You stare.—Perhaps now you wont believe that I could have put more value on a little piece of paper no bigger than the palm of your hand, than all these solid acres of grain, grass and pasture land would sell for?"

"I won't dispute it, friend," answered Josiah, "but I know I had rather have fifty acres of this good land, than a whole sheet of thy paper."

"You may say so now," said the ruined merchant, bitterly, "for my name would not be worth the paper I should write it on. Of course you must have heard of my failure?"

And the stranger mentioned his name, which, however mighty it might have been in the commercial world, the young Shaker had never heard of among the Canterbury hills.

"Not heard of my failure!" exclaimed the merchant, considerably piqued. "Why it was spoken of on 'Change in London, and from Boston to New Orleans, men trembled in their shoes. At all events I did fail, and you see me here on my road to the Shaker village, where, doubtless, (for the Shakers are a shrewd set,) they will have a due respect for my experience, and give me the management of the trading part of the concern, in this case, I think I can pledge myself to double their capital in four or five years. Turn back with me, young man, for though you will never meet with my good luck, you can hardly escape my bad."

"I will not turn back for this," replied Josiah, calmly, "any more than for the advise of the verse maker, between whom and thee, friend, I see a sort of likeness, though I can't justly say where it lies. But Miriam and I can earn our daily bread among the world's people, as in the Shaker village. And do we want any thing more, Miriam?"

"Nothing more, Josiah," said the girl quietly.

"Yes, Miriam, and daily bread for some other little mouths, if God send them," observed the simple Shaker lad.

Miriam did not reply, but looked down into the spring, where she encountered the image of her own pretty face, blushing within the prim little bonnet. The third pilgrim now took up the conversation. He was a sunburnt countryman of tall frame and bony strength, on whose rude and manly face there appeared a darker, more sullen and obstinate despondency, than on those of either the poet or the merchant.

"Well now youngster," he began, "these folks have had their say, so I'll take my turn. My story will cut but a poor figure by the side of theirs; for I never supposed that I could have a right to meat and drink, and great praise besides, only for tagging rhymes together, as it seems this man does; nor ever tried to get the substance of hundreds into my own hands, like the trader, there. When I was about of your years, I married me a wife, just such a neat and pretty young woman as Miriam, if that's her name, and all I asked of Providence was an ordinary blessing on the sweat of my brow, so that we might be decent and comfortable, and have daily bread for ourselves, and for some other little mouths that we soon had to feed. We had no very great prospects before us; but I never wanted to be idle, and I thought it a matter of course that the Lord would help me, because I was willing to help myself."

"And did'nt He help thee, friend?" demanded Josiah, with some eargerness.

"No," said the yeoman sullenly; for then you would not have seen me here. I have labored hard for years; and my means have been growing narrower, and my living poorer, and my heart colder and heavier all the time; till at last I could bear it no longer. I set myself down to calculate whether I had best go on the Oregon expedition, or come here to the Shaker village; but I had not hope enough left in me to begin the world over again; and to make my story short, here I am. And now, youngster, take my advice and turn back; or else, some few years hence, you'll have to climb this hill with as heavy a heart as mine."

This simple story had a strong effect on the young fugitives. The misfortunes of the poet and merchant had won little sympathy from their plain good sense and unworld feelings, qualities which made them such unprejudiced and inflexible judges, that few men would have chosen to take the opinion of this youth and maiden, as to the wisdom or folly of their pursuits. But here was one whose simple wishes had resembled their own, and who, after efforts that almost gave him a right to claim success from fate, had failed in accomplishing them. "But thy wife, friend," exclaimed the young man. "What became of the pretty girl like Miriam? Oh, I am afraid she is dead!"

"Yea, poor man, she must be dead, she and the children, too," sobbed Miriam.

The female pilgrim had been leaning over the spring, wherein latterly a tear or two might be seen to fall, and form its little circle on the surface of the water. She now looked up, disclosing features still comely, but which had acquired an expression of fretfulness, in the same long course of evil fortune that had thrown a sullen gloom over the temper of the unprosperous yeoman.

"I am his wife," said she, a shade of irritability just perceptible in the sadness of her tone.—"These poor little things asleep on the ground are two of our children. We had two more, but God has provided better for them than we could, by taking them to Himself."

"And what would thee advise Josiah and me to do?" asked Miriam, this being the first question which she had put to either of the strangers.

"'Tis a thing almost against nature for a woman to try to part true lovers," answered the yeoman's wife, after a pause; "but I'll speak as truly to you as if these were my dying words. Though my husband told you some of our trouble, he did'nt mention the greatest, and that which makes all the rest so hard to bear. If you and your sweetheart marry, you'll be kind and pleasant to each other for a year or two, and while that's the case, you never will repent; but by-and-by he'll grow gloomy, rough and hard to please, and you'll be pevish and full of little angry fits, and apt to be complaining by the fireside when he comes to rest himself from his troubles out of doors; so your love will wear away by little and little, and leave you miserable at last. It has been so with us; and yet my husband and I were true lovers once, if ever two young folks were."

As she ceased, the yeoman and his wife exchanged a glance in which there was more and warmer affection than they had supposed to have escaped the frosts of a wintry fate in either of their breasts. At that moment, when they stood at the utmost verge of married life, one word fitly spoken, or perhaps one peculiar look, had they had mutual confidence enough to reciprocate it, might have renewed all their old feelings, and sent them back, resolved to sustain each other amid the struggles of the world. But the crisis past, and never came

again. Just then, also, the children, roused by their mother's voice, looked up and added their wailing accents to the testimony borne by all the Canterbury Pilgrims against the world from which they fled.

"We are tired and hungry," cried they. "Is it far to the Shaker village."

The Shaker youth and maiden looked mournfully into each other's eyes. They had but stepped across the threshold of their homes, when lo! the dark array of cares and sorrows that rose up to warn them back. The varied narratives of the strangers had arranged themselves into a parable; they seemed not merely instances of woeful fate that had befallen others, but shadowy omens of disappointed hope and unavailing toil, domestic grief and estranged affection that would cloud the onward path of those two fugitives. But after one instant's hesitation, they opened their arms and sealed their love with as pure and fond an embrace as ever youthful love had hallowed.

"We will not go back," said they. "The world never can be dark to us, for we will always love one another."

Then the Canterbury pilgrims went up the hill, while the poet chanted a drear and desperate stanza of the "Farewell to his Harp," fitting music for that melancholy band. They sought a home where all former ties of nature or society would be sundered and all old distinctions levelled, and a cold and passionless security be substituted for moral hope and fear, as in that other refuge of the world's weary outcasts, the grave. The lovers drank at the Shaker spring, and then, with chastened hopes, but more confiding affection, went on to mingle in an untried life.

THE VOICE OF THE GRASS.

Here I come creeping, creeping everywhere,
By the dusty road side,
On the sunny hill side,
Close by the noisy brook,
In every shady nook,
I come creeping, creeping everywhere.

Here I come creeping, smiling everywhere,
All round the open door,
Where sit the aged poor,
Here where the children play,
In the bright and merry May,
I come creeping, creeping everywhere.

Here I come creeping, creeping everywhere,
In the noisy city street,
My pleasant face you'll meet,
Cheering the sick at heart,
Toiling his busy part,
Silently creeping, creeping everywhere.

Here I come creeping, creeping everywhere,
You cannot see see me coming,
Nor hear my low, sweet humming;
For in the starry night,
And the glad morning light,
I come quietly creeping everywhere.

Here I come creeping, creeping everywhere,
More welcome than the flowers,
In summer's pleasant hours,
The gentle cow is glad,
And the merry bird not sad
To see me creeping, creeping everywhere.

Here I come creeping, creeping everywhere,
When you're numbered with the dead,
In your still and narrow bed,
In the happy spring I'll come,
And deck your silent home;
Creeping, silently creeping everywhere.

Here I come creeping, creeping everywhere,
My humble song of praise,
Most gratefully I raise
To Him, at whose command
I beautify the land,
Creeping, silently creeping everywhere.

The Legend of the Black Vein of Sombrerete.

The following story is from Mr. RUXTON'S work on "Mexico and the Rocky Mountains." It is one of the most original productions of modern literature. It was told Mr. R. by an old Indian Miner. Mr. R. says:

His gesticulations, and the solemn asseverations of the truth of the story with which he frequently interrupted it, greatly amused me; and perhaps no more appropriate locale for the narration of such a tale could be found than the spot in which we then were sitting. In the large vaulted building, with its earthen walls covered with mould, and deep recesses, into which the blaze from the fire scarcely penetrated, the old Indian sat cowering over the fire, his sharp, attenuated features lighted up with animation as he narrated his story, stopping occasionally to puff from his mouth and nose a cloud of tobacco smoke, and drawing round his naked figure a tattered blanket, as a cold blast of wind rushed through chinks in the dilapidated wall. In nearly these words, he repeated

The Legend of the Black Vein of Sombrerete.
("La Veta Negra de Sombrerete.")

Ojala por los dias de oro!—oh for the days of gold—sighed the old gambucino: pero ya se a cabo todo eso—but *that* is all over now; ni oro, ni plata hay—neither gold nor silver is to be had now a days for picking or digging. Pedazitos, no mas—little bits one grubs up here and there; pero *se acabo la veta negra*—but the black vein, the black vein; onde esta?—where is it? Worked out long ago.

I was no older than your worship in those days, and my back was strong. Valgame madre santissima! but I could pack the ore nimbly in the mine and up the shaft. Ay, and *then* all worked with a will, for it was all *bonanza;* day after day, month after month, year after year, there we were at the same old vein; and the more we cut into it, the richer it grew. Ay que plata! Oh what silver came out of that old vein! blanco, rico, pesado—white, rich and heavy it was—all silver, all silver. Five hundred pesos fuertes I made in one week. *Que hermosita era aquella veta negra!*—what a beautiful little vein was that black one!

But your worship yawns, and my poor old head turns round, when it thinks of that time. Pues, senor. All the miners (for there were no gambucinos then) were making dollars as fast as they could, but the more they got, the more they wanted; although not one of the laziest but had more than he ever before had dreamed of possessing. However, they were not satisfied, and all complained because they did not strike a richer vein than the old veta negra—as if that was possible!

The most dissatisfied of all the miners was a little deformed man called Pepito, who did nothing but swear at and curse his bad luck, although he had made enough of money to last three of his lives; and the miserly style in which he lived was the by-word of every body.

However, whether it was from a bitterness of spirit caused by his deformity, or from genuine badness of heart, Pepito was continually grumbling at the old vein, calling it by every opprobrious epithet which he could summon to the end of his tongue, and which was enough to break the heart of any vein, even of iron.

One night—it was the fiesta of San Lorenzo—all the miners were away in the town, for they had agreed to give themselves a holiday; but Pepito took his basket and pick, and declared his

intention of remaining to work: "for," said he, "what time have I for holiday, when, with all my work, work, work' I only get enough out of that stony old vein to keep me in frijolitos, without a taste of pulque, since—quien sabe?—how long ago? Maldita sea la veta, digo yo—curse such a vein, say I!"

Valgame Dios!—this to the black vein of Sombrerete! apostrophized the old gambucino.

Now your worship knows, of course, (but quien sabe? for foreigners are great fools,) that every mine has its metal king, its *minapadre*, to whom all the ore belongs. He is, your worship knows, not a man, nor a woman, but a spirit—and a very good one, if he is not crossed or annoyed; and when the miners curse or quarrel at their work, he often cuts off the vein, or changes it to heavy lead or iron; but when they work well and hard, and bring him a good stock of cigarros, or leave him in the gallery, when they quit the mine, a little bottle of pulque or mezcal, then he often sends bonanzas, and plenty of rich ore.

Well, every one said, when they heard Pepito's determination to remain alone in the mine, and after he had so foully abused the celebrated veta negra, "Valgame! if Pepito doesn't get a visit from padre mina to-night, it's because he has borrowed holy water or a rosarioncito from Father Jose, the cura of Sombrerete."

We were all going to work again at midnight but the mezcal was so good that none stirred from he pulqueria long after that hour. I, however, shouldered my pick and trudged up the hill to the shaft, first waking up the watchman, who lay snoring at the gate of the hacienda, wrapped in his surape. I took him with me to the mouth of the shaft, that he might lower me down in the basket; and down I went. When I got to the bottom, I called to Pepito, for, knowing he was working there, I had not brought a lantern, but heard nothing but the echo of my own voice, sounding hollow and loud as it vibrated through the passages and galleries of the mine. Thinking that he might be asleep, I groped my way to where he had been working the great lode in the morning, thinking to find him in that direction, and hallooing as I crept, but still no answer; and when I shouted 'Pepito, onde esta?'—where are you?—the echo cried jeeringly, 'Onde esta?'

At length I began to get frightened. Mines, every body knows, are full of devils, and gnomes, and bad spirits of every kind; and here was I, at midnight, alone, and touching the 'black vein' which had been so abused. I did not like to call again to Pepito, for the echo frightened me, and I felt assured the answer was made by some unearthly voice, and came direct from the lode of the veta negra, that we were working. I crept back to the bottom of the shaft, and, looking up to the top, where the sky showed no bigger than a tortilla, with one bright star looking straight down, I shouted for the watchman to lower the basket and draw me up; but holy mother! my voice seemed to knock itself to pieces on the sides of the shaft as it struggled up, and when it reached the top must have been a whisper. I sat down and fairly cried, when a loud shout o laughter rattled along the galleries, and broke as it were up the shaft; I trembled like quicksilver, and heavy drops of perspiration dropped from my forehead to the ground. There was another shout of laugher, and a voice cried out—

"Come here, Mattias, come here."

"Where, most wondeful senor?" I asked, thinking it as well to be respectful.

"Here, here to the black vein, the old leaden, useless vein," cried the voice, mockingly: and I thought with horror of the abuse it had that day received.

Half dead with fear, I crept along the gallery, and, turning an abrupt angle, came upon the lode we had been working. Ave Maria purissima! what a sight met my eyes! The gallery seemed a mass of fire, yet there was no blaze and no heat. The rock which contained the vein of ore, and the ore itself, were like solid fire; and yet it wasn't fire, for there was no heat, as I said, but a glare so bright that one could see away into the rock, which seemed to extend miles and miles; and every grain of quartz, and even the smallest particle of sand, of which it was composed, was blazing with light, and shone separately like a million diamonds knocked in one; and yet the eye saw miles into the bowels of the earth, and every grain of sand was thus lighted up. But if the stone, and the grit, and the sand were thus fiery bright, and the eye scorched to look upon it, what words can describe the glitter of the *vein*, now of sparkling silver, and white, as it were, with flame, but over which a *black bush* now and then shot, and instantaneously disappeared? It wanted not this, however, to tell me that I was looking at the endless *veta negra*, the scorned, abused black vein, which throbbed, miles and miles away into the earth, with virgin silver, enough to supply the world for worlds to come.

"Ha, ha, ha!" roared the voice; "the *old leaden, useless vein.* Where's the man that can eat all this silver's worth of frijolitos? Bring him here, bring him here." And forthwith a thousand little sparkling figures jumped out of the scintillating rock, and, springing to the ground, ringing like new-coined pesos, they seized upon the body of Pepito, which I had not till now observed, who lay, blue with fear, in a corner of the gallery, and, lifting him on their shoulders, brought him in front of the silver vein. The brightness of the metal scorched his eyes, which still could not, even in his fear, resist feasting on the richness of the glittering lode.

"Bonanza, una bonanza!" shouted the enraptured miner, forgetting his situation, and the presence he was in, for the figure (if figure it can be called, which was like a mist of silver fire) of the padremina—the mine king—was now seen sitting in state on the top of the vein.

"Bonanza!" shouted the same voice, derisively; "bonanza, from an *old leaden, useless vein!*" repeating the terms which Pepito had used in abusing it. "Where's the man can eat this silver's worth of frijolitos?"

"What does he deserve who has thus slighted the silver-king?" "Turn him to lead, lead, lead!" answered the voice. "Away with him, then."

The thousand sparkling silverines seized the struggling miner. "Not lead, not lead," he shouted; "any thing but lead!" But they held him fast by the legs, and bore him opposite the lode.

The rock sparkled up into a thousand times more brilliant coruscations than before, and for an instant I thought my eyes would have 'burn'd' with looking at the silver vein, so heavenly bright it shone. An instant after a void remained in the rock; a horrid black void. The vein had disappeared, but the rock itself was still as brick as ever, all but the black opening which yawned from out the brightness; and opposite this stood the thousand silverines, bearing the body of the luckless gambucino.

"'Uno, dos, *tres*,' shouted the mine-king; and at the words 'tres'—with a hop, skip and jump—right into the gaping hollow sprung the thousand silverines, with the luckless miner on their shoulders, whose body, the instant that his heels disappeared into the opening, with these very eyes, I saw turned to lead.

Santa Maria! then all became dark, and I fell senseless to the ground.

When I recovered a little, I thought to myself, now will come my turn; but, hoping to conciliate the angry mine-king, I sought, in the breast of my shirt, for a bottle of mezcal, which I remembered I had brought with me. There was the bottle, but without a single drop of liquor.—This puzzled me; but when I called to mind the fiery spectacle I had just witnessed, I felt no doubt but that the liquor had been dried up in the bottle by the great heat.

However, I was not molested, and in a short time the miners returned to the work, and finding me pale and trembling, called me tonto, borracho—drunk and mad. We proceeded to the lode and grubbed away, but all we succeeded in picking out were a few lumps of poor lead ore; and from that day not a dollar's worth of silver was ever drawn from the famous 'black vein of Sombrerete.'

Correspondence of the Boston Atlas.

PARIS, March 18th, 1848.

English Servants and Workpeople—Enthusiasm—Fourierism—Madame Rachel—Pictures Destroyed—Lamartine—Exciting Scene with Lagrange, &c.

The antipathy of the French people to the English is well known. Whether it is of an older date than Waterloo, I will not say—but certain it is, it is sufficiently ancient to have become impregnated with the blood of the French masses. From these prejudices, and from a desire to obtain their places, the liberty-loving republicans of France have taken ground against the employment of English work people in the factories, on the railroads, and in private families. These disgraceful demands have been heeded, and the employers in nearly every instance have been compelled to discharge those in their employ who have the misfortune to be the countrymen of Shakspeare, Hampden, and Milton. In Paris, meetings have been held of French domestics out of place, in which violent denunciations were uttered against those Frenchmen who employ English servants, and against the servants themselves. Deputations of these "Liberty, Equality, Fraternity" gentlemen have gone round to families wherein English servants were known to be kept, and notice given if they did not instantly dismiss their English servants they must take the consequences. What the consequences would have been, I do not undertake to explain; but that they would have been of an unpleasant nature, is inferable from the fact that the threat had the desired effect.

It is related that the Prince de Beauveau was ordered by a deputation of liveried horse-coupers to discharge his grooms, coachman, and jockeys, and he was threatened, in case he refused, to have his race horses' legs broken. The Prince acceded to the knights of the curry comb request, and dismissed his servants, This made him popular—but at the same time he declared that, not being allowed to keep servants he could trust, he should sell his stud, curtail his establishment, and live within the narrowest limits. This he did, and it has made him very unpopular. About ten days ago, a meeting of grooms and coachmen was held, in which it was resolved that no English coachman should be employed, on pain of "being torn from the boxes of the carriages whenever they appeared." At present, there is hardly an English servant to be found employed in Paris. At Havre, on the 13th, the mob menaced the mills in that heighborhood with conflagration, unless the British workpeople were immediately dismissed. At Lisieux Malauey, outrages have been committed, arising from the same disgraceful cause. Some three or four thousand poor people have thus been thrown out of employment, subject to the senseless fury of the mob, and without means of getting back to England; for many of these people had deposited their hard earning in the Caisse d'Epargne in this city, and the recent decree of the Provisional Government, which renders it impossible to withdraw deposits exceeding 100 francs, making the rest of the capital bring five per cent, interest, beggars many of the industrious mechanics.

The proceedings of the first two sittings of the National Commission to regulate the hours of labor, and bring about an industrial paradise, have been published. M. Louis Blanc is the reigning deity in this new device. Any labor, he says, beyond ten hours a day is oppressive: therefore it is decreed that no mechanics shall work more than ten hours. The next thing is to establish four buildings, each capable of holding 400 families of workingmen. Great economy is expected from this, in the purchase of victuals by wholesale, and by a general system of cooking. In each establishment there is to be an asylum for infants during the absence of their "anxious mothers," a school, yards for exercise, gardens, baths, &c. The first expense is to be raised by mortgages upon the establishments themselves. This plan is to be submitted to the government, for their approval. It takes, and will be tried. Some of the workmen, however, have already objected to the ten hour clause.—Nine hours, they say, is enough, with wages undiminished. Several factories in the quartiers St. Martin and St. Dennis have been visited by bands of workmen, and the masters had to sign a contract to limit the day's work to nine hours, and not reduce the wages. They are not to reduce the number of workmen, or stop their work, on penalty of having their machinery broken.—These lawless bands say they are the government, and the masters have been forced to submit. Is this freedom?

The Republican enthusiasm covers the whole land, and invades every sanctuary, holy or unholy. A highly wrought scene took place last week at the Theatre Francais, now called "La Theatre de la Republique." Mademoiselle Rachel, the great tragedian, was called upon, after the performance of *Camille*, to sing *La Marseillaise*. She appeared in a Roman costume—the same she had worn in the tragedy—with the addition of a tri-color ribbon. She was never grander than in her acting of this song. It was more than singing—it was sublime—and partook of the character of a religious chaunt. Parts of it she gave in a low, tremulous voice. Her whole frame appeared quivering with patriotic fervor.—A writer says, that "when, at the last verse, she seized the Republican flag, threw herself upon her knees, and hugged it in her arms, she seemed to present, at once, the real and ideal Joan of Arc."

There were about three hundred pictures at the Chateau of Neuilly when it was pillaged, one hundred and fifty of which were destroyed, mostly modern, and of little value. The remainder have been conveyed to the Louvre.

Napoleon was called the child of the Old Revolution. M. Lamartine is emphatically the man of the New. His labors are overwhelming, and yet he is ready for any emergency. The power he exerts over the masses is almost miraculous. Nor is it less felt in the proceedings of the Provisional Government. He is earnest, real, of undoubted courage, and strictly honest. It is well known here, that shortly after the flight of Louis Philippe, a Council was held of the Revolutionary

leaders, to dictate to the Provisional Government. The Government felt compelled, though aware of the incendiary principles of Lagrange, to make him Governor of the Hotel de Ville. He held it two days, and was replaced by another. His resentment was so wild and terrible, that fear came upon several of them.

Lamartine, alone, blenched not. He kept his self-possession, and when Lagrange, in the wild fury of his rage, drew a pistol from his pocket and pointed it at him, exclaiming, "Thou art no true patriot! What hinders me from taking thy life on the instant?" "Your own conscience," coolly replied Lamartine, "and the utter uselessness of such an outrage; for should I fall there will still remain my colleagues, who all, to a man, have resolved to die rather than submit to violence or to return to the senseless anarchy of '93." Lagrange shook with fear, turned pale as death; he dropped the pistol and sank into a seat; his eye quailed before the steady glance of Lamartine, while he muttered between his teeth—"Thou art not a true Republican, nor yet a true patriot, but I verily believe thou art an honest man."

It was then that his neighbor, La Caussidiere, managed to seize the pistol which he had placed beside him, and by his presence of mind saved the Assembly from a dreadful catastrophe; for in the space of a few moments Lagrange arose, and with the most frightful yells and howlings began to rend the clothes from his back and to tear the flesh from his bosom, and the blood spurted forth, all the while uttering the most fearful imprecations and blasphemies. In an instant the whole Assembly was in an uproar—the terror of the scene was greater than words can describe. It was evident that the fierce excitement of the last few days had turned the brain of Lagrange and produced a fit of raging madness. He was secured with difficulty, and borne to a *maison de sante* at Montmartre, where he now remains, I believe, still a raving maniac. The Assembly all gathered round Lamartine with congratulations, but the effect of the scene was such that many were forced to retire, and the meeting broke up. Much commiseration has been felt for Lagrange, who, it cannot be doubted, is a warm and disinterested, though misguided Republican. His violence was much dreaded by the other members of the Government, and his absence is a great relief.

Money and Maladies.—The want of money, I am inclined to think produces physical changes which have not as yet been sufficiently noticed by the faculty. It causes a gradual and considerable accumulation of bile, which lies lurking in the system, until the incivilities of friends, or the importunities of creditors, cause it to become completely vitiated or inspissated: after which a man, especially one predisposed to melancholy and contemplation, looks at every thing on earth through a pair of yellow spectacles. The unhappy patient becomes saturated, body and mind, with jaundice; he shuns the society of his fellow men, buttons his coat up to his chin, pulls his hat over his eyes, deposits his hands in the pockets of his small-clothes, and takes extraordinary long walks into the country. But even the fair face of nature becomes changed; the barrenness of his pockets throws a corresponding sterility over the landscape, deducting "the glory from the grass and splendor from the flower." The blossoming of the earth is no longer pleasant to his sight, or the music of the merry warblers of the woods delightful to his ear. His "heart is out of joint," and all nature seems to be filled with unpleasing comparisons between his own state and hers.—He stalks about with lowering brow and upturned lip, and unpleasant discord amid the universal harmony and fitness of things. At this juncture let intelligence arrive of a heavy legacy left him by some appropriately defunct distant relative—and lo! the change! It is a dark cloud passing from the sun. Monsieur Il Penseroso become L'Allegro in a twinkling. He draws his hands from the extensive vacuum in which they have been dangling, takes the yellow spectacles from his eyes, raises the hat from his brows, unbuttons his coat, and turns, with a feeling of leisurely enjoyment, to welcome the fresh spring breeze.—The song of birds and the odor of flowers are again grateful to his senses. The rivulet tinkles once more pleasantly in his ear, and the cheerful song of the lark finds a corresponding echo in his own bosom. He indulges no longer in speculations on the vanity and insufficiency of things, but hies homeward cheerful, free, enfranchised, independent. He orders an approved cookery book, lies a-bed and studies it, and marvels in a short time, how melancholy ever gained a footing in this mighty pleasant world. Oh money, money!—marvellous indeed are the changes thou canst produce! Would that I were a bank director!—*The late Wm. Cox.*

The Mission of the Teacher.—Many fine things have been said concerning the mission of teachers; a mission truly important, inasmuch as they are commissioned not only to teach a few elementary branches of knowledge to the children of the people, but to direct their education as men and citizens. The best that has perhaps been written on this subject, is to be found in a memorial which the Minister of Public Instruction addressed to them. "Humble as the career of the schoolmaster may be," says the Minister, "and though doomed to pass his whole existence most frequently within the sphere of a small community, his labors are, nevertheless, felt throughout society at large, and his profession is as important as that of any other public functionary. It is not for any merely local interest, that the law demands that every man should acquire, if possible, the knowledge which is indispensable in social life, and without much intelligence often languishes and degenerates; it is for the state itself and the public interest; t is because liberty is certain and steadfast only among people enlightened enough to listen, in every circumstance, to the voice of Reason. Public elementary instruction is one of the guarantees of order and social stability. Doomed to pass his life in discharging the monotonous duties of his vocation, sometimes even in struggling with the injustice or the ingratitude of ignorance, the schoolmaster would often repine, and perhaps sink under his afflictions, did he not draw strength and courage from another and higher source than that of immediate and mere personal interest. A deep sense of the moral importance of his duties must support and encourage him; and the austere pleasure of having rendered service to mankind, must become the worthy recompense which his own conscience alone can give. It is his glory to pretend to nothing beyond the sphere of his obscure and laborious condition; to exhaust his strength in sacrifices which are scarcely noticed by those who reap their benefit; to labor, in short, for his fellow beings, and to look for his reward only to God."—*From the Education of the People, by J. Willm, Inspector of the Academy at Strasburg.*

☞ A girl, only 14 years of age, has been arrested in Boston on a charge of causing the death of her mother, a Mrs. Pinkerton, by giving her arsenic.

From the Knickerbocker.

Heretofore.

BY W. H. C. HOSMER.

"From all its kind this wasted heart
This moody mind now drifts apart;
It longs to find the tideless shore
Where rests the wreck of *Heretofore*."
[*Motherwell.*

Fresh are the roses of to-day
With hues that match the sunset's glow,
But sweeter, dearer far than they
Are flowers that withered long ago;
Young flowers, that graced a radiant shore
Washed by the waves of Heretofore.

Take back this tome with gilded leaves,
The work of one by wo untaught;
The soul of constancy that grieves
Within can find no food for thought;
I love alone to ponder o'er
The blotted scroll of Heretofore.

Names written on that record dim,
And stained with unavailing tears,
While airy visions round me swim,
Bring back the joys of other years;
And beams, outshining noontide, pour
Through the torn clouds of Heretofore.

Discordant to my mood of mind
Its music of the present hour,
For only in the Past I find
A voice that hath a spell of power;
A voice that wakes to life once more
The buried forms of Heretofore.

I love the home, so glad of old,
Though damp and mouldy now its walls,
And converse sweet with phantoms hold
That glide at midnight through its halls;
For they are wanderers from the shore
Of thy dim realm, oh, Heretofore!

Kind looks, as slowly they depart,
On me the wan procession cast,
For well they know that one poor heart
Keeps green remembrance of the Past;
A heart that trembles to its core,
When sung the songs of Heretofore.

I love old oaks that feebly wave,
And weeds that hide a ruined hearth;
Pale moss upon a sunken grave,
And every crumbling wreck of earth,
For they are teachers of a lore
That lends a charm to Heretofore.

For the Western Literary Messenger

The Mission of Flowers.

True Beauty points to heaven as its birth-place. Being an attribute of Deity himself, it accompanies every manifestation, and is visible in all nature around us. Upon the soul which is not lost to all appreciation of the pure and holy, it exerts a refining and hallowed influence. It is as faithful in its mission as the star which led the wise to the glory-crowned manger of Bethlehem. Dim though it may be upon our sin-beclouded vision, who can for a moment enter the world of the beautiful and not feel chastened and made better by it? Under its influence we instantly lose sight of the darker forms of earth, its stern realities sink away, and we feel ourselves less of earth and more of heaven. O, it is glorious to cease for a bright moment to be a prisioner of this sickly body, and become as large and pure as nature.

An ardent love for the beautiful is surely akin to worship, for in proportion as we come to a just appreciation of it do we gain exalted views of its author who has dispensed it so liberally. But how few are the eyes unsealed to discover this all-pervading element. Man gazes enraptured at the monuments of art, but never for once sees the greater skill and beauty which is manifest in all the breathing universe around him.

One of the purest forms of beauty in nature is presented us in the flowers. They are her mildest, sweetest expressions. They "touch us like poetry," and talk to the heart. They are eloquent instructors of morality. But, like all blessings so freely enjoyed, they are illy appreciated. Who would not shudder at the thought of walking amidst all the master-pieces of painting and sculpture and yet never behold one of them? How many there are who never for once pause *to* observe these emblems of the lovely and pure, which spring up all along our pathway in life.

How much flowers resemble the young heart, in its bright morning, ere it has stained the plumage of its sinless years. Tradition of them tells us that they were once like youth even in this—that they loved, and talked, and had passions like ours. Whether the golden age of flowers has passed or not, they are still invested with these susceptibilities in song. How often, and how fondly the poet revels in the field of flowers. Do they not talk to him? Who has ever heard the soft, low whispers of the green leaves and bright flowers on a spring morning, who did not feel rainbow gleams of gladness running through his heart? Like beauty in the human form, flowers hint and foreshow relations of transcendant delicacy, and sweetness, and point to the beautiful and unattainable, From the garden favorite to the dainty wild flower of the mountain, all have a charm inexpressible, a beauty unapproachable, leading the way, and wooing the spirit onward and upward. How sweetly and instructively the flower bows its head to the breath of night, or the rude storm. At morning it yields its fragrant orison borne to heaven on the soft wings of the dew-drop. Thus the heart learns to bring a holier offering to the shrine of all good.

The ancients called beauty in the human form the *flowering* of virtue, and flowers were wreathed around their imagined Elysian. They greet life's dawn with their smiles, and sweetly bloom over the grave. In all ages great minds have blessed them, and gracefully listened to their instruction. Some one has asked "why are external nature and man so separated?" Not from any necessity is it thus. Man in his riper age has ruthlessly torn himself from the kind mother of his youth. Nature is ever the instructor of the soul. From her its first teachings are derived. She will never prove recreant to her trust. Let the soul, conscious

of her continued favors, child like, love and learn, and it has rich reward. It becomes the favored child. Its eyes are unsealed to discover her rare beauties. Thus she draws it into so close and endearing intimacy, and so happily beguiles the hours of a weary life that it almost forgets its own mortality.

But flowers die. That which bloomed to tell us of purity, beauty, and heaven, in the sweetness of its fading glory bears a yet higher and plainer lesson—a lesson not forgotten, and which this little monitor must teach or it is untaught. We listen, for it is a sweet, though mournful voice which bids us mark the bright emblem of our own mortality,

The departure of beauty—like the nightingale's death-song, touches us sweetly yet sadly, and reminds us how much was lost in our Eden-home. Under this influence the soul rises from earth in its power, and looks, and longs for the land where flowers will never fade. Ion.

Madison University.

The News from Europe.

The Carlists mean to make a desperate push to carry the elections. No money or arts will be spared. Their cry is now that France, with universal suffrage, would be a Republic, whether that head were elective or hereditary!

It is considered by many that a strong Conservative majority will be returned to the Assembly from the Provinces. Should this be the case, Paris will not accept it, and new troubles will spring up. On the other hand, it was feared the majority would be ultra-democratic, and that too many inexperienced men would be elected.

Persons of all parties are offering themselves as candidates for seats in the impending National Assembly. A large number are partizans of the Bourbon and Orleans governments.

A growing jealousy was beginning to be manifested by the departments at the absolute domination over them assumed by the Parisians, and it was apprehended that the returns for the elections from the provinces would tell against the Provisional Government.

The following official communication has been made by the Government: "A despatch from Berlin, of the 14th of March, announces that the Emperor of Russia has declared, in the most positive way, that he will abstain from all intervention in the affairs of France so long as France shall not attack foreign territories."

A vast wooden building is being erected in the court of the chamber of deputies, for the meetings of the National Assembly.

The famous Champs de Mars is being raised on the whole of its surface about a yard. A magnificent fete, like that of the federation, will be held here on the 20th April.

M. Alexander Dumas, has proposed that the statue of the Duke of Orleans be restored to its situation in the Place du Louvre, as when alive, all the advanced portion of the nation, had their their hopes in him.

A recent statistical work on France states that the bulk of the property of Louis Phillippe was in forests and, as Duke of Orleans, his income thence was at least £300,000 a year. The crown estates he possessed as King was also principally in woods, yielding him £250,000 more.

The private domain of the ex-King is not to be sold but to be sequestrated for the use of the state, and its revenues applied.

The Duchess of Orleans and her two children were expected at Berlin. They were to reside in the Palace of Bellevue, in which Charles X. was received by the Royal family of Prussia on his way to Austria, after the revolution of 1830. At the last dates the Duchess was living at Ems, in Nassau, in great privacy. Beside her two sons—the oldest one, it will be remembered, is the Count de Paris, in whose favor Louis Philippe offered to abdicate—she had but few persons with her, among whom was the Count de Mornay.—Her mother, the Duchess-Dowager of Mecklenburg-Schwerin, arrived on the 8th, to assist and console her daughter, who, on her arrival, was destitute of the commonest necessaries.

The Austrian Monarchy is virtually dissolved. The dismissal of Metternich, and the overthrow of his despotic system, snap asunder the links which bind together the heterogeneous states of Hungary, Bohemia, Moravia, Gallicia, Styria, Tyrol, Lombardy, and Sclavonia; and it remains to be seen what future limits will be fixed to the authority of Austria Proper. The independence of Bohemia and Hungary is inevitable. Already the people, in a delirium of joy, are taking steps to secure their freedom

Advices from Genoa announces the arrival of an American Squadron in that port on the 3rd March.

The Turin papers of the 4th March, announces the departure of the Jesuits from that city, in consequence of an order from the Government. Some slight disturbances took place on the occasion

Austria.—The dates from Vienna are to the 18th ult. The following official announcement has been made:

His Imperial Majesty has been graciously pleased, by a royal resolution of the 17th, to command the constitution of a responsible Council of Ministers, for the deliberation and execution of the principles laid down in the imperial patent of the 15th of March. His Majesty the Emperor has been pleased to command the Lord High Chancellor to make known to the burghers of the capital his Majesty's satisfaction at the faithful loyalty which, as in times of old, they displayed during the last few days, and to express to them, as the new constituted National Guard, his high approbation of their fealty and loyalty, their zeal and praiseworthy exertions for the restoration and consolidation of public peace and security, with the full assurance that they will ever retain the same honorable bearing. In like manner, the admirable conduct of the academic students is equally appreciated by his Majesty, who desires that his high satisfaction may be conveyed to the University and the polytechnic institutes, viz.: to the President, the Professors, members of the faculty, and students, for the devotion which they evinced during the last few days, and their very strenuous exertions for the restoration of the public peace and security, and these thanks are heightened by the certain conviction that, in so far as is compatible with the duties of their calling, they will ever be equally willing to co-operate for the consolidation of public tranquility. His Majesty, the Emperor, by an imperial decree of the 17th of this month, in consequence of a humble petition presented to him, has been pleased to decree that bills of exchange which ought to have been presented for acceptance or payment from the 13th to the 18th of the current month inclusive, in Vienna, and in the places appertaining and included within the police circle,

shall be valid for presentation on the 20th of this month.

IOHANN TALATZKO,
Baron Von Gestieticz.

VIENNA, March 18.

Various addresses have been presented to the Emperor, expressive of gratitude and loyal attachment.

The procession by torch-light took place last night, (March 16.) It commenced at seven and lasted till ten. The whole city was splendidly illuminated, and the *tout ensemble* was the most imposing spectacle, perhaps, ever witnessed in Vienna.

Letters from Presburg of the 14th say that immediately the dismission of M. Metternich was known, Mons. de Kossuth announced it to the Chamber of Deputies, and proposed that they should go in a body to the Archduke Palatine, to ask him to convoke the Chamber of Magnates to adopt an address of the Deputies. The Deputy Zala declared every one who should not join M. de Kossuth a traitor. The Deputies went to the Archduke, who was addressed in their name by M. de Kossuth. The Archduke replied with much energy, and was loudly applauded. The address was to be sent immediately to the Emperor. The joy is universal.

PRUSSIA—LIBERATION OF THE POLISH PRISONERS.—By the Cologne *Gazette* of March 22, we have news from Berlin to the 20th inclusive.—The Poles had been set at liberty, and had celebrated the event with a great triumph, accompanied by the people.

The King has nobly and promptly redeemed his pledge to forget the past animosities. The following general amnesty appears in the *Allgemeine Preussische Zeitung* of March 21:

"Yesterday I declared that from my heart I have forgotten and forgiven. But, in order that no doubt may remain of my whole people being embraced in this forgiveness, and because I will not have the great future of our Fatherland now dawning upon us dimmed by painful reminiscences of the past, I hereby proclaim pardon to all who have been accused of or condemned for political offences or offences perpetrated by the instrumentality of the press. My Minister of Justice, Uhden, is charged to give immediate effect to this amnesty.

FREDERICK WILLIAM.

BERLIN, 20th March, 1848."

BELGIUM.—REVOLUTIONARY AND REPUBLICAN MOVEMENTS.—Letters received on the 24th, from Belgium, state that an insurrection had occurred at Ghent, with a view to expel the Jesuits from that city. A mob of between two and three thousand, vociferating "Vive la Republique!" bent their course to the church and residence of the Jesuits, the latter of which they demolished, and then commenced operations upon the church; and but for the timely arrival of the cavalry, gendarmes and police, this splendid church would have been demolished and sacked of its valuables. The city, however, still continued under great excitement, and it was feared that the mischief was not yet over.

We learn from Antwerp, by a letter dated Monday, that all the Jesuits had removed the whole of their valuables from the town, and taken flight.

The Duke and Duchess of Montpensier are living in retirement at Brussels.

RUSSIA—MILITARY PREPARATIONS.—The Emperor Nicholas, of Russia, in an ukase directed to the Minister of War, has commanded the immediate organization of all the military reserves. A large portion of the army of Russia is to be placed on a war footing, and to be assembled on the 1st (13th) April. This step, says the decree, "is required by the events transpiring in the west of Europe, manifesting the sinful design of subverting legal authorities. The alliance of friendship and the treaties by which Russia is connected with the neighboring powers, impose upon us as a sacred duty to take timely measures for placing a portion of our troops upon a war footing, that in case circumstances should demand it, a firm front may be opposed to the direful spread of anarchy."

Beyond these preparations it is not anticipated at present, that the Emperor will take any steps beyond the confines of his own dominions, the tranquility of which will not, it is expected, be sensibly disturbed.

POLAND—REVOLUTION IN CRACOW.—On the 18th, the inhabitants of Cracow proclaimed a Republic. Fifteen thousan insurgents are under arms. On the previous day, the Governor was compelled by the people to release 400 political prisoners implicated in the recent insurrection.

BAVARIA.—The telegraphic despatch received at Paris announces that the King of Bavaria has abdicated Previous intelligence informed us of a constitutional revolution. The people were in transports of delight at the success. The students and the soldiers had sworn allegiance to the new Constitution.

SICILY.—Sicily has obtained the constitution of 1812, and seems determined to enjoy a free government, independent of Neapolitan thraldom, notwithstanding the government had reinforced the garrison at Messina. The Messinese stormed the fortress of St. Salvadore, March 7th, and put great numbers of the garrison to the sword.

The English fleet remained on the coast, and it is confidently affirmed that Great Britain has determined to support the Sicilians in the maintenance of the constitution of 1812.

Lola Montes has found a new protector in a son of Sir Robert Peel, who is the British Charge d'Affaires at Berne, Switzerland. She is seen daily walking arm in arm with him, and he greeted her on her arrival, by a public dinner.

A MARRIAGE BY TELEGRAPH—ALMOST.—The Milwaukee Sentinel of the 4th, relates the following. We don't approve of the interference of Chicago *by no means*. The operator should be dismissed:

The following interesting chit-chat with Michigan City, occurred at our Telegraph Office yesterday afternoon. When Michigan City was called, a young lady of our town happening to be in the office, sent her compliments to the operator, and requested him to find her a husband. Answer—Will you accept of me? Lady promptly responded, "Yes." Operator—"A clergyman is just passing; shall I call him in?" Lady—"Yes." Operator—"Here is the clergyman." Clergyman—"Are you willing to have this man H—— to be your lawful and wedded husband?" Lady—"Yes." Clergyman—"Now, in the name of the Telegraph Company and to the extent of my authority, I pronounce you *man and woman*." Chicago—"Hold on! hold on! I forbid the banns—you are too late, young man." As the lady left the office with glowing cheeks, I fancied that she secretly blessed Morse for his useful invention.

FATHER MATHEW NOT COMING.—A letter by the *Hibernia*, (says the N. Y. *Express*) from Father MATHEW, to the Rev. Mr. MARSH, states that his projected visit to America must be deferred for the present.

Editorial Department.

J. CLEMENT, EDITOR.

YOUNG MAN, HAVE FAITH IN YOURSELF.—Next to christian, human faith is necessary. It is indispensable to temporal success. "In great crises," says Professor Vinet, of Switzerland, "in grand exigences, the favorable chance has always been for him who hoped against hope. And the greatness of individuals or of nations may be measured precisely by the greatness of their faith."

Such was the principle which guided Ledyard through his perilous itinerancy in the journey of life He early formed the resolution to *see* and to *know*, and no human obstacle could turn him from his purpose. "I am accustomed," he once wrote "to hardship: I have known both hunger and nakedness to the utmost extremity of human suffering. I have known what it is to have food given me as charity to a madman; and I have at times been obliged to shelter myself under the miseries of that character, to avoid a heavier calamity. My distress has been greater than I have ever owned, or ever will own, to any man. Such evils are terrible to hear; but they never yet had power to turn me from my purpose. *If I live, I will faithfully perform, in its utmost extent, my engagement to society;* and if I perish in the attempt, my honor will still be safe, for death cancels all bonds."

With a spirit like this in your bosom, young man! you may look an envious world, with its ugliest imps of malice, in the face; may scale Alps of adversity; and, should you meet the Nemæan lion of Temptation in your pilgrimage, may pursue him to his den and choke him to death! or, better still, trusting in God, you may snatch the girdle from the queen of the Amazons of Iniquity, and hang her with it! Live not for yourself alone, but for society, for your country, for Heaven; and come what may, your honor, like that of Ledyard's, will be safe; and glorious, in the end, will be the cancelling of your bonds!

BLACKWOOD'S EDINBURGH MAGAZINE for April, re-published by Leonard Scott and Co., has already been received. It contains the Fall of the Throne of the Barricades, by Alison; A German Ditty; Two Sonnets; My Route into Canada (No. 2); The Conquest of Naples; Travelling in Taffyland; Life and Times of Lord Hardwicke; How we got possession of the Tuilleries; and the Caxtons—a Family Picture. A future number of our paper may be enriched with choice extracts from some of these articles.

For sale by Andrew Burke.

TO CORRESPONDENTS.—Letters addressed to the editor, as well as the publishers, unless post paid, are not sure to be taken out of the Postoffice.

NEW DRAMATIC POEM.—MRS. ELIZABETH OAKS SMITH has lately written a Dramatic Poem called the "Roman Tribune," which is highly commended by Mr. BRYANT, in the N. Y. *Evening Post*: It is founded on that chapter of the history of the Roman empire in which the barbarian invader Attila is recorded to have extorted a tribune from the weak emperor, Theodosius." We find the following, among other extracts, in the *Literary World*:

DESTINY.

Ye iron Fates
Unhuman—gods above—cased in your walls
Of adamant eternal! our puny strength
Is crushed in contest with you! The universe,
With all its goodly shapes, submission owns,
Hymning obedient harmonies, while we,
The toys and puppets of your moving will,
Wrench at the bars of our poor prison house,
In strivings to achieve a way not yours;
And all our aspiration, all the dreams,
That make us hardly less than gods,
Ye mockingly return in broken chalices,
And we are left like him, whose rooted strength
Upheaved a temple from its base—and died—
Amid the wreck.

LATENT EVIL.

Listen! I've slumbered with thee until now
A nameless, shapeless, wingless, couchant thing,
Within the filmy vesture of the soul,
Until thy evil hour evoked me forth.

MYSTERIOUS SOUNDS.

The child starts from his innocent pillow,
And answers with a smile, for he believes
The angels called him with their sweet, rose lips.

THE DEMOCRATIC REVIEW for April contains a likeness of J. A. LOWELL, ex Governor of Maine, and fourteen political and miscellaneous papers. The first two on the French Revolution and the Reforms of Pope Pius IX, are very valuable. We also like the one on Woodchucks.—There is raciness in the author's pen. The article on Freedom of Opinion was evidently written by an enemy of Evangelical Religion, and we regret that it should poison the pages of so influential a periodical as the Democratic Review.

COLLEGE ADDRESSES.—Dr. T. M. FOOTE, editor of the Commercial Advertizer, has received and accepted an invitation to address the literary societies of Clinton College, at the next commencement; and Rev. L. TUCKER, paster of the Washington street Baptist church, has received and accepted an invitation to address the literary societies of Franklin (O.) College.

THE LADY'S BOOK FOR MAY has been on our table several days, and it is a splendid issue. The Queen of May, a picture painted in colors, is not only new and unique, but transcendently beautiful. The other embellishments, which are numerous, are also fine; and the literary contents are by such writers as Miss Leslie, Grace Greenwood, Chas. Lanman, T. Mayne Reid, L. F. Tasistro, etc., etc. Success to Godey!

From the Boston Traveler of Saturday.

Mysterious Circumstance.—Two years ago last February, a lad named J. Bruce, of Winchendon, Mass., was despatched by his father to this city, with a sled and two horses, to sell a load of straw, since which time he has never been heard of. Recently a keg was found in Eastman's stable, in Deacon street, in this city, which was known to have been in the possession of the boy, and this led to a disclosure that at the time of the boy's disappearance, the horses had been left at Mr. stable by the boy, and never claimed, and that E.'s Mr. E., after keeping them a proper time and advertising them, sold them, and has on hand the balance of money, deducting charges.

The man has been found who bought the sled of the boy. Finally after a long search, the body of the boy himself was found buried in one of the city tombs in the South burying ground, with his clothes still on.

There is no record of his death or burial upon the books, which leads to the supposition that he was buried under a feigned name, and that there has been foul play in the matter. The body has been taken home to Winchendon.

A long account in the Boston Journal adds a variety of details, among which figure the revelations of a Mesmeric clairvoyant who was consulted by the father. This person described, it is said, the departure of the lad from his home and added that:

Although he was of unexceptionable character, he had fallen into bad company, was induced to drink something, soon after which he was seized with convulsions and died in that state; that he was then buried under a heap of manure, but was subsequently removed and taken out upon the water, and his body sunk in the harbor; that it was afterward found, and was placed in a tomb in the South burial ground.

From reasons which were satisfactory to Mr. Bruce no examination of the tomb was had at that time, and the matter rested without any farther developements being made, until some few weeks since, when two relatives of the family were in the city, and more from curiosity than any other reason, visited the clairvoyant referred to, and the same circumstances were detailed to them that had been previously related to Mr. Bruce, with the addition that the coffin containing the remains was in a particular position in the tomb No. 15, in the South burial ground.

Mr. Lincoln, superintendant of burials, Mr. Bruce and two or three of his friends, repaired to the South burial ground. They opened the tomb No. 15, moved several coffins, and upon raising the lid of that described by the clairvoyant, Mr. Bruce exclaimed, "that's my son—I remember those pantaloons."

The Eagle Street Theatre, we regret to learn, will soon be opened for the season. It is said to be undergoing thorough renovation from pit to dome. Pity this renovating process could not be extended to its actors and puffers.

Fire.—The stable wood shed and back part of the dwelling of Judge Love, on the corner of Mohawk and Franklin streets, was destroyed by fire on Tuesday afternoon.

Shocking Accident.—At the launch of the schooner Emblem, at Wilson, Niagara county, on the 8th instant, Mr. Knowlton Harrington was run over by the schooner in its course to the water, and instantly crushed to death. He was 48 years of age.

☞ Whether or not the French will be able to establish and maintain a true Republican government, that shall avoid the danger of despotism on one hand and licentiousness on the other, they have at least, thus far, proved themselves consistent in their professions. They have not proclaimed that all men are created free and equal, and then falsified it by insisting that thousands of their fellow-men shall be held in hereditary bondage. On the first day of their accession to power, the Provisional Government issued a decree abolishing Slavery in all the Colonies of France.

The colored and mulatto citizens of Paris—among whom is classed Dumas, the celebrated writer,—rejoicing in this act of justice, designated a deputation to address the Provisional Government. They were replied to by M. Cremieux, one of the new Cabinet, in the following beautiful address:

Fellow citizens, friends, brothers—I am happy to hail you in the name of the Provisional Government of the Republic, every part of which has entertained the great thought of emancipating such of your fellow countrymen as still remain in slavery. Slavery, slavery in the midst of liberty! Why, this is the most odious, the most afflicting inconsistency. Distinctions between men! This is a violation of the law both of God and man. (Loud applause.) We have only proclaimed the principles which dwell in the hearts of all mankind. Yes, the national convention—that grand, that immortal assembly, had restored you all to freedom, but the error of a great man again placed you under the yoke which you had believed was broken forever.

You, who, having been slaves, had become freemen, rendered to the liberty which had been restored to you such great and important services—you yourselves were cast back into servitude! The new Republic will accomplish what the Republic of 1792 proclaimed. You shall again become free. There shall no longer be a slave on the soil of liberty. In our colonies as well as in continental France, every man who inhabits the land shall be free. You will prove yourselves worthy of it, for you ever have been so. And when slavery shall have disappeared, our descendants will exclaim with pride—it was to the revolution of 1848 that the final abolition of slavery was due.

This was re-echoed by the repeated cries of "Vive la Republique! Vive la gouvernement provisoire!"

Boston—Sunday, April 16.

The U. S. Steam Frigate *Mississippi*, Com. McKenzie, arrived at this port this day from Vera Cruz, which place she left on the 2d inst., via Havana on the 8th. As she came out from Vera Cruz the propeller *Massachusetts* arrived there from New Orleans, having on board Mr. Clifford, Associate Commissioner for securing the ratification of the Treaty.

The general impression at Vera Cruz among well informed persons having communication with the Capital was, that the treaty would be ratified by the Mexican Congress notwithstanding the modifications made by the U. S. Senate.

The Vera Cruz Free American of the 21st ult. says:

We learn from good authority that Santa Anna requested Col. Hughes, the governor of Jalapa, to receive him as he had a passport to leave the country.

Col. Hughes went out with two companies of dragoons and one of artillery, to meet the gentleman at Hacienda, at Encero. He will probably embark on board the English steamer for Havana. Gen. Valancia died of Apoplexy in the city of Mexico, on the 25th ult.

The Mexican Congress had not assembled at the latest acounts. The Court of Inquiry was hearing the testimony in the case of Gen. Pillow on the 25th ult. Major Burns, who claims the authorship of the Leonidas letters, was under examination.

The spirit of revolution was said to be fomenting in San Luis and Guadalaxara.

On the 29th ult., Col. Wilson, acting Governor of Vera Cruz gave notice, that on the following day he should surrender the entire civil administration of that city with the archives, funds, courts, post office, &c., into the hands of the Mexican authorities, in accordance with the armistice entered into by General Butler. The American residents were loud in their disapprobation of the measure.

City Tract Society.

A Semi-Annual Meeting of the Buffalo City Tract Society was held last Sabbath evening in the North Presbyterian Church. A large assembly, consisting of members of the English Lutheran, Baptist, Methodist and Presbyterian congregations in the city, was convened. AZEL ENSWORTH, M. D., President of the Society, presided. The devotional exercises of the evening were under the direction of the Rev. CHARLES RICH, pastor of the North Presbyterian Church. The services were introduced by singing, after which the Rev. F. W. GRAVES read a portion of Scripture, and offered prayer. In the absence of Mr. L. DANFORTH, the Secretary, Mr. C. D. COWLES read the semi-annual Report, of which the following is an abstract:

The Buffalo City Tract Society was formed in October 1846. In the first year of its operations, the Society distributed tracts during six months only; and in this period 3000 families were visited, and 36,000 tracts distributed at an expense of a little more than $100. Numbers were persuaded to attend church; many children were gathered into the Sabbath School; the destitute were supplied with the word of God: suffering families were relieved; a few backsliders were reclaimed, and some souls, we trust, were brought to accept the Saviour as their only hope.

During the four months of the present year, 2500 families have been visited, and more than 50,000 pages of tracts have been distributed. The society has already expended $67, and at this rate will need $134 for the remaining eight months. Our city, (say the report) contains over 5000 families, and to supply these with tracts requires the labor of 150 distributers. Thus far the work has been but partially accomplished, not only for want of means, but of laborers And now, in view of what has been effected, in view of the wants of the city, and the encouragements we have to go on with the work;—what shall be done? Shall the means be placed at the disposal of the society for furnishing tracts? Will the persons needed volunteer to scatter these messenger of salvation? And thus the work of the Lord be accomplished, and sinners brought to a knowledge of the Redeemer.

The Report was adopted.

The following resolutions were then proposed, and after having been sustained by appropriate addresses, were adopted.

On motion of the Rev. Mr. HEACOCK, of the Lafayette St. Presbyterian Church.

Resolved, That the Report, which has just been adopted, exhibits a wide and growing field of usefulness, demanding of those who are engaged in it a new consecration to their work, and loudly calling upon the friends of Christ to come to their help, and to pray the Lord of the harvest that He would send forth more laborers into this field, and crown their prayers and their efforts with His blessing.

Resolved, That this Institution, by calling forth the activities of individual Christians in direct and personal efforts to win souls to Christ, is doing essential service to the cause of true religion, and contributing greatly to the strength and spirituality of the people of God.

On motion of the Rev. Mr. SHELDON, of the Cottage Baptist Church, it was

Resolved, That the Divine blessing, which has so eminently attended and prospered the labors of tract visitors, powerfully recommends and entitles those who are engaged in these ministries of love to the friendly and favorable regards of the families, on whom they call in their monthly visitations, and to the prayers and sympathies of all Christians.

On motion of the Rev. Mr. THOMAS, of the Niagara St. Methodist Episcopal Church, it was

Resolved, That this enterprize, by encouraging the co-operation of Christians of different denominations, has a happy influence in promoting that unity of spirit among the followers of Christ for which the Saviour prayed; and that we regard this fellowship in good works as one of the most favorable signs of the times, and a sure earnest and harbinger of better days to come.

This resolution was seconded by G. B. RICH, Esq., who expressed his deep interest in the subject of it, and his wish that all present might be requested to vote on its adoption.

After singing a hymn, on motion of the Rev. Mr. STERNBERG, of the English Evangelical Lutheran Church, it was

Resolved, That the success, which has already attended the Colporteur enterprize, abundantly proves the great importance of the system of Colportage, and its adaptedness to all classes, and to every part of our country; and lays us under obligation to praise God for what has already been accomplished by this agency, and to pray that it may be more extensively and vigorously employed in every city and county in our land.

Resolved, That, in view of the great influx of foreigners, flocking to our shores from the different nations of Europe, the work of supplying them with evangelical truth in their own language is a service which is demanded as well by the dictates of charity and patriotism, and by the exigencies of the times as by the peculiar circumstances of these immigrants and strangers in this land of their adoption.

After making some remarks in support of these resolutions, Mr. STERNBERG introduced to the audience Mr. EHLNER, a German Colporteur, of the American Tract Society, sustained by the Ladies' Colporteur Association of the First Pres-

byterian church, and laboring among the German population of this city. Mr. E. stated some facts illustrating the practical workings of the Colporteur enterprize, and with much fervor recommended it to the regard of all Christians by pointing out its fruits, and showing the great need of such labors of love in behalf of all immigrants and especially among his fellow countrymen.

The resolutions offered by Mr. STERNBERG were seconded and sustained by Dr. C. C. HADDOCK, who submitted a resolution, which was seconded by the Rev. Mr GRAVES, that a collection be now taken up in behalf of the Buffalo City Tract Society. This resolution, to the regret of many of the congregation, was afterwards withdrawn.

On motion of the Rev. Dr. TUCKER, of the Washington st. Baptist church, it was

Resolved, That we regard the Press as a mighty instrument for good or for evil; and that the people of God are required, by the extensive abuse of this power, by the plain indications of Providence, and by the wants of a perishing world, to inscribe "*Holiness to the Lord*" on this instrumentality, and to employ it diligently and faithfully in promoting the interests of Christ's Kingdom.

On motion of the Rev. Mr. BURTIS of the First Presbyterian church, it was

Resolved, That while we feel under special obligation to provide for the spiritual destitutions of his city, by distributing Evangelical tracts and volumes among its inhabitants, we deeply sympathise with those who are endeavoring to disseminate a Christian Literature throughout our land; and also, with the Missionaries of the cross, who are circulating the productions of the Press in the dark places of the earth, and bring the heathen, by this instrumentality, to the knowledge of Christ, and thus contributing to the coming of that day, when "the earth shall be full of the knowledge of the Lord, as the waters cover the sea."

On motion of CHARLES E. CLARK, Esq., it was

Resolved, That a copy of the proceedings of this meeting and of the resolutions passed, be sent to the several papers in this city for publication.

After the Dexology and Benediction, the assembly was dismissed.

PITTSBURGH, April 12—1 o'clock P. M.

FIVE DESTRUCTIVE FIRES IN PITTSBURG—IMMENSE AMOUNT OF PROPERTY DESTROYED.—Our city this morning was visited with no less than five terribly destructive fires. The first fire broke out in a stable near the canal, and before the flames could be subdued, twenty-six houses were destroyed and three smoke houses, containing seven hundred thousand pounds of bacon, the property of Holmes Brother, Jordan & Son, Acheson & Dagg, J, Dalzell, and Carson & McKingle. The smoke houses were insured.

Four houses were consumed at the second fire, including Hill's paper factory.

At the third fire four houses were destroyed, two of them dwellings, besides a stable.

At the fourth, two houses.

At the fifth, three stables and a dwelling in Mulberry Alley.

The five fires were raging in the different parts of the city at the same time, producing the utmost consternation, as the belief was general that it was the work of incendiaries. The loss must be immense, although no correct estimate can be made at present.

Fortunately there was no wind, or else half the city would now be a mass of smouldering ruins. The flames are completely subdued.—*Philadelphia Bulletin.*

Title of Acts

Passed by the Legislature of the State of N. York at the 71st Session thereof, 1848.

To incorporate the Clinton Monument Association.

To authorise the formation of Gas Light Companies.

To authorise the formation of corporations for manufacturing, mining, mechanical and chemical operations.

To authorise the wife and heirs of Peter Alphonse Le Couteulx to take, hold and convey real estate.

To amend the several acts in relation to fraudulent debtors.

To amend an act entitled "An act to authorise the canal commissioners to drain certain lands near Skajaquada creek, in the town of Black Rock," passed April 28, 1847.

To amend the act entitled "An act to consolidate and amend the act to incorporate the city of Buffalo, passed April 28, 1832, and the various acts amendatory, thereof," passed April 17, 1843.

To punish abduction as a crime.

To incorporate the city of Auburn.

To punish seduction as a crime.

To incorporate the city of Oswego.

To authorise the formation of the Niagara Falls House Company.

To provide for the distribution of the annuities due from the State of New York to the Cayuga nation of Indians.

To provide for the election of County Treasurers and fix their term of office.

To authorise the formation of Railroad corporations.

In relation to existing railroad corporations.

To improve the Cayuga creek road in the Co. of Erie.

In relation to the appointment of commissioners of deeds in and for the cities of this State, except the city of New York.

In relation to the Canal Department.

To amend an act entitled "An act to enlarge the powers of the boards of Supervisors," passed May 18, 1838.

In relation to the Madison University.

Making an appropriation to the Erie canal enlargement.

Making an appropriation to the Black River canal and Erie canal feeder.

In relation to the funds appropriated for the canals.

To provide for deficiencies in the Sinking Funds under the provisions of article seven of the constitution.

Making an appropriation to the Genesee Valley canal.

In relation to the Chemung canal.

To amend an act passed December 14, 1847, entitled "an act to amend the acts relating to the Buffalo and Hamburgh Turnpike Company" passed January 23, 1830, and amended April 7, 1847.

To authorise the formation of the Niagara Suspension Bridge House Company.

To appropriate certain portions of the income of the United States Deposite and Literature Funds, to certain Colleges, Academies and for other purposes.

To incorporate the American Dramatic Fund Association.

To provide for the incorporation of Bridge companies.

To provide for the payment of certain expenses of government.

Declaratory of the meaning of the words "Delaware and Hudson" in act passed April 8, 1845.

Making appropriations for State Library.

To provide for the incorporation and regulation of Telegraph Companies.

In respect to the funds and securities in possession of the Clerk of the Court of Appeals.

To remove the obstructions below the ship lock in Lower Black Rock in the Niagara river.

To amend the act for the better regulation of county and state prisons.

To facilitate the determination of existing suits in the courts of this State.

To fix the time for electing officers for the Seneca Indians residing on the Cattaraugus and Allegany reservation in this State.

To declare the public use of a railroad from Buffalo to the State line between New York and Pennsylvania.

Congressional.

WASHINGTON—April 12.

SENATE.—The bill to define the franking privilege of members of Congress was passed unanimously.

A bill to amend the Naval Pension Law was read twice and referred to the Committee on Pensions.

The bill dispensing with the Justices of the Supreme Court from Circuit duty for the space of one year was lost.

The California bill was taken up. Mr. Mason spoke in favor of the bill in defence of the Mexican war, and moved to refer the bill to the Military Committee, with instructions to report an amendment providing for the appointment of two Commissioners by the President and Senate, with permission to examine and decide upon all claims arising out of our claims in California.

HOUSE—The House resolved itself in Committee of the Whole, Mr. Burt in the chair, and took up the bill providing for the carrying of the Foreign Mail.

Mr. Goggin proposed a substitute for the bill and spoke in defence of it.

Mr. Nichol advocated reciprocity in Foreign Postage.

Mr, Tompkins advocated the bill—opposed an amendment, and advocated the bill as a general measure. It was then laid aside, and the Revolutionary Pension bill taken up.

Mr. Van Dyke made a speech against the War.

WASHINGTON—April 13.

SENATE.—Sundry private bills were reported and read twice.

The bill to repeal the pilot laws was taken up and advocated by Mr. DIX. Mr. Miller replied. John Davis rejoined, when the bill was informally laid aside.

The bill for the payment of the California claims was then taken up, when an interesting debate arose on the question of the power of Congress to appoint Commissioners to examine and decide upon the claims.

Mr. Badger contended with much earnestness that Congress has power to appoint the Commissioners. Mr. Rush took the same view of the subject.

Mr. Benton vehemently denied the power of Congress in the premises. Messrs. Butler and Phelps coincided with Mr. Benton.

The Senate adjourned without action on the subject.

HOUSE.—Mr. Horace Mann, successor of Mr. Adams, appeared and took his seat.

The bill for the establishment of a branch mint in New York was read twice and referred to the Committee of Ways and Means.

The contested election case of Monroe and Jackson, in the Sixth District of New York, was taken up. Mr. Thompson, of Indiana, spoke in favor of Col. Monroe's claim. Messrs. Murphy and Cobb advocated the claim of Mr. Jackson. No action was had.

The House then adjourned.

WASHINGTON, April 14.

SENATE.—Mr. John Davis introduced a bill for amending the act of Congress for the promotion of useful arts and inventions, which was read twice.

The bill conferring judicicial powers on American Consuls resident in China and Turkey, was made the special order for Wednesday next.

The bill for the repair of a coffer dam at Cumberland, in the Ohio River, was passed, and the balance of the session was devoted to private bills.

HOUSE.—The contested election case of Monroe and Jackso was taken up. Mr. Van Dyke advocated che claims of Mr. Monroe in a speech of considerable length and earnestness, when the subject was laid aside and the House resolved itself into a Committee of the Whole on the state of the Union, and took up the private calendar, Mr. Morse, of Louisiana, in the Chair.

Several private bills from the Senate, were taken up and passed, when the House adj.

REPUBLIC OF SIERRA MADRE.—The New Orleans *Delta* says it is a clear and notorious fact that "there is a deep laid and settled determination, on the part of many persons of influence and capacity, to complete the work which the United States, under Mr. Trist's treaty, leaves unfinished, to wit, the conquest and occupation of the whole Mexican territory lying North of Sierra Madre." The conquest will be made principally by the uneasy spirits in the army, who will be turned loose upon the community by the consummation of the treaty. The Delta predicts that "the republic of Sierra Madre will be the legitimate offspring of the Trist treaty." Should such be the case, the locofoco party will feel bound to "annex" *if they have the power*, another bloody war will result, another hundred millions more of treasure will be spent, the work will be consummated and the Union will be dissolved owing to the impossibility of keeping together such a mass of States with discordant opinions and interests.

MAN SHOT.—We regret to learn that a Mr. Hartney, of Ogdensburg, was fired upon by one of our officers of Customs, a few nights ago, while endeavoring to make off with some smuggled property, which had been seized, and so severely wounded that his life is in danger. We have not heard the particulars of the affray, but we understand that the officer was discharging his duty, and fired only after the smuggling party had rescued the property from him. Rumor says that two or three other man were wounded at the same time. The occurrence took place between Maitland and Brockville.—*Prescott (C. W.) Telegraph.*

THE CODE OF PROCEDURE.—The Senate bill, amending the 90th section of the Code of Procedure, as regards the limitation of time for commencing suits, was lost in the Assembly yesterday for want of a single vote—ayes 64, noes 30.

The Attica and Buffalo extension to Hornellsville, was also lost—ayes 59, noes 30.

For the Western Literary Messenger.

Life and Death.

LIFE.

It is a strife
Where each against his mate
Urges, with mining will or open hate,
A struggle fierce for fame or power or bread;
Where every broad cast dragon tooth ripens an armed head.
And yet the few apart a better path do tread,
Seeking the thorny way the Savior led,
Insult retorting not again;
Hating dishonest gain,
Knowing that brief
Is life.

DEATH.

Conquereth
When to the ditch or monument
The empty casket of the soul is sent.
The beggar's carcass to the trench all coffinless
though thrown
Sleeps soft as Cheops, spiced and wreathed in pyramid
of stone.
The soul then feels its strength from chains of earth set
free,
When through new opened senses pour'd new wonders be,
Speeding with angel wings to heaven on high,
To blessed immortality,
Crowns radiant glow,
On each young brow,
A conqueror hath
Death.

BLOOMSBURGH, Pa. H. R. W.

NEW YORK, April 17—7 P. M.

The steamship Ohio has arrived at New Orleans with Vera Cruz dates to the 31st ult., and Tampico to the 2d inst.

The most interesting portion of the news is that in relation to the movement of Santa Anna, during the latter part of March.

One of the agents of Santa Anna, obtained a passport for him from the American commander at Orizaba, thence proceeded to Vera Cruz, for the purpose of chartering a vessel to convey him away from the country.

The agent chartered a brig, which at the last accounts was lying off Antiqua, 12 miles North of Vera Cruz, where Santa Anna proposes to embark and proceed thence to Jamaica.

A train from the city of Mexico arrived at Vera Cruz, on the 30th under command of Captain White.

The troops consisted of the Louisiana Foot, with a squadron of Louisiana Cavalry, under Capt. Besancon, and a company under Captain Kerr. The General met Major Graham at Plandel-Rio.

The guerillas were still very troublesome on the roads

All the civil authority had been turned over to the Mexicans.

It was the conviction at the Capital, Vera Cruz, and Tampico, that Congress would assemble before the end of March, and that the Treaty would be immediately ratified.

On the 21st and 22d ult., seven Senators left the Capital for Queretaro, in order to take their seats.

The arrival of Gen. Scott, who is reported to be on his way home, was hourly expected at Vera Cruz.

Purser R. M. Price, arrived at New Orleans on the steamer Ohio, bearing despatches from the Pacific squadron to the Government.

Commander R. Reed and Purser Christian had joined the squadron. They were wrecked on their passage from San Francisco to Mazatlan, in the brig Commodore Stockton, when near Magdalena. The brig was a total wreck, but the passengers were saved by the providential appearance of four whale boats.

WHEAT.—An intelligent friend, who resides in York, Livingston Co., informs us that the wheat crop in that section, and all the way between this city and Mt. Morris, is looking remarkably well, with the exception of a few pieces which were too much injured by the winter to be revived. The fine weather of the last three weeks has had a surprising effect in bringing the crop forward; though rain begins now to be needed.—*Rochester American.*

QUICK TRAVELLING.—Last week the stage from Cherry Valley to Albany performed the distance, fifty-two miles, in seventy-two hours. The roads *were* heavy, it must be admitted.—*Troy Whig.*

MARRIED.

At Black Rock, on the 13th instant, by the Rev. Mr. Sturgress, Mr. JOEL A. BEAN, and Miss JENET CUMMINGS, both of this city.

At the Christian Church, Honeoye Falls, April 16th, by the Rev. Mr. Eaton, Doct. E. JUDSON, of Chicago, to Miss MARY M. SHATTUCK, daughter of Levi Benton, Esq.

DIED.

Last night, CHARLES F., child of Joseph B. and Ann S. Gardner, aged 3 years, 3 months, and 13 days.

FEMALE SEMINARY.

THE regular Spring and Summer Sessions of the BLACK ROCK FEMALE SEMINARY will commence on the first Wednesday in May, and continue twenty-two weeks, under the direction of Mrs. C. M. STEELE, as Principal, aided by competent Assistant Teachers.

The Seminary buildings are commodious, and are pleasantly located within a mile of the limits of Buffalo, on a site overlooking Lake Erie and the Niagara River—uniting the advantages of country air and quietude with all the privileges of the city.

TERMS.—For Board, Washing, and Tuition in all the English Studies, $113 per annum. The extra charges are, for lessons on the Piano or Harp $10 per Quarter; on the Organ $15; on the Guitar $6; the German or French Language $7 50; Drawing and Painting $6.

☞ Circulars, containing farther particulars, may be obtained by applying to the Principal or Trustees.

April, 15, 1848. a112t.

T. S. HAWKS,

LITERARY DEPOT, Post Office Buildings, Buffalo, N. Y. All the Cheap Publications, Magazines, &c., kept constantly on hand, at New York prices. Orders by mail attended to when accompanied with the cash.

AMBROSE S. CARNER,

DRAPER AND TAILOR, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main-Street, Buffalo.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 186 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.

PUBLISHERS,

COMMERCIAL ADVERTISER BUILDINGS

MAIN STREET, BUFFALO.

TERMS.—To mail subscribers, $1,50 per annum in advance, four copies for $5,00, ten copies for $10,00. To city subscribers who receive their papers from the carrier, $2,00. Mail subscribers will also be charged $2,00 if payment is not made in advance.

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

*** All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

Western Literary Messenger.

VOL. X. BUFFALO, SATURDAY, APRIL 29, 1848. NO. 13.

For the Western Literary Messenger

To Minna.

The picture represents beautiful Minna sitting alone, on a wild, secluded rock, looking out upon the ocean, with her eyes suffused in tears.

Say, why, sweet Minna, thus alone
Sitting in sadness now?
Why that dark shadow, not its own,
Wreathing thy thoughtful brow?

Why gaze so mournful on the deep?
Bears it a treasure dear,
For which thy love doth vigils keep
All trembling in that tear?

Or, hath its wave too envious proved,
And claimed thy jewel rare,
Whither affection warm hath moved
That ocean-couch to share?

Or, art thou now by nature wild
To pure devotion here?
She'll own and bless her loving child,
But asks no sorrowing tear.

O, turn to me those soft, sad eyes;
I'd read thy soul's deep thought,
And watch its swelling fountains rise
With mournful message fraught.

Perchance thy heart hath sweetness poured
Upon some shrine approved,
And hand too rude swept its frail chord:
Say, Minna, hast thou loved?

And o'er thy youthful bower and shrine,
Hath sorrow wrought her part,
And all round whom affections twine,
Lift but a broken heart?

'Tis all unknown what wreaths of woe
Within those tear drops shine:
This stern world *may* a dart can show
To pierce a breast like thine.

It matters not; my heart must be
By storms and tempests riven;
Earth hath no home for thee and me;
Minna, there's rest in heaven.

MADISON UNIVERSITY, N. Y. ION.

The Yankee Girl.

BY MRS. HARRIET BEECHER STOWE.

If you wish to investigate the flowers of a country, you do not look for them under the shade of damask curtains, in the windows of drawing rooms, but seek them, as they grow free and individually at the roots of old mossy trees, and in the clefts of overhanging ledges of rocks, or forming eye-lashes to the thousand bright eyes of merry brooks. So if you would see the Yankee girl as she is, take a flight with us, up—up—not to the skies, but to the north of New Hampshire. Alight with us now in this cosy little nook, where the retiring mountains have left space for cultivation, and hard hands have been found to improve it. There, on the green roasted turf, have been dropped some dozen or so of dwellings, a meeting house, and a school house, all in very nondescript and unutterable styles of architecture. There, in that village which never was aroused by the rattle and tramp of the mail coach, whose only road has a green ribband of turf in the middle, with a little turfy line on each side, you will perhaps find what I speak of. How still and Sabbath-like seems the place to-day—does anybody live here? There is nobody to be seen in the streets—nothing stirring but the leaves of the dense, heavy sugar maples, that shade the old brown houses, and the blue flies and humble bees which are buzzing about, with great pretension to business, in the clover fields. But stay! there are signs of life; else why the rows of shining milk pans,—and hark! by the loud drawl from the open windows of yonder school house, you perceive there is a rising generation in the land. Come with us, where a large, motherly, old-fashioned house seems to have set down to cool itself on that velvet slope of turf, while the broad masses of the maples and the superb arches of the elms, form an array of foliage about it, truly regal. That house is the palace royal of one of the soverign people of New Hampshire, to wit, Jonathan Parsons, Jonathan is a great man, and rich in the land, a wise man, and a man of valor, moreover. He is great, politically, for he keeps the post office. He is rich too, for he is the undisputed possessor of all that he wants. He is wise, for he knows a little more than anybody about him, and as to his valor, it is self-evident from the fact that he has been promoted with unparalleled rapidity to be Captain, Colonel, and finally General Parsons. Accordingly he is commonly recognised by his martial title, "the General." He is a hale, upright, cheerful man of fifty or thereabouts, with a bluff, ruddy face, and a voice as cheerful and ringing as a sleigh-bell. He turns his hand to more kinds of business than any one in the village, and, what is uncommon, thrives in all. He keeps the post office, and therewith also a small assortment of groceries, thread, tape, darning needles, tin pans, and axe-heads, and the usual miscellaneous stock of country stores. He has a thriving farm,—possesses legal knowledge enough to draw deeds and contracts, and conduct all the simple law business of his neighborhood, and besides this, he attends, in a general way, not only to the government of the United States, but of all the countries in the world; for Jonathan takes a weekly newspaper, from Boston, and makes up his mind once a week as to all the matters and things the world around, and his convictions, doubts and opinions of these points, are duly expounded to his townsmen, while he is weighing out sugar or tea, or delivering letters in the course of the week. It is a pity that the President of the United States or the crowned heads of Europe never sent to Jonathan for his opinion,—for they would always find it snugly made up and ready for instant delivery. We have only to say in addition, that besides the patriarchal wealth of flocks and herds, Jonathan had a patriarchal complement of sons and daughters, among whom we shall only mention the eldest, whom we introduce by the ever verdant name of Mary. The village had called her mother a beauty before her, and Mary has borne that name ever since she shook the golden curls of

careless childhood. Yet it is not the impression of mere physical beauty that she produces upon you: there is both intelligence and energy in the deep violet of her eye, and decision as well as sweetness in the outline of her beautiful mouth. Her form, naturally slender, is developed by constant and healthful exercise, and displays in every motion the elastic grace of her own mountain sweet brier. And, more than all this, there is a certain cool, easy air, a freedom and nobility of manner, a good taste in speaking and acting, that give to her, though untaught in the ways of the world, that charm beyond beauty, which is woman's most graceful gift. For this instinctive sense of what really is due to one's self and others—this perception of times, places and proprieties, which forms the highest attraction of the lady, though it may be wrought out by laborious drilling, and the tutelage of etiquette, is often the free gift of nature, poured on the fair head of some one who has never trod a carpet, seen a piano, or taken one step in the labyrinth of artificial life.

Mary's amount of accomplishments, so called, was small,—including not a word of French, and no more music than was comprised in the sweetness of natural voices, taught in the common evening singing school of the village. But as a daughter and sister and housewife, her accomplishments were innumerable. Enter the cool, quiet house, not a room of which boasts a carpet, but whose snowy floors need no such concealment. The chief of all that is done in the house, in providing, making, mending, cleaning, and keeping in order, is by the single hands of Mary and her mother. We know this may lead the minds of some of our readers to very prosaic particulars. We have heard a deal of heroines playing on the harp and so forth, but who ever heard of a heroine washing or ironing? The most that has ever been accomplished in these respects, was by the lovely Charlotte of Goethe, whom he introduces to us cutting bread and butter for her little brothers and sisters. We can assure all our fair readers who are inclined to be fastidious on the point, however, that had they lived under the roof of Jonathan Parsons, they could scarcely have been scandalized by any disagreeable particulars. Even at the wash bench, our heroine, in her neat, close fitting calico, never looked so little like a lady as some fair ones we have seen in curl papers and morning gowns, before they were made up for company; and moreover, much that seems so laborious would be over with and out of sight, long before they are in the habit of having their eyes open in the morning. Many days they would find our heroine in possession of leisure to draw, read, write, sew or work muslin, quite equal to their own. They would see that by ingenuity and that quick observation in which pretty women are seldom lacking, she could fashion her attire so as not to be far from the rules of good usuage; and that though her knowledge from books was limited, her mind was active and full of thought, and as ready to flash at the entrance of knowlenge, as a diamond at the entrance of light.

You are not to suppose that a lady of such accomplishments, natural and acquired, a lady of rank and station, moreover, passed to her seventeenth year unwooed. So far from it, there was scarcely a personable article in the way of a beau, who had not first or last tried a hand in this matter. There were too dilapidated old bachelors, one disconsolate widower, half a dozen school masters, one doctor and one lawyer, already numbered among the killed and wounded, and still Miss Mary carried her head with that civil, modest, "what do-I-care-for-you" air, that indicated that her heart remained entirely untouched—and all the wonder was, whom would she marry.

It came to pass, one bright summer afternoon, that as two young gentlemen, strangers in the village, were riding by the house of Jonathan Parsons, the sudden explosion of a gun caused the horse of one of them to start, and threw his rider, who, falling against a post in the front of the door, was very seriously injured. The consequence of all this was, that the two very good looking young gentlemen were detained at the house for some two or three weeks. They were from Canada, and had come down into New Hampshire on a summer shooting and exploring expedition. The younger of them was the young Earl of Beresford, and the gentleman with him, a Mr. Vincent his travelling companion, to whom happened the unlucky accident. He was so seriously hurt as to be confined entirely to his bed, and my young lord being thus suddenly thrown out of business, and into a dismally calm, roomy, clean, uninteresting old house, with no amusement but to tend a sick friend, and no reading but Scott's Family Bible and the Almanac, thought himself in very deplorable circumstances, until he caught a glimpse of the elegant form and face of Mary, which suddenly roused him from his apathy. Now when one is treading carpet floors, lounging on damask sofas, and smelling cologne water, a pretty girl is very much a matter of course, unless her beauty be of a peculiarly rare and striking character. But where there are no curtains, no pictures, no carpets, and nothing more luxurious than a very high backed, perpendicular rocking chair, a pretty girl becomes an angel forthwith, and such was the case at present. The young earl really thought, all things considered, that he would do our fair young Yankee the honor to institute a flirtation with her—so at least said his manner, when he made his first advances. He was repulsed, however, with a cool and determined indifference, which seemed to him quite unaccountable. We could have told the young gentleman the reason. It was not that Mary had not a woman's love of admiration, when honestly and sincerely offered, but there was something in the gallantry of Beresford altogether too taking-for-granted and condescending. She could perceive from his travelling equipments, his general air and manner, that he had alighted among them from quite another orb of society than any of which she had ever conceived, and there was a something indefinite even in his politeness, that told her, he looked down both on her and her parents as beings of a vastly inferior order,—and the thought roused all the woman's pride within her. No princess of the blood could have been more stately, self-possessed and politely determined to keep one at a distance, than our village beauty.

The Earl of Beresford was a mere man of fashion, with no more than a barely comfortable degree of reflection and feeling. Entirely incapable of estimating the real worth of Mary's character, and valuing her merely by the rules of conventional life, he was still struck by the quiet determination of her manner, into something like respect. Our gentleman, however, had been thoroughly accustomed to have his own way, and as is usual with such persons, the thing he could not attain assumed in his eyes a sovereign value. He, moreover, piqued himself particularly on his success with women, and was not disposed to yield his laurels in an obscure country village. Consequently, the more Mary receded, the more eagerly he advanced—the less she seemed disposed to value his attentions, the more obsequious they became, till at length my young lord grew so excited, that he determined on the magnanimous

expedient of declaring his name and rank and making love in regular form, rather than lose the game.

"Vincent," said Bersford to his friend, one evening, after walking up and down the room several times, adjusting his color and brushing up his whiskers, like a man that is getting ready to say something.

"Well, Beresford, out with it," said Vincent.

"Vincent, I have come to a very serious determination."

"I should think you might have," said Vincent, laughing. "We have been in serious circumstances lately."

"Nay, but without joking—"

"Well, without jokrug then."

"I have determined to be married."

"For the two hundred and twentieth time," replied Vincent.

"Vincent, do be serious."

"Serious! have I not been dolefully serious, ever since I came head first into this philosophic retreat? However, Will, proceed to particulars, for any news is better than no news."

"Well, then, Vincent I am determined to marry this lovely little hostess of ours."

"Not old Mrs. Parsons, I presume," said Vincent, laughing, "there would be little eclat in an elopement with her."

Beresford grew angry, but as Vincent continued to laugh, was at last obliged to join, though with a very poor grace.

"Now Vincent," he resumed, "you may spare both your wit and your wisdom, for my determination is unalterable:—you know, of course, I mean the lovely Mary."

"Pshaw!" said Vincent, growing serious in his turn. "Now, Beresford, is not this just like you? Because you are here, in a stupid place, and in want of amusement, must set yourself to ruin the peace of an honest, artless country girl:—it's too bad,—I'm ashamed of you."

"Ashamed! too bad! what do you mean?—Did I not tell you that I am going to marry her?"

"And do I not know that you will do no such thing!" replied Vincent,—"did you ever see a handsome woman, of honorable principles, that you have not had a six-week's vow of marrying?"

"But Vincent—"

"But, Beresford," interrupted Vincent, "do you not know, well enough, that all your vows and promises will wear only till you get to Quebec—and after the first ball, then comes the old story — unavoidable alteration — cruel necessity must prevent, and so forth—and so the poor girl who has been the dupe of your good looks and fair speeches is forgotten. Now, Beresford, you know all this as well as I do."

"But, Vincent, you do not understand the case."

"So you have told me regularly in every flirtation since you have been in the country. Come, now, Will, for once be advised, and let this affair, alone. Besides, think of the absurdity of the thing —introducing a wife whom you have picked up like a partridge, on a shooting tour—no body knows when or where."

"Oh, as to that"' replied Beresford, "I can take her to Quebec and put her in a convent to acquire accomplishments. She has an air and manner worthy of a countess now—and then one can make up some little romance as to her parentage,—at all events, marriage is the only terms on which she can be gained, so marry her I will."

"And you have gained her consent, and that of her parents, to this wise scheme?"

"Her consent!" said Beresford,—"of course she will consent, though I have not yet opened the subject with her."

"And pray, how do you know that"

"How do I know! why, I shall tell her who I am, and plead the cause officially you, see,—and with all deference to the elite of this region, such offers do not occur every day—she must see this, of course."

"Well," replied Vincent, "I have seen little of her, to be sure, but from the sobriety of mind and good sense that seems to characterize the family, I have some hopes that you will not succeed."

"That's past praying for, I fear," said Beresford, "if I may judge from certain little indications, and so forth," and Beresford turned on his heel and whistled himself out of the room, with a very contented and assured appearance.

His confident expectations had arisen simply from the fact that our heroine, from the joint influence, acquaintanceship and natural good humor, had grown, of late, much more approachable; besides which, for a few days past, a more marked change of manner had supervened:—Mary had become absent-minded, occasionally melancholy and more than usually excitable,—her color was varying, her eye was restless, and there was a nervous tremor of manner, entirely different from anything she had ever before exhibited. The truth was, that she was wholly engrossed by certain little perplexities and sorrows of her own; but as Bersford knew nothing of the kind, he formed for himself a very natural and satisfactory theroy, as to the cause of her altered manner.

Accordingly, at the close of a still afternoon, when Mary's mother and sister were absent, Beresford stole suddenly upon her, as she was sitting by an open window curtained by green vines. He commenced his enterprise by a series of complimentary remarks, in just that assumed comfortable way, that is inexpressibly vexatious to an inexperienced sensitive woman—a manner that seems to say, "I understand all about you, and can manage you to admiration." Mary felt annoyed, yet conscious of her own inability to meet, on his own ground, the practised and ready man of the world, who had addressed her.

"Mr. Bersford," she said at length, after some silence, "I presume that all this is very fine in its way, but I beg you will not waste it upon me,—I really have not the cultivation to appreciate it."

Beresford protested that he was entirely and devoutly serious in every word.

"I am very sorry for it, if you are," said Mary, smiling.

Beresford proceeded to reveal his real name and title, and make an offer in regular form.

With some surprise, but with great simplicity and decision, our heroine declined his proposal.

Beresford pleaded the advantage of station he had to offer, his own disinterestedness, and so forth.

"Indeed Mr. Beresford," replied Mary, "I do not know enough about these things to feel in the least honored or tempted by them. It may very possibly, seem to you that you do me great honor by this proposal, but I have no such feeling. You are accustomed to such a different kind of society, such a different manner of estimating things, from anything I have ever known, that I cannot very well understand your feelings. If I ever marry, it will be one who can fully appreciate the affection I give, for its own sake, and not one who will always look upon me as a sort of ornamental appendage to his station."

"Some Yankee pedler or tinker perhaps," replied Beresford, angrily.

"Very possible," replied Mary, calmly, "and he may yet be more truly noble, than the only earl I ever had the honor of knowing," and our heroine left the room.

"Handsomely done, that!" said the earl, walking up and down the room—"upon my word, a duchess could not have executed the thing better. I was a fool for being angry with her, for, after all, it would have been awkward if she had consented," and the earl, who never in his life troubled himself five minutes about any thing, made up his mind to pass off the whole as a good joke; and in less than three weeks from this time, he was desperately in love with a captivating little opera dancer at Quebec.

And yet on the evening of that very day, you might have caught a glimpse of the white dress of Mary, as she stood beneath the old vine arbor, in the garden, alone with one other, listening to the oft told tale again. But this time one might perhaps see that she listens with no unwilling ear, while a manly hand clasps hers, and words of passionate feeling are poured forth.

"I must go, Mary—brightest, dearest, loveliest,—with such a form and face, such a soul, what might you not demand in one that dared hope for you, and I have nothing to offer—nothing."

"And do you think that I count a heart and soul like yours for nothing?" said Mary.

"Yes, but there is so long an uncertainty before me—so much to be done single-handed, and not a soul thinks I'll succeed—not a soul—not even my own mother."

"Yes, George, you know *I* do," said Mary, "and you know that what I say is worth more than all put together."

"Indeed I do—indeed I do—or I should have given up in despair long ago, my life, my angel."

"To be sure I am an angel," said Mary, "and so I beg of you believe every word I say:—that six or seven years from this time, you will come back here the great George Evarts, and every body will be making bows and shaking hands."

"Ah, Mary!" said the young man, smiling, and immediately after, his face changed; an anxious and thoughtful cloud again seemed to settle upon it,—he took her hand and spoke with an expression of sorrow, such as she had never before seen.

"Mary, I fear I have done you wrong, to involve you in any uncertainties—to make your happiness in any respect dependent on my doubtful success in a long hard struggle. I ought not have you bound to me by any promise. If, during these future years, you see one who makes you an immediate offer of heart and—one worthy of you—and you think that if it were not for me—"

"I am to take him of course," said Mary. "Well I will remember it. Oh, George, this is just like you,—always desponding when you hope most. Come back to me, five or ten years hence, and if you have any advice of the kind to give then, why I'll think of it.

But what was said after this, we will not stop to relate; we will only pause a little in our story to explain the "who and what" of the last scene.

There dwelt in the village, a poor, pale, sickly, desponding widow, whose husband had been a carpenter, but being suddenly killed by a fall, had left to his wife no other treasure than a small house and garden, and as bright and vigorous a shoot of boyhood as ever grew up, fair and flourishing, by an old, decayed stock. Little George was a daring, resolute fellow, with a heart running over with affection and protecting zeal for his mother, and for a while he hoed in the garden, drove the cow, milked, and helped in various matters in-doors, with an energy and propriety that caused him to be held up as a pattern in the neighborhood. But when the days drew on that he sould be put to some effective way of making a living, the various wise advisers of his mother began to shake their heads, for with a deal of general ability he seemed to have no elective affinity for any thing in particular.

There was a good natured shoemaker, who offered fully to teach him in the mysteries of the craft, and his mother looked upon it as a providential opening, and George was persuaded to essay upon the lap-stone; but it would not do. Then Jonathan Parsons, being a neighborly, advised man, thought he knew what was best for the boy, and offered to take him on his farm and make something of him, and so George wielded spade and hoe and axe, and a very capable young farmer he promised to be; but after a while he declared off from this also. In short, he seemed in the eyes of many to be in danger of falling into that very melancholy class of instances of clever people, who in common phrase, "don't seem to stick to any thing."

But the gossips of the place were for once mistaken, for there was that which George did stick to, after all. He had in his being that instinctive something or other, which leads one to feel after and find what he is made for. George had come across various odd volumes of books—history, travels, biography,—and these had awakened in his mind a burning desire to be or do something in the world—something he scare knew what, and so he determined he would go to college. and what a sighing and wondering there was from his old mother, and what talking and amazement among the village worthies. Jonathan Parsons gave the young man a faithful and fatherly lecture, from the top of a codfish barrel, on the subject of tempting Providence, and other kindred topics, enforcing his remarks by alluding to the example of Jack Simpson, a poor nondescript, who was generally reported in the attempt to study Latin as a more forcible illustration of his argument. Poor George had but one friend to encourage him amid all this opposition, and that was our warm hearted and trusting Mary. He had become acquainted with her during his stay at her father's, and she had entered warmly into all his plans, and encouraged his schemes with all a girl's confident, undoubting enthusiasm. They had never, until the evening interview we relate, settled any definite expectations for the future, for both knew that it was not a subject to be mentioned to Jonathan Parsons, who would set it down for as clear indication of lunacy on the part of Mary, and of something worse on that of the gentleman.

We will not tell o. the year-long efforts that had been made by our hero, up to the date of his last interview—of the ragged Latin Grammar studied by firelight at his mother's hearth—the Euclid poured over during the long hours of the night, while he was tending a saw mill for a neighboring farmer. Suffice it say, that alone and unassisted, he had now conquered the preparatory studies necessary to fit him for college, and had earned, beside, a small stock of money. This, his little all, he laid out in a pedlar's box and the necessary outfit for it, and after bidding adieu to Mary, and promising his mother to send her a portion of all his earning, he left his native village with the determination never to return, till he had fulfilled the destiny he appointed for himself.

Six years from this time, and Mary was a beautiful woman of three-and-twenty, and not only beautiful, but educated and accomplished; for her own efforts had procured for her advantages of culture superior to what it is the lot of many to attain. George returned to his native village, a newly admitted lawyer, with the offer of a partnership in a very extensive business in Boston. Of course, everybody in the village altered their minds about him directly. His old mother laughed and almost blushed when complimented on her son, and said that somehow George always did

seem to have it in him, and his neighbors, one and all, remembered how they had prophesied that George would be a remarkable man. As to Jonathan Parsons, he shook hands with him in extra style, invited him to drop in and see him any time, and even inquired his opinion as to one or two measures of Congress, about which he professed he had not yet made up his mind; and Mary —— ah, well! Mr. George and Miss Mary had a deal of business by themselves in the little front room, from which came in time as gay a wedding as ever made an old house ring with merriment; and then they took a house in Boston, and Mr. George Evarts began to make a figure in the papers, as a leading young man in the political world, which made Jonathan Parsons a more zealous reader of them than ever; for, as he often took occasion to remark, "he felt that he had some hand in forming that young man's mind."

Many years after this, the Earl of Beresford and our heroine again met at a court drawing room in his own land, and to her, as the wife of the American Minister, his Lordship was formally presented. He was now a regular married man, somewhat gouty, and exceedingly fastidious in the matter of women, as his long experience on these subjects had entitled him to be. He was struck, however, with the noble simplicity of Mary's manners, and with a beauty which, though altered in style, time had done little to efface; nor did he know, till the evening was over, that he had been in close attendance on the little village beauty of New Hampshire and the wife of a Yankee Pedler.

Letters from John Quincy Adams to his Son, on the Bible and its Teachings.

The whole system of Christianity appears to have been set forth by its Divine Author in His Sermon on the Mount, recorded in the 5th, 6th, 7th chapters of Matthew. I intend hereafter to make them the subject of remarks much more at large; for the present I confine myself merely to general views. What I would impress upon your mind is infinitely important to the happiness and virtue of your life, as the general spirit of Christianity and the duties which result from it. In my last letter, I showed you, from the very words of our Saviour, that He commanded His disciples to aim at absolute perfection, and that this perfection consisted in self-subjugation and brotherly love, in the complete conquest of our own passions, and in the practice of benevolence to our fellow creatures. Among the Grecian systems of moral philosophy, that of the Stoics resembles the Christian doctrine in the particular of requiring the total subjugation of the passions; and this part of the Stoic principle was adopted by the academies. You will find the question discussed with all the eloquence and ingenuity of Cicero, in the fourth of his Tusculan disputations, which I advise you to read and meditate upon. You will there find proved the duty of subduing the passions. It is sometimes objected that this theory is not adapted to the infirmities of human nature; that it is not made for a being so constituted as man; that an earthen vessel is not formed to dash itself against a rock; that in yielding to the impulses of the passions, man only follows the dictates of his nature; that to subdue them entirely is an effort beyond his powers.

The weakness and frailty of our nature, it is not possible to deny—it is too strongly tested by all human experience, as well as by the whole tenor of the Scriptures; but the degree of weakness must be measured by the efforts to overcome it, and not by indulgence to it. Once admit weakness as an argument to forbear exertion, and it results in absolute impotence. It is also very inconclusive reasoning to infer that because perfection is not absolutely to be obtained, it is therefore not to be sought. Human excellence consists in approximation to perfection; and the only means of approaching to any term, is by endeavoring to obtain the term itself. With these convictions upon the mind—with a sincere and honest effort to practice upon them, and with the aid of a divine blessing which is promised to it, the approaches to perfection may at least be so great as to nearly answer all the ends which absolute perfection itself could attain. All exertion, therefore, is virtue; and if the tree be judged by its fruit, it is certain that all the most virtuous characters of heathen antiquity were the disciples of the Stoic doctrine. But let it even be admitted that a perfect command of the passions is unattainable to human infirmity, it will still be true that the degree of moral excellence possessed by any individual is in exact proportion to the degree of control he exercises over himself. According to the Stoics, all vices were resolvable into folly; according to the Christian principle, it is all the effect of weakness. In order to preserve the dominion of our own passions, it behooves us to be constantly and strictly on our guard against the influence and infection of the passions of others. This caution above all is necessary to youth; and I deem it indispensable to enjoin it upon you, because as kindness and benevolence comprise the whole system of Christian duties, there may be, and often is, great danger of falling into errors and vice merely for the want of energy to resist the example or enticement of others.

On this point the true character of Christian morality appears to me to have been misunderstood by some of its ablest and warmest defenders. In Paley's 'View of the Evidences of Christianity,' there is a chapter upon the morality of the Gospel, the general tenor of which (as of the whole work) is excellent, but in which there is the following passage: "There are two opposite descriptions of character, under which mankind may generally be classed: the one possesses vigor, firmness, resolution, is active and daring, quick in its sensibilities, jealous of its fame, eager in its attachments, inflexible in its purposes, violent in its resentment; the other meek, yielding, complying, forgiving, not prompt to act, but willing to suffer, silent and gentle under rudeness and insults, suing for reconciliation where others would demand satisfaction; giving way to the pushes of impudence, conceding and indulgent to the prejudices, the wrong-headedness, the intractability of others with whom it has to deal."

The former of these characters is, and ever has been, the favorite of the world: it is the character of great men—there is a dignity in it which commands respect. The latter is poor-spirited, tame and abject. Yet, so it has happened, that with the Founder of Christianity, the latter is the subject of His commendation, His precepts, His example, and that the former is so in no part of its composition. Dr. Paley in this place adopts the opinion of Soame Jennings, whose essay on the "Internal Evidences of Christianity," he strongly recommends; but I cannot consider it either as an accurate and discerning delineation of character, nor as exhibiting a correct representation of Christian principles.

The founder of Christianity did indeed pronounce distinct and positive blessings upon the "poor in spirit," which is by no means synonymous with the "poor spirited;" and upon the meek; but in what part of the Gospel did Dr. Paley find Him countenancing by "commendation, by precept or example, the tame and abject?"

The character which Christ assumed upon earth, was that of a Lord and Master; it was in that character His disciples received and acknowledged Him. The obedience He required was unbounded, infinitely beyond that which was ever claimed by the most absolute earthly sovereign of his subjects; never for one moment did He recede from this authoritative station; He preserved it in washing the feet of His disciples; He preserved it in answer to the officers who struck Him for this very deportment; to the High Priest; He preserved it in the agony of His ejaculation on the Cross, "Father forgive them, for they know not what they do." He expressly declared Himself "the Prince of this world, and the Son of God."—He spoke as one having authority, not only to His disciples, but to His mother, to His judges, to Pilate the Roman Governor, to John the Baptist, His precursor; and there is not in the four Gospels, one act, not one word recorded of Him, (excepting His communion with God,) that was not a direct, or implied assertion of authority. He said to His disciples, "Learn of me, for I am meek and lowly of heart;" &c. but where did He ever say to them, learn of me for I am tame and abject? There is certainly nothing more strongly marked in the precepts and example of Christ, than the principle of stubborn and inflexible resistance against the impulses of others to evil.

He taught His disciples to renounce everything that is counted enjoyment upon earth; "to take up their cross," and to suffer ill-treatment, persecution and death for His sake. What else is the book of the "Acts of the Apostles" than a record of the faithfulness with which these chosen ministers of the Gospel carried these injunctions into execution? In the conduct and speeches of Peter, John, and Paul, is there anything that could justly be called "tame or abject?" Is there anything indicating a resemblance to the second class of character into which Dr. Paley divides mankind? If there is a character upon historical record distinguished by a bold, inflexible, tenacious and intrepid spirit, it is that of Paul. It was to such characters only, that the commission to "teach all nations," could be committed with certainty of success. Observe the impression of Christ, in His charge to Peter (a rock); and upon this rock will I build my Church and the gates of hell shall not prevail against it. Dr. Paley's Christian is one of those drivelers, who, to use a vulgar phrase, can never say no, to anybody. The true Christian is the "Justum et tenacem propositi virum" of Horace, (the man who is just and steady to his purpose.) The combination of these qualities, so essential to heroic character, with those of meekness, lowliness of heart, and brotherly love, is what constitutes that moral perfection of which Christ gave an example in His own life, and to which He commands His disciples to aspire.—Endeavor, my dear son, to discipline your heart, and to govern your conduct by these principles thus combined; be meek, be gentle, be kindly affectionate to all mankind, not excepting your enemies; but never be "tame or abject;" never give way to the pushes of impudence, or show yourself yielding or complying to prejudice, wrong headedness, or intractability, which would lead or draw you astray from the dictates of your own conscience, and your own sense of right: "till you die, let not your integrity depart from you;" build your house upon the rock, and then let the rains descend, and the floods come, and the winds blow and beat about that house—"it shall not fall, it will be founded upon a rock." So promises your blessed Lord and Master, and so prays your affectionate father,

JOHN QUINCY ADAMS.

A Novelist's Plantation.

Correspondence of the N. Y. Express.

WOODLANDS, Barnwell District, S. C, April 10, '48.

I now write you from the plantation of the novelist and poet William Gilmore Simms, Esq., where I am spending a few days as the guest, not only of that gentleman but of his father-in-law, an accomplished gentleman of the old school. It is a very beautiful and secluded retreat, within a mile or so of the railroad leading to Augusta, and seventy-two miles from Charleston. It contains about 4000 acres, and produces in great abundance cotton, rice, and almost every variety of the most delicious fruits. The family mansion is spacious, and surrounded with a brotherhood of superb trees, and when viewed in connection with its out houses and an occasional group of polite and happy slaves, (with the white and black children frolicking under the trees,) produced a truly charming and comfortable effect upon my feelings. At the present time all nature is decked in her summer garb, and a thousand birds, (chief amongst them the mocking bird,) are filling the air with their sweet singing.

Before reaching this place I was told that I should find "Woodlands," to be a fair specimen of a southern plantation, (or "farm" as it is called,) and judging from this specimen, I am convinced that the gentry of the South have brought the art of rationally enjoying life to its perfection. Though I have barely commenced my journey through the Southern States, I have seen enough already to impress me with the idea that the people of this region are eminently distinguished for their intelligence and hospitality. On plantations like that of "Woodlands," the proprietors reside only about one-half of their time, spending the summer and autumn in the larger cities on the sea-board, particularly in Charleston. Much attention is paid to the cultivation of fruits, and though these ripen when the planter is in the city, arrangements are always made by which they receive an abundant supply from their attentive slaves, who continue on the plantation.

On enquiring of Mr. Simms, yesterday morning how he managed to take the exercise usually required by the scholar, he led me through the winding paths of an extensive forest, which he is gradually transforming into what he designates a woodland. Every tree seemed to him a familiar friend, and the grape vines which bound together many of his favorites, struck me as the most luxuriant and beautiful that I had ever seen. The natural beauties of every thing I looked upon, even to the sparkling brooklet or the exquisite swamp scenes, seemed to have been quietly enhanced by the hand of the poet.

On one side of Mr. Simms's plantation flow the clear waters of the Edisto, a lovely and picturesque stream, which has already been made classic by the productions of the Poet and Novelist of the South, *par excellence*. Mr. Simms tells me that the Edisto abounds in fish, such as the bream, the trout, the black perch, sunfish and catfish. Alligators are also found here, but they are small and harmless. Of game, such as deer, partridge, woodcock, rabbits and squirrels, there is an abundance throughout the surrounding country; and in an "aside," I was informed that there were few men in the lowlands of Georgia, who could "bark" a squirrel in a handsomer style than my host.

The indoor attractions of Woodlands are fully equal to those of fields and woods. This is not the place for me to speak of the delightful family with which I am staying, but I may allude to Mr. Simms's Library. It must have cost, I should suppose, from ten to twenty thousand dollars, and

is made up of rare and well selected works in almost every department of literature. Of the productions given to the world by the proprietor himself, I counted no less than 35, including histories, novels, poems, and miscellaneous matter. It is not at all strange therefore, that Mr. Simms's reputation should be co-extensive with the country, and even with the enlightened world.

The Indian Chief.

The following beautiful story is literally true, and was first published in a lecture delivered by WILLIAM TRACY, Esq., of Utica, on the early history of Oneida County. It has been altered by somebody, but we have not at hand the means of correcting the alterations, nor are they sufficiently important to greatly mar the beauty of the incident as gracefully related by Mr. TRACY—whose fine pen, we would take this occasion to say, it is a reproach to him that he has suffered to lie idle so long:

One of the first settlers in Western New York, was Judge W———, who established himself at Whitestown—about four miles from Utica. He brought his family with him, among whom was a widowed daughter with an only child—a fine boy about four years old. You will recollect, the country around was an unbroken forest, and this was the domain of the savage tribes.

Judge W——— saw the necessity of keeping on good terms with the Indians, for, as he was nearly alone, he was completely at their mercy. Accordingly he took every opportunity to assure them of his kindly feelings, and to secure their good will in return. Several of the chiefs came to see him, and all appeared pacific. But there was one thing that troubled him; an aged chief of the Oneida tribe, and one of great influence, who resided at a distance of a dozen miles, had not yet been to see him, nor could he ascertain the views and feelings of the sachem in respect to his settlement in that region. At last he sent him a message, and the answer was that the chief would visit him on the morrow.

True to his appointment, the sachem came; Judge W——— received him with marks of respect, and introduced his wife, his daughter and little boy. The interview that followed was interesting. Upon its result the Judge was convinced his security might depend, and he was therefore exceedingly anxious to make a favorable impression upon the distinguished chief. He expressed his desire to settle in the country, to live on terms of amity and good fellowship with the Indians, and to be useful to them by introducing among them the arts of civilization.

The chief heard him out, and then said:—"Brother, you ask much and you promise much. What pledge can you give of your faith? The white man's word may be good to the white man, yet it is wind when spoken to the Indian."

"I have put my life in your hands," said the Judge' "is not that an evidence of my good intention? I have placed confidence in the Indian and will not believe that he will abuse or betray the trust that is thus reposed."

"So much is well, replied the chief, "the Indian will repay confidence with confidence, if you will trust, he will trust you."

"Let this boy go with me to my wigwam—I will bring him back in three days with my answer!"

If an arrow had pierced the bosom of the mother, she could not have felt a deeper pang than went to her heart, as the Indian made this proposal. She sprang forward, and running to the boy, who stood at the side of the Sachem, looking into his face with pleased wonder and admiration, she encircled him in her arms, and, pressing him to her bosom, was about to fly from the room. A gloomy and ominous frown came over the Sachem's brow, but he did not speak.

But not so with Judge W——. He knew that the success of their enterprise, the lives of his family, depended on a decision of a moment.

"Stay, stay, my daughter," he said. "Bring back the boy, I beseech you. He is not more to you than to me. I would not risk a hair of his head. But, my child, he must go with the Chief. God will watch over him! He will be as safe in the Sachem's wigwam, as beneath our own roof."

The agonized mother hesitated for a moment; she then slowly returned, placing the boy on the knee of the Chief, and kneeling at his feet, burst into a flood of tears. The gloom passed from the Sachem's brow, but he said not a word. He arose and departed.

I shall not attempt to describe the agony of the mother for the ensuing days. She was agitated by contending hopes and fears. In the night she awoke from sleep; seeming to hear the screams of the child calling on its mother for help. But the time wore slowly away—and the third day came. How slowly did the hours pass. The morning waned away, noon arrived; yet the sachem came not. There was a gloom over the whole household, The mother was pale and silent. Judge W—— walked the floor to and fro, going every few minutes to the door, and looking through the opening in the forest towards the sachem's abode.

At last the rays of the setting sun were thrown upon the tops of the trees around, the eagle feathers of the chief were seen dancing above the bushes in the distance. He advanced rapidly—and the little boy was at his side. He was gaily attired as a young chief—his feet being dressed in moccasins, a fine beaver skin was on his shoulders, and eagle feathers were stuck in his hair. He was in excellent spirits, and so proud was he of his honors that he seemed two inches taller than he was before. He was soon in his mother's arms, and in that brief minute she seemed to pass from death to life. It was a happy meeting—too happy for me to describe. "The white man has conquered!" said the sachem; "hereafter let us be friends. You have trusted an Indian, he will repay you with confidence and friendship."

He was as good as his word; and Judge W. lived for many years in peace with the Indian tribes, and succeeded in laying the foundation of a flourishing and prosperous community.

☞ We like the sentiment of the following scrap, though the author is unknown. Whoever he may be, if his practice accords with his precepts, we would like to shake hands with him:

"A genial and happy disposition finds materials of enjoyment every where. In the city, or the country—in society, or in solitude—in the theatre, or the forest—in the hum of the multitude, or in the silence of the mountains, are alike materials of reflection and elements of pleasure. It is one mode of pleasure to listen to the music of "Don Giovanni," in a theatre glittering with light, and crowded with elegance and beauty: it is another to glide at sunset over the bosom of a lonely lake, where no sound disturbs the silence but the motion of the boat thro' the waters. A happy disposition derives pleasure from both, a discontented temper from neither, but is always busy in detecting deficiencies, and feeding dissatisfaction with comparisons. The one gathers all the flowers, the other all the nettles, in his path. The one has the faculty of enjoying everything, and the other of enjoying nothing. The one realizes all the pleasure of the present good; the other converts it into pain, by pining after something better, which is only better because it is not present, and if it were present would not be enjoyed.

The Holy Land.

[We find the following translation of a poem by Lamartine, the great French revolutionist, in the National Era. The translation is made by the American poet Whittier. The poem was written by Lamartine on the eve of his departure for Palestine.]

I have not felt o'er seas of sand
The rocking of the desert barque;
Nor laved at Hebron's fount my hand,
By Hebron's palm-trees cool and dark;
Nor pitched my tent, at even-fall,
On dust where Job of old had lain,
Nor dreamed beneath its canvass wall
The dream of Jacob o'er again.

One vast world-page remains unread:
How shine the stars in Chaldea's sky,
How sounds the reverent pilgrim's tread,
How beats the heart with God so nigh!—
How round grey arch and column lone
The spirit of the old time broods,
And sighs in all the winds which moan
Along the sandy solitudes!

In thy tall cedars, Lebanon,
I have not heard the nations' cries,
Nor seen thy eagles stooping down
Where buried Tyre in ruin lies.
The Christian's prayer I have not said
In Tadmor's temples of decay,
Nor startled with my dreary tread
The waste where Memnon's empire lay.

Nor have I from thy hallowed tide,
Oh, Jordan! heard the low lament,
Like that sad wail along thy side,
Which Israel's mournful Prophet sent!
Nor thrilled within that grotto lone,
Where, deep in night, the Bard of Kings
Felt hands of fire direct his own,
And sweep for God the conscious strings!

I have not climed to Olivet,
Nor laid me where my Savior lay
And left His trace of tears, as yet
By angel eyes unwept away;
Nor watched at midnight's solemn time
The garden where His prayer and groan,
Wrung by His sorrow and our crime,
Rose to One listening ear alone!

I have not kissed the rock-hewn grot
Where in His mother's arms he lay,
Nor knelt upon the sacred spot
Where last His footsteps pressed the clay;
Nor looked on that sad mountain head,
Nor smote my sinful breast, where wide
His arms to fold the world He spread,
And bowed his head to bless, and died!

A Remarkable Meeting.—The following notice, by an American Missionary of a late meeting in Constantinople, shows the harmonizing tendency of missions:

"Think of a great union meeting, consisting of Armenians, Jews, Americans, English, Scotch, Germans, Catholics and Greeks, and all sitting down together at the table of the Lord—Congregationalists, Presbyterians, Lutherans, Baptists, Methodists, baptized Jews and Protestant Armenians. The elements were distributed by a Jew, a German, and the two deacons of the Protestant Armenians. Prayers were offered in three languages, Turkish, English and Armenian. Remarks and exhortations were made in four languages, German, English, Armenian and Turkish. And hymns were sung to the same tune, and at the same moment, in three different languages, Armenian, German and English. The first tune was *Old Hundred*, the same that will be sung in the Millennium. There was no confusion, no discord. No one was out of time or out of tune. The harmony was perfect; while each, with the spirit and the understanding, and with the greatest power and might, was singing in his own tongue wherein he was born, or with which he is now familiar, '*the high praise of our God.*' The effect was overpowering. It was 'the voice of a great multitude,' redeemed out of many nations, kindreds and tongues; and it rose on high like 'the sound of many waters.' Our chapel was crowded with communicants; and our hearts were filled with emotions too big for utterance."

For the Western Literary Messenger.

Astronomy—The new Planet.

The study of Astronomy was a favorite pursuit in the palmy days of the earliest civilization.—When Literature was in its cradle and Art had reared no monument to genius, the Chaldean shepherds, as they watched their flocks on the banks of the Euphrates, beguiled the tedious hours of night by grouping the constellations, and noting the motions of the planets—and thus laid the corner-stone of that noblest of edifices that the genius of man has ever reared—the science of *Modern Astronomy*.

In every subsequent age Astronomy has had her votaries, and enrolled among them many of the choicest and most gifted of our race; by whose untiring efforts, and profound investigations, the boundaries of human research and knowledge have been extended to an almost unlimited range; the littleness of man, and all terrestrial things, the magnitude and gorgeous magnificence of the universe, and the majesty and glory of Him who "stretched out the north over the empty places and hung the worlds on nothing," have been taught to the human heart and understanding in a way to humble its pride, and abash him in the dust before the august presence and power of the great Architect and upholder of all things.

The discovery of the new Planet, Neptunus, on the 23d September, 1846, by M. Le Verrier, or as the English astronomers maintain (and with some show of reason), by Mr. N. Adams, has given a new impulse to astronomical research and awakened profound interest, not only in the circles of the scientific, but in every department of the world of letters, and throughout the walks of ordinary *practical* life. It has called forth the highest encomiums upon its most fortunate discoverer, and enrolled the name of Le Verrier with the Newtons, the Herschels, and the Galileos—names that will live through all time, and sound like household words to the ears of the most distant posterity—glory enough for one man.

A double interest attaches itself to this discovery. All other such discoveries had been made by the practical astronomer, with his glass, ranging the wastes, and sounding the depths of space. But here, a Mathematician, in the seclusion of his study, with the simple record of the annual perturbations of the planet Uranus for his data, by the power of a rigid and profound analysis, deter-

mines not only the *existence* but *demonstrates* to the most infallible certainty, the exact position, of a new member of our system which till then was unknown, and hardly suspected by any human being! and then directs an astronomer, hundreds of miles distant, where to point his telescope, that he might welcome, in his eye-glass, this stranger planet, which he had hailed through his analysis. M. Galle, of Berlin, is the happy man who was first gladdened by the light of this new world as it came struggling through the vast intervening wastes! What a triumphant display of the power of analysis! If the Pythagonian rightly revered numbers as divine, surely before such an astounding exhibition of their divinity, we might well prostrate ourselves and adore.

This is the eighth planet that has been added to our system. Its distance from us is more than three thousand four hundred millions of miles; its magnitude is two hundred and fifty times greater than the earth, and its time of revolution is about two hundred and twenty-four years. At this distance, the sun dwindles into a mere star (though above the brilliancy of any that deck our heavens,) whose light and heat is to that at the earth as 7 to 10,000.

Thus have the lateral dimensions of our system been extended more than one thousand five hundred millions of miles, a new illustration furnished of the mighty reach of solar attraction.—A sister orb has been revealed to our astonished vision, which yields to the high behests of the same far-reaching law is warmed into life and mantled with beauty, by the same genial light as that which guides the course, and clothes in the glad livery of spring or the sober hues of autumn, our own terrestial home; and the music of whose solemn march, struck to the same great key-note, and mingling with the grand harmony of the skies, completes the *celestial octave*, and perfects "the music of the spheres." Here the hand of Deity is seen moving forward in its century-cycles this dweller on the confines of our system; and we may believe dispensing and upholding *life*, in its endlessly diversified forms—moral and physical, and here the increase of grateful devotion may rise, amid these wastes and solitudes of space.

IRIS.

ENORMOUS PROFITS OF FARMING.—A correspondent of the Boston Cultivator, states the success of a man who left a lucrative business in the city of Philadelphia, for farming, to make a profit. After two years trial, he was asked if he did find the profits small, compared with those of trade? He answered, "Quite the contrary; I have realized far more than the most I had dared to anticipate, and I am, at the end of two years, richer than I ever could have become by twenty-five years of successful trade. It is true, I made more dollars and cents in trade than I do now, but that is dross compared to the blessings of health, of body and peace of mind, which gold and silver could never purchase. I eat, drink and sleep with an appetite; yawn at bed time, and never in the morning; am up before the sun, and yet the day is never too long; and more than all, I have no acceptances to take up. Money! why what use have I for it? I raise my own food in the richest profusion, and my own clothing—my estate is annually increasing in value—then what is the use of money?—I can't eat or drink it, even if it were cut into mince meat."

Recent Intelligence from Yucatan.

The Boston *Post* says:

More than a hundred towns and villages, 500 haciendas, and 1000 ranchos or smaller estates, spread over half the territory of Yucatan, have fallen into the hands of the Indians. This territory contained a population of more 250,000, of whom about 180,000 were Indians. The remaining 70,000 being of the proscribed colors, white, mestizos, or negroes, have either been put to death or have fled in utter destitution from their homes. The savage barbarity of the Indians has led them, in some cases, even to eat the white infants whom they had slain. The principal chief of the Indians is Jacinto Pat. The second in consequence is Chi. Each has a standing force under his orders of about 12,000. They act in concert. Numerous smaller bands are scattered over the country, each under its separate leader, all animated by the common setiment of extermination of the whites and mestizos, and murdering, burning, and violating in terrible rivalry of each other.

Yucatan, though perhaps the poorest province of Mexico in fertility of soil, was one of the most flourishing from the industry and frugality of its inhabitants. It was covered every where with extensive establishments for the culture of sugar, Sisal hemp, and the raising of cattle. The buildings of its haciendas were spacious, and many of them remarkable for their architectural elegance. The laboring population lived with as much comfort as those of any country except our own. Their cottages made of reeds, and thatched with palm leaves, afforded all the protection that the climate called for. In addition to maize, they received rations of animal food from the proprietors, and each could have his milpa or corn field, and had the privilege of raising pigs and poultry for use or for sale. A cleaner or more appropriately dressed population than that of Yucatan could nowhere be seen.

It is believed that party spirit, the struggle for office in this petty state, first invoked the demon of discord and civil war in this heretofore happy, but now doomed country. The Yucatecos, though deemed the bravest and most warlike of the Mexicans are everywhere panic stricken at the numbers and ferocity of their enemies. Desolation and barbarism seem the inevitable destiny of a state which a year ago was the abode of prosperity, comfort, and an advancing civilization.

On the 1st of April a vessel arrived at Vera Cruz with despatches from Commander Bigelow, Governor of Yucatan, to Commodore Perry. It was said that the people of Campeachy, a fine old Spanish town of 15,000 inhabitants, the seat of no inconsiderable wealth and luxury, was in great panic at the approach of the Indians. Commander Bigelow had sent off the Iris steamer and schooner Falcon to give countenance, and if necessary, a refuge to the inhabitants. The Vesuvius bomb vessel had already been left off Campeachy with that view by Commodore Perry, on the occasion of his recent visit in the Mississippi.

Laguna, in the possession of the United States, will at any rate give refuge and protection to all who may flee thither.

VIENNA, MARCH 14.—In walking through the town this afternoon, I met Mr. Styles, the American Minister. He tells me that he was accidentally very near to the Landhaus when the firing took place yesterday, little dreaming that such an attack would be made on an unarmed people; he had only just time to take refuge in the Walner strasse, and six men were shot dead within a very short distance of the place where he was.—*Corr. London Times.*

Using up a Gang of Robbers.

The western hunter (though rarely) has been set upon by robbers, for the pack of furs he was carrying upon his back to some of the seaport towns to dispose of; but as the fur hunters are generally on foot, and from habits of watching about for either hostile Indians or wild animals, are always on their guard, and as the robbers well know that they are, to a man, riflemen who seldom miss their mark, they avoid them. During my rambles in the wilds and fastnesses in California, I became acquainted with many of them, some from the back settlements of the United States, others from Canada.

I have hunted for months with them, and witnessed some conflicts between them and wild animals, in which the utmost daring and recklessness were exhibited by the hunter. These are not the men that robbers like to oncounter, but I have said they sometimes take a liking to the valuable packs of furs, which, if they find any facility for obtaining, they may make the attempt upon. It is the very climax of cruelty to plunder those poor fellows of packs which were procured only by outlying for months in the depths of the forest and wilds of the country, and not unfrequently in the hunting grounds of a tribe of hostile Indians.

I once hunted three months in company with a hunter well known in California. In idea, he was wild and imaginative in the extreme; but in his acts of daring, &c., the most cool and philosophic fellow I ever knew. A commerciante, or merchant, at San Francisco, on whose veracity I know from experience I can depend, told me the following story of this man, which will at once illustrate his general character.

This hunter was, some months before I had fallen in with him, making the best of his way down the valley of the Tule Lakes, from the interior with a heavy pack of furs on his back, his never-erring rifle in his hand, and his two dogs by his side. He was joined at the north-most end of the valley by the merchant I have spoken of, who was armed only with a sword and pistol.—They had scarcely cleared the valley, when a party of robbers galloped out before them. There were four whites, fully armed, and two Indians with their lassoes, coiled up in their right hands, ready for a throw.

The hunter told the merchant, who was on horseback, to dismount instantly, and to "cover." Fortunately for them, there was a good deal of a thicket, and trunks of large trees that had fallen, were strewed about in a very desirable manner. Behind these logs the merchant and the hunter took up their position, and as they were in the act of doing so, two or three shots were fired after them without effect. The hunter coolly untied the pack of furs from his back and laid them beside him. "It's my opinion, merchant," said he, "that them varmints there want either your saddle-bags or my pack, but I reckon they'll get neither." So he took up his rifle, fired, and the foremost Indian, lasso in hand, rolled off his horse. Another discharge from the rifle, and the second Indian fell, whilst in the act of throwing his lasso at the head and shoulders of the hunter, as he raised himself up from behind a log to fire.—"Now" said the hunter, as he reloaded, lying on his back to avoid the shots of the robbers, "that's what I call the best of the scrimmage, to get them brown thieves with their lassoes out of the way first. See them rascally whites, now jumping over the logs to charge us in our cover."

They were fast advancing, when the rifle again spoke out, and the foremost fell; they still came on to within about thirty yards, when another fell, and the remaining two made a desperate charge close up to the log. The hunter, from long practice, was dexterous in loading his gun. "Now, merchant," said he, "is time for your popguns," meaning the pistols, "and don't be at all nervous. Keep a steady hand, and drop either man or horse. A man of them shan't escape."

The two remaining robbers were now up with the log, and fired each a pistol shot at the hunter, which he escaped by dodging behind a tree close to him, which he fired with effect. As only one robber was left, he wheeled round his horse, with the intention of galloping off, when the pistol bullets of the merchant shot the horse from under him. "Well done, merchant," said the hunter, "you've stopped that fellow's gallop." As soon as the robber could disentangle himself from the fallen horse, he took to his heels, and ran down a long sloping ground as fast as he could. The hunter drew his tomahawk from his belt, and gave chase after him. As he was more of an equestrian than a pedestrian, the nimbleness of the hunter shortened the distance between them, and the last of the robbers fell.

Thus perished this dangerous gang of six, by the single hand of this brave hunter, and, as the "commerciante" informed me, he acted as deliberately as if he were shooting tame bullocks for the market. The affair was rather advantageous to the hunter for, on searching the saddle-bags and pockets of the robbers, he pulled forth some doubloons and a few dollars, with other valuables they had, no doubt, a short time previously taken from some traveller. The saddle-bags, arms and accoutrements of the four white men were packed up, and made fast on the saddles of two of the horses, the hunter mounted a third, the merchant another, his horse being shot, and thus they left the scene of action—the bodies of the robbers to the wolves which were howling about them—and entered St. Francisco in triumph.

A Wife and Husband forcibly Divorced.—On Monday morning, as the person whose duty it is to sweep out the cars at the Depot, opened one which came up with the preceding train, but which was not required by the diminished number of passengers who went to Buffalo, he was much surprised to find a woman, safely locked in. It seems she, in company with her husband, were on their way west, in the night train; and when the cars reached Rochester, she was in such a profound sleep, that all the noise and tumult did not wake her. The husband, on the principle of "every man for himself," went on his way to Buffalo. The car in which the woman was seated, was run on to another track, and by the time she awoke, and was released, her husband was in Buffalo.—*Rochester Daily Advertiser.*

Swinish French.—A drunken Frenchman, having mistaken a pig sty for a human habitation, knocked at it most violently and awoke the inmates, who had long retired to rest, of whom the Frenchman inquired—"*Quelle heure est il?*"—The old pig whom he had disturbed began to grunt out—"*Neuf, neuf.*" On which the Frenchman exclaimed—"*Est il si tard?*" At this moment a young pig thrust forth his head singing out—"*Oui, oui, oui!*" On which the inquirer walked off very well satisfied with his information.

☞ The Zanesville *Courier* states that a flash of lightning visited the telegraph office at that place, passed through the magnet, heating it almost red hot, and then off on a very small spiral wire used as a spring. Melting this, the fluid went out of the open window in front.

Editorial Department.

J. CLEMENT, EDITOR.

YOUNG MENS' ASSOCIATION.—The twelfth annual Report of the Young Mens' Association has been published, and it exhibits the society in an unusually prosperous condition. It is a source of profound gratification that such an association has existence among us; for its influence in promoting the cause of science and general intelligence, is incalculable. It is just such a society as ought to be found in every city and large village; and the fact that its thrift is increasing, speaks well for its supporters. We notice by the Report that the property of the Association has lately been insured for the sum of $5,000 which is $1,000 more than any previous insurance. The publications received regularly, are 14 daily papers; 15 weekly; 6 monthly periodicals; and 9 quarterly reviews. The number of books in the Library does not, we believe vary much from 6,000 volumes. The Report concludes as follows:

"In conclusion your Committee would congratulate you upon the prosperous state of the affairs of the Association. By the exertions of those who preceded us, the difficulties with which it was surrounded, and by which its usefulness was diminished, have been dispersed; and to us has been committed the comparatively easy task of strengthening its position, and enlarging the circle of its influence. Much, however, remains to be done. So long as we are compelled to rely upon the liberality of our citizens for additions to our Library, the Association may not justly be deemed in a wholly prosperous condition. Its legitimate revenue, derived from the dues of its members, should be so large as to amply suffice for this object.

The Association has the foundations of its prosperity broadly and deeply laid; but it is the foundation alone, of such an institution as we need; and the duty still remains, of erecting a superstructure which, in its fair proportions, shall command the admiration and respect of our community, and those who visit us from the older and more favored sections of the country. To accomplish this, however, is beyond the ability of any Executive Committee; and whoever may be entrusted with the administration of its affairs, should receive the energetic co-operation of all those whose interests are committed to their charge."

THE WATER IN OUR HARBOR has not been so low for thirty years as it was on the 18th instant. The steamer Lexington grounded in the creek abreast of the Light House. The Lloyd street canal was almost completely dry.

THE BETHEL CHURCH.—The Rev. J. G. WITTED, of the Methodist Episcopal order, has assumed the pastoral charge of the Bethel church of this city.

SUBSCRIBERS IN THIS CITY who change their place of residence the first of May, will be particular to leave word of the same at the counting room, the *early* part of next week.

BEAUTIFUL EXTRACT.—The following passage is introductory to a sketch of the history of Buffalo, by GEORGE W. CLINTON, Esq. It is classically beautiful:

"In the Eastern hemisphere, after rude and warlike hordes had occupied them, centuries were required to populate countries; and hamlets swelling by slow, natural increase, and by the accretions of sluggish commerce, grew into cities as infants grow to manhood, and became great only as they became venerable. The free institutions and virgin soil of our country infused immediate energy, encouraged immigration, and promoted increase, and its progress has outstripped all calculation, and astonished plodding Europe. Rich in all the material elements of wealth, and richer still in equal and unrestrictive laws, it has realized a better than the fabled Golden Age. For our pursuits are not purely agricultural, but are most happily diversified, and our time is marked by a wholesome, but intense activity, rather than by the lethargic composure of Saturnian days. So wonderful has been the augmentation of our numbers, that Fiction might almost be excused for transferring hither the Cadmean story, and proclaiming that our exuberant soil, eager to be enjoyed, had given sudden birth to myriads of people, armed and prepared, not for mutual slaughter, but for all peaceful avocations. In Europe, great improvements in arts, or commerce, make epochs, and are centuries apart;—Here they succeed each other unintermittingly; or rather, our sustained, onward march is but an epoch in the world's history. Eastern nations have moved tardily, and laboriously towards power, like hunters scaling the Alps with hesitating and uncertain feet. But our young Republic flew like a victor, to the goal, and grasped the prize at once. Our national existence outruns the alloted span of individual life, but by a single year, and a happy and hopeful people swarm over its vast surface, everywhere developing its limitless resources. Our cities are often, but the growth of yesterday, and so have no time-honored monuments, and present but meagre annals. The few trivial facts concerning them, which posterity will seek to know, when time has dignified them, are yet fresh in the memory of living witnesses.

"Buffalo affords one of the most prominent of the many illustrations of these truths, presented by our country. It is emphatically a young city—the offspring of a commerce, which was itself created but five and twenty years ago. About forty-six years since, it first received a name, and took its place upon the maps; but for more than twenty years thereafter, it remained at best, a petty frontier village. Now it ranks high among our chief cities, and is named and known throughout all Europe, and wherever civilization rules or roves."

MAY, month of returning flowers, reviving hopes and new-born joys, is at our door. No visitor could be more welcome than she. Beneath her smiles childhood is given to double merriment, and the heart of age is rejuvinated. Every body feels young in May.

> —— "This season of delight
> Hath magic yet to make more bright
> The tombstone of the Past;
> And Memory 'a-May-ing' goes,
> Reviving many a withered rose
> In gardens dim and vast."

THE COLUMBIAN MAGAZINE for this month is embellished with two engravings, one of "Myra Clarke" (Mrs. Gaines) the other of "Jerusalem from the Mount of Olives." Mrs. Ann S. Stephens, Mrs. Osgood, Mrs. Sigourney, Anna Blackwell, John Inman and William Wallace are among the contributors. The last mentioned writer has furnished a poem called a Hymn to the Hudson from which the following extract is taken. No mortal but a born-poet could write like it:

"Thy lip
Meets Ocean here, and in deep joy he lifts
His great white brow, and gives his stormy voice
A milder tone, and murmurs pleasantly
To every shore, and bids the insolent blast
To touch thee very gently; for thy banks
Hold Empires broad and populous as the leaves
That rustle o'er their grave—Republics gone
Long, long ago—before the pale men came—
Like clouds into the dim and dusty Past;
But there is dearer season; for the rills
That feed thee, rise among the storied rocks
Where Freedom built her battle-tower; and blow
Their flutes of silver by the poor man's door;
And in the ripple innocent childhood dips
Its rosy feet, and from the round blue sky
That circles all, smiles out a certain Godhead."

SIR WALTER SCOTT was not only a great poet and the prince of novelists, but precocious a grammarian as will be seen by the following anecdote: "When he was at school, a boy in the same class was asked by the 'dominie,' what part of speech "with" was. "A noun sir," said the boy. "You young blockhead," cried the pedagogue, "what example can you give of such a thing?" "I can tell you, sir," interrupted Scott, "you know there's a verse in the Bible which says 'they bound Samson with *withes*.'"

NEW CATHOLIC CHURCH.—The corner stone of a new Catholic church on Batavia street was laid on Monday. The designer of the building is Mr. H. G. HAMMOND. It is to be of the Corintian order, and to cover 188 feet by 80—the height to be in proportion.

☞ The London *Standard* of the 20th ult., in speaking of the death of JOHN QUINCY ADAMS, quotes extracts from the speeches of the Hon. Messrs. HUDSON, of Mass., MCDOWELL, of Va., and BENTON, of Mo., and concludes with the following language:

If the speakers whom we have quoted are representatives of the prevailing spirit of the United States, there is little cause to wonder at their prosperity; at all events, the gentlemen from whose speeches we have made extracts, have faithfully discharged their duty in sustaining the religious feeling of their fellow citizens; and with such a glorious subject as the religious life of John Quincy Adams before them, they have had a great opportunity. Such men as he, "being dead, yet speak;" and they who commemorate his worth, do little more than give a voice to piety and every other virtue. We own that we are humbled when we reflect that, except it were Sir Robert Inglis or Lord Ashley—men otherwise distinguished above the reach of sneers, by talents, character, and services—scarcely any member of our House of Commons would dare to speak with the courage with which the American gentlemen have illustrated that freedom from "that consummation of all folly, the fear of man," by confessing "the fear of God, which is the beginning of all wisdom." It is thus that a man like John Quincy Adams, even from his grave, pours blessings upon his country.

European News.

As full details as our limits will allow of the news brought by the *Sarah Sands*, briefly reported by Telegraph last Friday.

The intelligence from Lyons is important. The *Courrier de Lyons* says, that the workmen in that city were in revolt. They demanded and took forcible possession of the powder magazine, and seized on a quantity of arms, and at the time the paper was going to press orders had been given that no public carriage should be allowed to leave the city. M. Arago, the Commissary of the Government, had sent to Paris for orders, and had expressed his determination to carry them into execution to the last extremity.

The disturbances in Lyons still continued. On the 26th 2,000 workmen attacked the military stores of Perrache and plundered them of several thousand carbines.

The Government has given orders for the immediate assembly of a camp of from 30,000 to 35,000 men between Vienne and Grenoble.—"This measure," says the Union, "has no doubt been caused by the intelligence received from Italy."

A Lyons Journal, the *Salut Public*, says, "We are assured that orders were given yesterday morning to the troops in garrison at Grenoble to leave immediately for Savoy, to take possession of it in the name of the Republic. It is said that these orders were obeyed immediately, so that the entry into Savoy will have taken place today. This news, given to us as positive, seem to us to require confirmation."

Napoleon Bonaparte, son of Jerome, bids for the representation of Corsica. In his address he quotes the words of his uncle, who, from St. Helena, prophesied that, "before fifty years Europe would be Republican or Cossack."

The condition of Ireland is still matter of serious concern to the Government. Disaffection, it is believed, is spreading, and a rumor prevailed that the Government was in possession of information of grave import.

Tipperary, Clare and Limerick seem to be the principal scene of symptoms of disaffection. Signal lights are often burnt during the night, the object of which is not apparent.

A meeting of the Privy Council was held at Dublin on the 29th of March; when the subject of consideration was the propriety of putting into force the Irish Coercion Act in the city of Dublin, and other large cities.

All concurrent accounts bear testimony that the present position of affairs in Ireland is most alarming. Some account of the sayings of the members of the Confederation and clubs we gave last week. We have now to record some of the accounts of their doings.

The Dublin correspondent of the Times says: "I can state as a positive fact, that the Confederates now meet nightly in their club rooms for the purpose of being drilled, and that, under the hands of practiced teachers, they are taught to march in time, form sections, close and open columns, &c.; and, further, that the 'rifle clubs' are in full operation; that new pikes, twelve feet long, are becoming plentiful in the arms market, some of the misguided owners, acting on the advice of Mr. Mitchell, really believing that the time for an out-

break has arrived; and, to cap the climax of insane folly, a gentleman, at least in appearance, parades the streets of Dublin dressed in the uniform (green and gold, with yellow facing) of the Irish National Guard that is to be organized at the bidding of Mr. Smith O'Brien and his co-sedition mongers."

The correspondent of the Morning Chronicle says: "Day by day the evidences of increasing disaffection are becoming more and more apparent. I refer not to mere rumors of armings, or to speeches of excited persons at the meetings, but to facts which, I believe, are well ascertained by competent authority. A large portion of the working classes in this city are arming. Rifles, muskets, pikes, and other weapons have been obtained in considerable quantities, in accordance with the suggestions of the Jacobin newspapers.—One wholesale dealer in those articles has declared that he is unable to supply further orders at present. You may see butchers' boys, on leaving the markets, marching home with rifles on shoulder. Such is the anxiety to obtain arms of any kind, that in some instances the long blades used by cork cutters have been converted into a species of bayonet or dagger. Regular meetings of rifle clubs take place for practice in firing. Numbers of persons congregate occasionally, for drill, in enclosed yards and obscure streets."

Death of the American Consul.—Gibraltar, March 20.—Horatio Sprague, Consul of the United States of America at this port, died this day at a quarter to 1 o'clock, in the 65th year of his age.

The rumored abdication of the King of Bavaria, in favor of his son, is confirmed.

All continues tranquil at Berlin, and the popularity of the King is increasing. The Berlinische Zeitung says that the King has taken a large number of those of the citizens who were wounded in the combat of liberation on the 18th ult. in his palace, and the apartments of the Duchess of Mecklenburg, where every attention is paid to their comfort. The Queen has given her own beds and family linen, and has the meals for the patients cooked in her own kitchen. She pays daily visits to the sufferers, whom she comforts and cheers.

The attempts to establish a Republic in Prussia have all signally failed. The feeling in favor of re-establishing the nationality of the Poles is every where increasing. The Poles are on guard with the burghers of Berlin. They wear the German cockade combined with the Polish national colors. The King openly recognized them, and it is every where understood that the desire in Prussia is to interpose the Poles as an independent nation between Germany and Russia.

In the city of Milan, on the 18th of March, some disturbance occurring between the soldiery and the people, a general battle ensued, which resulted in the complete success of the people, and the total rout of the Austrians, with *two thousand slain!*

"Liberty, Equality, and Fraternity," was then proclaimed, and a Provisional Government established.

From this body a proclamation had been issued, congratulating the people on the success of their arms, and concluding thus:

"Valiant citizens! The disgrace of thirty years has this day been effaced. All Europe will speak of the brave Milanese! Long live Pius IX."

At Rome, on the 21st ultimo, on the arrival of the first news from Milan, the people tore down the arms from the palace of the Austrian Embassy. The ambassador has fled.

The Paris Moniteur du Soir publishes the following summary of the Italian news: "The Italian journals have brought the following accounts: The King of Sardinia has himself marched at the head of his army. The viceroy of Lombardy is at Verona with his family. His third son, the Archduke Sigismund, has been arrested at Bergamo. The Austrians, to the number of 5000 and 6000, are stationary at Marignan. The Milanese have blown up the bridge of Sambro, to cut off the communications with the enemy.—Venice is in full insurrection."

Austria and Prussia continue tranquil, but there appears every probability of a war between United Germany and Russia, Poland being the battle field. The great object of the Germans is to interpose an independent nation between themselves and Russia, and this object is distinctly avowed in the following article which appears in the Cologne Gazette:—"If we look carefully at our position towards foreign states, nothing is more certain than that we shall shortly be in open war with Russia. *One month hence, at the latest, we must be in the field.* The will of the German people has pronounced itself in favor of the re-establishment of Poland. The words in the royal proclamation of the 21st of March, recommending a federative army, and an army of neutrality, are equivalent to a call to arms."

The Hamburgh Correspondent, of March 24, says, in allusion to the warlike preparations of the Emperor of Russia, "In the eyes of Russia Louis Philippe was not a legitimate King; hence the opinion generally prevails that the great armaments which Russia is at this moment preparing are not intended for the creation of an invasive or retributive war, but for the sole purpose alone of supporting Austria in case of urgent necessity, and, further, for the establishment of better defensive measures in the event of a movement in Poland."

The National reproduces, from the Abeille du Nord, the personal organ of the Emperor of Russia, an article on the French Revolution, which must have been written by one suffering under the most agonizing pangs of impotent rage. If we are to attribute this article to the inspiration of the Emperor, he evidently, on the receipt of the news, played "the woman with his eyes and braggart with his tongue." How will he act when he hears of the revolution of Berlin and Vienna, and Lombardy and Poland? Will he follow the example of "the scorpion girt with fire?"

The Constitutionel states that there are 30,000 Russian troops concentrated on the frontier of Gallicia, a few leagues from Cracow. 50,000 Russians occupy Russian Poland, and Warsaw alone contains a garrison of 20,000 men. The Russian Imperial Guard has already marched towards the frontiers of the Grand Duchy of Posen. The army of reserve has been called from the interior, and the army stationed towards Odessa has received orders to send 15,000 men towards Gallicia.

The army of Caucasus is to be diminished, and has received strict orders to confine itself to the defensive. Schamyl has established a regular estafette service with Constantinople, in order to obtain the earliest intelligence of what passes in Europe. His intention is to assume the offensive as soon as hostilities shall have commenced in Poland. It must not be forgotten that there are from 60,000 to 80,000 Poles in the Caucasus. The state of Southern Russia is very uneasy. The Cossacks are greatly irritated by the harshness with which the Czar has treated them. The province of Kusan, situated between the White Sea, the Ural Mountains and the Wolga, is in a state of great excitement. The four millions of Tartars who inhabit it are eagerly expecting an opportunity of throwing off the iron yoke of the Emperor. This province supplies Russia with

her wealth; it is here are her funds, the mines, of platina, of gold, copper, and of iron, and here are the forests which furnish the finest timber.

The accounts from Poland have been contradictory. Statements have appeared that Cracow and Warsaw, are both in open insurrection. The inhabitants of Warsaw are said to have risen *en masse*, and murdered hundreds of the Russians.

Telegraphic accounts say that revolution in Poland broke out at Warsaw, the inhabitants rising as one man against the Russian garrison.—The troops retired to one of the adjacent forts and thence bombarded the city, which was reduced to ashes.

The revolution was extending throughout Poland but apparently with divided counsels, some declaring for union with Prussia, others for the kingdom of Poland.

Advices have arrived from Lemberg, (Gallicia,) of the date of the 22d of March, which announces that a great popular demonstration took place there on the 19th. The people demanded a constitution, the liberty of the press, a general amnesty, the national guard, the adoption of the Polish language, and that the Emperor of Austria should take the title of King of Poland. Count Stadion undertook to transmit these demands to the Emperor,

On the 22d a courier from Vienna brought the reply of the Emperor: Two hours after, the students, the pupils of the School of Arts and Manufactures, followed by an immense crowd, went to the Governor's palace. The Count Stadion read from the balcony the answer of the Emperor, which is in substance as follows:—"1. Arms shall be distributed to the people on condition that they should only use them against the enemies of the country. 2. The Emperor to be proclaimed 'King of Poland.' 3. Political and civil equality to be decreed: The Germans and Jews to be considered as natives."

Arrival of the Acadia.

NEW YORK, April 24—3 P. M.

The steamer *Acadia* arrived last night, bringing five days later news. The commotion on the Continent increases.

The King of Sardinia with 30,000 men has made war on Austria, invading Lombardy. The Austrians were driven before him from Parma and Brescia.

It is supposed all Austria will be overrun.

Savoy declared a Republic.

Switzerland remains strictly neutral.

Prussia is likely to quarrel with Denmark for Holstein.

Russia was making vigorous preparations to retain Poland. She had ordered every man between 18 and 35 to be removed from Russian Poland to the interior of Russia. She is constructing large armies in southern Russia.

In Belgium all attempts at revolution had failed.

Violent disturbances had taken place in Madrid. 268 people and soldiers fought all night, and many were killed.

Queen CHRISTINA, it is said, ran away, and the city was declared in a state of siege, but was subsequently tranquil.

Portugal is tranquil.

Greece also tranquil. Ministry resigned.

In France the government ordered the army to assemble on the eastern frontier. In Sicily, Parliament is formed. The separation from Naples is complete.

The Irish Address was presented to France, in Paris, on the 3d inst. LAMARTINE replied, expressing sympathy for Ireland, but adhered to strict neutrality, condemning Mr. PITT for interference in 1798.

Abdel-Kader is removed to Paris, and allowed some liberty.

Proclamations are made exhorting quiet and subordination.

Lamartine has discharged all English workmen in French steamers.

Ten thousand men are to be sent to reinforce the Algiers army. Paris workmen are crowding to Hotel de Ville with contributions in aid of Government.

Belgian, Prussian and Austrian Ministers complain of the demonstration for liberty of their countrymen in Paris.

Lamartine said he could not control the opinions of any one. France would be neutral. He expressed the possibility of interference with Poland.

The Provisional Government have taken possession of railroads and will redeem shares.

The Bank of France has been allowed farther latitude in discount.

Banks in Lyons, Rouen, Bordeaux and Nantes, Lille, Havre, Marseilles, Toulouse, and Orleans had suspended specie payments.

Relief banks have been established in all large towns, and expense of protesting bills, registering dues, and some other emoluments, reduced 35 per cent.

Election lists closed April 20.

The National Guard elect officers for themselves.

Grenadiers and Voltigeurs suppressed. All foreigners of five years residence are worthy of being naturalized.

Fifteen days farther delay in paying exchange bills have been granted.

Wine and spirit transit and sale duties have been abolished and consumption tax levied.

Arago has been appointed Minister of War.

Archillo, the great banker, succeeds Garnier Pages as Finance Minister.

Ireland is in great excitement. The students of Trinity College, Dublin, are arming in defence of the Government. More troops have arrived from England. The Repealers still defy the law. Dublin will soon come under arms. Martial law will be the order of the day, and all arms in the hands of the people will soon be ordered to be given up.

Many presses and men are out for a Republic in England, and the great Chartist meeting of the 10th inst. was forbidden by Government.—The route of the procession was marked, and a great wagon was constructed to carry a monster petition. Government, however, forbid the meeting or procession of Chartists.

All the Chartists, however, were firmly deter-

mined to hold the meeting and declared they would forfeit their lives if necessary in the attempt.

Fergus O'Conner recommends all Charters to withdraw all their money from the Savings Banks which will embarrass governments, the gross amount being £25,000,000.

Troops have been brought into London, so that the force now is more than 10,000. Many strong anti-Chartist presses protest against the conduct of the Government.

In India some warlike demonstrations are making against China.

The Telegraph.

Although there are four lines of this wonderful invention in operation at this place they excite apparently but little attention, and but few are familiar with the *modus operandi* by which communications are transmitted and received. The following from the clever editor of the Cleveland *Plain Dealer* gives as good a description of the "way it works" as we have seen:

An Hour with the Telegraph.—Every day, at half-past three, we, in connection with the Herald, receive our Telegraphic Reports, and it is necessary for us to be present and transcribe said Report as it is read off the "ribbon" by the operator.

It is not every one who visits a Telegraph Office that is admitted behind the screen, as publishers are, and therefore we propose to give such outsiders a peep into the mysteries of this forbidden apartment. There are queer doings here, things but recently dreamed of in philosophy, and not yet mentioned in the books.

As you enter this electro-magnetic sanctuary, your attention is first attracted by the incessant clicking of a piece of brass machinery, with wires, wheels and weights, standing, perhaps untouched, upon a table before you. It is the register of the Philadelphia, Pittsburg, and Wellsville lines, and is responding to the touch and magnetic influence of fingers in Pittsburg, or Cincinnati, or Louisville, Ky. Should an operator in Philadelphia wish to communicate with St. Louis, not only all the intermediate offices, but a branch station like this, can "take off" his message. He makes every machine talk that is connected and open to the electrical current, and operators, if they wish, can know all that is going on.

At present we patronize only the Buffalo line, as the news from St. Louis is just as fresh coming from New York, as though it was sent directly to us. However, we shall soon have it via Chicago.

Imagine it half past 3 P. M., ourself and better conditioned neighbor seated at a small table behind the high board partition, waiting for the telegraph to talk. Here it comes—"Click, click—click—click, click !"—This is a mere call from the operator at Buffalo, and is a notice that he is ready, and a warning to operators and reporters here to be also ready. The operator mounts his stand, seizes the ribbon, and commences reading the report, in characters as follows. It is a copy of a report sent from New York to Buffalo one half hour before:

New York, Feb. 15—3 P. M.

M r C a l h o u n
s a i d h e w a s
a n o l d m a n h e
w a s a l m o s t
a m o n g

[Here the operator is thrown into a flurry by a break in the communication.] "What's the matter, Mr. Operator?" "Oh, the Sandusky man, who is receiving the same report, has got baulked; he don't understand the last word—'among'—and has sent to the Buffalo office to have it explained." In an instant, it is re-telegraphed in more distinct characters, and the Sanduskian says—

i i

(Aye, aye.) "Go ahead, &c." It will be seen that these characters are fac similes of the indentures made by the machine on the ribbon paper, from which the operator reads.

s t r a n g e r s
a n d i f h e h a d
u r g e d a n
y t h i n g t h
a t w a s s t r
a n g e o r p e
c u l i a

Whir-r-r-r! What's the matter now?

The Toledo operator wants to send a message of pressing importance to Buffalo. Permission is granted by this and the Sandusky station. Now the missive goes; (click, click, click.) We could look into it as it passed along, were we so disposed, and could translate the "ribbon," but this art belongs to the operators, who are sworn to mind their own business. It has been but a minute, and the message is sent.

Report resumed:

r u p o n t h e
S e n a t e t h e y
m u s t a t t r i
b u t e t o t h e
a s s o c i a t i
o n s o f t h i r
t y f i v e y e a r
s a g o

Now, Mr. Operator, give us the New York makets up to this hour. (Here they come—Stocks up; produce down, &c., &c.) Tell our reporter at Buffalo to get the Commercial Advertiser of today, and send us the markets as therein quoted. (He calls Buffalo; makes the request, and receives for answer that the reporter has just gone for the paper. Here is a pause of three minutes. Reporter returned with paper, and "click, click" comes the report.)

"Commercial Adv., Feb. 15—4 P. M.

"Market buoyant. Weather fine," &c.

Sandusky and Toledo receive this same report at the same time. Detroit will soon be hitched on. And thus this new discovery operates. From half to three-quarters of an hour we have been sitting here, and have received all the important news afloat or known in the principal cities or on our great thoroughfares, besides our New York and Buffalo

market reports. We bid the gentlemanly operators "good-day," with the hope of meeting them again tomorrow. Our manuscript is put into the compositor's hands, our Steam Press is waiting with steam up, and as soon as Bennett's readers in New York, or Foote's in Buffalo, get the news, the readers of the Cleveland Plain Dealer will have it.

THE PASSION FOR SURGERY.—THEODORE S. FAY, in a letter to the Home Journal, relates the following anecdotes of DIEFFENBACH, the celebrated German Surgeon whose recent death has been deeply regretted by scientific men:

"He was a small man, with a high, shrill voice, and nothing externally remarkable, except a pair of brilliant black eyes, and a good deal of dash and style in dress and equipage. His thirst was for those terrible operations for which he was so celebrated. Among others, this:—He one day saw a student in the street, with some unhappy excrescence growing out of his head or neck, and that glittering eye once fixed on the poor fellow, it was not possible to escape. Dieffenbach addressed him, and proposed to operate for nothing. The man refused. He offered a bribe. In vain. He described the probable course of the deformity. It would lead to torments—to death perhaps. The student impatiently replied, when he felt the approach of those grave inconveniences, he would address himself to the operator, and not before,—Dieffenbach left him at length, and the young fellow returned to his books, pipe and lectures, laughing heartily at the perseverance of his formidable enemy, and congratulating himself upon a happy escape. But one morning about daybreak, a knock at his door announced, as the sleeper supposed, the *Stiefelputzer*, the boot cleaner, who usualy came at that hour. He rose, unlocked the door, and lo! Dieffenbach stood before him, with those supernatural eyes, and four stout medical students at his back.

"We have come to operate upon you!"

"No! *Donner Wetter!*" cried the student.

The surgeon made a sign. The subject was thrown upon the bed and held there by firm force. He had scarcely time to express his sense of his treatment, by certain German exclamations, when his frightful infirmity was whisked off from him, and he lay a month or two in bed, recovering from the effects. He did recover, completely, and the students, the subordinate demons of this diabolical drama, declare the ungrateful dog was no sooner on his legs again, a corrected and mended man, than he went and sued his benefactor; and recovered heavy damages.

Another person had a protuberance upon the end of his tongue. Up to a certain day, the history is the same as the preceding. On that day, Dieffenbach, having received a final negative to all his prayers and remonstrances, requested at least one farewell look at the beautiful object of his desire. The unsuspecting patient put out his tongue, and, in the twinkling of an eye, there was a needle through it, about half a foot long, retaining it immoveably in its place, and cutting short all expressions of disapprobation and ineffectual arguments. The happy artist now had everything his own way. And what his own way was, I leave you to imagine."

FATAL RAILROAD ACCIDENT.—This afternoon, about half-past 12, as the freight train from Rochester was about to make a momentary stop at Shortsville, a man named Wm. Adams, a tailor by trade, who got on the cars at East Vienna, intending to stop at Shortsville, by some means unknown to the conductor and hands, was precipitated into the track. The wheels passed over him, nearly severing one of his legs and crushing his body in a most shocking manner. He leaves a family. It is said he exhibited strong evidence of being intoxicated.—*Canandaigua Repository.*

FEMALE SEMINARY.

THE regular Spring and Summer Sessions of the BLACK ROCK FEMALE SEMINARY will commence on the first Wednesday in May, and continue twenty-two weeks, under the direction of Rev. C. M. STEELE, as Principal, aided by competent Assistant Teachers.

The Seminary buildings are commodious, and are pleasantly located within a mile of the limits of Buffalo, on a site overlooking Lake Erie and the Niagara River—uniting the advantages of country air and quietude with all the privileges of the city.

TERMS.—For Board, Washing, and Tuition in all the English Studies, $112 per annum. The extra charges are, for lessons on the Piano or Harp $16 per Quarter; on the Organ $15; on the Guitar $8; the German or French Language $7 50; Drawing and Painting $6.

☞ Circulars, containing farther particulars, may be obtained by applying to the Principal or Trustees.

April, 15, 1848. m152.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 186 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

AMBROSE S. CARNER,

DRAPER AND TAILOR, Nos. 274 and 276 Main-street, (Kremlin block, up stairs,) Buffalo.

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected; comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
No. 164 Main-Street, Buffalo.

Western Literary Messenger.

VOL. X. BUFFALO, SATURDAY, MAY 6, 1848. NO. 14.

For the Western Literary Messenger.

A Song for May.

From the wintry frost set free,—
Sweetest month of all the year,—
Earnestly we welcome thee,
Our deserted lot to cheer.
Now the joyous birds are singing;—
Now the early flowers are springing;—
Airy hopes their flight are winging,
O'er the surface of our sphere.

What tho' clouds obscure the light,
Sorrows dim the rising day?
Sunshine, but appears more bright,
When those clouds have passed away.
What tho' hearts with grief are swelling?
Sunny smiles those griefs dispelling,—
Love triumphant, still excelling,
Shall life's gloomy passage cheer.

Life, like thee has in its tide
Stormy nights and sunny days,
Grief and joy go side by side,
And attend us all our ways;
But like thee all care denying,
From our eyes the salt tears drying,
We, the ills of life defying,
Nobly, proudly onward bear.

MAY 1, 1838. ADELIA.

Blennerhassett and his Island.—The Romance of the Ohio.

From the Cincinnati Chronicle.

In 1806, Aaron Burr was denounced, for *attempting* what in 1836, Samuel Houston attempted, succeeded in, and was glorified for! The transitions of History—the mutations of Opinions—the vacillations in the wave of Human Society, and the tremendous roll and power of that Wave, as it tumbles its tides over the American Continent, were never better illustrated in any thirty years of human existence!

We do not say that the plan of Burr and of Houston were identical, for Burr was charged with an attempt to separate the Union, and whether truly or not, can never be proven. But in their *conduct*, as to the attempt on the Spanish or Mexican Provinces, they were so nearly alike, that one can never be proved innocent, while the other is guilty. Thirty years made a most wonderful difference between the two! In 1806, the genius of Andrew Jackson was limited to the banks of the Cumberland, but in 1836, it had taken flight and accompanied Houston and his Squatters beyond the Sabine! The spirit of the drama was changed, and the prudent, republican, peaceful policy of Jefferson was exchanged for the doctrines of Annexation, and Conquest, of golden dreams and eagle flights, beyond the Sabine—beyond the Trinity—beyond the Rio del Norte, even to the Halls of the Montezumas, the orange-blooming land of the Aztecs, and the wave washed shores of the Pacific! Such is vaulting Ambition, the circle of whose desires the round globe, and all which it contains can hardly limit!

Burrr, with an ambition equal to any of them, and with scarcely greater crimes, was far less fortunate that the modern adventurers, and might well lament that his plans, like his sins, were *too early for his times!* His history, however, was more various, and his life one of a very singular and mysterious interest. The chief mystery was, that the world could never understand how a man, so eminent in ability, and station, could ever be so wicked! Latter illustrations, however, have made it perfectly credible, that one of the most eminent men, should also be one of the worst.—The country is, in this respect, improving in the number of moral curiosities which it can present to the examination of the moral Physiologist.—We wish to speak, however, of Blennerhassett and his Story. The "American Review" for April contains a most interesting article on this subject, in which most of the facts, concerning the Life and Fate of Blennerhassett are correctly given. Burr's Expedition has nothing about it, which is so deeply interesting as this little episode, whose scene was laid on an island in the Ohio.

Herman Blennerhasset was one of those not very uncommon men, who are weak in judgment, but brilliant in abilities. His wife was beautiful, accomplished, graceful, and ambitious. He dealt in philosophy and the Fine Arts; she in taste, elegance and gaiety. He was of an Irish family—she an English. He was related to Emmett—she to British nobles. He inherited fortune, but was a Republican. Not finding quite as much freedom to speak in England, as he liked, he came to the United States, to think and speak as he pleased. Soon after, he heard of the beautiful Valley of the Ohio, then the El Dorado of the aspiring Emigrant. He came, and was one of the first of the thousands and millions, who have come to this lovely Western Vale, to seek the Visions of Hope, and realize, in part, their Dreams of Terrestrial Beauty! They came, and what they imagined, they made! The garden bloomed; the air was fragrant; philosophy and poetry danced attendance; grace and elegance presided, where Ease and Learning were guests; and, in fine, that fancy colored Creation of the eloquent Wirt was all but realized!

We said that Mr. Blennerhasset was weak in judgment, though possessed of shining qualities. This was manifested clearly enough, in leaving all the places in which he was calculated to succeed, to seek, like some Paul and Virginia, happiness in "Nature,"—that is the nature which is found in the sylvan retreats of a new and unsettled country. In such places, the men of hardy habits and vigorous business minds, do well enough; while the refined and elegant are lost.—Mr. Blennerhasset, however, partook of the spirit of the last French Revolution, and wanted the "anchor of the soul," without which human mind is but an unballasted, unruddered vessel, the sport of fickle winds and waves:

In common with many of the distinguished men of his time, he gave no evidence of that clear religious faith, without which, there can be no true contentment in any condition of life. The works of the French skeptics and enthusiasts, which were his favorites, could not guide his intellect to the simple truths of Christianity. He laid out his plan of existence for the indulgence of every lawful pleasure,

but lacked those higher motives of action, which inspire men with firmness and dignity.

Margaret Agnew, then Blennerhasset, was not overrated so much as many people think by the rich coloring of poetic eloquence. She was, in fact, a remarkable person. All who saw her in her prime and glory know that fact.

The Review says:

A very intelligent lady, who was familiarly acquainted with her in her best days on the island, and has since visited and seen the most elegant and beautiful females in the courts of France and England, as well as Washington city, says that she has beheld no one who was equal to her in beauty of person, dignity of manners, elegance of dress, and in short, all that is lovely and finished in the female person, such as she was when "queen of the fairy isle."

She dressed in brilliant colors, and threw over dress, manners and style, the roseate hues of her own brilliant imagination.

Marietta is fourteen miles below the island, and is the place where Mrs. Blennerhasset sought society, and purchased many of the supplies of the family; for Mrs. Blennerhasset was a business woman, as well as an elegant lady. Sometimes she rode down, and sometimes she went in a boat. In her equestrian style, she is thus described:

When she rode on horseback, her dress was a fine scarlet broadcloth, ornamented with gold buttons, a white beaver hat, on which floated the graceful plumes of the ostrich, of the same color. This was sometimes changed for blue or yellow, with feathers to harmonize. She was a perfect equestrian, always riding a very spirited horse, with rich trappings, who seemed proud of his burthen, and accomplished the ride to Marietta, of fourteen miles, in about two hours; dashing through and under the dark foliage of the forest trees, which then covered the greater part of the distance; reminding one of the gay plumage and rapid flight of some tropical bird winging its way through the woods.

The manner in which Herman Blennerhassett was beguiled of property, reputation and happiness, by that artful and wicked man, Aaron Burr, is well enough known.

We must skip all the intermediate passages of their lives, and come to the closing scene of this elegant woman, this bird of pleasure just skimming through these Western woods, as we have seen the Paroquet illuminate the verdure of the forest with the brilliance of its colors.

For a long time we could not discover what had finally become of Mrs. Blennerhassett. The Review gives us the first information of her end.—Before, however, we attend the death of Margaret Blennerhassett read one verse, written by her own pen, in memory of the lovely island, when *that* was desolated by a ruffian mob, and she was living at Montreal, in the ruins of the past, with her flowers all withered and scattered

v.

"The blackening fire has swept through her halls,
The winds fly whistling through them, and the wave
No more in spring floods o'er the sand-beach crawls,
But furious drowns in one o'erwhelming grave
Thy hallowed haunts, it watered as a slave.
Drive on, destructive flood; and ne'er again
On that devoted Isle let man remain.

vi.

"Too many blissful moments there I've known;
Too many hopes have there met their decay;
Too many feelings now forever gone,
To wish that thou wouldst e'er again display
The joyful coloring of thy prime array;—
Buried with thee, let them remain a blot,
With thee, their sweets, their bitterness forgot."

We believe there is yet a cabin or two on the island and cornfields where the gardens stood.—But the Palace of Fancy, the home of Philosophy, of Beauty and Grace, will be reared no more!—Burr and Jefferson finished the scene.

Must we relate the last days of Margaret Agnew? Providence has furnished mankind with many lessons, but few more remarkable or instructive than this. We close with the words of the Review, which are apt and touching.

"The reverses in this accomplished woman's fortune, and in that of her amiable husband, illustrate the uncertainties of human life, and unfold the mysterious doings of Providence with the children of men.

"More than forty years have passed away since these events were transacted, and not a vestige now remains of the splendid and happy home of Herman and Margaret Blennerhassett. All has passed away like the vision of a pleasant dream; while the thousands of passengers who travel up and down the Ohio, in steamboats still eagerly inquire after, and gaze upon 'the Island of Blennerhassett' with wonder and delight."

From the London Times.

We can easily imagine the exultation of triumph with which the news of this month will be received on the other side of the Atlantic. The proved hollowness of despotisms, the liberation of intellect, the majestic advance of a young democracy—we think we hear already the magnificent periods with which the American "caucusses" are by this time ringing on such themes as these, and to which each successive mail will give a louder and loftier tone. Nor can it be denied that things look as though the philosophic vaticinations of M. De Tocqueville were about to be realized, and the old world were going to learn a new political alphabet at the feet of her Transatlantic offspring. The exiles whom the Europe of the 16th and 17th centures, disinherited as prodigal children, planted their ideas in a congenial soil, and the luxuriance of their growth is overshadowing and blighting the parent tree. It would be considered irrelevant at this juncture, to inquire accurately into the respective *merits* of the two systems of government which are at issue; as to which produces the greatest amount of individual happiness, of national greatness, of moral and intellectual fruit. *There is no question at any rate as to which is the most powerful and prosperous*, and America may be allowed to take full advantage of the popular tendency to cry *væ victis*, and shout with the winning side.

No doubt it is a good and valid argument, as far as it goes, against despotism, that it appears to be in its nature evanescent, and to carry with it the seeds of its own decay; the civilized world seems to have outgrown it so gradually as to have been unconscious of its own progress; till at a touch from without, the mask falls off, and the whole pageantry of arbitrary power, vanishing "like the baseless fabric of a vision, leaves not a wreck behind." Strength and stability are essential points to be considered in deciding the respective merits of different forms of government, and it is useless to prove, on paper, that a certain constitution is the best, if, as a matter of fact, we find that it cannot stand alone, when we attempt to realize it. Just now, the fact that if the American people were polled to-morrow, from the Rio Grande to the St. Lawrence, every single individual would vote for precisely the form of Government which he now possesses, is undoubtedly *a strong argument in favor of that Government*.—Of course, we do not say that it is a conclusive one; we ourselves happen to like something different—only we imagine that, as between a stable, that is "Conservative" democracy and a decadent, that is, "revolutionary" despotism, there can be but little doubt which to prefer. And so

we may assume that for the present at least, and till we see what the upshot of the new state of things may be, the advocates of arbitrary power will be silent, if not convinced; and the constitutional questions which will be henceforth warmly urged, with a view to practical results, are rather those which concern the degree of power which the people should hold in their own hands, the definition of the word "people" the modes in which they can best exercise that power, and the mutual relations of different communities and States.

Dropping, therefore, for the present the question between popular and arbitrary principles of government, which will not be stirred, at least for some time to come, we wish to draw attention to another great principle which we think likely to be brought prominently forward, and to exercise great influence; a principle the exemplification of which, in the fullest extent, we also owe to the Americans; we mean the principle of Federalism. The most important improvement in the practice of modern constitutional countries, as compared with ancient, is the introduction of the system of representation. In the Athenian *ecclesia*, and in the Roman *comitia*, the people deliberated, discussed, and voted, in the mass, upon each separate question of policy. The idea of electing, from time to time, plenipotentiary delegates to do their political business never occurred to them. It is needless to point out the extreme inconvenience of the ancient plan, and the incalculable extent to which the transaction of public affairs has been facilitated by its abolition. But it would seem that the idea which representation embodies has as yet been but partially and inadequately carried out in Europe, and that we must look for its most effectual and consistent developement to the United States. We conceive that idea to be the union of individual participation in power with an effective combination of individual powers for common purposes; in modern technical phraseology, legislative centralization with administrative localism.

There is at this moment a very evident tendency, all over Europe, in two directions, apparently opposite; to local self-government, and to national unity. In 1815 certain lines were drawn upon a map, according to which States were carved, as it were, out of the Continent, without reference to language, habits, race, feelings, antipathies, or any of those influences which constitute real nationality. The consequence was, that the desire for a national independence, in the provinces thus subjected to foreign dominion, went hand in hand with the wish for popular institutions; they became convinced that they could not have the one without the other, they have long struggled for both, and at length they appear on the eve of winning them. But these provinces have, in almost every case, national unities of their own, to which, when rid of the crude and Procrustean arrangement of 1815, they are beginning naturally to look, as supports to their new-born independence, and rallying points for their awakened patriotism. Thus Italy is gathering under one name and banner her estranged and provincialized children; the scattered and disunited States of Germany are craving earnestly for union; Poland is uniting; Switzerland is uniting; it will not, perhaps, be long before we see a Panslavonic nation constituted in the East of Europe. Yet none of the provinces would like the idea of ceasing to manage locally their own affairs, in order to secure the safety and dignity of a greater father land.—The question, then, for them to consider, is, whether, by an adoption of the principle of federalism, their wants may not be supplied and their tendencies satisfied.

Let them observe the working of Federalism in America. The most complete national unity is there preserved as regards foreign nations; complete freedom of trade, complete uniformity of action in all respects essential to national life; while, at the same time, the estimable habit of self-government is created and retained, and the power of adapting local institutions to local wants exercised so fully, that no American citizen has to complain that the interests of his locality suffer by the distance or neglect of the legislative centre. The German in Pennsylvania, the Frenchman in Louisiana, the Spaniard in Florida, had no need, when they came to participate in the advantages belonging to the great American Union, of sacrificing one iota of the local institutions to which they were attached. So wonderfully elastic and expansive is this principle of Government, *that the entire American continent might, as it appears to us, be absorbed in one vast federation, with but little inconvenience or danger resulting from its extent and diversity of characteristics.* If a similar system of permitting local self-government, in subordination to a supreme legislative head, had been pursued in Lombardy and Poland, we do not believe that even the fact of the central head being an arbitrary monarch would have induced, in either case, the declaration of independence which has now ensued. The Spanish monarchs had no subjects so loyal as the inhabitants of the Basque provinces; the fidelity of the Tyrolese to Austria is proverbial; because the former lived practically under the shadow of their own *fueros*, and the latter were not deprived of their ancient *grundgesetz*. The Romans understood this principle, and left to the *municipia* of their own enormous empire the full enjoyment of their institutions, and management of their affairs. This was the cause of the astonishing duration of their rule, and of the general contentedness of their subjects.—In France, on the contrary, where the utmost point of administrative centralization had been obtained, the "people" are utterly demoralized and incapacitated for liberty by the habit of having everything done for them; the consequence now is, that the mob of Paris now rules France; the 35,000,000 individuals who inhabit the provinces follow like sheep after a leader, even though it be down a precipice.

If there be any truth in these speculations, the object of which we have rather indicated than explained, the good or bad success of the unprecedented movement now going on in Europe will depend, in great measure, upon the extent to which the different nations engaged in it may succeed in reconciling and turning to account the principles which we have been describing—that of local self-government, the true nurse of freedom, and that of national unity, the best safeguard for peace, civilization, and social progress. It is impossible to lay down, beforehand, how far and in what manner it may be possible, in each particular case, to do this; but the tendency of the attempt, however imperfectly developed, is in the right direction; the ideal perfection of it would be a Utopia,

"Where the drum should throb no longer, and the battle flag be furl'd,
In the Parliament of man, the federation of the world."

A Curiosity.—Mr. James Crane, of Shalersville, in this county, while engaged a short time since in splitting barrel staves from a white oak tree, which was perfectly sound, and after he had worked up twenty or twenty-five feet from the butt end, discovered what he supposed so be a knot, at least eight inches from the outside; but upon opening it, found it to contain a middling size toad, which had remained in this space until there

had grown eight inches of timber over him. Mr. Crane says he made staves from all sides of the tree where the toad lay. When the little customer was shown daylight, he stretched himself, hopped a short distance at first, until he reached a puddle of water, where he took leave of Mr. C. and left him to his own meditations. The place in the timber from which the toad was taken, leaves a fair imprint of this little inhabitant, who must have been locked up in his narrow cell many years.—*Ravanna Star*,

Napoleon's Prophecy.

The following is said to form part of the suppressed portion of the Journal of Las Casas. We know of no reason to doubt its authenticity. It was published a long time ago, and whether or not the sayings imputed to Napoleon were actually uttered by him, recent events in Europe afford a fulfilment of them more exact than awaits or has followed most modern prophecies. Speaking to Las Casas, on the island of St. Helena, Napoleon is reported to have said:

"Never was a web more artfully woven over a nation than that horrible debt which envelopes the people of England. It has been the means of enriching the aristocracy beyond all former examples in any country; whilst it has, at the same time aroused as many fast and powerful friends to the government as there are individuals who receive interest for that money, so extravagantly squandered to crush liberty in other countries; but even that must have an end; some accidental spark will ignite the combustible mass and blow the whole system to the devil! If the mighty debt were due to foreigners, these cunning islanders would not bear the burden an hour, but would on some pretext or other, break with their creditors and laugh at their credulity; but they owe the money to individuals among themselves, and are therefore likely to enjoy the pleasure of paying the interest for generations to comer France too has got a debt. Those Bourbons think to maintain themselves on my throne by borrowing largely of the present generation, in order to lay heavy taxes on the next, and all future ones. But I know the French too well to suppose that such a system can long be tolerated. I know that they have too much affection for their offspring to entail upon them a national debt like that of England, however artfully incurred. No, no! my subjects are too sharp-sighted to allow the property accumulated for their children to be mortgaged to pay the Russians and English for invading them, and for the restoration of the Vielle Cour des Imbeciles, who now insult them. They will, after a time, make comparisons between them and me; they will recollect that the expenses of my government were defrayed by imposts during the war—that my wars cost France nothing—that I left her not one fraction in debt—but that I enriched her territory. Such comparisons will not be favorable to the Bourbons. The French will cast them and their debt from their shoulders, as my Arabian would any stranger who should dare to mount him.—Then, if my son be in existence, he will be seated on the throne amidst the acclamations of the people; if he be not, France will go back to a republic, for no other hand will dare to seize a sceptre it cannot wield. The Orleans branch, though amiable, are too weak, have too much of the Bourbons, and will share the same fate, if they do not choose to live as simple citizens, under whatever change takes place."

Here the emperor paused for a few moments, then waving his hands, he exclaimed, in an animated tone, his dark eye beaming with the enthusiasm of inspiration—

"France once a republic, other countries will follow her example. Germans, Prussians, Poles, Italians, Danes, Swedes, and Russians, will all join in the crusade of liberty! They will arm against their sovereigns, who will be glad to make concession of some of their rights in order to preserve a minor authority over them as subjects.—They will grant them representative chambers, and style themselves constitutional kings, possessing a limited power. Thus the feudal system will receive its death blow, and like the thick mist on the ocean, it will dissipate at the first appearance of the sun of liberty, but things will not end there; the wheel of revolution will not stand still at this point; the impetus will be increased in a ten fold ratio, and the motion will be accelerated in proportion. When the people recover a part of their rights as men, they will become elevated with the victory they have achieved; and, having tasted the sweets of freedom, they will become clamorous for a larger portion. Thus will the states and principalities of Europe be in a continual turmoil and ferment, perhaps for some years—like the earth, heaving in all directions, previous to an earthquake. At length the combustible matter will have vent; a tremendous explosion will take place—the lava of England's bankruptcy will overspread the European world, overwhelming kings and aristocracies, but cementing the democratic interest as it flows. Trust me, Las Casas, that as from the vines planted in the soil which encrusts the sides of Ætna and Vesuvus, the most delicious wine is obtained, so shall the lava of which I speak prove to be the only soil in which the tree of liberty will take firm and permanent root. May it flourish for ages! You perhaps consider these sentiments strange and unusual; they are mine, however. I was a republican, but fate, and the opposition of Europe, made me an emperor! I am now a spectator of the future."

Horrors of Slavery!

Correspondence of the Evening Journal.

Washington, April 22, 1848.

Friend Weed—Last evening, in passing the Rail Road Depot, I saw quite a large number of colored persons gathered round one of the cars, and from manifestations of grief among some of them, I was induced to draw near and ascertain the cause. I found in the car towards which they were so eagerly gazing, *fifty colored persons*, some of whom were nearly as white as myself. A large majority of the number were those who attempted to gain their liberty last week, in the schooner Pearl. About half of them were females, a few of whom had but a light tinge of African blood in their veins; they were finely formed and beautiful. The men were ironed together, and the whole group looked sad and dejected. At each end of the car stood a ruffian-looking guard, with large canes in their hands. In the middle of the car stood the notorious slave dealer of Baltimore, who is a member of the Methodist Church, in good and regular standing. He had purchased the men and women around him, and was taking his departure for Georgia. While observing this old grey headed dealer in the bodies and souls of men, the Chaplain of the Senate—a Methodist brother—entered the car, and took his brother Methodist by the hand, chatted with him for a short time, and seemed to view the heart-rending scene before him with as little concern as he would look upon cattle! I know not whether he came with a view to sanctify the act, or pronounce the parting blessing; but this I do know, that he justifies Slavery. A Presbyterian Minister, who owned one of the

fugitives, was the first to strike a bargain with a Slave Dealer, and make merchandize of God's image. Some of the colored people outside, as well as in the car, were weeping most bitterly.—I learned that many families were separated.—Wives were there to take leave of their Husbands, and Husbands of their Wives; Children of their Parents, and Parents of their Children. Friends parting with friends, and the tenderest ties of humanity severed at a single bid of the inhuman Slave Broker before them. A husband, in the meridian of life, begged to see the partner of his bosom. He protested that she was free—that she had free papers, and was torn away from him, and shut up in the jail. He clambered up to one of the windows of the car to see his wife, and, as she was reaching forward her hand to him, the black hearted Slave Dealer ordered him down.—He did not obey. The husband and wife, with tears streaming down their cheeks, besought him to let them speak to each other. But no; he was knocked down from the car, and ordered away!—The bystanders could hardly restrain themselves from laying violent hands upon the brute. This is but a faint description of the scene which took place within a few rods of the Capitol, and under enactments recognized by Congress. Oh, what a revolting scene to a feeling heart, and what a retribution awaits the actors. Will not their wailings of anguish reach the ears of the Most High?—"Vengeance is mine—I will repay, saith the Lord."

You have already heard of the fugitive case and the mob here. A very exciting discussion has been going on in the House for the last two days, growing out of these riots. The galleries were thronged, and the most intense interest was manifested while Northern and Southern members were discussing.

I have the honor to be your sincere friend and obedient servant,

JOHN I. SLINGERLAND.

A sewing Machine has at last been produced which is said to be one of the most useful and curious of all Yankee inventions. The inventors are J. B. Johnson and Chas. Morey, of Boston Mass. The Boston Traveller gives the following notice of it:

"It is a contrivance of great ingenuity, but of remarkable simplicity; and so far as we know is the only machine for sewing which has ever been put into successful practical operation. Several of the machines have already been constructed, and we yesterday had the pleasure of seeing them perform with a sort of vivacious accuracy, rapidity and ease, the hitherto slow, toilsome, and monotonous, 'stitch—stitch—stitch.'

"It is difficult to describe this machine so as to give the reader an intelligible idea of it. To sew the seams of pantaloons, for instance, the cloth is fastened to a bar, so constructed as to obviate the necessity of basting. This bar, with the cloth attached, is moved horizontally in front of the needle, by means of a feed motion, which measures with perfect accuracy the length of the stitches. This motion can easily and instantly be so adjusted as to make longer or shorter stitches, at the will of the operator. The needle—which has its eye in the point, or very near it—is driven through the cloth by means of a peculiarly formed cam. The thread—which runs from a spool through the end of a spring, so that it can be tightened at pleasure—passes with the point of the needle through the cloth, till it is caught by a hook on the other side. This hook holds the thread in a peculiar manner, forming it into a loop, until the needle has passed out and been again driven through—the bar upon which the cloth is, having in the mean time been moved along the length of one stitch. The hook then drops its first hold and again seizes the thread—which has now passed through the loop—and repeats the process; thus interweaving the thread so as to form a uniform and substantial stitch, such as the ladies call a chain stitch.

From 250 to 300 stitches can be taken in this way in a minute; and one machine can do, and do well, the work of six and perhaps eight seamstresses. The work for which the machine is peculiarly adapted, is the sewing of long straight seams; but it is obviously susceptible of variation and improvement so as to adapt it to needle-work of a more complicated description. It is destined, we doubt not, to work a great change in one of the most laborious departments of female industry."

The Ghost of Canargwa—"Murder most Foul!"

From the Rochester Daily Advertiser.

The excitement in reference to the mysterious knocking in a house at Hydesville, Wayne county, still continues, and the revelations which it makes daily, are astonishing the multitude. A pamphlet has been published, containing a great number of certificates from individuals residing in that neighborhood, who have heard the mysterious knocking, and have propounded to his ghostship a variety of questions, all of which have been answered by *raps*. The occupant of the house is named John D. Fox, who formerly resided in Rochester, and himself and his wife both make a certificate in regard to the mysterious thumping.

They state that they first heard this noise about the 30th of March, in the evening, just after the family had retired to rest, and that it has continued from that time to the present. The ghost not only answers all questions put to it, but readily gives the age of each child in the family, and of others in the neighborhood, but the "spirit's" history of its own affairs is altogether the most marvellous. The "story of its wrongs" runs somewhat thus:

It states the body it once inhabited was that of a pedlar; that it was 31 years of age, and was murdered about four years since by the then occupant of the house, by having its throat cut with a butcher knife; that it left a family of five children, two sons and three daughters, who are now living in Orleans county; that its wife died about two years since; that the amount of money taken was $500, besides a trunk and pack of goods; that the wife of the man who committed the murder had gone away that night, as well as a girl who worked there, named Lucretia Pulver; that it was murdered on Tuesday night at 12 o'clock; that the first letter of its given name was C., and that of its sir-name was B., but it refused to give the entire name, (a very considerate ghost!)

The manner in which these questions are said to be asked and answered, is this: For instance, when they wish to ascertain the first letter of its name, the questioner goes through the alphabet, and when the right letter is called, it *raps*. So also of the county where its children now reside, On calling over the list, when the one it wishes to designate is named, it manifests it by rapping.—In this way, all the answers have been given.—Sometimes there has been as many as two or three hundred persons at the house at a time, and it is said that all have distinctly heard the noises.—Some fifteen or twenty of them certify to the fact over their own signature.

In the course of their questions, it was asked who committed the murder, and each individual was named who had occupied the house from its erection. No knocking was heard until the name of a very respectable man now residing at Lyons, Wayne county, was called, when it made three knocks louder than common, and the bedstead jarred more than it had done before! It states that the murderer cannot be punished because there

were no witnesses of his crime, and yet so many are the absurd stories about the matter, that the individual has felt constrained to procure a certificate of good character and respectability, signed by some forty or fifty of his former neighbors.

Thus the matter stands, and what renders it still more remarkable is the fact that individuals who have resided there previous to the present occupant taking the premises, now come forward, and over their own signature certify that they too heard these same mysterious noises when they occupied the premises! According to the unquiet "spirit's" story it was buried ten feet under ground, in a particular part of the cellar designated, and that since, on account of the body affecting the water in a neighboring well, it was removed from its first resting place, and buried on the bank of "Mud Creek," more recently known as the "Ganargwa." It says that it shall keep up the rapping until its remains, a portion of which are still underneath the building, are discovered, and the residents round about have made a vow that his ghostship shall be attended to just as soon as the water in the cellar will permit. We await further revelations with a good deal of interest. In the meantime we trust that the neighborhood will keep "cool," and that the ghost of the murdered pedlar may continue to make all needful and proper suggestions in reference to the matter.

Farther News by the Acadia.

The general commotion of the Continent has gone on increasing. The intelligence respecting the insurrection in Lombardy has been confirmed with the farther important feature that the King of Sardinia at the head of an army of 80,000 troops crossed from the Piedmontese territory into Lombardy, issuing, as he passed the frontiers, a formal declaration of war against Austria, and marched direct to Milan. The Austrians defeated at every point, fled as he approached, and having successively been driven from Parma, Brescia and Des Senzano, have endeavored to establish themselves on the line of the Mincio.

The Italian Duchies have burst out into open insurrection. Modena and Parma are revolutionized, and Venice, which has been dying daily since the fatal 18th of Jan, 1798, now just half a century, when the Austrians took possession of that city in virtue of the treaty of Campo Formio again show signs of life.

In Austria proper every thing seems disorganized, and amid the chaotic confusion which prevails it is quite impossible to fix the hourly changing scene. It is anticipated that the Austrian General Radetsky, who is afraid to enter Mantua for want of provisions, will be compelled to capitulate upon the appearance of the Sardinian troops.

It is said that a disposable force will be shortly at the command of Charles Albert of not less than 250,000. With such an army not only will all Lombardy be liberated, but Austaia may be threatened, even at the gates of Vienna.

Savoy has declared itself a Republic.

In Switzerland a strict neutrality seems to be aimed at, and the levying of troops is discountenanced by the Vorort. All the countries on the right bank of the Rhine have been violently convulsed.

At Baden, Wurtemberg and Saxony, liberal Governments have been conceded to the people.

In Hanover the triumph of popular feeling has been complete.

In Prussia, after the bloody scenes which took place in Berlin, the King has put himself at the head of the German Confederation, and promises extensive Constitutional reforms. At the same time he has plunged headlong into a dispute with the Danes respecting the long contested affair of the Duchess of Holstein and Schleswig, which by force he seems resolved to detach from Denmark. By encouraging the Poles to erect a free government, on the other hand, he is exasperating the Autocrat of Russia to the highest bounds of passion, in the Grand Duchy of Posen.

All Silesia, Breslau, and even Lithuania appear to be in an alarming state of convulsion. It is rumored that 50,000 Cossacks have suddenly appeared at Tilsit, and in the state of excitement in which the Emperor is at this moment, should the King of Prussia waver, the consequences may be serious. The Emperor himself is vigorous and decided. He is said to have ordered every man in Russian Poland between 18 and 35 to be removed into the interior of Russia.

Nicholas is concentrating a vast army in Southern Russia which we should deem sufficient to crush any attempt at a republic in that division of the Empire.

Hanover is preparing an army to march in favor of the German side of the quarrel.

In Belgium all attempts to overthrow the Government, or to create disturbances, failed. Belgium and Holland are comparatively quiet.

It is reported that the Turkish Government, under the influence of the Russian Ambassador, refuses to acknowledge the French Republic.

A violent emeute took place at Madrid on the evening of the 26th. The people and the soldiery fought in the streets from 7 in the evening until 3 or 4 in the morning, and a considerable number were slain on both sides. The cause was said to be a republican movement, and it was wholly unexpected. Court martials have been held on many of the the prisoners, but no executions took place. Queen Christina is said to have fled.

In the conflict M. Escosura, the Minister, was shot in the leg and a Mr. Whitwell an English engineer, killed. On the 27th the city was declared in a state of seige. Tranquility has since prevailed. But the Provinces are excited to an alarming degree. M. Olozaga and M. Escosura have both been arrested by Narvaez.

In Portugal matters continue tranquil at present.

In Sicily the Sicilian Parliament is constituted and the separation of the Island from Naples is complete. It is generally believed that the King of Naples has altogether abdicated his rights over Sicily.

The advices from Athens state that the Greek ministry had resigned and that Senator Conduriotto had accepted the task of forming a new Cabinet.

Republic of Savoy.—The Lyons Gazette of the 4th gives the following under date

Chamberry, 31st.

Savoy will tomorrow constitute itself a Republic; a Provisional Government will be constituted, and the Republic of Savoy proclaimed; the country will be immediately convoked to decide on its political condition. There is in this no hostility to the King, who has given us very liberal institutions. Nothing of disaffection to the French Republic, for which we preserve our sympathies; nothing, in short, which prejudges any course. This intelligence is, however, doubtful, and is not confirmed by the letters from Lyons of the same date.

The Viceroy of the Emperor of Austria who fled from Milan, was at Botzen, a town of the German Tyrol, on the 29th ult., waiting the issue of events. The Milanese have sent an address to Pius IX, in which they ascribe to the Pontiff all the honor of the emancipation of Italy.

Washington's Library.

Correspondence of the Journal of Commerce.

WASHINGTON, Tuesday, April 25.

An inquiry is to be made, after it is too late, as to the *library of Gen. Washington*, with a view to secure it for the United States. What has become of the Regency of the Smithsonian Institution, and of the Smithsonian library fund, and of the Act of Congress providing for a large expenditure from the interest of the fund for a library? what has become of these, that such a library should go a begging, and then be sold for a song to a speculator for the English market?

This was not the collection of books left at Mount Vernon by General Washington and Judge Washington, and to which Mrs. Jane C. Washington refers, in her contradiction of the late rumor as to the sale of the Washington library.—Mrs. Washington says that that library has not been sold for 5,000 dollars, and would not be sold for five times the sum.

But it is the library left by General Washington to Col. George C. Washington, of Maryland, that has been sold. Three thousand volumes of this library has been sold by Col. Washington to Mr. Stephens for $5,000; and they are packed up, in this city, for transportation. They are said to be, and no doubt are, destined for England.

Many of them were sent to General Washington with the respects of their authors, and many were gifts of friendship. Four or five hundred of them have General Washington's autograph.

The Washington medals were sold in this city twenty years ago, for $500, and fell into good hands, having been purchased by, and being still in the possession of Daniel Webster.

IMPORTANT ARREST OF COUNTERFEITERS IN CANADA.—On the 11th inst., High Constable Clark arrested, at Barnston, near Sherbrooke, in Canada, seven persons, and lodged them in Sherbrooke jail; having found on the premises of some of them a quantity of bad money, and some tools for coining; a quantity of bank bills and a printing press, under a forge in a blacksmith's shop. Also some counterfeiting apparatus, and about one hundred counterfeit half eagles. The person at whose house were found coining and printing apparatus had fled. At another place was found a *Bogus* or drop press for stamping hard money, portions of it having been removed to a large ash heap, and other portions of it in the bed of a brook.

This *Bogus* press with its appendages, weighed about half a ton. At the house of one of the villains the "exploring party" found three engraved plates for bank bills, about $4,000 in counterfeit bills, a portable bellows, and sundry other materials. In a field were found two sets of dies for making dollars and half dollars. There is pretty good evidence that between the visits of the constables, about *half a bushel* of counterfeit bills were burnt at one of these houses. Two persons who were arrested on the first visit made their escape.

About $20,000 in counterfeit bills, 120 Mexican dollars, 220 half dollars, and 160 American quarter eagles, with a lot of half eagles made of copper for galvanizing, were secured. The bills are on the following banks: 1's, 2's and 3's on the Marblehead Bank, Mass.; 1's and 2's, Atlantic Bank, Boston; 2's Hartford Bank, Ct,; 10's Indiana Bank, (well executed, said to be from the original plate;) 2's Eastern Bank, Bangor; 1's Atlantic Bank, Boston; 10's Suffolk Bank, Boston; 2's Lebanon Bank, N. H.; 2's Worcester Bank, Mass; 5's Lansingburgh Bank; 5's Danbury Bank, 2's Derry Bank, N. H.; 1's New England Bank, Boston; 2's Burlington Bank, Vt.; 5's Dover Bank; 1's Kingston Bank, N. Y.; 2's Mechanic's Bank, Newburyport; 5's and 1's Chillicothe Bank, Ohio; 1's Vergennes Bank, Vt.; 1's Washington Bank, Boston; 5's Nashua Bank, Mass.

The plates secured are a $3 Hungerford Bank, Adams, N. Y.; a $3 Bank of Chenango, N. Y.; a $2 Gloucester Bank, Mass.; and on the opposite side of the same plate a $5 Suffolk Bank, Boston. There was also secured about two reams bill paper, 10 or 12 pounds of printing ink, a quantity of arsenic, three printing presses, &c., sufficiently to show that the business has been carried on upon a very extensive scale.

Congressional.

HOUSE—Mr. MCKAY's resolution providing that the House meet at 11 A. M. hereafter was adopted on motion of Mr. VINTON.

The rules were suspended in order that Mr. VINTON might offer a resolution fixing a day for the consideration of appropriation bills. Adopted.

Mr. ASHLEY's death was announced by a message from the Senate, when Mr. JOHNSON of Arkansas, pronounced a feeling and appropriate eulogy, and moved the usual resolutions.

Mr. WHITE followed in a few remarks when the House adjourned.

SENATE.—Mr. BORLAND announced the death of Mr. ASHLEY, of Arkansas, and pronounced an eulogy on the life and character of the deceased.

Mr. BREESE of Illinois, followed briefly, when the usual resolutions were passed, and a committee was appointed to make arrangements for the funeral, which is to take place to-day.

SUMMARY PUNISHMENT OF TWO THIEVES.—During the trip of the steamer Saladin, betweun Memphis and New Orleans, about ten days ago, two passengers attracted great notice for their elegant dress, fine accomplishments, and supposed singular piety. They played their parts admirably until one night finding all on board asleep, they proceeded to rifle the pockets of their fellow passengers, when their true characters were made known, having been arrested and discovered on the spot. The next morning a court was held on board, Judge Davis, of Lexington, Ky., presiding; J. D. Fuller, of New Orleans, prosecuting; Dr. Stiver of Alabama, clerk, with 12 jurymen.—After hearing the evidence, the two prisoners were convicted of stealing $37, and each sentenced to receive 39 lashes well laid on. This sentence, however, was waived, as the court was opposed to lynch law, and in its stead they were ordered to pay over the stolen money, and the captain was then directed to set them both ashore, one on each side of the Mississippi, which was immediatdly done. The official proceedings of the court are published in the New Orleans papers.

SHOCKING ACCIDENT.—A most shocking and fatal accident occurred in Lowell, Monday evening, about 6 o'clock. A runaway horse with the fore wheels of a wagon attached, knocked down a young lady who was crossing the street at the time, and her clothes becoming entangled in the wheels, she was dragged some thirty or forty rods to the stable, her head and shoulders upon the ground, and most shockingly mangled. She breathed but a few seconds after. She was about 21 years of age.

For the Western Literary Messenger.

Lines:

ADDRESSED TO J. M. LE R.

I kneel at Friendship's sacred shrine,
And pay the tribute that is due;
And own the life that values mine
Is dearly loved, if always true.

The tender ties of human love,
Are stronger than the chains of power;
For those no strength can ever move,
Or sunder in a needful hour.

Then let our greeting ever be,
On Friendship's footing, firm and sure;—
With willing heart, I bend the knee,
And worship at a shrine so pure.

BUFFALO, April 18, 1842. D. W.

The People of Accomac.

In a letter published in the National Intelligencer, is given an interesting account of the inhabitants of that long peninsula of the State of Virginia which lies between Chesapeake Bay and the Atlantic, and is divided into two counties—Northampton, comprising the southern extremity, and Accomac, the northerly portion. The people and some of their customs are thus described:

Of the twenty-five thousand souls who inhabit the peninsula, I suppose that not more than one thousand could distinguish the difference between the English and the Cherokee alphabet. In the counties of Accomac and Northampton, the idea of even a weekly newspaper was never dreamed of. The people are fond of amusements, which consist principally of dancing and card-playing parties, and the Saturday of each week is usually appropriated as a holiday. Any event which can bring together a crowd is gladly welcomed, so that court days, training days, election days, the fourth of July, Christmas day, New Year's day, and Tanksgiving day, are among the white days of the unwritten calendar of the Accomacians. The roads of the country are all by nature very good, and the people exceeding fond of going through the world as pleasantly as possible; so that each man who can own a horse is sure of owning a gig, and many of them are particularly unique and tottleish, someting like a scow-boat in a gale of wind.

But the crowning peculiarity of this nook of the great world has reference to the custom of raising and taming wild horses. Like every thing poetical connected with the habits of our people, this custom is rapidly becoming obsolete, and will soon be remembered merely as an idle and romantic tale. The very idea of having to do with wild horses excited my fancy the very moment I heard the custom alluded to; and I made every effort to collect reliable information upon it, as it existed half a century ago. As good fortune would have it, I found out an intelligent and venerable gentleman, who supplied me with many interesting particulars. The "oldest inhabitant" to whom I allude is the Rev. David Watts, of Horntown, who is now in the 82d year of his age, and the substance of his information is as follows:

In the Atlantic ocean, off the northeastern shore of Accomac, lies a long and sandy island known by the name of Assateague. The distance from one extremity to the other is perhaps ten miles, and in reaching it you have to cross a bay that is perhaps eight miles wide. At the present time there are only four families residing upon the island, one of them having charge of the light-house, the remaining three being devoted to the fishing business. From time immemorial it has been famous for its luxuriant grass, and from the period of the Revolution down to the year 1800, supplied an immense number of wild horses with food. When these animals were first introduced upon the island has not been ascertained, but it is said that they were the most abundant about half a century ago. At that period there was a kind of stock company in existence, composed principally of the wealthier planters residing on the main shore. The animals were of the pony breed, but generally beautifully formed and very fleet; of a deep black color, and with remarkably long tails and manes. They lived and multiplied upon the island without the least care from the hand of man, and, though feeding entirely on the grass of the salt meadows, they were in good condition throughout the year. They were employed by their owners, to a considerable extent, for the purposes of agriculture, but the finer specimens were kept or disposed of as pets for the use of ladies and children. The prices which they commanded on the island varied from ten to twenty dollars, but by the time a handsome animal could reach New York or New Orleans, he was likely to command one hundred and fifty or two hundred dollars.

But by far the most interesting circumstances connected with the wild horses of Assateague had reference to the annual festival of penning the animals, for the purpose, not only of bringing them under subjection, but of selling them to any who might desire to purchase. The day in question was the 10th of June, on which occasion there was always an immense concourse of people assembled on the Island from all parts of the surrounding country; not only men, but women and children; planters who came to make money, strangers who wished to purchase a beatiful animal for a present, together with the grooms or horse-tamers, who were noted at the time for their wonderful feats of horsemanship. But a large proportion of the multitude came together for the purpose of having a regular frolic; and feasting and dancing were carried on to a great extent, and that too upon the open sandy shore of the ocean, the people being exposed, during the day, to the scorching sunshine, and the scene being enlivened at night by immense bonfires, made of wrecked vessels or drift wood, and the light of the moon and stars. The stable business of these anniversaries, however, was to tame and brand the horses; but to give an account of all the particulars attending these exciting scenes would require more time than I can spare at the present moment.

Suffice it to say that the horses were usually cornered in a pen, perhaps a hundred at a time, when, in the presence of the immense concourse of people, the tamers would rush into the midst of the herd, and not only noose and halter the wild and untamed creatures, but mounting them, at times even without a bridle, would rush from the pen and perform a thousand fantastic and daring feats upon the sand. Few, if any, of these horsemen were ever killed or wounded while performing these exploits, though it is said that they frequently came in such close contact with the horses as to be compelled to wrestle with them, as man with man. But, what was still more remarkable, these men were never known to fail in completely subduing the horses they attempted to tame; and it was often the case that an animal which was as wild as a hawk in the morning could be safely ridden by a child at the sunset hour.

MARINE DISASTER.—The brig Cumberland and schr. William in Mackinaw, during the blow drifted afoul of the schr. Wyoming and carried away her head gear and fore rigging.—*C. Herald.*

The Chartist Demonstration.

From the London Times of April 17.

The metropolis presented yesterday a scene of unusual excitement and alarm. The determination announced by the members of the Chartist National Convention to hold their meeting and procession in defiance of the law and the constituted authorities—the military preparations, almost unparalleled for extent and completeness, made by the Duke at the head of the army to put down any insurrectionary attempts that might be made—and the remarkable unanimity with which the middle and higher classes placed their services at the disposal of the Government—had each in turn contributed to interest large numbers of the population in the results of the day's proceedings, and to increase the general feeling of undefined apprehension with which the intentions of the Chartists were regarded. The weather was exceedingly favorable for the demonstration; no obstruction was offered by the police to the trades' and other processions which left the Middlesex side of London for Kennington-common; a free thoroughfare was permitted to all who wished to take part in the public meeting; and yet, instead of the 300,000 persons who were told would assemble upon Kensington-common, and proceed thence to the House of Commons, the most liberal estimate of the number of persons within view at one time at Kennington-common does not reach 50,000, and ought not probably to exceed 20,000.

Our description of the events of the day will perhaps most fitly commence with the proceedings of THE CHARTIST CONVENTION. The delegates re-assembled at 9 o'clock yesterday morning at the Literary and Scientific Institute, John street, Fitzroy Square.

The Secretary (Mr. C. Doyle) said that he had received a written communication from the Police Commissioners of the metropolis, stating that the national petition would be allowed to be taken to the House of Commons, but that no procession would be permitted to take place through the streets of London.

The delegates left the hall with Mr. O'Connor at their head, and took their place in the car prepared for the delegates.

THE DELEGATES' PROCESSION TO KENSINGTON-COMMON.—Mr. O'Connor and the principal members of the Convention were loudly cheered by the crowd assembled outside the Institute as they took their places in the car, a large and strongly-built vehicle drawn by six horses, sufficiently large to contain upwards of 50 persons. The delegates' car was preceded by another car of the same kind, intended to convey the national petition, and drawn by four horses. Both cars had been expressly constructed for the occasion, and were gaily painted and decorated with flags, banners, and mottoes. Upon a large banner, at the head of the first car, in the Chartist colors of alternate red, white, and green, were inscribed the "six points" of the People's Charter, viz.: universal suffrage, annual Parliaments, vote by ballot, no property qualifications, payment of members, and equal electoral districts.

The petition was rolled up into five huge bundles, resembling bales of cotton in size, and placed upon a platform appointed to receive it on the car. This having been accomplished amid the cheers of the crowd, the procession was again put in motion, and slowly advanced along Holborn.—Most of the shops at the western end of Holborn were closed; but, as the procession approached Holborn Hill, the shutters of very few were up, and no alarm appeared to be felt. The windows of the houses throughout the line of procession were generally filled by spectators, mostly women, but with scarcely an exception no marks of sympathy were exhibited in the objects of the procession.

The cars reached the bottom of Holborn-hill in safety, and here a crowd were assembled who cheered the delegates. The shops in Farringdon street were for the most part closed. A large concourse of persons swelled the procession, at the intersection of Ludgate-hill and Fleet street, and the spectacle, when it arrived upon Blackfriars bridge, had become very imposing. The narrower thoroughfare had compressed the crowd into a vast moving mass, and the shifting sunlight of an April day gave increased effect and animation to the scene. By a judicious arrangement, a strong body of Chelsea pensioners were drawn up on the city side of the bridge, and stationed on the floating pier, at such a distance from the crowd that their military clothing and accoutrements could be discerned without exposing the more feeble and superannuated of the pensioners to the criticism of the mob. On the Surrey side of the bridge a strong force of police was stationed, and this was the first point at which the police force presented themselves to the notice of the procession.

By the time the procession had reached the Elephant and Castle it had received great accessions of numbers; and from this point along the Kensington road to the common, the crowd presented the appearance of a moving mass of upwards of 100,000 persons.

It proceeded almost in silence until the cars arrived within sight of the congregated thousands already assembled upon the common. The scene which burst upon the view of the delegates at this point was certainly grand and imposing. The processions of the various trades and societies which had already arrived were drawn up in military array at the outskirts of the common, with their several flags and banners, and also formed a line, through which the cars advanced to the place of meeting. The centre of the common was occupied by a vast assemblage, many of whom were soon seen hurrying in rapid motion to welcome the Chartist leaders. As the cars advanced into the centre of the common, they were surrounded by a crowd, which every minute became more dense, and who rent the air with their shouts. It was evident that the police authorities, having permitted the common to be occupied by so large a body of the Chartists, had decided upon allowing the meeting to be held without interruption, and that it would be next to impossible to clear the common of the thousands now congregated there.

Here a person approached the car and addressed Mr. O'Connor with a message from Mr. Mayne, one of the Commissioners of Police, requesting to have an interview with him before the commencement of the proceedings. Mr. Mayne announced to Mr. O'Connor that the authorities would not object to the meeting taking place, but that the procession would not be permitted to pass over the bridges, that the Government were prepared with means of preventing it from taking place, and were fully determined to use them if necessary. Finally, that if the procession was persevered in, he (Mr. O'Connor) must take the responsibility of the consequences, whatever they might be. Mr. O'Connor at once consented to do all that the Government wished, to abandon the procession altogether, and he gave his hand to Mr. Mayne, as a pledge that he would do all in his power to induce the meeting to disperse peaceably.

On the motion of Mr. Clark, seconded by Mr. Adams,

Mr. Doyle was appointed President of the meeting, amidst very vociferous cheering. He said—Men of London—This is a sight such as was never witnessed in this vast metropolis before.—Friends, I need not ask you to be peaceful in your conduct this day. I need not ask you to conduct yourselves with the greatest propriety; for, recollect that on your good conduct this day, on your peaceful but firm demeanor, depends the success of one of the most glorious causes ever agitated by man. The delegates of the people will do their duty, but they will expect you to do yours. (Loud cheers, and cries of "We will.")

Mr. O'Connor proceeded to address the meeting, dissuaded them from violent and injudicious conduct. In the course of his remarks, he said, well, then, we must tell you that the government has taken possession of the bridges. I have always been a man of determination, as you know, and a man of courage too; but how should I rest in by bed to-night, if, through any incautious advice or expressions of mine, I made any of your wives widows? How should I rest in my bed if I made any of those children who are dependant upon your exertions fatherless? If you have any true love for the cause—if you appreciate the trouble, anxiety, the loss I have sustained to secure its promotion, I beg of you to countenance no violence this day. Therefore, my friends, what the Convention have decided upon is this, that we should not attempt to cross the bridges which are guarded by armed forces. The huge petition which you have prepared, will be taken down to the House of Commons by the executive, and I shall be there ready to present it, to protest against the injustice which has this day been inflicted upon you, and to make your voice heard throughout the length and breadth of the land. (Loud cheers.)

Mr. O'Connor again exhorted the meeting not to damage the cause by intemperance and folly, and before concluding obtained, by a show of hands, a promise not to violate the law.

The five huge bundles comprising the petition and its signatures were then deposited in two cabs, and conveyed, in the charge of the executive committee, to the House of Commons. The cars were dismantled of their trappings, and removed to a neighboring stable. The vast assembly then quietly dispersed, and in half an hour there were not an hundred people left on the Common.

The military in accordance with the well known tactics of the Duke of Wellington, remained invisible throughout the day, and no one would have dreampt that within hail almost of the spot where the Chartist demonstration took place their lay in ambush a little army of disciplined troops complety equipped and ready for action.

We learn that Mr. O'Connor was himself the first person to report the result of the meeting at the Home office. At 1 o'clock he waited on Sir George Grey, and after stating that the meeting had quietly dispersed, expressed his thanks to the Government for the forbearance with which they had acted on the occasion.

It is not a triumph over Chartism that we are claiming; nor do we charge on those opinions any necessary contradiction to the spirit of the British Constitution. On the contrary, we fully admit that the "six points of the Charter" are honest and allowable doctrines. No one can pretend that our representative system is free from abuses and scandals, which demand a continual rather than a final reform.

We were told that 200,000 men were to march through London and take up their station on this new Runnymede. Every attempt was made to procure that number. The railways all brought their contingents, far and near. The remotest suburbs were ransacked and swept for contributions. The snow-ball was to increase as it rolled from Stepney, from Highgate, or Paddington.—The programme contained an endless enumeration of trades. Irish rebellion hoisted its banner; and forty thousand Irish laborers of the metropolis were invited to muster under Emmett's name. The *fasces* of the Republic and the crimson cap of liberty were displayed to attract their admirers.

The sum of all the processions that crossed the bridges towards Kennington-common yesterday was not more than seven thousand. We doubt whether more than three thousand were added from south of the Thames. At the crisis of the meeting, the total number on the Common, including the most incurious and indifferent of the spectators and the bystanders, was not 20,000.—Our estimate is confirmed by the best authorities. Of these 20,000 only 10,000 had any thing to do with the demonstration, or gave their "moral" weight to the cause of the day. Look now to the other side. There were 150,000 special constables spontaneously enrolled *against* the movement, and testifying to its dangerous and reprehensible character. There you have the proportions of the day: 150,000 to 10,000—15 to 1.

The Chartist Petition.—The Chartists have certainly nothing to complain of in the manner in which their petition was received on *Monday* night. The Marquis of Lansdowne, speaking of it in the Lords, said feelingly and emphatically,

That it had, in the other House of Parliament, received that attention which all petitions emanating from the people were entitled to have.

In the House of Commons the scene was most impressive,

Mr. Feargus O'Connor, amidst almost breathless silence, said: Sir, I rise to present a petition, signed by 7,560,000 persons; also another petition, signed by 100,000 persons, whose names are not appended to this large muster. The petitioners pray for annual parliaments, universal suffrage, vote by ballot, equal electoral districts, no property qualification, and payment of members. I beg, Sir, to state, that from the courtesy I have already received from the House, I shall say no more than simply move that the petition be read by the clerk ot the table.

The petition was accordingly read by the clerk.

At the conclusion of the reading of the petition,

Lord Morpeth rose amid much cheering, and said—Sir, my right honorable friend the Secretary of State for the Home Department would have been in his place had he not been greatly occupied by the necessary business of his department this morning. (Hear, hear,) I may, however, in his absence, state, that whatever may be his opinion of the sentiments contained in that petition, he does not wish that he should be considered in his absence as wanting in that respect which a petition so numerously signed was undoubtedly entitled to. (Hear, hear.)

The petition was then removed from the floor of the house by four of the messengers.

The measure brought in by Sir George Grey for assimilating the laws of Great Britain and Ireland, as they respect overt acts of treason and sedition, was carried, on the second reading, by 452 against 35, being a majority of 417. The measure is being pressed rapidly through Parliament, not, however, without great objections to that clause in the bill which constitutes felony, the "*open and advised speaking*, tending to levying war, and by force of constraint upon, to intimidate or overawe the Parliament, or to stir up foreigners to invade the United Kingdom," which has been qualified by a proviso.

In consequence of the vast number of foreigners from the continent, who have recently appear-

ed in the streets of London and Dublin—it has been determined by Government to revive the Alien Act, for a limited period, and in certain cases, in order to compel the departure of those obnoxious visitors from our shores; and, accordingly, the Marquis of Lansdowne has introduced a bill to that effect in the House of Lords.

It was distinctly stated by the Marquis of Lansdowne, on the 11th, that the Earl of Clarendon has expressed an opinion that some measure was necessary to counteract the efforts made by foreign emissaries in Ireland.

FRANCE.

By Telegraph to the London Times.

The Moniteur of Friday, April 14th, publishes the weekly account of the situation of the Bank of France, which is negatively satisfactory; the situation of the Bank had neither improved nor become worse.

The elections and the preparations for war continue, however, to distract public attention from the contemplation of the financial and commercial crisis.

Party feeling in respect of the former was beginning to display itself in very unsatisfactory forms.

The promotions in the army and other movements led to the belief that in a very brief space of time France would be engaged in foreign war.

The riots in various parts of the Republic were assuming a formidable character. An additional instance of military revolt had also occurred.

Two seizures of arms took place in Paris on Wednesday.

The French Revolution.—The news from the departments, says La Presse, is deplorable—emeute at Havre; emeute at Troyes; disorders at Beziers; in the Landes, &c.; agitation everywhere. The more warmly the departments accept the Republic, the more stifly do they rise against dictation:

The same journal observes:

We have before us a list of candidates to the National Assembly, prepared by the central committee of Paris, and published by the National. It fills 18 columns. It would appear that the number of Republicans that inspire confidence is extremely limited, for we see the same names reproduced *ad infinitum*.

Not only do the writers of the National figure upon the list of 34 candidates for the department of the Seine, but there is hardly a departmental list which is not decorated by their names. Almost at each line you find the name of a writer of the National repeated for the third, fourth, fifth, or sixth time.

From La Presse.

It is believed that the national workmen will amount to 75,000 individuals before the end of the month of April; and, at the rate of 1f. 50c. per day, they will cause an expense of 112,500f. per day, or 3,375,000f. per month.

It appears that M. Louis Blanc and M. Emilie Thomas have themselves allowed that it will be impossible for the State to continue such expenses, unless the works undertaken be really useful and profitable. In consequence, measures are at present being taken to ascertain the trade of each workman, in order to class them. Vast workshops for all kinds of trades are to be immediately organized. The workmen accustomed to out-door labor will probably be sent to the railways in course of construction.

The Constitutionel has the following, relative to the Government commissaries in the departments, which is curious for the light it throws on the feeling of the provinces:

"The spirit in which these changes are made is really extraordinary. When a commissary suits the people among whom he is sent, he is no longer pleasing to the central authority from whom he derives his power. The list of the functionaries thus changed or dismissed, from the honorable names which it contains, shows the motive of these removals.

"All these men, who have for a long time been guarantees of liberty, cannot carry out the policy inspired by the circulars of M. Ledru Rollin.—They certainly cannot agree with the principles expressed by M. Saurnac, the commissary of the department of the Tarn and Garrone, who, in a conversation which has been since published, announced the approaching disappearance of all private property.

"It is by propagating such doctrines that the commissaries excite against them the animadversion of all citizens."

The correspondent of the London *Times*, referring to the interview of the Minister of Finance (M. Garnier Pages) with the representatives of the railroad companies in France on the preceding night, observes that the difficulties that presented themselves to the absorption of those enterprises by the State afforded strong hope that the project would be found utterly impracticable.

The financial difficulties of the country continued to press heavily upon the public mind, as they did upon the government itself. Every practicable economy was ordered, and great reductions of the public expenditure had already ensued. These would ultimately place the expenditure below the income, provided that the revenue could be maintained at the amount which it reached under the late Government, but the stagnation of trade and commerce precluded hope that the income would continue to be on the same scale, while new heads of outlay, for the support of unemployed workmen, and the expenses connected with the increase of the army and National Guard, more than counterbalanced the savings.

DENMARK.

From the European Times, April 11.

The first Battle—The Danes Victorious.—By the arrival of the Hamburg, Capt. Brown, at Hull, we have "Bersenhallo," of the 11th inst., from which we extract the following:

Hostilities have seriously commenced between the forces of Denmark and those of Schleswig Holstein. A very fierce battle has been fought near Flonsburg, in which the Danes had a decided superiority in numbers, as well as in their cavalry and artillery. The Schleswig-Holstein army was defeated and compelled to retreat towards Rendsburg. The loss of life has been very great on both sides.

The Danes entered the city of Schleswig, yesterday.

The Prussians have received orders to drive the Danes out of Schleswig, in order to the re-establishment of the *status quo ante*. This being done, the King of Denmark is to be informed that should he in retaliation for this step on the part of the German Powers, stop the passage of the Sound, the Prussian forces would immediately advance into the Danish territories and vigorously prosecute the war.

The Duke of Augustemburg and Prince Waldemar arrived here yesterday from Berlin, and immediately left for Rendsburg.

The Duke brings the order for the Prussian troops to enter Schleswig.

Pursuant to this order, two Prussian battalions have been directed to advance, but it stated they will have to await the arrival of cavalry and artillery.

At the latest dates it was generally expected

that the questions at issue would be amicably settled.

PRUSSIA.

BERLIN, April 6.—Some excitement existed here last night. Labor is beginning to fail, and the price of provisions is increasing. At four o'clock a mob of about 200 workmen crossed the square of the Palace, taking the direction of the Koenigstrasse. They wanted to destroy a manufactory in this street, but were quieted, and the night passed off without disturbance. It is the opinion of many professing knowledge of what the movements of the people are, that all is not finished, but that there will be another disturbance.

AUSTRIA.

The *Wetner Zeitung*, of the 4th of April, announces that the Emperor has just suppressed the Council of State, and given to the parties composing it another position, which will not interfere with constitutional intentions of the Council of Ministers,

A letter of the 4th, Vienna, addressed to the *Zietungshalle* of Berlin, says that the government will abandon Italy, but only after having obtained indemnities in money, and settled important commercial treaties for the future. The committees charged to revise the new laws on the press have decieded that newspapers may appear without authorization or caution money, and without necessarily having an Austrian for editor. They have also decided that libels on the imperial family shall be tried in the same manner as those on private individuals.

GERMANY.

The riots among the country people of the States of South Germany continue. The castle of Wallenbourg, in the Province of Saxony, belonging to Prince Schoenburg, was burned down on the 4th of March. The Prince fled to Altenburg. The troops called up from Leipsic and Zwickau were too feeble to resist. Serious anxiety existed for the safety of the castle and town of Glaucha. A general insurrection among the highlanders of Saxony was imminent. At Donaueshigen, in Wurtemberg, a bloody conflict took place between the population and a detachment of Wurtumburgese troops, which came to occupy the Schwarzwald, Both parties had several killed and wounded.

The Committee of Fifty, sitting at Frankfort-on-the-Maine, are actively pursuing their duties. They have published several regulations for the approaching elections.

Some disturbances took place on the 11th, at Cologne, which caused the calling out of the National Guard.

NEW LIGHTHOUSES ON LAKE MICHIGAN.—Mr. Wentworth, writing to the Chicago Democrat, under date of the 8th of April, says: "The Committee on Commerce, have agreed on a bill for Light Houses. The proposition introduced to provide for buoys on the St. Clair flats, and also for a Light House much needed at *Death's Door*, has been inserted. The bill also provides for a Light House at *Port Washington*, Wisconsin, and also one on the end of the *pier at Milwaukee*, like that now at Chicago."

The Committee will also report favorably for a Marine Hospital at Chicago.

The timbers of the bridge over the Marcovey river on the line of the Northern Railroad, West Lebanon, N. H., gave way yesterday, while two cars laden with iron, containing about 40 tons, were going over. One man was injured very much and not expected to recover.

Editorial Department.

J. CLEMENT, EDITOR.

Puffing.

Puffing is a pernicious practice. It injures all parties. The puffer debases himself and weakens the power of conscience by uttering a falsehood; the puffed is raised to an unnatural height, preparatory to a painful fall; and the public are misled and for a time deceived.

Like certain baleful maladies, puffing is an epidemic. In plain language, like other vices, it is imitative and catching. Some little great man, whose breath of life consists in gratifying his vanity by hearing himself praised and his egotism in praising himself—writes a puff on some wingless angel who butterflies herself in a *nom de plume* of alliterative sweetness, and *forthwith* a thousand editors catch the key note and sound her praise from Plymouth Rock to the Rocky Mountains.

At present the burthen of the puffer's song is "Grace Greenwood," a lady of fair talent who seems destined to fall a sacrifice to the thousand toad-eaters of Prince Puffer. The latest edition of these puffs which has met our eye is as follows:

"Grace Greenwood, the most graceful of the Graces, graces now the editorial chair of the "Ladies Dollar Newspaper," a truly *feminine Journal* which all her fair countrywomen should cultivate as a boudoir and household grace. The young, spirited, and (so they say) beautiful Editress, is one of the proudest daughters of genius that our literary clime has ever given birth to; her charming mind seems the very well-spring of all that is beautiful, etherial, flowery, and gloriously dashing; the vein which the accomplished authoress has struck out of her sweet imagination, she is working with universal *eclat*. The sparkling gems in the magazines of the day have encircled her brow with Genius' dazzling coronet."

We know not the author of the above, but we sincerely pity its victim. If Grace Greenwood—who has assumed a very flat name—is a woman of good sense, such "compliments" must be extremely disgusting to her, and she may well pray to be delivered from her friends.

Charles Dickens, a really clever writer, was, six years ago, the great central orb of the literary system. He was *puffed*, however, and going "up like a rocket, he came down like a stick." Let lesser orbs beware.

TO CORRESPONDENTS.—Communications are on hand from "P. S." "J. H. B."

"*The Insulted Boy*" we have already seen in print—or such is our impression.

Next week the lecture of S. WILKESON, Jr., on the *Limitations to the Right of Suffrage*, will be published.

THE FOREIGN NEWS is of such interest that we have given an unusual space to this department. It will be handy for reference years hence.

STEAMBOAT ASSOCIATION.—An association has been formed between the steamboat and propeller owners on the lakes; and the following tariff of prices has been adopted:

PRICES OF PASSAGE ON LAKE ERIE.

	Cabin Passage.	Steerage Pass.
From Buffalo to—		
Erie	$3 00	$2 00
Conneaut and Ashtabula,	4 00	2 00
Fairport and Cleveland,	4 50	2 50
Black River, Huron and Sandusky,	5 00	3 00
Maumee River,	6 00	3 00
Monroe and Detroit,	6 00	3 00

Furniture and Luggage to any port, 50 cents per hundred.

PRICES OF PASSAGE TO THE UPPER LAKES.

	Cabin Passage.	Steerage Pass.
From Buffalo to—		
Mackinaw,	$10 00	$6 00
Milwaukee, Racine, Southport and Chicago,	12 00	6 00

SONGS FOR THE PEOPLE.—This deservedly popular periodical for May, has not reached us. We regret this, for it is a work of starling merit, and we regret to have our files broken.

RUNNERS.—The hotel keepers, owners and masters of steamboats and propellers, forwarders and citizens generally, of Buffalo, have pledged themselves to dispense with, and discountenance the use of runners this season. Travellers will rejoice at this act.

FRIGHTFUL RAIL-ROAD COLLISION!! LOSS OF LIFE!!

The passenger train of cars which left this city yesterday noon for Schenectady, met with a frightful disaster when about a mile this side of Herkimer. In turning an abrupt curve in the road at that point it came in collision with a freight train bound up. The whistle of the freight train was heard a moment before it came in sight, two or three rods distance, and the passenger train somewhat checked. The engineer, firemen and conductor saved themselves by jumping off, but we understand that Mr. Brower on the passenger train maintained his post till within a very few feet. The collision was terrible. The two locomotives reared on end, like two combatant beasts, and fell over down the embankment perfect wrecks. The baggage car was torn to splinters. The express and mail car was driven completely through the way passenger car, and the platforms of the three other passenger cars broken and other injuries done.

Two persons were instantly killed and three injured; two of them very seriously.

Mr. James Welsh, of this city, moulder in Higham & Co.'s Vulcan Works, and Mr. Wm. F. Smith, stage proprietor at Herkimer, were either on the tank of the locomotive or the platform of the baggage car. They were horribly mangled, the former being torn from his lower jaw down, so that his heart could be seen, and the latter having his head cut into and brains scattered on the road.

Mr. Bennett, of Hamilton street, Albany, was in the baggage car, and when extricated from under its ruins, was found to have his thigh broken, and also below the knee, besides being injured in the head. He was considered to be in a critical condition.

A young man named Howard, from Watertown, was standing on the platform between the third and fourth cars. Both his legs were broken near the thighs. It is thought one must be amputated.

The roof of the mail car, after it had gone completely through the way passenger car, fell upon the heads of the passengers, but no one was much injured except the father of Mr. Crittenden, the baggage man, whose head was considerably cut.

The Express agent had a most remarkable escape, being thrown upon the top of the baggage car.

The blame is attributed to those having charge of the freight train, who were attempting to push on to Frankfort before meeting the passenger train.

The loss to the railroad company is probably from $12,000 to $15,000. It is the first loss of life that has ever occurred on the Utica and Schenectady road.

Mr. Welsh leaves a wife and five children. He was going to Herkimer to return in the next train. Mr. Smith had also a wife and child.

Arrival of the America.

LIVERPOOL, April 15.

Corn trade firmer on the 14th of April. Indian Corn 24s a 26s 6d. Flour 25s a 26s. Meal 10s a 11s. White wheat 7s a 7s 10d.

There are indications of improvement in trade. Cotton had been down, but recovered.

The *Chartist Meeting* was a complete failure, and passed off quietly. Two hundred thousand special constables turned out.

Consols in London were 82¼.

The Prussian troops are advancing into Holstein.

The King of Denmark left Copenhagen to join the army.

Hungary had declared herself independent.

Serious disturbances have broken out at St. Petersburgh.

Some disturbances occurred at Cologne, but they were suppressed.

The Sicilian Independent Parliament are in session.

Large bodies of troops are concentrated on the Sardinian frontier.

The Austrian and Sardinian troops are approaching each other in Lombardy.

In Venetian territory each defile is guarded to prevent the Austrian reinforcements from entering Italy.

The general character of Continental advices are much more satisfactory than for some time previous.

In Berlin several banking houses have failed.

GENERAL BUSINESS.—Under the head of General Character of Continental Advices, the Liverpool Mail says that business affairs are now much more satisfactory than they have been for some time. Commercial affairs begin to wear a more cheerful aspect.

Several Banking Houses had failed in Belgium, France and Berlin.

There had also been several heavy and serious failures in Marseilles.

Hurneysen & Co., one of the most respectable banking houses in Paris have failed.

All is quiet, and there are indications of an improvement in trade.

The Chartist Petition had been carried to Parliament by appointed Deputies.

The Chartist meetings called in Manchester and Glasgow, had fallen throgh.

Earl Grey had brought forward a proposition in Parliament, assimilating the laws of England and Ireland in regard to overt acts of treason. It was carried through by a large majority.

The alien act had been revived in England.—The consequences were that no foreigners had arrived.

There had been no important changes in Ireland since the 7th. The people appeared to be waiting the movements of Parliament.

J. O'Connell had had an interview with Lord John Russell. He asked that government would make large concessions to Ireland; but Lord John declined to make known the intentions of government in regard to that unhappy country.

The Repeal excitement continues strong.

There is but little improvement in the financial affairs of France.

Paris and Lyons were tranquil.

The *Landes* state that the workmen were in full insurrection in Toulouse.

The people of Strasburgh were in collision with the military.

Serious disturbances had broken out among the laboring classes of Havre.

Fighting on the Continent.—A battle had been fought near Rendsburgh, in Schlesing. The Holstein army was defeated. The loss was great on both sides.

The Danes had entered Schlesing. The Prussians were ordered to drive them out.

The Piedmontese had marched victoriously through Lombardy. The Austrain troops fled in dismay, at all points.

A battle was expected on the banks of the Mincio. Should the Italians be defeated, France could not, probably, remain neutral.

Tranquility prevailed in Belgium and Holland.

Metternich was at the Hague.

The government of Turkey has recognized the French Republic.

Austria is willing to acknowledged the independence of Lombardy.

Madrid was quiet at last advices, but the people were discontented.

The Duke of Montpensier had arrived at the capital.

The Ministers of Spain and Russia have exchanged friendly assurances.

Prussian troops were advancing upon Holstein.

The King of Denmark had left Copenhagen to join the army to repel the invasion of the Prussian troops.

Hungary had declared herself independen of the government of Austria, and chosen Arch Duke Stephen King.

At Botzen, the Tyrol Citadel had yielded to the new government, and all was quiet.

The Government of Prussia was actually preparing for war.

A new Ministry has been formed at Naples. It was composed of liberal men.

St. Patersburgh, March 31,

The Emperor, it is stated in letters from St. Petersburgh, in consequence of the receipt of despatches from Berlin and Vienna, had suddenly countermanded the warlike preparations which were on foot all over the Russian Empire. This rumor is countenanced in some degree by letters from Koningsberg a Prussian frontier fortress, which distinctly deny the reported accumulation of large masses of troops upon Warsaw, Konow, Kalish and other places in Russian Poland and Western Russia.

Commercial matters in the manufacturing districts do not at all improve. Nothing but the exceeding low price of Cotton could prevent the stoppage of the mills, as there is no demand and prices are at minimum.

The Prussians have received orders to drive the Danes out of Schleswig in order to the re-establishment of the *status quo ante*.

This being done, the King of Denmark in retaliation for this step on the part of the German powers, will stop the passage of the Sound. The Prussian forces would immediately advance into the Danish territories and vigorously prosecute the war.

Some riots have occurred at Saverne in the Department of the *Bas Rhin*, and at Sloner, an attempt was made to pillage some of the shops, but it was prevented by the National Guards.

At Dunkirk the people rose to prevent the departure of some English vessels laden with Indian corn, and injured the ships, but the National Guard turned out and restored order.

The new police *Gardiens de Ville* had just come into service, In the central parts of Paris they are unarmed and wear no uniform.

Warlike preparations in France, on a great scale continue both in respect to land and sea-forces. All of the regiments of Infantry and Cavalry in the Departments of the north, have received orders to place their battalions and squadrons on a war footing.

The National states in an article dated Toulon, the 4th ult., that the fleet, under the orders of Admiral Boudin, had been instructed to sail the moment after their crews should have voted for Deputies to the National Assembly.

A proclamation calls on the German people to proceed to the work of the elections, and not to rest until they have made Germany united and free.

The Constitutionel has the fotlowing: "All the Kaliffs and other Arab chiefs of the Province of Algiers, had presented their homago to the new government."

Later From China.

New York, April 28—7 P. M.

Advices from Hong-King, to January 29th, have been received here today.

Nothing decisive has been done as yet towards the settlement of the difficulties between the Chinese and English. It is thought that a military and naval chastisement of the Chinese will be resorted to.

There was a great fire at Shanghai, on the 2d of January, 50 houses were destroyed, Alarm had been occasioned at Shanghai on the 11th of January, by an intimation that certain lawless Chinese were organizing a gang for the purpose of attacking and plundering some of the foreign Hongs. Precautions were taken in consequence, and all remains quiet.

Frozen to Death.—A man named James Charlton left Washington Island about the 1st of January last, to go to Sturgeon Bay for the purpose of fishing, and was not heard of until the 8th of March last, when he was found frozen, on the beach about sixty miles from Green Bay. It is supposed that, as his journey was long, he laid down through fatigue and was frozen. When found, he had a small sum of money on his person.

The deceased was unmarried, about twenty-two years of age, and temperate. His parents reside at Brockville, Canada. Ralph Stone, of this place, will furnish any information in relation to the deceased.—*Green Bay Adv.*

The Foreign News.

The papers containing the details of European news did not come to hand till after 1 o'clock, too late to allow a proper selection to be made and put in type for this afternoon's paper. The main points are substantially embodied in the telegraphic summary. As that summary alluded but very slightly to the condition of Ireland, now looked to with much interest, as the theatre of a possible outbreak, if anywhere in the British Empire, we copy the following from the N. Y. *Com. Adv.*:
